# THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XXXV.

SEVENTH-DAY, NINTH MONTH 7, 1861.

NO. 1.

PUBLISHED WEEKLY.

Price Two Dollars per annum, payable in advance.

Subscriptions and payments received by

JOHN RICHARDSON,

AT NO. 116 NORTH FOURTH STREET, UP STAIRS,

PHILADELPHIA.

Postage to any part of Pennsylvania, for three months, if paid in advance, three and a-quarter cents; to any part of the United States, for three months, if paid in advance, six and a-half cents.

Selected.

Robert Barclay's Proposition XV.

(Continued from page 410, vol. xxxiv.)

Who then needs further to doubt, but that since Christ would have his disciples attain the highest pitch of perfection, he abrogated oaths, as a rудiment of infirmity, and in place thereof established the use of truth? Who can now any more think that the holy martyrs and ancient fathers of the first three hundred years, and many others since that time, have so opposed themselves to oaths, that they might only rebuke vain and rash oaths by the creatures, or heathen idols, which were also prohibited under the mosaical law; and not also swearing by the true God, in truth and righteousness, which was thus commanded? as Polycarpus, Justin Martyr, Apolog. 2, and many martyrs, as Eusebius relates. Tertullian, in his Apol. cap. 32, ad Scap. ep. 1. of Idolatry, cap. 11. Clem. Alexandrinus, Strom. lib. 7. Origen, in Mat. Tract. 25. Cyprianus, lib. 3. Athanasius, in pass. & cruc. Domini Christi. Hilarius in Mat. v. 34. Basilus Magn. in Psalm xiv. Greg. Nyssenus in Cant. Orat. 13. Greg. Nazianzenus in dialog. contra juramenta. Epiphanius adversus heres. lib. 1. Ambros. de Virg. lib. 3. Idem in Mat. v. Cryostom in Genes. homil. 15. Idem homil. in Act. Apost. cap. 3. Hieronimus Epistol. lib. part. 3. Ep. 2. Idem in Zech. lib. 2. cap. 8. Idem in Mat. lib. 1. cap. 5. Augustinus de Serm. Dom. serm. 25. Cyrillus in Jer. iv. Theodoretus in Deut. vi. Isidorus Pelusiota. Ep. lib. 1. Epist. 155. Chromatus in Mat. v. Johannes Damascenus, lib. 3, cap. 16. Cassiodorus in Psalm xxiv. Isidorus Hispalensis, cap. 31. Antiochus in Pandect. script. hom. 62. Beda in Jac. v. Haimo in Apoc. Ambrosius Anbertus in Apoc. Theophylactus in Mat. v. Paschasius Radbertus in Mat. v. Otho Brunfelsius in Mat. v. Druthmarus in Mat. v. Euthymius Euginius Bibliotheca vet. part. 1. in Mat. v. Oecumenius in Jac. cap. v. ver. 12. Anselmus in Mat. v. the Waldenses, Wickliff, Erasmus, in Mat. v. and in Jac. v. Who can read these places and doubt of their sense in this matter? And who, believing that they were against all oaths, can bring so great an indignity to the name of Christ, as to seek to subject again his followers to so great an indignity? Is it not rather time that all good men should labour to remove this abuse and infamy from Christians?

Lastly, They object, This will bring in fraud and confusion; for impostors will counterfeit piety, and under the benefit of this dispensation will lie without fear of punishment.

I answer, There are two things which oblige a man to speak the truth: First, Either the fear of God in his heart, and love of truth; for where this is there is no need of oaths to speak the truth; or, Secondly, The fear of punishment from the judge. Therefore let there be the same or rather greater punishment appointed to those who pretend so great truth in words, and so great simplicity in heart that they cannot lie, and so great reverence towards the law of Christ, that for conscience' sake they deny to swear in any wise, if they fail; and so there shall be the same good order, yea, greater security against deceivers, as if oaths were continued; and also, by that more severe punishment, to which these false dissemblers shall be liable. Hence wicked men shall be more terrified, and good men delivered from all oppression, both in their liberty and goods: for which respect to tender consciences, God hath often a regard to magistrates and their state as a thing most acceptable to him. But if any can further doubt of this thing, to wit, if without confusion it can be practised in the commonwealth, let him consider the state of the United Netherlands, and he shall see the good effect of it: for there, because of the great number of merchants more than in any other place, there is most frequent occasion for this thing; and though the number of those that are of this mind be considerable, to whom the states these hundred years have condescended, and yet daily condescend, yet nevertheless there has nothing of prejudice followed thereupon to the commonwealth, government, or good order; but rather great advantage to trade, and so to the commonwealth.

§ XVIII. Sixthly, The last thing to be considered, is revenge and war, an evil as opposite and contrary to the Spirit and doctrine of Christ as light to darkness. For as it manifest by what is said, through contempt of Christ's law the whole world is filled with various oaths, cursings, blasphemous profanations, and horrid perjuries; so likewise, through contempt of the same law, the world is filled with violence, oppression, murders, ravishing of women and virgins, spoillings, depredations, burnings, devastations, and all manner of leuciousness and cruelty: so that it is strange that men, made after the image of God, should have so much degenerated, that they rather bear the image and nature of roaring lions, tearing tigers, devouring wolves, and raging bears, than of rational creatures endued with reason. And is it not yet much more admirable, that this horrid monster should find place, and be fomented, among those men that profess themselves disciples of our peaceable Lord and master Jesus Christ, who by excellency is called the Prince of Peace, and hath expressly prohibited his children all violence; and on the contrary, commanded them, that, according to his example, they should follow patience, charity, forbearance, and other virtues worthy of a Christian?

Hear then what this great prophet saith, whom every soul is commanded to hear, under the pain

of being cut off, Mat. v. from verse 38, to the end of the chapter. For thus he saith: Ye have heard that it hath been said, An eye for an eye, and a tooth for a tooth: But I say unto you, That ye resist not evil; but whosoever shall smite thee on thy right cheek, turn to him the other also. And if any man will sue thee at the law, and take away thy coat, let him have thy cloak also. And whosoever shall compel thee to go a mile, go with him seven. Give to him that asketh thee; and from him that would borrow of thee, turn not thou away. Ye have heard that it has been said, Thou shalt love thy neighbour, and hate thine enemy: but I say unto you, Love your enemies, bless them that curse you, do good to them that hate you, and pray for them which despitefully use you, and persecute you, that ye may be the children of your Father which is in heaven. For he maketh his sun to rise on the evil and on the good, and sendeth his rain on the just and on the unjust. For if ye love them which love you, what reward have ye? Do not even the Publicans the same? And if ye salute your brethren only, what do ye more than others? Do not even the Publicans so? Be ye therefore perfect, even as your Father which is in heaven is perfect.

These words, with respect to revenge, as the former in the case of swearing, do forbid some things, which in time past were lawful to the Jews, considering their condition and dispensation; and command unto such as will be the disciples of Christ, a more perfect, eminent, and full signification of charity, as also patience and suffering, than was required of them in that time, state, and dispensation by the law of Moses. This is not only the judgment of most, if not all the ancient fathers, so judgment of the first three hundred years after Christ, but also of many others, and in general of all those who have rightly understood and propagated the law of Christ concerning swearing, as appears from Justin Martyr in Dialog. cum Tryph. ejusdemque Apolog. 2. Item ad Zenam. Tertul. de Corona Militis. It. Apolog. ep. 21, and 37. It. lib. de Idolol. cap. 17, 18, 19. It. ad Scapulam. ep. 1. It. adversus Jud. ep. 7, and 9. It. adv. Gnost. ep. 13. It. ad Marc. cap. 4. It. lib. de Patientia. c. 6, 10. Orig. cont. Celsum, lib. 3, 5, 8. It. in Josum hom. 12. cap. 9. It. in Mat. cap. 26. Tract. 35. Cyp. Epist. 56. It. ad Cornel. Lectan. de just. lib. 5. c. 18. lib. 6. c. 20. Ambr. in Luc. xxii. Chryost. in Mat. v. hom. 18. It. in Mat. xvi. hom. 85. It. lib. 2. de Sacerdotio. It. in I Cor. xiii. Chromat. in Mat. v. Hierom. ad Ocean. It. lib. Epist. p. 3. Tom. 1. Ep. 2. Athan. de Inc. Verb. Dei. Cyrill. Alex. lib. 11. in Johan. cap. xxv. 26. Yea, Augustine, although he vary much in this matter, notwithstanding in these places he did condemn fighting, Epist. 158, 159, 160. It. ad Judices, Epist. 203. It. ad Darium, & lib. 21. It. ad Faustum. cap. 76. lib. 22. de Civit. ad Marc. ep. 6. as Syllurgius relates. Euthym. in Mat. xxvi. and many others of this age. Erasmus in Luc. cap. 3. & 23. Ludov. Vives in Introde. ad Sap. J. Ferrus, lib. 4. Comment. in Mat. vii. & Luc. xxii.

From hence it appears, that there is so great a

connexion betwixt these two precepts of Christ, that as they were uttered and commanded by him at one and the same time, so the same way they were received by men of all ages, not only in the first promulgation by the little number of the disciples, but also after the Christians increased in the first three hundred years. Even so in the apostasy, the one was not left and rejected without the other, and now again in the restitution, and renewed preaching of the eternal gospel, they are acknowledged as eternal and unchangeable laws, properly belonging to the evangelical state and perfection thereof; from which if any withdraw, he falls short of the perfection of a Christian man.

And truly the words are so clear in themselves, that, in my judgment, they need no illustration to explain their sense: for it is as easy to reconcile the greatest contradictions, as these laws of our Lord Jesus Christ with the wicked practices of wars; for they are plainly inconsistent. Whoever can reconcile this, Resist not evil, with resist violence by force; again, Give also thy other cheek, with strike again; also Love thine enemies, with spoil them, make a prey of them, pursue them with fire and sword; or, Pray for those that persecute you, and those that calumniate you, with persecute them by fines, imprisonments and death itself; and not only such as do not persecute you, but who heartily seek and desire your eternal and temporal welfare: whoever, I say, can find a means to reconcile these things, may be supposed also to have found a way to reconcile God with the devil, Christ with Antichrist, light with darkness, and good with evil. But if this be impossible, as indeed it is, so will also the other be impossible; and men do but deceive themselves and others, while they boldly adventure to establish such absurd and impossible things.

(To be continued.)

For "The Friend."

#### Meteorology.

(Concluded from page 411, vol. xxxiv.)

#### POUILLET'S SPECULATIONS.

"In 1839, Pouillet published a memoir in which he discusses these large questions; the quantity of solar heat which falls perpendicularly in a given time on a given surface; the proportion of this heat which is absorbed by the atmosphere in the vertical passage; the law of absorption for different obliquities; the total quantity of heat which the earth receives from the sun in the course of a year; the total quantity of heat which is emitted at each instant by the whole surface of the sun; the elements which must be known in order to ascertain whether the mass of the sun cools gradually from century to century, or whether there is a cause destined to reproduce the quantities of heat which escape incessantly from it; the elements which would allow its temperature to be determined; the absolute quantity of heat emitted by a body whose surface, temperature, and radiating powers are known; the laws of cooling of a body which loses its heat without receiving any; the general conditions of equilibrium of temperature of a body protected by a diathermanous covering analogous to the atmosphere; the cause of the cooling of the high regions of the air; the law of that cooling; the temperature of space; the temperature which would be observable everywhere on the surface of the earth if the sun's action was not felt; the elevation of temperature which results from the solar heats; the relation of the quantities of heat which the earth receives from the sun, and from space, or all the other celestial bodies.

"By direct experiment on bodies, exposed during a serene night to celestial radiation, Pouillet

inferred that the temperature of space may be about  $-220^{\circ}$ ; that it cannot possibly exceed  $-175^{\circ}$ . Yet small as it is, the earth is indebted to it for as much heat as it receives from the sun. This conclusion will appear less strange when it is considered that the sun occupies only five millionths of the celestial vault, and must, therefore, be 200,000 times as hot as the same angular part of space to produce an equal effect on the earth. If the sun did not exist, the mean temperature of the earth's surface would be  $-128^{\circ}$ . As the actual mean temperature of the equator is, with the sun's help,  $51^{\circ}$ , the sun produces an augmentation of  $209^{\circ}$ . The quantity of heat which the earth receives from the sun Pouillet calculates to be adequate to melt annually a crust of ice having a thickness of about one hundred feet. It would be sufficient to melt a crust of ice enveloping the sun to the depth of about forty feet in one minute. If the mass of the sun possesses a perfect conductivity, so that its temperature is the same throughout, and if the specific heat of its materials is supposed to be 113 times that of water, then without any renewal of the sources of its heat, from chemical, electrical, or other action, it would cool down less than  $2^{\circ}$  in a century. This must be taken in connexion with the fact that the present temperature of the sun must be as high as  $2,628^{\circ}$ , and may be, if its emissive power is equal to that of polished metals,  $3,165^{\circ}$ . Now, if the earth, instead of basking in the nearly uniform rays of the sun and the other celestial radiations, were plunged into a space of absolute cold, it would cool from  $140^{\circ}$  to 0 in no less than 13,640 years, and from 0 to  $-140^{\circ}$  in no less than 29,580 years. 'These examples,' says Pouillet, 'may show that there has, perhaps, been some exaggeration in the ideas which have hitherto been entertained of absolute cold, and the phenomena which would be manifested on the surface of the earth, if the temperature of space were excessively reduced below the zero of our thermometers; they show, at the same time, that the essential laws of heat are established upon such fixed principles that sudden changes of temperature are not less impossible in the system of the world than the sudden changes resulting from mechanical actions.'

#### POISSON'S CONJECTURES.

"The views taken of this subject by the eminent mathematician, Poisson, are, in many points, peculiar. He rejects the theory of Fourier and Laplace, who attribute the increasing temperature of increasing depths in the earth to a primitive heating. Poisson refers the fact to the unequal temperature of the spaces which the solar system has visited. He considers it highly improbable that the temperature of space is everywhere the same; the variations at remote points may be very large, and must produce corresponding variations in the temperature of the earth, to depths depending on their duration and the magnitude of the variations themselves. If a block of stone were transported from the equator to Paris, the cooling would begin at the surface and extend into the interior; and if the time of its transportation was not sufficient to allow the cooling to extend through the whole mass, the rock, after it reached the northern climate, would present a temperature increasing with the depth. The earth is a large block of stone submitted to a similar experiment. It has come from a region of space where the temperature exceeds that in which it now is. It is a stupendous thermometer which has not time, on account of its size and its imperfect conducting power, to assume, throughout its mass, the temperature of the regions which it visits. To-day the temperature of the earth increases below; and the opposite result may once have occurred

and may occur again. Moreover, the superficial temperature may once have been, and may be again, at remote epochs, much greater or much smaller than it is now, so that it is not always fit for the abode of man and other animals, and has been subject to the great revolutions which geology discloses. Poisson regards his *cause* as a permanent and general one, while that of an *internal heat* is local and temporary.

"Poisson calculates that, on the theory of Fourier, the increase of temperature at the depth of only  $\frac{1}{100}$  of the radius would be nearly 4,000°; and in the central portions may amount to 400,000 degrees. The matter in this heated condition would assume the form of incandescent gases, so condensed, however, as to have a density five times as great as that of water. Poisson doubts whether the solid crust of the earth has a thickness and cohesion sufficient to sustain the enormous pressure from within to which it must be exposed. Inferring from the form of the earth that it was once fluid, if not aeriform, Poisson thinks that the centre solidified first, the surface cooling and sinking. This current would equalize the temperature rapidly throughout the mass. Besides, the superincumbent pressure would force the interior parts to consolidate first, in spite of a high temperature. If a column of water extended from the surface to the centre of the earth, the bottom would be subject to a pressure of thirty million of atmospheres."

"Poisson thinks it very probable that the stellar radiation on one hemisphere of the earth may be different from what it is on the opposite hemisphere, and that this difference co-operates with the slight difference of solar radiation, and the variety in the absorbing and radiating materials of the surface to create that difference between the mean temperature of the northern and southern hemispheres which has been observed. Neglecting the absorption of the air, Poisson calculates that the temperature of space cannot be less than  $+9^{\circ}$ . Poisson thinks it possible that the space traversed by the earth, millions of years ago, may have been  $6,000^{\circ}$  or more, sufficient to bring the outside crust, studied by geology, into a state of fusion, but not its whole mass, on account of the velocity of its motion. If the earth, 100,000 years ago, passed a spot heated to  $8,000^{\circ}$ , and if the successive temperatures of the places traversed by the earth diminished in rapid geometrical ratio with the time, so that the excess of temperature in the earth from this exposure would be reduced in 2,000 years to one degree, the earth at the surface would have been in a state of fusion, but at great depths no effect would be felt; and at the present time the superficial effect would have been nearly dissipated, but still there would be a slight variation, even after the temperature of space was sensibly constant, increasing with the depth to a certain extent; another 100,000 years would be required to reduce the effect to one third of its present value, and it would be only after millions of years that there would remain no trace at the surface of the great heat it had suffered.

"Herschel has called in question the accuracy of the reasoning which has led Fourier to place the temperature of space so high as he has done. The same objection would apply to the estimates of Pouillet and of Poisson. Herschel thinks that we can compare the heat derived from the sun with the heat derived from the multitude of stars, by contrasting the brightness of the noonday sky with the brightness of starlight. The latter is fifteen million times less than the former. Hence Herschel conjectures that the temperature of space may be  $1,000^{\circ}$  or  $5,000^{\circ}$  below zero. He also suggests that if this is true, and if we depend on the sun to raise the temperature of the earth from this low

point to what it really is, then a change of three per cent. only in the efficiency of the sun (proceeding from a change in the eccentricity of the earth's orbit) would not be insensible, but might amount to 30° or even 150°."

We have now quoted nearly all the article of Prof. Lovring as far as yet published. The reader will perceive that the speculations of scientific men as regards both the terrestrial and the astronomical causes of meteorological changes are conflicting and unsatisfactory; and that their most careful and refined calculations on this subject are of but little value, owing to the want of definite and reliable data, whereon to base their calculations and their theories. With regard to the temperature of space, the measure of the absolute quantity of heat received from the sun, the rate of cooling of our earth and other planets, these are subjects in which little else can be accomplished than vague speculations, until that other question is answered which lies at the base of all these inquiries, viz: what degree of temperature indicates *absolute cold*, or the absence of all heat?

Abridged from "Recorder."

Be Holy.

"I would not if I could," says scoffing Indifference. "I could not if I would," replies downcast Despondency. They are both in the wrong; but our business is not now with the skeptic soul; it is only with our sincere but faint-hearted brother Despondency. He belongs to a large family. He is brother to Mistrust and Littlefaith, and own cousin to a whole troop of Doubts, Fears and Unbeliefs, besides being stepfather to Lackcourage and Muchafraid. Perhaps he or his may fall in with this paragraph, and we will have a friendly word with him and his velvet-footed friends.

What is it to be holy? Holiness is not monkish asceticism—nor is it Pharisaism—nor is it sour sanctimoniousness—nor is it the unattainable state of the glorified before the throne in heaven. It is simply the *habit of being one mind with God*. It is the fixed, permanent *habit of soul that hates what God hates, and loves whatsoever God loves*, even though all this costs daily and hourly self-denial. That this habit of heart and method of life are not unattainable, is clear from the fact that God commands us, "Be ye holy." Our Heavenly Father never enjoins impossibilities upon his children. It is possible for thee, therefore, my friend, to be holy. The Bible speaks of scores of men as "holy."

"Well, but those were extraordinary men," says one, "who lived in extraordinary times. They possessed wonderful gifts." So they did. And so may we. Their God is our God. Their promises are our promises. Their Heavenly Father never gave their souls a more glorious tonic than these words—*my grace is sufficient for thee*. God's grace is enough. Hast thou ever sought the possession of that, sincerely, prayerfully and practically? I fear not. I fear thou hast never tried to be holy.

Another says, "I have no time to cultivate heart-holiness. My business swallows up all my time." Then there is too much business. The more business we have, the more holiness we need to conduct it aright, and to keep from being spiritually engulfed and ruined beneath it. *Take time*. If in no other way it be possible, take it from the eating and sleeping hours. What is far better, take it in the midst of business, and let God be in thy thoughts when in the counting-room, or amid the buzzing wheels of the manufactory, or behind the plow upon the hillside. Thou cannot well be a busier man than Daniel was when the cares of

nighly Babylon rested on him; yet he found time to kneel down thrice in each day before his God. He did not serve the king any the less faithfully for serving his Maker all the more faithfully. We know not what occupation thou mayst pursue, but remember that presently thy *whole business* will be with God, and he it is who commands, "Be ye holy."

"But," says a third, "I live in the midst of irreligious associations. Everything is against me." So far from being a valid excuse for neglecting holiness, it is an urgent reason for cultivating it. There is all the more need of letting thy light shine, if the surrounding atmosphere is as dark as Egypt. Ahab's court was a most unfavorable place for the growth of godliness. Yet in that court was an Elijah who bowed not the knee to Baal. Nero's palace was a chilling spot for the tender plants of grace. Did they droop and die there? We find an answer in that buoyant heart-message of heroic Paul, "All the saints salute you, chiefly they that are of *Cæsar's household*." This excuse brings up a kindred one. "I am driven about from pillar to post, and have no settled home. I am forever journeying, with no quiet home for meditation, and no sweet hallowed Penuels or Olivets of sacred life-long association." Neither had Paul, he was a bird of passage, with no abiding place for the sole of his foot. The roof under which he commonly tarried longest was the roof of a prison. And thou, my itinerant brother, whether roaming the land or sea, whether in the rattling coach or steaming rail-car, whether the denizen of hotels or the lodger in the wayside inn, may realize an ever present Saviour who compasseth thy path, and who can make thy heart to burn within thee as thou walkest with him in the way. Never can thou travel beyond the reach of that Divine injunction, *Be ye holy*.

"I am in trouble," says Despondency, "My mind is overborne by my grief. I shall never be the man again that I was before I met with my losses." Neither was David the same man that he was before affliction came upon him. "It is good for me to be afflicted," was his testimony. Sorrow left him a better saint than it found him. No strains rise sweeter from a Christian's lips than his "songs in the *night*." Never do the stars of promise gleam so bright as when the sun of worldly prosperity has gone down. Many a man who forgot his God at the noonday, has "sung praises at midnight," like Paul and Silas in Philippi's dungeon.

For it is not only by toil, but by trial, that Christ ennobles, purifies and sanctifies his people. He sometimes takes their estates away, and leaves them nothing but an empty purse and—a confiding heart. He sends a messenger of love into their households with a shroud. The cradle over which the mother hovers slowly turns into a coffin; the little treasure that nestled so warmly in her loving bosom, lies cold enough under the grassy turf. But out from this tempest of trial comes the triumphant child of God, wet with the baptism of suffering, yet radiant as "Mercy" rising from the river of death to the pearly gates, and as she cometh up she exclaimed, "Oh! my God, thou hast tried me, but when thou didst try me, thou didst make me to come forth as gold."

The pressure of affliction affords no better excuse for the neglect of holiness, than does the pressure of business, or the adverse array of worldly associations. These are the very positions for the exercise of holiness. And with the command comes the promise of Divine aid to obedience. Never, therefore, canst thou reach a point of prosperity so lofty, or a place in the vale of adversity

so lowly; never canst thou be environed with an array of temptations so dense, or be screened by human authority so weighty, as to protect thee from that solemn injunction of Almighty love: *Be ye holy in all manner of conversation.*

For "The Friend."

Musings and Memories.

REMARKABLE PRESERVATION.

At a mine at Kelvinside, near Glasgow, Scotland, the following occurrence recently took place. In proceeding with a new shaft, an opening was accidentally made into an old working, which contained so great an accumulation of water, as flooded the mine. At the breaking in of the water, two or three men were instantly drowned. There were other workmen in the mine, and in the hope that some of them might be alive in the higher parts, every effort was made by those interested above to pump the water from the shaft. The accident occurred on a Third-day of the week, just after the workmen had commenced their daily operations, and it took until the following First-day, before the water was so diminished as to allow entrance into the workings below, where the miners for whom they were seeking had been at work. Here they found three men alive, who had been immured in this gloomy prison, for six days and six nights.

These workmen had been in the pit but a few minutes when the accident occurred, yet it was several hours before they discovered what had happened. One of them feeling hungry, went for a piece of bread and butter, which he had brought down with him, and saw the water filling the lower part of the passage and preventing any possibility of escape that way. Returning to his companions, he gave them the alarming intelligence, and immediately they all proceeded to the edge of the water, which was still forcing itself in from the old working, and was gradually rising up to the higher parts of the gallery in which they had been at work. They then tried the passage in the other direction, but it soon descended, and they met the water forcing itself up on that side also. The water that thus threatened to engulf them, was a putrid, stinking flood, which had long been gathering and laying stagnant in the old workings. The full extent of the danger which threatened them, now forced itself upon their consideration.

Their situation was indeed truly a sad one, and unless some good degree of christian hope was in their hearts, it must have been an awfully alarming one. Forty fathoms below the surface of the earth, on a small elevation above the general level of the working in which they were, a flood of water in every passage leading from it, rising surely, steadily, rapidly, and threatening soon to drown them, if they should not have previously been suffocated by the air, which must necessarily soon become unfit for respiration. In the expectation that a few hours would close their earthly being, they endeavoured to commit themselves to the great Controller of all things, praying that he would receive them into his kingdom, forgiving, for his dear Son's sake, all their sins. They had oil enough with them to keep their lamps burning for two days, and this enabled them to compute how time was passing. As long as the oil lasted, they kept a close watch upon the uprising of the water. For the most of the time, its approach was rapid, but towards the close of their lamp-light, its rate of increase grew sensibly less and less. At last, it was apparent that it had ceased to rise, and whilst gazing with the first emotion of awakening hope, it began to subside. The diminution went on very slowly for some time, yet they now felt assured that efforts were being made for their deliverance.

They had with them but three slices of bread when their captivity commenced, which had been divided amongst them, and this, with pure water, of which there was, happily, a little well in the part of the working, to which they had access, was all the nourishment they had for those tedious six days. They felt no fear of starvation in the early period of their imprisonment; they looked for a speedy death by water, or by suffocation. With this last fear prominently before them, it is somewhat singular, that they should have kept their lamps burning, which rapidly destroyed the vital property of the air. But the light was doubtless a consolation, and they probably deemed the bright flame would hasten but a very little while the expected consummation.

When the lamps went out, they placed a stone by the edge of the water, to which returning from time to time, they formed a pretty accurate idea of the rate at which the surface sank, and from this formed an estimate of the time it would take to lower the water so that they might escape by the shaft. They thought it could not be accomplished before the first day of the approaching week, and their calculation proved true. On Seventh day they, for the first time, heard the operations going on for their deliverance. The air had become close and suffocating, but as the water lowered, the undulations occasioned in it by the pumping, were communicated to the air around them, and seemed to render it less oppressive. When not examining the state of the water, they sat much together for the sake of the heat, alternatively taking the middle place, which was the warmest and most agreeable.

They reported that they had not felt any severe cravings of hunger, but an unquenchable thirst oppressed them, which up to the latest account (the evening of the day of their deliverance) had not left them. They had slept, lying side by side, on some logs of wood, covered with a piece of oil cloth found near by. When taken from the mine they were very weak, and though the weakness continued through the day, it was the full belief of those who visited them, that a short period of careful treatment would restore them to their usual strength. They were beginning to suffer a little pain in the stomach which, without doubt was occasioned by their long abstinence from food.

During that day they were visited by large numbers of their fellow workmen, who manifested much joy at their deliverance. Such an accident might well quicken in the minds of the delivered and the deliverers, an earnest persuasion of the uncertainty of life, and the necessity of a constant state of preparation for the eternal existence which death will usher all into. Sudden accidental deaths are far more common amongst the workers in mines, than in other classes of their fellow beings, yet it behoves us all to examine our spiritual condition, for whatever our situation may be, in such an hour as we think not, the Son of Man, by his messenger Death, may come to our houses.

*The Use of Trials.*—It is not in the light and sunny places of the wilderness that the traveller most sweetly reposes. It is under the shadow of a great rock, or in the depth of a sequestered valley; and it is the same with a Christian. The sun of prosperity withers our joys, and changes the green leaves into the sickly colours of autumn. Adversity is like the winter which prepares the ground for the reception of the seed, and for the rich and glowing luxuriance of spring-time.

Our chief troubles do not arise from our living in the world, but from the fact of the world's living in us.

#### Portrait of a Christian Judge.

Judge McLean's personal appearance was both commanding and attractive. His noble form, his countenance that betokened at once a mind full of thought and a heart full of love, and his manners, uniting great dignity, simplicity and kindness, preposited every one who met him, even in the most casual manner, to a high estimate of both his intellectual and moral character. And when you began to converse with him, you found that the outer man had borne no false testimony in respect to the inner—you came in direct contact with that bright and active intellect, and that genial and generous spirit, which the external aspect had already shadowed forth to you. While there was nothing in his conversation that savoured in the least, of personal display, there was much to indicate great clearness of perception, a sound, discriminating judgment, large and liberal views of things, and a rich store of varied and valuable information. You saw, too, at once, that he was one of the most transparent of men; that he was truthful and honest. His heart seemed a great fountain of kindness. While he would not hesitate to remonstrate frankly and firmly against what he believed to be evil, even in high places, he was always predisposed to judge charitably, and sometimes displayed some invention in finding an apology for actions of at least, equivocal import. You could not be with him half an hour, without witnessing manifestations that would leave you in no doubt that his presence would grace any circle, and his services honour any station.

It does not become me to speak of him particularly in the relations of Statesman and Judge, except as they were identified with a spirit of lofty patriotism—inflexible adherence to the true and right—but to omit all allusion to this were to ignore one of the brightest features in his character. At every subject, bearing upon the interests of the country, he looked with a careful and discriminating eye; and, in forming his judgment, he took counsel, not of prejudice, not of party, not of personal advantage, nor yet of the wishes of friends, but of an honest devotion to the public good, under the guidance of conscience and of God. Though his mind always welcomed the light, no matter from what point it came—and though when the light was so strong as to produce conviction, it seemed to cost him no sacrifice to surrender even the most cherished purpose; yet the martyr's stake would not have had terror enough in it to make him falter in his adherence to his own honest sense of duty. I had it from his own lips, that, while he was holding one of the highest offices under the government, the politicians gave him no rest, because he would give them no satisfaction—that is, he would not bow to party dictation—he would not displace from any office within his control, acknowledged intelligence and integrity, from considerations of mere partisanship; and he added that it was to this circumstance that he owed his appointment to the Supreme Judiciary, where his persistence in following out his convictions, would occasion less inconvenience to office seekers. I could not have inferred from any thing he said, what political party had the best right to claim him—he seemed to me to be a man by himself—towering far above all parties; earnestly devoted to, and yet wellnigh despairing of, the perpetuity of his country's liberties. In one of the last letters I received from him, he repeated, with great confidence, the remark that our national corruption had destroyed us.

But the crowning glory of this venerable man, was that he was an humble, consistent, devoted

follower of the Lord Jesus. His religious sympathies were not circumscribed by denominational lines—his heart bounded forth in grateful recognition of the image of Christ, wherever he discovered it—and while he was an earnest Methodist, he was yet a more earnest Christian. His religion was at once intelligent, vital, practical. The graces of the spirit were beautifully blended in his character; but no one shone more brightly than humility—if others thought of his wealth, his honours, his influence, it was plain that he thought not of them except as they could be rendered tributary to the benefit of his fellow men and the honour of his Master. It was evident that he lived habitually under the influence of invisible and eternal realities. His conversation, his prayers, his daily walk, showed that he was in constant communion with the Fountain of all grace and strength.

It pleased a gracious Providence to spare this admirable man, through a long course of years, to perform many and varied services of the highest importance to his country. And yet, when I saw him a few months ago, his vigorous intellect, his cheerful and even buoyant spirits, and his elastic step, seemed to justify his expectation that at least another decade of years of honourable activity and usefulness might be added to his life. He had always been one of the most industrious of men, performing an amount of official labour that seemed scarcely within the range of human ability: though it was interesting to see how gracefully he could, at pleasure, come out from beneath the heavy burden that oppressed him, and give himself up to the pleasures of social intercourse as freely and as fully as if he had nothing else to do. But though I saw nothing to indicate the waning of any of his faculties, it was not long before disease was at work to bow that stately frame, to cripple those manly energies, to close that honoured life. Meanwhile the political elements were evidently combining for a tempest; the spirit of agitation mounting up to frenzy, was abroad; the old land-marks which the fathers had set up had begun to disappear; and that bond which had united the States in one, had come to look as if, after all, it were but a rope of sand. The venerable Christian patriot watched the approach of the storm with the deepest concern, and yet with full confidence in the Power that was directing it—he saw the lightnings play fearfully on the bosom of the overshadowing cloud, and was expecting the convulsive shock by which our institutions would be overturned, when the Master whom he had served so long, sent his angel, in the liveliest of death, to whisper the gracious words, "Come up hither."—*Sprague.*

#### Letter of John Barclay.

I have had from one season to another, up to the present time, many teaching intimations and timely warnings, from within and without, that there is no trust to be had in length of days, nor dependence to be placed on health or strength or youth, no nor yet on any services or sufferings for Truth's sake; but only upon the Rock, Christ Jesus, the Lamb slain from the foundation of the world. To know that renewed in us, which rightly gives an interest in his blood, and in the salvation he purchased for us,—to feel the spring of immortal, immaculate life and goodness, bubbling up and breaking forth in and over us,—to be assured by hearing, knowing and following the Shepherd of Israel, that we are his sheep,—to have a sure and satisfactory evidence, that we are more and more coming out of the world's spirit, into that of the weaned child,—becoming more and more separated from sin and self,—more and more seasoned with and leavened into the nature of a child of

God; this is sweet, and a safe spot, saith my soul, for any poor mortal to be found in, when the summons may be sounded forth.

"The time is short," said the apostle; and it remains for us all, whatever be our situation in this life, or our station in the church, or our standing in a religious sense, to remember, that "the fashions of this world passeth away." These things that are mutable must pass away, and shall be as though they had not been; yet shall the righteous stand and be established, when the earth is removed out of its place, and the firmament swept away as with a flood. Greatly do I desire to be found amongst those, who stay themselves upon the living, eternal, Almighty Father and Saviour; and to be increasingly concerned to pass the remainder of my time in true filial fear and faithfulness.

5th mo. 1820.

*Christian Leucis.*—Long afflictions will much set off the glory of heaven. The longer the storm the sweeter the calm; the longer the winter nights, the sweeter the summer days. The new wine of Christ's kingdom is most sweet to those who have long been drinking gall and vinegar. The higher the mountain, the gladder we shall be when we get to the top of it. The longer our journey is, the sweeter will be our end; and the longer our passage is, the more desirable will the haven be.

A murderer is an ungodly man; he is an ungodlike man; no man on earth more unlike to God than the murderer; and therefore no wonder if, when Christ comes to execute judgment, he deals severely and terribly with him. Let him make what profession he will of godliness, yet if murmuring keeps the throne in his heart, Christ will deal with him at last as with ungodly sinners.

A lazy Christian will always want four things—comfort, content, confidence, and assurance. Assurance and joy are choice donations that Christ gives to laborious Christians only. The lazy Christian has his mouth full of complaints, when the active Christian has his heart full of comforts.

God loves to smile most upon his people when the world frowns most. When the world puts its iron chains upon their legs, then God puts his golden chains about their necks; when the world puts a bitter cup into their hands, then God drops some of his honey—some of his goodness and sweetness into it. When the world is ready to stone them, then God gives them the white stone; and when the world is tearing their good names; then he gives them a new name, and none knows but he that has it—a name that is better than that of sons and daughters.—*Spurgeon's Small Stones.*

*All for the Best.*—Dr. Johnson used to say that a habit of looking at the best side of every event, is better than a thousand pounds a year. Bishop Hall quaintly remarks, "for every bad there might be worse; and when a man breaks his leg, let him be thankful that it was not his neck." When Fenelon's library was on fire, "God be praised," he exclaimed, "that it is not the dwelling of some poor man!" This is the true spirit of submission—one of the most beautiful traits that can possess the human heart. Resolve to see this world on its sunny side, and you have almost half won the battle of life at the outset.

Happiness is a perfume which one cannot shed over another, without a few drops falling on the giver.

Though sincere repentance is never too late, yet late repentance is seldom sincere.

From "The Family Treasury."  
Wanderers over Bible Lands and Seas.

SOLOMON'S GARDENS, HEBRON, AND BETHLEHEM.

(Continued from page 41, Vol. XXXIX.)

After luncheon and our midday rest we rode to Solomon's magnificent tanks or pools. There are three of these excavated, in the solid rock, and in some places supported or approached by walls or steps of massive ancient masonry. They were full on that June afternoon of living water flowing through them. A ruined castle stood near. But the tanks, which must have been excavated two thousand years at least, were before a stone of the castle was raised, were not ruined. Throughout the Holy Land no relics of glorious old times are so perfect and so satisfactory as these tanks. Temples, and fortresses, and palaces, are scattered or defaced, but these retain the fresh mark of the workman's tools, and remain a witness—not to the pomp of superstition, or royalty, or war,—but to the useful labours of an industrious and prosperous people, and a blessing to the peasants of to-day as to those of three thousand years ago.

Thence we proceeded to Hebron, the city of David's early reign, a rough and hilly ride. It was growing dark before we reached it, and our tired horses stumbled frequently over the rocks and roots on the hill-sides. Before night, however, our tents were pitched, and our camp-fire was lighted under the shade of "Abraham's oak." The horses, mules, and donkeys, with a foal which belonged to one of our mares, and greatly perplexed the riders by its erratic ways, were fastened to stakes near at hand. We commenced mending, sketching, and chatting over adventures, and were at home and at rest as much as pilgrims could wish to be. Vines trailed their luxuriant branches along the ground—stakes to support them being expensive luxuries in this treeless land. The horses were led to water at a neighbouring spring; muleteers and servants were grouped in various picturesque attitudes; our dinner was slowly but surely in course of preparation by the Maltese cook; the moonlight fell, chequering the ground through the interstices of the black massive branches and the delicate leaves of the oak, which was large enough to have sheltered a legion of soldiers. And it was Abraham's oak. Here, on this Plain of Mamre, under just such a venerable oak, at the door of a tent (probably more like the camel-hair Bedouin tents than ours), Abraham had welcomed the three mysterious visitors, two of whom were angels. Heavenly feet had trodden this ground. Had heaven grown distant since then, or only invisible, and were such heavenly beings indeed encamping round us for His sake, who in his humiliation needed their ministry once, and commands it always! That God cares for, and protects the feeblest of those who seek his care, we cannot doubt, and He works out his merciful purposes rather with living agents than with unconsensatory instruments, rather with hands than with machines. Such thoughts often cheered us in our night encampments in the Holy Land, and in regions far more dangerous than Hebron. Although our party happened to be entirely unarmed, I cannot remember experiencing a sensation of fear.

Before breakfast the next morning, June the 18th, we took a beautiful ride along the side of a very fine ravine to Adoraim, the modern Dura. From the top of a mosque near the poor cabins which form the village, we had one of those views so frequent from high land in the centre of Palestine, embracing a large range of hilly country east and west, from the Mediterranean to the hills beyond Jordan, from the sea to the desert.

My horse fell with me at full gallop on some smooth slippery turf, happily just after we had

passed the ravine along the precipitous side of which the road wound quite unguarded. I walked back to the tent, and in that way had more leisure to notice the high vineyard walls, built of rough stones, and leaving narrow lanes between them, with occasionally a rude tower at an angle of the walls. These are characteristics of Southern Palestine, and are the lineal descendants of the ancient solitary "cottage in the vineyard." The proprietors often come from their houses in Hebron and live in them during the grape season, at once to enjoy and to protect their property.

In the afternoon we rode to Hebron. It was more like a European town (not one in England, certainly, but in some remote part of Italy,) than any other place we had seen in Palestine. There were some faint indications of prosperity and life about it: numerous and abundant wells, water-troughs, gardens, vineyards, walls not in ruins, reservoirs well-kept, even a road in the valley.

We had some slight hope of being permitted to see the inside of the Haram or Sacred Place of Hebron, honoured by Moslems, Jews, and Christians as Abraham's Tomb. Mohammedan bigotry had yielded to bribes at Jerusalem, enforced by the echo of our artillery at Sebastopol. And why not here? But all our solicitations were in vain. The authorities of Hebron, were either too strictly bound by Mohammedan law, or too ignorant of European politics to pay any attention to our demands. A crowd of angry looking idlers, and boys evidently not averse to the use of physical force, began to collect, and we were obliged to content ourselves with inspecting the outside walls. These were in many parts built of very large stones with that groove round them which we had been told at Jerusalem was characteristic of early Hebrew or Phœnician workmanship, like the stones left in the Temple enclosure. Thus the building carried us back to the days when David dwelt here a king, whilst the cave beneath it is indeed the resting place of Sarah and Leah, Jacob, Isaac, and Abraham, the friend of God.

From Hebron we climbed a steep terraced hill, partly riding, and partly scrambling on foot, leading our horses. At the top was a grove of fine old fig-trees, reminding one of the groves which crowned the "high places" in ancient days. The view from this was rich and beautiful, and might be taken as some faint likeness of what it must have been in David's time, when the industrious Jews had entered on the olive gardens and vineyards of that earlier race, which, with all its crimes and savage idolatries, must have possessed elements of material civilization lost to the lawless Arab peasants who people the land now. The royal city lay below us, not far off, in the luxuriant plain, from a centre in the valley radiating up three separate hills. Its white roofs, domes, and airy minarets, and especially the great mosque over Machpelah, blended beautifully with the olives, vines, and figs which surrounded them. Around was the lovely, rich Plain of Mamre, and beyond, corn-fields were still golden on the lower uplands.

Again a night under the shelter of Abraham's oak, and in the morning (Thursday, June 19th) once more across the hill-country of Judea on our way back by Bethlehem to Jerusalem.

The special interest of this day's journey was that it lay through the heart of the scenery of David's Psalms. The rocks and hill-fortresses, the "thousand hills," and the quiet valleys, the green pastures by the still waters, the wild caves and ravines of the shadow of death, amidst which we journeyed this day, were precisely those which have from our earliest childhood been made allegorical to us by the inspired poetry of the shepherd king.

Our first thoughts, however, in mounting the heights east of the city, were of Abraham's pleading for Sodom on these very hills, and afterwards beholding from the same spot, not the sea of verdure he had seen there before, or the gleam of sunny waters which we see now, but the heavy sea of smoke going up between him and the mountains of Moab,—no wreathed folds of morning mist, but the smoke of a burning land.

The first place we reached was Tekoah, after a wild, rough ride up and down pathless hills. One valley we had much difficulty in crossing. The side was very steep, and clothed or rather thickly sprinkled with trees, the roots of which perplexed our horses, whilst their branches perplexed us, and more than once forcibly recalled the fate of Absalom. At the bottom of this valley, which was a broad level, were corn-fields and meadows, beside an abundant, but still and noiseless stream,—“green pastures by still waters,” sufficiently rare in this country to impress themselves strongly on the memory. Some peasants were at work in the fields, who warned us off their territories with angry gestures.

Tekoah only differs from the ruined towns or villages which crest almost every hill-top, in its ruins being, although untenanted, more extensive and perfect than usual. This does not imply much; but since “ruins” in the Holy Land frequently mean little more than shapless heaps of stones, there was a certain interest in exploring the foundations of houses, and the remains of tanks and wells in the city of the “wise woman” of old. The walls of a Greek church were still standing, with large stones of earlier buildings used in its foundation, and a stone font. The chief interest of the place, however, consists in its being one of the “fortresses,” the fortified places on the rocky heights of Judea, which suggested to David the image so frequent in his Psalms: “Thou and not these strongholds of my country's hills, “art my refuge and my fortress.”

(To be continued.)

*Be Humble.*—Pray much for the spirit of humility, the spirit of Christ, for that is it; otherwise, all thy vileness will not humble thee. When men hear of this or of other graces, and how reasonable they are, they think presently to have them, and do not consider the natural enmity and rebellion of their own hearts and the necessity of receiving them from heaven. And, therefore, in the use of all other means, be most dependent on that influence, and most in the use of that means which opens the heart most to that influence, and draws it down upon the heart; and that is prayer.

“That spirit of Christ which is all sweetness and love, so calms and composes the heart, that peace with God, and that unspeakably blessed correspondence of love with him, do so fill the soul with lovingness and sweetness, that it can breathe nothing else. It hates nothing but sin, it pities the sinner, and carries towards the worst, the love of good-will, desiring their return and salvation. But as for those in whom appears the image of their Father, their heart declares to them as brethren indeed.—No natural advantages of birth, beauty, or wit, draw a Christian's love so much, as the resemblance of Christ; wherever that is found, it is comely and lovely to a soul that loves him.”—*Leighton.*

The more any renewed heart tastes of the sweetness of communion with God, by so much more it is disposed for unity and peace with his people.

They that spend their days in faith and prayer, shall end their days in peace and comfort.

#### THE KINGDOM OF GOD.

I say to thee, do thou repeat  
To the first man thou mayest meet  
In lane, highway, or open street  
That he, and we, and all men move  
Under an canopy of love,  
As broad as the blue sky above;

That doubt and trouble, fear and pain,  
And anguish, all are shadows vain;  
That death itself shall not remain;

That weary deserts we may tread,  
A dreary labyrinth may thread,  
Through dark ways underground be led;

Yet if we will our Guide obey,  
The drearest path, the darkest way,  
Shall issue out in heavenly day.

And we, on divers shores now cast,  
Shall meet, our perilous voyage past,  
All in our Father's house at last.

And ere thou leave him, say thou this  
Yet one word more, They only miss  
The winning of that final bliss,

Who will not count it true that love—  
Blessing, not cursing—rules above,  
And that in it we live and move.

And one thing further let him know—  
That to believe these things are so,  
This firm faith never to forego;

Despite of all which seems at strife  
With blessing, all with curse refine—  
That this is blessing, this is life.

#### NEVER PUT OFF.

Whatever duty waits for thee,  
With sober judgment view it,  
And never idly wish it done;  
Begin at once, and do it.

For Sloth says falsely, “By and by  
Is just as well to do it;”  
But present strength is surest strength;  
Begin at once, and do it.

And find not lions in the way,  
Nor faint if thorns bestrew it;  
But bravely try, and strength will come,  
For God will help thee do it.

#### Agricultural Progress at the Sandwich Islands.

It is exceedingly interesting to watch the progress of agricultural pursuits, and the introduction of flowers, plants, vegetables, cereals and animals. It has been the custom to assert that this and that tree, plant, and vegetable would not grow, the climate was too warm, or some other insuperable difficulty existed. The success which has attended the introduction of certain plants, should lead us to be very cautious in expressing our opinions before the experiment is made.

A few years ago it was stoutly asserted that wheat could not be produced, but now more than enough can be easily raised for home consumption. Well do we remember when an ear of Indian corn was a great rarity, but recently on the road to Ewa, we saw more than a twenty acres of as fine looking Indian corn as ever grew in Massachusetts or Illinois. Who does not remember when it was said roses and flowers could not be raised in Honolulu? and now the most beautiful hedges are gathered at all seasons. Strawberries and peaches even are becoming quite common upon the islands. Only a few years since it was thought quite impossible to produce good butter, but now an article finds its way to our markets vying in quality with butter from Goshen, New York, and we hope that something in the way of cheese will soon be produced outdoing Cheshire. Why not? Our beef

Selected.

and mutton call forth even an Englishman's commendation. This, too, is to become a land of honey. The old foggy wisacres asserted that on our sunny islands the bee would become lazy, and it would no longer be true,

“How doth the little busy bee  
Improve each shining hour;” &c.

We now have busy and industrious bees, and excellent honey. Only a few months since one live was imported from California, and now hives are reckoned by scores in some parts of the islands. The honest truth is, we do not know what will thrive and grow in the Sandwich Islands until a fair trial has been made. All praise to those who are labouring to introduce plants, vegetables, flowers, and whatever will adorn our fair islands, rendering them still more lovely and inviting. Only give us places of worship in our towns, school-houses in our villages, a happy and growing population, waving fields, green pastures, numerous herds and flocks, a stable government, and where will you find a more desirable home than upon these sunny islands?—*Late paper.*

Selected for “The Friend.”

Letter of Susanna Hutton, (afterwards Lightfoot), Stanton, near Philadelphia, 1st mo. 13th, 1762.

*Dear and Tender Friend, Sarah Neal.*—Thy acceptable letter with that of thy dear husband, was as a cordial to me, a poor pilgrim in a strange land, only my mind was deeply affected on hearing of the decease of our friends. What can I say but this, all that our Master does is for the best. We being but poor short-sighted mortals can see a very little way before us. This I know, that the more like a weaned child I become from all visible objects, with my mind rightly fixed on durable heavenly riches, the better it is for me. Oh, the Lord Jesus! that unalterable saviour friend, in whom my soul delighteth! He never failed me when I consulted in him. It is true I have been short in some part of my duty before I left home,—for which I have gone through much sorrow. But it is over now, and passed by, on condition of my fidelity in time to come to my beloved Master.

Thy husband makes some remarks concerning deep baptism,—the Lord only knows what I have gone through in this land, and what I am still wading through. Had (thy husband) known my inward condition, he could not have written more to the purpose than he has. His letter came in an acceptable time. I wish to be truly thankful to the great Remembrancer of his little ones. True gospel fellowship is really wonderful, reaching over sea and land, insomuch that the living seed though separated, can greet one another in spirit, feeling pure cementing love, which can even assist in binding up the broken-hearted, and letting the prisoner go free. May we know it, dear Sally, more and more to arise in us into dominion;—then will our duty not be neglected, as that of too many is.

I wish, my dear friend, thou and thine may be preserved from letting the unstable enjoyments of this fading world hinder you, or keep you back from duty. Truly glad I am, to see that you get out to meetings, which I am sure is a duty required of every well concerned member. Oh, I am troubled within me, and many times am ready to say, by whom shall favour' Jacob arise, for he is small?

I have been favoured with dear Susy Brown\* for a companion to the eastward. We went first to the Indians, where upward of five hundred of them were in one place, every tribe by themselves.

\*A minister, the wife of William Brown who was also an eminent labourer in the gospel of Christ.

## Life in Java.

## HOTEL ON THE OTHER SIDE OF THE WORLD.

A correspondent who went out in the United States steamer Niagara, in company with the Japanese Embassy, writes as follows of hotel life in Batavia, Island of Java:

Now, about Batavia and the hotel at which I am stopping. How many in New York believe that, on the opposite side of the globe, ten thousand miles nearer the sun, hotels to compare with the Oriental magnificence of New York hotels can be found? But such is the fact.

Every thing we see here is so entirely different from what I have seen, or ever imagined before, it is hard to tell where, or how to begin. In all the imaginary wilds of speculative fancy, I had never dreamed of anything to come up to, or compare with Batavia. The place approaching nearest to it in the East Indies, or, in fact, in any part of the world, is Calcutta, and that by many is not considered equal to Batavia.

The hotel at which I am stopping is the Hotel des Indes, situated in the new, or upper town, some half dozen miles from the water. This is a fair specimen of five or six others, within half a mile of each other. My hotel and grounds cover ten acres. The whole ground, like the rest of the city, is one immense forest of trees and canals. The trees remind one very much of the class of New Haven.

Houses are placed two or three hundred feet back from the street. In front, the yard is filled with trees, literally alive with birds, and every variety of plants and flowers. Every house has a stoop or piazza in front, on which, mornings and evenings, sit beautifully dressed ladies and children. The houses are white as the driven snow. In front are bird-cages, elegant lamps, beautiful pictures and steel engravings, handsome marble-top tables, rocking-chairs, lounges, &c. These articles are mostly of French manufacture, of the widest description.

One can ride here for miles on roads as smooth as a floor, and see nothing different from what I have described. At night the city is one blaze of light from lamps—no gas is allowed. The streets swarm with Malays, Japanese, and Chinamen, but no negroes. They are very civil and attentive as waiters, and generally honest. Rooms are left open, and articles of all kinds left exposed, without being stolen. There are no beggars to be met with in the streets.

The hotel at which I am stopping—the main building two stories high, with an immense piazza in front—is connected on each side by buildings like rail road depots, three or four hundred feet long. Each suit of rooms contains room enough to make two, three, and even half a dozen ordinary rooms, such as we get at hotels in the United States. In front and back are bath-houses, fountains, flower-gardens, and out-houses, for cooking and for servants, marble floors, tiled roofs, ceilings, from twenty to twenty-five feet high, no carpets, and but few curtains.

Meals are served up in about the same style as at the first-class hotels in New York.

The habits of living are quite different. At day-light, coffee and tea are taken to your room; at eight, same, with light refreshments; twelve, breakfast, and at seven dinner. Coffee and tea are always ready, day or night, same as baths. No extra charge; take them or not, as you please. No business is done in the street in the middle of the day, on account of the heat. Nights and mornings are cool and delightful. Birds are singing all night.

extremes—the inner cliffs of one a glistening white; of the other a blue, soft and airy as the July heavens.

In the neighbourhood were numbers of block-like bergs, which, when thrown together by our perpetual change of position, resembled the ruins of a marble city. The play of the light and shadows among its inequalities was charming in the extreme, on the outskirts of this Palmyra of the waves lay a berg closely resembling a huge ship-of-war, with the stern submerged, over which the surf was breaking finely, while the stem, sixty or seventy feet aloft, with what the fancy easily shaped into a majestic figure-head, looked with fixed serenity over the distant waters. As we ran athwart the bow it changed instantly into the appearance of some gigantic sculpture, with broad surfaces as smooth as polished ivory, and with salient points cut with wonderful perfection. The dashing of the waves sounded like the dashing at the foot of rocky cliffs, indicative of the mass of ice below the surface.

## FOUNDING OF A BERG.

Between making my last dot and now—an interval of ten minutes—Windor Castle has experienced the convulsions of an earthquake and gone to ruin. To use the term common here, it has "foundered." A magazine of powder fired in its centre could not more effectually, and not much more quickly, have blown it up. While in the act of sketching, C—— suddenly exclaimed: when lo! walls and towers were falling asunder, and tumbling at various angles with apparent silence into the ocean, attended with the most prodigious dashing and commotion of water. Enormous sheaves of foam sprung aloft and burst in air; high green waves, crested with white caps, rolled away in circles, mingling with leaping shafts, and fragments of ice reappearing from the deep in all directions. Nearly the whole of this brilliant spectacle was the performance of a minute, and to us as noiseless as the motions of a crowd, for a length of time I had not expected. When the uproar reached us, it was thunder doubled and redoubled, rolling upon the ear like the quick successive strokes of a drum, or volleys of the largest ordnance. It was awfully grand, and altogether the most startling exhibition I ever witnessed. At this moment there is a large field of ruins, some of them huge masses like towers, prone along the waters, with a lofty steeple left alone standing in the midst, and rocking slowly to and fro.—After *Xobergs* with a Painter.

In the Long Run.—There is no little of repining on the part of many worthy people, which must be attributed chiefly to a habit of forgetting some well-known truths. It would be good for all to remember that in the long run, the things which now fret and annoy will all be seen to be parts of a plan of infinite benevolence. The evils we lament will be turned into agencies for good, and the sorrows we experience will eventuate in future joys. That life is the sweetest which is passed in extracting honey even from the bitterest adversities; and he is the wisest man who can most heartily confide in the rectitude of Providence, and in the final supremacy of truth and right. In the long run, that Christian will come out well who works cheerfully, hopefully, heartily, without wasting his energies upon vain regrets and passionate murmuring. The bird sings in the storm; why may not the child of God rejoice too, even though passing clouds lower?—*Chris. Intel.*

He that will set the hearts of other men on fire with the love of Christ, must himself burn with love.

There was about one hundred that bear the name of friendly Indians. There are between four and five hundred, so called, but only the one hundred were present. There are others who appear to be under conviction. We attended the treaty, above fifty miles from —, in the wilderness. They were told that a Friend was coming to see them, who had crossed the great water, which pleased them much. A number of them came to our lodging, inasmuch that the room was filled with Friends and Indians. After shaking hands, in a sweet feeling sense of the Father's love, we fell into silence, and I may truly say, my spirit was clothed with profound silence, as much so as I ever witnessed. After a considerable time, the great Commander and Author of all good, moved my understanding, and I was concerned in humble supplication to the Shepherd of Israel, who was pleased to prepare an offering acceptable in his sight. It was a time never to be forgotten. The hearts of all appeared melted, and admitted to eat and to drink in the presence of the Father. I believe each one had, in a measure, to sit under their own vine, and under their own fig tree; where neither the enemy nor any of his, could make afraid. The sense of this bows my mind in gratitude at this time, and ever will, I believe, when I remember it. The next day I had it on my mind to have a meeting with them, and informed Friends, thy spouse's old companion\* being there. Some Friends applied to the governor, his secretary and council, requesting them to allow the meeting to be held in the place erected for the treaty. This was obtained. As we went to the meeting, we saw the Governor and his council coming, which brought a dread over my mind, and a cry was gotten in my heart to the Lord, to this effect: Oh, let not thy glorious truth suffer on my account! neither did it. The Indians of whom there were many, sat all in the middle,—Friends, the Governor and council, with other people, sat around. After a time the fear of man was taken from me, and I stood on my feet leaning on a Friend's shoulder. When I began,—to speak by an interpreter seemed very hard, but it was made easy to me by Him who only can make hard things easy and bitter things sweet. After I closed, dear William Brown concluded the meeting in thanksgiving to Him that lives forever.

SUSANNA HATTON.

## Icebergs.

As we approach the bergs they assume a great variety of forms. Indeed, their changes are quite wonderful. In passing around a single one we see as good as ten, so protean is its character. I know of no object in all nature so marvellously sensitive to a steady gaze. Sit motionless and look at one, and, fixture as it appears, it has its changes then. It marks with unerring faithfulness every condition of atmosphere, and every amount of light and shadow. Thus manifold complexions tremble over it, for which the careless observer may see no reason, and many shapes, heights, and distances swell and shrink it, move it to and fro, of which the mind may not readily assign a cause.

The large iceberg for which we bore away this morning resembled, at one moment, a cluster of Chinese buildings, then a Gothic cathedral, early style. It was curious to see how all that mimicry of a grand religious pile was soon transmuted into something like the Coliseum, its vast interior now a delicate blue and then a greenish white. It was only necessary to run on half a mile to find this icy theatre split asunder. An age of ruin appeared to have passed over it, leaving only the two

\* William Brown.

**The Fifth Commandment.**—An old schoolmaster said one day to a minister who had come to examine his school:

"I believe the children know the Catechism word for word."

"But do they understand it that is the question," said the minister.

The schoolmaster only bowed respectfully, and the examination began.

A little boy had repeated the fifth commandment, "Honour thy father and thy mother," and he was desired to explain it.

Instead of trying to do so, the little boy, with his face covered with blushes, said, almost in a whisper: "Yesterday I showed some strange gentlemen over the mountain. The sharp stones cut my feet, and the gentlemen saw they were bleeding, and they gave me some money to buy me shoes. I gave it to my mother for she had no shoes either, and I thought I could go barefoot better than she could."

Of him that hopes to be forgiven, it is indispensable required that he forgive.

Traquill pleasures last the longest. We are not fitted to bear long the burden of great joys.

#### SUMMARY OF EVENTS.

**UNREO STAVES.—Missouri.**—The calamities of civil war have fallen on this unhappy State with peculiar severity. Beside the large armies of rebels in the southern part of Missouri, nearly every county in the State is infested by bands of murderers and marauders, who are the terror of the peaceable and loyal inhabitants. Gen. Fremont appears to exert all his authority, and to use all the means at his command for the preservation of order, but it remains to be seen whether his efforts will be successful. On the 21st ult. he issued a proclamation, declaring martial law throughout the entire State. He justifies the measure by the disorganized condition of the country, the want of the civil authority, and the total insecurity for life and property. The proclamation declares: "The lines of the army of occupation in this State are, for the present, declared to extend from Leavenworth, by way of the posts of Jefferson City, Rolla and Ironton, to Cape Girardeau on the Mississippi river."

All persons who shall be taken up with arms in their hands within these lines shall be tried by court-martial, and if found guilty shall be shot.

The property, real and personal, of all persons in the State of Missouri, who shall take up arms against the United States, or who shall be directly proved to have taken active part with the enemies in the field, is declared to be confiscated to the public use, and their slaves, if they have any, declared *free men*.

All persons who shall be proved to have destroyed, or attempted to public use, any order, railroad tracks, bridges or telegraphs, shall suffer the extreme penalty of the law."

The prisoners taken on both sides at the battle of Springfield have been released. It is said that McCullough's army has been increased by reinforcements from Missouri and the south to 40,000 men. He was gradually moving towards the Missouri river. Gen. Pillow's army at New Madrid had been reinforced from Tennessee and was expected soon to move northward. It is estimated at more than 20,000 men.

**Affairs at Washington.**—The rebels have approached so near that their troops are plainly visible from the dome of the Capitol with the aid of a glass. They are engaged in fortifying themselves on Munsions Hill. The Federal army is understood to be in a more efficient state than it ever was before.

The north of the Mesilla valley and Arizona seems to have fallen into the hands of the rebels. Fort Fillmore was garrisoned by 750 U. S. troops, under the command of Major Lynde, who is represented to be a weak old man. He surrendered his whole force and the public property near his charge without resistance, to a company of 250 Texan rangers. The Texans released the U. S. troops on parole after disarming them. Fort

Stanton has been abandoned by the U. S. garrison, and destroyed by fire.

The rebel Government has availed itself of the peculiar conformation of the coast, to make Pamlico Sound and the waters lying within the heavy sand barrier extending along the ocean line, its chief nursery for pirates, and a depot for the prizes taken by them. In furtherance of this object fortifications have been erected on the 21st and 22nd miles inland from Pamlico Sound. Last week a combined naval and military expedition was despatched from the Chesapeake under the command of Com. Stringham and Gen. Butler, for the capture of the rebel forts, named Hatteras and Clark. The expedition sailed on the 21st inst. and arrived during part of the next day, when the rebel garrison surrendered. The prisoners, 674 in number, have been sent to New York, together with the commander, Com. Barrow, who was formerly an officer of the U. S. navy. No loss, whatever, was sustained by the attacking party. Fifteen rebels were killed and twenty-five wounded. The forts had 31 cannon, 1,000 stand of arms, and a limited supply of ammunition, &c. Federal troops were left in them, and it is presumed the forts will be permanently held, and made the base for further operations on the coast. The success of this expedition is considered of important advantages yet gained by the Government. The steamer Harriet Lane, one of the U. S. war vessels, grounded in attempting to enter the inlet. It was found necessary to throw her guns overboard to get her off the bar.

**Virginia.**—There do not appear to be any reliable statements of the movements of the rebel forces in Western Virginia, or of their relative strength. On the 26th ult, a regiment of Ohio volunteers under Col. Tyler was surprised near Summerville, in the Kanawha valley, by a division of the Confederate army, commanded by Gen. Floyd, the Secretary of War. Fifteen of the Federal troops were killed and forty wounded. The remainder effected their retreat, except a few who were taken prisoner. The rebel loss is stated to have been much greater. There are reports of other skirmishes attended with loss of life. The Federal troops near Washington have been pushed forward into near proximity with the Federal lines. It is believed that the resources of the region must be almost exhausted, and that they cannot much longer subsist their immense army on the Virginia side of the Potomac. Hence, necessity will compel them either to evacuate Maryland and retire to a greater distance from Washington.

**New York.**—Mortality last week, 454.

**Brooklyn.**—Mortality last week, 178.

**Philadelphia.**—Mortality last week, 259.

The receipts at New York, during the week ending on the 26th ult, the receipts of grain by the rail roads leading from the west amounted to 2,323,089 bushels. This is said to be the largest quantity ever received in one week. It does not include the receipts by the eastern rail roads.

**Seizure of Rebel Property.**—On the 2nd inst., twenty-five vessels, owned wholly or in part by rebels, were seized by the Government in the port of New York. The value of the vessels seized is over \$2,000,000.

**The Grain Markets.**—The following were the quotations on the 26th inst. for the week ending on the 26th inst. Eastern red, \$1.12 a \$1.15; Milwaukee, \$1.03 a \$1.06; Oats, 30 a 32; corn 46 a 52. **Philadelphia.**—White wheat \$1.16 a \$1.25; red wheat, \$1.10 a \$1.13; corn, 54 a 55; oats, 28 a 31.

**Southern News.**—The newspapers from the rebel States, which are still accessible at Louisville, Ky., throw some light on affairs in that section.

The Confederate Congress has passed a resolution approving of the course of the planters in relation to the cotton crop, and the determination of the insurance companies to insure cotton. It says that the planters are to be planted. It is the intention of the leaders of the rebellion that the crop shall not leave the country under present circumstances. A correspondent of the Charleston Courier says, "We are without the sympathy or friendship of any nation on earth. The only arguments by which we can influence them are their necessities and their fears."

The Memphis Appeal strongly urges the planters of West Tennessee, Alabama, and Mississippi to subscribe food and meal for the use of the Confederate army, and to send the contributions to the depot at Memphis. It says the immense quantity stored at Memphis last spring by the Confederate Government is all gone, and unless there is prompt action, the troops will soon be without bread.

The Richmond Examiner says that steps are being taken by the Navy Department to construct suitable vessels of light draft for purposes of river and harbour defence.

The rebel Governor of Tennessee has ordered every house in the State to be searched by the county constables, for arms, cartridges, swords and pistols. The officers are to receive one dollar for every market and bayonet they discover, and fifty cents each for swords and pistols.

Flour was quoted in New Orleans at \$3 a \$9 per barrel; corn, 54 cts.; meat pork, \$27 per bbl; lard, 16 1/2 cts. The Congress at Richmond has appointed two more Commissioners to Europe. President Davis will determine to what nations they shall be accredited.

The Mobile News gives a brief summary of a new revenue act of the Southern Congress. It says: "The Secretary of the Treasury under special conditions, is authorized to issue not exceeding \$100,000,000 in Treasury notes. The act also provides for a tax of fifty cents on every hundred dollars worth of real estate, slaves, merchandise, bank and other stock, money at interest, (except Confederate bonds), also taxes at the same rate on stocks, bonds, real estate, gold and silver plate, pianos, pleasure carriages, &c."

The Savannah Republican says the Confederate authorities, within a week, would complete their defences, so that no Federal fleet can enter a harbor or inlet, or land troops on the coast of Georgia.

The Vicksburg Whig advocates the manufacture of cotton-seed oil for burning, the blockade having deprived them of material for light.

The Petersburg, (Va.) Express complains of the increasing scarcity of coal and salt. The latter readily comes from the coast of Georgia.

**FOREIGN.**—Liverpool dates to the 22nd ult. The Emperor of Austria has issued a decree for the dissolution of the Hungarian Diet.

The Liverpool cotton market continued to advance. The Liverpool market for New Orleans, 91; Mobile, 91; Upland, 9d. Stock in port 913,000 bales. The Manchester affairs were favourable.

The market for breadstuffs was still declining, and the sales of the week had been small.

Queen Victoria had proceeded to Ireland on a visit to that part of her realm.

#### RECEIPTS.

Received from Wm. S. Kirk, Pa., per N. K., \$2, vol. 35; from Ann Kaighn, N. J., \$2, vol. 34; from Jos. Conroy, O., \$2, vol. 34; from D. Conson, O., \$2, vol. 34; from G. C. Ellwood, M. Garty, G. Schill, G. Wilson, \$2, vol. 35; for Lewis Tager, \$2, T. A. Wharton, \$2, vol. 34; from Jehu Fawcett, Agr. O., for Elizabeth Kirk, and J. B. Bruff, \$2 each, vol. 34; for Jos. Taylor, and R. Woolman, \$2 each, vol. 35, for Daniel Ferry, \$2, vol. 33; from Jas. Carter, \$2, vol. 35; from J. C. Leonard, \$2, vol. 34; for Jas. Stanton, \$4 vols. 33 and 34; from Stephen Hobson, Agr. O., \$2, vol. 35, and for Stephen Hodges, \$4, vols. 33 and 34; from J. Huestis, Agr. O., \$4, vols. 34 and 35, for D. Dewese, \$2, vol. 33; from J. B. Pussy, Pa., for Jane Ann Passmore, \$2, vol. 35; from Jos. Sueli, Agr. Pa., \$2, vol. 35; from G. C. Ellwood, M. Garty, G. Schill, G. Wilson, and J. Battin, \$2 each, vol. 35. E. Fogg, in 51, for vols. 33 and 34, read 34 and 35.

#### FRIENDS' SCHOOL, GERMANTOWN.

Since the opening of this School, in Ninth Month, 1855, the buildings have been enlarged and improved, for the accommodation of French children, and others who conform to the regulations of the School. The situation is pleasant and healthful, adjoining and communicating with Friends' Meeting-House premises, on Germantown avenue. The course of study embraces the usual branches of a good English Education; also, the French and Latin Languages.

**Terms for Tuition.**—From \$8 to \$20 per Session of five months, according to the ages of the pupils, and the branches taught,—French and Latin, \$8 each per Term.

Application may be made to ALFRED CORN, EZRA CORN, JOHN S. HAYES, LEWIS FERRIS, SAMUEL W. WARR, GEORGE JONES, ELLISTON P. MORRIS, or to AMY and SARAH H. ALBERTSON, at the School. Eighth mo., 1861.

N. B.—A limited number of scholars can be accommodated with board in the dwelling on the premises. Access may also be had by the Scholars to a valuable library, belonging to the Preparative Meeting.

DIED, at Burlington, N. J., Eighth mo. 24th, 1861, GEO. S. BOOTS, son of our late friend Thomas Booth, after a lingering illness which he endured with patience and courage, and with an evidence of acceptance being made departed in peace.

Postage to any part of Pennsylvania, for three months, if paid in advance, three and a-quarter cents; to any part of the United States, for three months, if paid in advance, six and a-half cents.

Selected.

Robert Barclay's Proposition XV.

(Continued from page 2.)

§ XIV. Nevertheless because some, perhaps through inadvertency, and by the force of custom and tradition, do transgress this command of Christ, I shall briefly show how much war doth contradict his precept, and how much they are inconsistent with one another; and consequently, that war is no ways lawful to such as will be the disciples of Christ. For,

First, Christ commands, That we should love our enemies; but war, on the contrary, teacheth us to hate and destroy them.

Secondly, The apostle saith, That we war not after the flesh, and that we fight not with flesh and blood; but outward war is according to the flesh, and against flesh and blood; for the shedding of blood, and destroying of the other.

Thirdly, The apostle saith, That the weapons of our warfare are not carnal, but spiritual; but the weapons of outward warfare are carnal, such as annons, muskets, spears, swords, &c., of which there is no mention in the armour described by Paul.

Fourthly, Because James testifies, That wars and trifles come from the lusts, which war in the members of carnal men; but Christians, that is, those that are truly saints, have crucified the flesh, with its affections and lusts; therefore they cannot, in such manner, be engaged by waging war.

Fifthly, Because the prophets Isaiah and Micah have expressly prophesied, That in the mountain of the house of the Lord, Christ shall judge the nations, and then they shall beat their swords into ploughshares, &c. And the ancient fathers of the first three hundred years after Christ did affirm those prophecies to be fulfilled in the Christians of their times, who were most averse from war; concerning which Justin Martyr, Tertullian, and others may be seen; which need not seem strange to any, since Philip Judeus abundantly testifies of St. Essenes, That there was none found among them that would make instruments of war. But how much more did Jesus come, that he might send his followers from fighting, and might bring them to patience and charity?

Sixthly, Because the prophet foretold, That there should none hurt nor kill in all the holy mountain

of the Lord; but outward war is appointed for killing and destroying.

Seventhly, Because Christ said, That his kingdom is not of this world, and therefore that his servants shall not fight; therefore those that fight are not his disciples nor servants.

Eighthly, Because he reproved Peter for the use of the sword saying, Put up again thy sword into its place: for all they that take the sword, shall perish with the sword. Concerning which Tertullian speaks well, lib. de Idol. How shall he fight in peace without a sword, which the Lord did take away? For although soldiers came to John, and received a form of observation; if also the centurion believed afterwards, he disarmed every soldier in disarming of Peter. Item, de Coron. Mil. asketh, Shall it be lawful to use the sword, the Lord saying, That he that useth the sword, shall perish by the sword?

Ninthly, Because the apostle admonisheth Christians, That they defend not themselves, neither revenge by rendering evil for evil; but give place unto wrath, because vengeance is the Lord's. Be not overcome of evil, but overcome evil with good. If thine enemy hunger, feed him; if he thirst, give him drink. But war throughout teacheth and enjoineth the quite contrary.

Tenthly, Because Christ calls his children to bear his cross, not to crucify or kill others; to patience, not to revenge; to truth and simplicity, not to fraudulent stratagems of war, or to play the sycophant, which John himself forbids; to fee the glory of this world, not to acquire it by warlike endeavours; therefore war is altogether contrary unto the law and Spirit of Christ.

§ XV. But they object, That it is lawful to war, because Abraham did war before the giving of the law, and the Israelites after the giving of the law.

I answer as before, 1. That Abraham offered sacrifices at that time, and circumcised the males; which nevertheless are not lawful for us under the gospel.

2. That neither defensive nor offensive war was lawful to the Israelites of their own will, or by their own counsel or conduct; but they were obliged at all times, if they would be successful, first to inquire of the oracle of God.

3. That their wars against the wicked nations were a figure of the inward war of the true Christians against their spiritual enemies, in which we overcome the devil, the world, and the flesh.

4. Something is expressly forbidden by Christ, Mat. v. 38, &c., which was granted to the Jews in their time, because of their hardness; and on the contrary, we are commanded that singular patience and exercise of love which Moses commanded not to his disciples. From whence Tertullian saith well against Marc. Christ truly teacheth a new patience, even forbidding the revenge of an injury, which was permitted by the Creator. And lib. de patientia. The law finds more than it lost, by Christ's saying, Love your enemies. And in the time of Clem. Alex. Christians were so far from wars, that he testified that they had no marks or signs of violence among them, saying, Neither are the faces of idols to be painted, to which so much as to regard

is forbidden: neither sword nor bow to them that follow peace; nor cups to them who are moderate and temperate, as Sylvius Disc. de Rev. Belg.

Secondly, They object, That defence is of natural right, and that religion destroys not nature.

I answer, Be it so; but to obey God, and commend ourselves to him in faith and patience, is not to destroy nature, but to exalt and perfect it; to wit, to elevate it from the natural to the supernatural life, by Christ living therein, and countering it, that it may do all things, and be rendered more than conqueror.

Thirdly, They object, That John did not abrogate or condemn war when the soldiers came unto him.

I answer, What then? The question is not concerning John's doctrine, but Christ's, whose disciples we are, not John's; for Christ, and not John, is that prophet whom we ought all to hear. And although Christ said, That a greater than John the baptist was not among men born of women, yet he adds, That the least in the kingdom of God is greater than he. But what was John's answer, that we may see if it can justify the soldiers of this time? For if it be narrowly observed, it will appear, that what he propotheth to soldiers doth manifestly forbid them that employment; for he commands them not to do violence to any man, nor to defraud any man; but that they be content with their wages. Consider then what he dischargeeth to soldiers, viz. Not to use violence or deceit against any; which being removed, let any tell how soldiers can war? For are not craft, violence, and injustice, three properties of war and the natural consequences of battles?

Fourthly, They object, That Cornelius, and that centurion of whom there is mention made Mat. viii. 5, were soldiers, and there is no mention that they laid down their military employments.

I answer, Neither read we that they continued in them. But it is most probable that if they continued in the doctrine of Christ, (and we read not any where of their falling from the faith,) that they did not continue in them; especially if we consider that two or three ages afterwards Christians altogether rejected war, or at least a long while after that time, if the emperor Marc. Aurel. Anton. be to be credited, who writes thus:—I prayed to my country gods; but when I was neglected by them, and observed myself pressed by the enemy, considering the fewness of my forces, I called to one, and entreated those who with us are called Christians, and I found a great number of them; and I forced them with threats, which ought not to have been, because afterwards I knew their strength and force: therefore they betook themselves neither to the use of darts nor trumpets, for they use not so to do, for the cause and name of their God, which they bear in their consciences: and this was done about an hundred and sixty years after Christ. To this add those words, which in Justin Martyr the Christians answer, *οὐδὲνα ποτε ἔχρηται*; that is, We fight not with our enemies. And moreover the answer of Martin to Julian the apostate, related by Sulpitius Severus, I am a soldier of Christ, therefore I cannot fight; which was three hundred years

after Christ. It is not therefore probable that they continued in warlike employments. How then are Vincentius Lyrinensis and the Papists consistent with their maxim, "That which always, every where, and by all was received, &c. And what becomes of the priests, with their oath, That they neither ought nor will interpret the scripture but according to the universal consent of the fathers, so called? For it is as easy to obscure the sun at mid-day, as to deny that the primitive Christians renounced all revenge and war.

And although this thing be so much known, yet it is as well known that almost all the modern sects live in the neglect and contempt of this law of Christ, and likewise oppress others, who in this agree not with them for conscience' sake towards God: even as we have suffered much in our country, because we neither could ourselves bear arms, nor send others in our place, nor give our money for the buying of drums, standards, and other military attire. And lastly, Because we could not hold our doors, windows, and shops close, for conscience' sake, upon such days as fasts and prayers were appointed, to desire a blessing upon, and success for, the arms of the kingdom or commonwealth under which we live; neither give thanks for the victories acquired by the effusion of much blood. By which forcing of the conscience, they would have constrained our brethren, living in divers kingdoms at war together, to have implored our God for contrary and contradictory things, and consequently impossible; for it is impossible that two parties fighting together, should both obtain the victory. And because we cannot concur with them in this confusion, therefore we are subject to persecution. Yea, and others, who with us do witness that the use of arms is unlawful to Christians, do look asquint upon us: but which of us two do most faithfully observe this testimony against arms? Either they, who at certain times, at the magistrate's order, do close up their shops and houses, and meet in their assembly, praying for the prosperity of their arms, or giving thanks for some victory or other, whereby they make themselves like to those that approve wars and fighting; or, who cannot do these things for the same cause of conscience, lest we should destroy by our works, what we establish in words, we shall leave to the judgment of all prudent men.

(To be continued.)

*The Power of One Good Boy.*—"When I took the school," said a teacher speaking of a certain school he once taught, "I soon saw there was one good boy in it. I saw it in his face. I saw it by many unmistakable marks. If I stepped out and came suddenly back, that boy was always studying, just as if I had been there, while a general buzz and the roguish looks of the rest showed there was mischief in the wind. I learned he was a religious boy, and a member of the church. Come what would, he would be for the right. There were two other boys who wanted to behave well, but were sometimes led astray. These two began to look up to Alfred, and I saw were much strengthened by his example. Alfred was as lovely in disposition as firm in principle. These three boys began now to create a sort of public opinion on the side of good order and the master. One boy and then another gradually sided with them. The foolish pranks of idle and wicked boys began to lose their popularity. They did not win the laugh which they used to. A general obedience and attention to study prevailed. At last the public opinion of the school was fairly revolutionized; from being a school of ill-name, it became one of the best behaved schools any where about, and it was that

boy Alfred who had the largest share in making the change. Only four or five boys held out, and these were finally expelled. Yes," said the teacher, "it is in the power of one right-minded boy to do that. He stuck to his principles like a man, and they stuck to him and made a strong and splendid fellow of him.

#### Musings and Memories.

##### HUMAN DETERMINATIONS UNSTABLE.

When Timour Beg, often called Tamerlane, or Timur the Tartar, was about eighteen years of age, it is recorded that he went through some severe struggles of mind, on account of the sins of his earlier youth. It is probable that the convictions which then came upon him, were dispensed by Infinite Mercy, for his everlasting good, and that if he had continued obedient to the light then unfolded, he might have been a benefactor instead of a scourge of the human family. As it was, a great change for the better came over him. His habits of thought and of action were altered. He made profession of repentance for the follies and the wickedness of his past life, as a debt of duty he abstained from playing at chess, to which he had been greatly addicted, and in view of the kindness which he deemed the due of every living creature from man, he made a vow that he would never wilfully injure any one of them. So tender, indeed, was at that time his feelings for the comfort of the smallest created object, endowed with life and sensation, that he was greatly grieved on finding that he had inadvertently set his foot upon an antmet, extinguishing life, causing, at least, momentary suffering, and preventing whatever future amount of pleasure that insect might otherwise have enjoyed. It is recorded that through the shock his mind endured from having been on the occasion of this accidental destruction of life, a vigorous debility affected the foot which had crushed the animal, and he felt for a time as though it had lost all muscular power. Such was Timour, under the influence, without doubt, of some holy influences; yet filled with fanaticism, engendered by a false religious faith, tending to exaggeration in feeling and hypocrisy in profession. Time past on. This man, so deeply affected at the destruction of an ant, under the reachings of ambition, learned to turn a deaf ear to the cry of suffering humanity, to gaze unmoved at the massacre of thousands, and in his bloody career as a conqueror, to leave as famous a name as a destroyer of his fellow creatures as any one with whose career of conquering wickedness, history has made us acquainted. Ambition prompted him to the destruction of kindred, and led him on to aggressive war; success increased his delight in the fierce carnage of the battle-field, whilst he conjured up pretended principles of justice, to soothe his own conscience, to enable him to stifle its convictions, and to offer some sort of a plea by which he hoped to obtain a favourable verdict from those who should undertake to judge of his actions. The principles he avowed, and under which he sought to screen his own course of rapine and blood, were to this effect. First, "from regard to justice, a prince should assault every kingdom wherein tyranny, oppression and iniquity predominated, and extirpate the authors of these national calamities," and again, "It is the duty of a victorious king to bring under his authority every kingdom where the people are oppressed by their rulers."

Had any one told Timour in the period of his tender-hearted feeling for the lower animals, that he would one day without hesitation, in cold blood, order the destruction of myriads of his fellow men

with multitudes of helpless women and children, slaying some with the sword, burning others in the dwellings wherein they had witnessed the pleasures and comforts of domestic life, he would have felt, probably, as Hazael did, when on being told of the enormities he should commit as a conquering prince, he exclaimed, "Is thy servant a dog, that he should do this great thing." No one knows when he departs from the convictions of truth, to what degree of wickedness he may debase himself. No one can tell when he stifles the pleadings of mercy in his bosom in even so small a degree, be it under whatever plea it may, how far the one act of inhumanity, may open the way for others. Little by little, does the heart become hardened, little by little do mankind in a general way, lose the tenderness and innocency of youth. We should turn from sin in every shape; yea, the apostle exhorts to avoid even the appearance of evil. Thus only shall we, can we, be preserved from participating in wickedness.

Leslie, the noted English artist, would not look at pictures painted with bad taste, lest inadvertently his pencil should, as he expressed it, take a hint from them, or in other words, lest his own style of painting should be debased. It is well for Christians to feel a great jealousy over themselves, lest dwelling on the evil actions going on around them, they become more or less leavened into the prevailing spirit actuating the many to wrong. Let, in other words, they in their actions show that they have "taken a hint" from sin, instead of keeping to the soul-preserving instructions of grace. At this time, the spirit of war is strongly actuating the community around us. If we do not watch over our spirits with great care, if we do not seek for preserving grace from the only fountain thereof, we shall be almost certain to "take a hint" from the actions, the conversation, the all-prevailing war-tone of our neighbours, and shall find ourselves losing ground as respects a faithful support in our thoughts and feelings of the spirit of the gospel, the spirit that breathes and craves nothing but peace and good will to all men.

*Decline of Heathenism in India.*—A Baptist missionary in Orissa, gives the following statement in regard to the great idolatrous festival in that part of India: "You may remember my mentioning, when at home, that the last time I attended the Juggernath festival the ear was abandoned by the people and left on the road. A few days ago I went to the same spot, and expected to see two ears, and was told that one is too old, and worn regard to the other, it was said the proprietor could not afford the usual fee to the Brahmins. But this is all a blind. The truth is, that the people have grown too wise to make beasts of themselves by dragging the ear; and thus I have lived to see an end to the swinging and Juggernath feasts in the one and same place; and singular enough, there were no images of Juggernath offered for sale. Formerly there were."

*The Daily Struggle.*—"If we keep not God's grace that he giveth us,—if we do not continually and daily reform ourselves, and with all diligence fashion our lives after His life, it is but right that we lose again that which we have received. But if we abide in him through faith, then hard and unprofitable things are light and possible to us for in Him that strengtheneth us, we may do all things.

He that ceases to be useful to others, becomes a burden to himself.

Religious characters, like the sun when sunk below the horizon, still shed a light upon the world

## Letter of John Barclay.

The examination of religious tracts proposed to be printed, is a weighty service. If it were only to judge of words, the consistency of the sense and meaning with the principles which we profess, this would be easy and could be compassed by the spirit of a man: "but the things of God knoweth no man, but the Spirit of God;" so that man's spirit is unequal to it, but must be in subjection, with all the vain reasonings which he can muster up and contrive by the natural powers of his understanding, or by his acquired learning and erudition; and he must wait to feel that raised up in him, which is able rightly to discern and comprehend the precious, and to distinguish it from the vile. I believe a time may come, when the writings of many of our early members, who shone bright in their generation, may again rise into repute among us, and also among others; notwithstanding the unfashionable garb in which many of these writings are clothed, so unsuitable (apparently) for these times.

So that we would like to see the avowals kept open, and the channel clear, and the conduits clean; that whatever is to flow in the ordering of best Wisdom, may flow freely. As to what thou sayest of the fear of some, about the style of our early Friends' writings, I think this fear is a weakness, and proceeds from a sort of doubting in the mind about the writings themselves, and not merely about the language. I would ask these fearful ones, whether in reading a peculiarly interesting history on travel, the subject of it does not carry them above the style, so that almost any style, however prosy and dull, is overlooked; and this is the case I should more strongly with the humble seeking soul in religious matters, by whom the words are overlooked in the earnest desires after the substance. Those who are admirers of words, whether they be words printed or words preached, are very unlikely to be benefited really and truly by either, having gone from that which is beyond words, and which alone can make words effectual.

5th mo. 22d, 1819.

**Trials.**—Trials are very many and very great, if the thought of our hearts is to be believed. Unfortunately, we shun trials which are least ruinous to piety, and seek to be subjects of those most dangerous. Under trials which are little and safe we complain; and strange as it may seem, we complain if not made subjects of trials great and perilous. For, obviously, there is a great mistake, or perhaps a willing forgetfulness in regard to the nature and effect of trials. Contrary to the general opinion, poverty, having one's name cast out as evil, sickness, and such like afflictions, are the least of this world's trials.

We are often told that the age of stern Christian life has passed, and with it the resulting high type of Christian life. Not so. The trials of this age are different from those of fiercer ages, but who shall say they are less? "Peace has her victories greater than war." Martydoms are endured in garrets as well as at the stake, and display all the more Christian grace as they are concealed and protracted, and their subjects more sensitive. Many a man would rush along the Bridge of Lodi who would quail before the sneer of his comrades.

The allotments of honour and wealth are more powerful, the opportunities far more general, than when the early disciples renounced them for Christ. The allotments and opportunities were almost nothing then, almost every thing now.

It requires far less affection to leap overboard for your wife, than it does to anticipate her wants, relieve her of care, and make joyous her daily life. It requires more grace to live for Christ than to

die for him. Years of self-denial, without the spur of any great occasion, show more Christian grace than one great act wrought in the eye of the world. It has been the habit of men to sneer at this age and country as being mercenary and cowardly. But when or where did occasion ever call forth means and men of worth so quickly? The sneer is answered, but no better answered than daily fact replies to the regretful or cynical complainer against the Church of these Christian times.—*Meth.*

From "The Family Treasury."

## Wanderings over Bible Lands and Seas.

SOLOMON'S GARDENS, HEBRON, AND BETHLEHEM.  
(Continued from page 6.)

Our next expedition was to the Cave of Adullam, as our guides called it, I suppose incorrectly, since the refuge of David and his outlawed band is considered to have been more probably situated in one of the valleys opening on the rich maritime plains of the Philistines, on whom they made their forays. This mattered little to us—it was doubtless *such* a cave. During that exiled and outlawed period of his life, when David, like so many of whom the world was not worthy, "wandered in deserts and mountains, and in dens and caves of the earth," he had recourse to more than one such hiding-place, and why not to this?

In itself this cave was remarkable, not indeed wrought by stalactite and stalagmite into fairy likenesses of cathedral, palace, or grove, like some of the caves in our own limestone formations, but interesting, nevertheless, from its situation and its size. Its only opening is into a narrow, deep, dry ravine. Its only approach is down a steep mountain-path to a ledge of rock, over which you have to creep on hands and knees, one at a time, round a projecting crag into the cavern. This jutting rock, which effectually screens the entrance, once passed, the opening is large enough to admit abundance of light and air, and introduces you at once into a wide and lofty hall, with a vaulted or dome-shaped roof, the top of which was only lighted up at angles here and there by the daylight, or further in by our torches. This led into other chambers, and into one passage which we did not penetrate. A more secure hiding-place could scarcely be imagined. The entrance even could not be reached to smoke its tenants out, and except that, no mode of attack, but blockade, could affect them. The opening was about half-way up the perpendicular sides of the ravine. Wild birds flew uneasily about the crags, disturbed by our presence. The deep, narrow glen lay in shade even in that burning mid-day, and suggested forcibly by its lifeless stillness and darkness, in contrast with the valley of still waters and green pastures we had just passed, the other valley mentioned in the same psalm—the sunless, waterless ravine of the shadow of death.

There was something most interesting in this, as it were, approaching the Psalms from the *other side*. Usually the thoughts are present with us, and we illustrate them with David's images. Spiritual life and refreshment—the sure guardianship of our God—his presence lighting us at that hour when all other lights go out,—these are facts familiar to us, and we clothe them in the imagery of stream, and meadow, and dark ravine. But with David, probably, this was often reversed; *he saw* the still waters, the cavern "hiding-place," the commanding "fortress," the gloomy valley, and he linked these to the realities of the unseen world. Looking at his flocks peacefully feeding under his shepherd care, he thought with happy confidence, "The Lord is my Shepherd. I will traverse

bill and valley before these trusting flocks should lack pasture, and will lie suffer me to want?" Or, watchfully leading them through such a desert ravine as this—one of those "desert-creeks" through which Bedouin marauders might invade the peaceful land—without a tuft of herbage or a drop of water to sustain the wearied sheep, gathering the lambs in his arms, bearing the sickly on his shoulder, guarding them and guiding them with his rod and staff, he might feel: "And I also, though I have to pass through a ravine darker and more desolate than this, will fear no evil. These sheep fearlessly follow me here, and I will fearlessly follow thee, my Shepherd; for even there thou shalt be with me. My rod and staff lead and protect them.—*Thy rod* and *thy staff*, they comfort *me*." Or, in after years, looking from his mountain stronghold, or hiding in such a cave as this, he thought, "Not these stone walls and this rocky height, or this inaccessible cavern, are my true security. The Lord is my rock and my fortress, my high tower, my refuge, and my hiding-place."

It is difficult to describe the freshness and beauty which those precious, familiar psalms acquire by being thus visibly approached from the side of the scenery which suggested their imagery.

After leaving "Adullam," or whatever this interesting cave should be called, the next feature of importance in our day's journey was the ascent of the "Frank Mountain." This is a conical hill with a square, level summit, higher than the hills around, of a peculiar shape among their usual unvaried rounded forms, and commanding a fine view. There are ruins on it, and the mere fact of its having an outline of some character amidst these monotonous heights, is said to have gained it the honour assigned it of being the last fortress held by the crusading Franks in the Holy Land.

Our last point was Bethlehem, to which, on account of the length of the day's journey and the approaching darkness, our visit was rather hurried.

We lingered a little time by the Well of Bethlehem, waiting for some of our party. But, precious as the hours were to us, we could hardly call this time lost, we were so much interested in watching several of the Bethlehem maidens who were drawing water. Their manners and appearance were so different from most of the peasantry of the country; their bearing was so modest, and yet so frank and trustful; and their movements and figures were so graceful, as they sat on the edge of the well, or helped each other to draw up the heavy pithers, in their white classical robes, with their head-dresses of gold coins; and their unveiled faces had such a noble beauty, a Greek regularity of feature, combined with such dignity of expression.

I cannot say the refreshment it was to see women once more whose ideas of modesty and good manners consisted in something else than in hiding their faces, and covering like frightened animals when spoken to. These Bethlehem Christian women are, we were afterwards told, renowned for their beauty and for their good character. They are said to be descendants of the crusaders. The Europeans of Jerusalem engage them, whenever they can, as upper servants. There was something indescribably touching to me in finding this little knot of free, noble-looking women at the birth-place of Him to whom the women of Christendom owe, in every sense, everything which ennobles and blesses them for eternity and for time.

The water they so courteously drew for us was the water of "the well hard by the gate," which David longed for, but would not drink, as the purchase of the blood of his faithful soldiers—the well to which he had doubtless often repaired when feeding those "few sheep" in the upland pastures

near. As we left Bethlehem one of the women we had met at the well, and given some piastres in acknowledgment of a draught of water, rushed out of a house as we rode by, and took my hand and kissed it fervently. I wonder if that little gift had come at some moment of need, and so awakened that burst of gratitude. It seemed to give one a link with a home at Bethlehem.

Our best views of the town were as we left it, and looked back on it from the hill, the long crest of which its white walls and houses crown—a brown, bare hill, like the thousand others near, but terraced into vineyards by the Christian population, and looking down on a valley “standing thick with corn,” whilst beyond are the pastures of the wilderness where David kept his sheep, and guarded them from the lions and bears which roamed over from the Jordan Valley, and beyond and above again, as always here, the purple mountain wall of Moab. Cornfields where Ruth gleaned, hills where the boy David kept his sheep; but to us how infinitely more than this,—hills where shepherds once kept watch over their flocks, by night—where the glory of the Lord shone round them through the midnight—where the voices of a great multitude of the heavenly host sang, “Glory to God in the highest”—where the Lord of angels, higher than heaven, once lay, a babe wrapped in swaddling-clothes, cradled in a manger. “For unto us was born that day in the city of David a Saviour, which is Christ the Lord.”

I have often since thought it was unwise, but then and there our hearts revolted from the beads, and relics, and even the Church of the Nativity, with its candles, and silver shrines, and marble floors. Cannot any one see it any day at a diorama in London? At all events, we did not visit it. I know that the subsequent historical interest of that church is great—that it was one of the earliest sanctuaries of Christendom—that Jerome, the fervent, stern, rugged father, lived there in a cave for years. But I cannot, on the whole, regret that our unmixt associations with Bethlehem were of frank and noble-looking Christian women drawing water for us from David's well; of a white town creating a hill where shepherds feed the flocks, and at whose foot rest golden corn-fields, and where all subsequent historical events are merged in the one event which began all Christian history—that He to whom every knee in heaven and earth shall bow once lay there, a babe, on a poor Galilean woman's breast.

We returned to Jerusalem by the Hill of Evil Counsel, with its one solitary tree, passing in an hour or two from the mountain village where we know the Saviour was born to the desolate fields where it is said the traitor died.

Once more, and for the last time, we returned to Jerusalem as our home, and felt how even the most interesting and sacred minor associations of this wonderful land are dim and distant compared with the thoughts which gather round every minutest touch and incident of that one life and death which are to us, in the midst of all the darkness of earth and time, light and life, wisdom and redemption, the opening of heaven, and the manifestation of God.

Our service to God must not be merely in outward works and religious performances, it must be something by which we become like to God; the divine prerogative must extend beyond the outward man; nay, even beyond the mortification of corporeal vices; the Spirit of God must enter in, and mollify all our secret pride, and create in us true humility, christian meekness of spirit, and a divine charity.

### The Solace.

“God is our refuge and strength, a very present help in trouble.”—Palm xlvi. 1.

God is whatever his people needs, and whatever he is, he is to them. Are they in danger? He is their refuge. Here they are safe from the avenger of blood, the justice of God, and the threatenings of a violated law. Are they weak? He is their strength. He will strengthen them for conflict with the foe, strengthen them while in the engagement, and bring them off more than conquerors. Are they in trouble? He is a help, a very present help, in trouble. He will help them to bear trouble. He will help them to improve trouble. He will help them out of trouble. He will deliver them in six troubles, and in seven shall no evil touch them. Christian, in every danger run to thy God. His arms are open to receive thee. His heart is a refuge for thee. He will screen thee. He will shelter thee. He will defend thee. He will be thy protection in adversity and prosperity, in life and death. In all thy weakness go to him for strength; in all thy infirmities, repair to him for grace. He is the strength of the poor, and the strength of the needy in his distress. He has strengthened thousands of poor feeble ones, and he will strengthen thee. In all thy troubles go to him for solace and succor. He will help thee. Hear his own precious words, addressed to his people when in deep trouble and distress: “Fear thou not, for I am with thee; be not dismayed, for I am thy God: I will strengthen thee; yea, I will help thee: yea, I will uphold thee with the right hand of my righteousness.” He is thy shield in danger, and thy very present help in trouble. He is always at hand, always ready to help, always willing to bless thee.

“Let us therefore come boldly unto the throne of grace, that we may obtain mercy, and find grace to help in time of need.”—Hebrews iv. 16.

*Presbyterianian.*

Every affliction has an errand, and is sent to accomplish some special purpose.

### STANZAS.

Thought is deeper than all speech,  
Feeling deeper than all thought;  
Souls to souls can never teach  
What unto themselves was taught.

We are spirits clad in veils;  
Man by man was never seen;  
All our deep communion falls  
To remove the shadowy screen.

Heart to heart was never known;  
Mind with mind did never meet;  
We are columns left alone,  
Of a temple once complete.

Like the stars that gem the sky,  
Far apart though seeming near,  
In our light we scattered lie;  
All is thus but starlight here.

What is social company  
But a babbling vapoury stream?  
What our wise philosophy  
But the glancing of a dream?

Only when the sun of love  
Melts the scattered stars of thought,  
Only when we live above  
What the dim-eyed world hath taught,

Only when our souls are fed  
By the fount which gave them birth,  
And by inspiration led  
Which they never drew from earth,

We, like parted drops of rain,  
Swelling till they meet and run,  
Shall be all absorbed again,  
Melting, flowing into one.

Selected.

### THE GUEST.

“Behold, I stand at the door, and knock: if any man hear my voice, and open the door, I will come in to him, and will sup with him, and he will with me.”—Rev. 3: 20.

Speechless Sorrow sat with me;  
I was sighing wearily!  
Lamp and fire were out; the rain  
Wildly beat the window-pane.  
In the dark we heard a knock,  
And a hand was on the lock;  
One in waiting spoke to me,  
Saying sweetly:  
“I am come to sup with thee!”

All my room was dark and damp;  
“Sorrow,” said I, “trim the lamp;  
Light the fire, and cheer thy face;  
Set the guest-chair in its place.”  
And again I heard the knock:  
“In the dark I found the lock—  
“Enter, I have turned the key!  
“Enter, stranger,  
Who art come to sup with me!”

Opening wide the door, he came;  
But I could not speak his name;  
In the guest-chair took his place,  
But I could not see his face;  
When my cheerful fire was beaming,  
When my little lamp was gleaming,  
And the feast was spread for three,  
Lo! my Master,

Was the guest that supped with me!  
*Harriet M. Ewen Kimball.*

For “The Friend.”

### COAL AND DIAMOND.

The coal that warms our home and hearth,  
And drives the steam car on its way,  
So plain and useful,—rich in worth,—  
So poor and meagre in display,  
Is the same substance as the gem,  
The diamond,—brightest jewel found,  
Of any in the diadem.  
Of richest monarch ever crowned,  
The same in substance, yet we see,  
One formed for use, and one for show;  
Oh! may I like the dull coal be,  
A useful worker here below,  
Not formed to dazzle or to shine,  
I ask no jewel's bright supplies;  
To cheer the hearth and home be mine,  
By doing good in humble guise.

N.

### Report on the Indians.

*To the Yearly Meeting.*—The committee for the civilization and improvement of the Indians, report,—

That during the past year, the Boarding School at Tunnessassah has been well sustained, and appears to be answering the purpose for which it was established. The number of scholars is twenty; of whom fifteen are girls. Their conduct and improvement have been generally satisfactory. An increasing interest on the subject of education is evinced among the Indians, and our school is viewed favourably by them; application being made for the admission of thirteen more pupils than can be accommodated.

Meetings for divine worship are regularly held on First and Fifth days, “in which, say the Friends, in their report, we may acknowledge that we have been favoured with a little renewal of strength;” and the family have been preserved in much harmony.

A young Indian woman, who has had part of her education at our school, and who has since been employed in teaching, being desirous of further improvement, has returned to the Institution at Tunnessassah, and under date of Third month 8th, 1861, writes thus, to one of the committee, viz: “I am now at the Friends' Boarding School, and have been the last two weeks. I am trying to improve my time in a way that will be a bene-

*Crunch.*

it to others as well as to myself. My heart is full of thanks to you, who have granted my desires. I cannot be too thankful for receiving such privileges as you are bestowing upon us; and I shall wake to know by improving my time as I should. I have received those valuable books you sent me—they are very good books, far beyond my expectation. A person would know something to understand all their contents. I have only three studies; Arithmetic, Grammar, and Physiology. Our teacher thought it best for me to take only a few studies at first, until I should get more used to it; then take a few more. I like the school very much; I could not have a better place than this. The children, too, all seem to be very contented."

In our last report it was stated that, owing to a partial failure of the crops of the previous year, the natives were likely to be without seed for planting and sowing. The committee thought it right to furnish a supply, and two of their number having kindly offered to attend to the purchase and distribution of it, they repaired to the Reservation, made a personal inspection into the wants of the different families, and divided among them 377 bushels of corn and oats; and 435 bushels of potatoes, at a cost of about \$387, which appeared to afford timely and substantial relief to many, who would otherwise have suffered greatly.

The Indians are reported to be about as comfortably situated, this spring, as is usual for them to be; and there is some improvement manifested among them, in avoiding the use of intoxicating drink, and in some other respects.

The decision of the Board of Property, in relation to part of the land belonging to the heirs of Corplanter, not having been appealed from by those who unjustly claimed it; and the time allowed for such appeal having elapsed, we hope the Indian title to the last remnant of the soil held by them in Pennsylvania, is now secured.

The treasurer's account shows that he has received \$1498.60 income, which, with \$793.55, balance from last year, makes \$2292.45; and he has expended, for maintenance of the family, salaries, and wages, books, stationery, &c., \$1887.83; leaving a balance, Third month 14th last, of \$404.62; all of which will be required to meet claims not yet presented. The securities bearing interest, amount to \$15,700.

The committee deem the present a suitable opportunity to spread the information, that a man and a woman Friend are wanted, to aid in conducting the Boarding School; and they will be pleased to receive early application from such as may feel inclined to engage in this work of christian benevolence.

Signed on behalf and by direction of the committee,

THOMAS EVANS, Clerk.

Phila., Fourth mo. 11th, 1861.

*The Grace of Silence.*—Some invalids find their chief consolation in relating to others a doleful history of their sufferings. Their friends are daily invited to this unwelcome banquet, and grow weary of the oft-told tale, and lose sympathy even for the sufferer. How much nobler and more Christian is silence in regard to our own sufferings, as exemplified in the following sketch, by Dr. Arnold, of his sister, who for twenty years suffered from a painful disease of the spine.

"I must conclude with a more delightful subject—my most dear, and blessed sister. I never saw a more perfect instance of the spirit of power, of love, and of a sound mind; intense love almost to the annihilation of selfishness—a daily martyrdom for twenty years, during which she adhered to her

early-formed resolution of never talking about herself; thoughtful about the very pins and ribbons of my wife's dress, about the making of a doll's cap for a child—but of herself, save only as regarded her ripening to all goodness, wholly thoughtless, enjoying everything lovely, graceful, beautiful, high-minded, whether in God's work or man's, with the keenest relish; inheriting the earth to the fullness of the promise, though never leaving her crib, nor changing her posture; and preserved, through the very valley of the shadow of death, from all fear or impatience, or from every cloud of impaired reason, which might mar the beauty of Christ's Spirit's glorious work. May God grant that I might come within one hundred degrees of her place in glory!"

For "The Friend."

#### Excellency of True Spiritual Poverty.

The following extract, with the brief letter annexed, appears to have been sent to Susanna Hutton, (afterwards Lightfoot,) by Samuel Neale, whilst she was on a religious visit in England.

"Mary Peaseley, (afterwards Neale,) of Ireland was favoured with this manifestation as she rode from Asquith to Knaresborough, in Yorkshire.

"Having been long under deep baptism, and poverty of spirit, as I quietly rode along, the Lord in mercy was pleased to break in upon my mind by his living presence and power, and it became the language of my soul, speak, Lord, and thy servant will hear. After this many things were Divinely opened to me, whereas I greatly rejoiced, and was thankful to the Lord my God. Then found I, a sudden but gentle rebuke, and as it were, a voice said in the secret of my soul, 'the dispensations thou most delightest in, are least pleasing to me, and are not so beneficial to thy soul, as that pure poverty of spirit, brokenness of heart, contrition, and humility of mind, that have (of late) attended thee. The reason this [state] is so little desired, and is so unpartisan to the creature is, because it can have no part in it; being wholly and entirely excluded and set at naught, it can discover no beauty or excellency in it. The reason I love the offerings of a broken heart and a contrite spirit, is, that it is most pure and without mixture of the creature. Whether there be prophecy, Divine openings, revelations, joying and rejoicing in the Holy Ghost, gifts of healing, tongues of utterance, in all these self can rejoice and have a share, because these are obvious and bring honour.' Then said I, 'Lord, dispense to me what is well pleasing to thee, and be it for me so long as my weak faith and patience can endure it, but when I am ready to faint, then give me a little of the wine well refined on the lees, that my soul may rejoice in thee, the God of my salvation.'

"Dear friend, the above I extracted sometime since, intending to send it to thee, which I have prevented from doing by one occurrence or other until now. If it contributes to yield thee any satisfaction, my end in sending it will be answered. Please to remember me to John Haslam, when opportunity serves, and also to his daughter. I should be pleased to hear how poor William Longmire is, I sympathize with him and his poor wife. My love present to them; likewise, in thy freedom, to any other honest traveller, thou thinks it would be acceptable to.

"I am thy well wishing friend in the best friendship.

"SAMUEL NEALE."

The less notice we take of unkindness and injuries that are done us, the more we consult the quiet of our minds.

#### West-town Boarding School.

To the Yearly Meeting.—The committee who have charge of the Boarding School at West-town, report,—

"That during the winter session of 1859-60, there were 177 pupils, viz: 106 boys and 71 girls; of this number, 32 boys and 19 girls were new admissions. During the summer session there were 138, viz: 62 boys and 76 girls, of whom 15 boys and 23 girls were new scholars. The whole number admitted for the year was 59, viz: 51 boys and 38 girls; and the average number for the same period was 157, viz: 84 boys and 73 girls, which is 11 less than the number the preceding year. The annual average for the past ten years appears to have been 193. The disbursements for family expenses for the year ending Tenth month 16th, 1860, were \$8774.94; for salaries and wages, \$9647.34; for incidents, \$363.81; for repairs and improvements, \$874.30; making a total of \$19,660.39. The charges for board and tuition were \$13,515.83; for rents of tenements, saw and grist-mills, and profits on merchandise, \$652.05; income of fund for general purposes, \$3371.51; income of fund for paying salaries of teachers, \$866.12; and net income from the farm, \$841.78; making together \$19,247.29, and showing an excess of expenditure of \$413.10. Adding to this the excess reported last year, \$448.82, makes \$861.92; deducting from this sum the amount annually appropriated by the Yearly Meeting, \$800, there remains a deficiency of \$61.92.

The average annual cost of each pupil for the year 1860, has been over \$125, or \$35 more than the charge made for board and tuition.

The usual visits to the school by sub-committees appointed for the purpose, have been regularly made. During the past year, the health of the family has been good, with but little exception; and the order of the household satisfactory. The department of the children, both in and out of school, and their progress in study, has been, for the most part, commendable.

The number of teachers has been unchanged since last year; there are six on the male, and five on the female side of the house. Instruction has been given in the elementary and higher branches of English, including Algebra and Mathematics; also in the Latin and Greek languages. In the primary school on the boys' side, there have been 20 pupils, and on the girls' side, 17 pupils: 71 boys and 60 girls have received instruction in Mathematics, and some of the more advanced studies embraced in the department of English education: 35 boys have pursued the study of Latin, and six boys have made creditable progress in Greek. During the winter, 16 lectures have been delivered; they were attended by all the pupils. The subjects were Chemistry and Natural Philosophy, illustrated by experiments. The usual attention has been given to the recitation of portions of the Holy Scriptures, Barclay's Catechism and Jevan's View. And frequent opportunities have been embraced, when the children have been assembled together, to read to them selections from the Bible, and various religious books.

The library is supplied with a considerable collection of agreeable and instructive works, including many especially suitable for young people; likewise a number of excellent books of reference, adapted to the purposes of teachers: it is an attractive and useful appendage to the Institution. Meetings for divine worship, on the first and fifth days of the week, have been regularly, and we believe, profitably held.

The committee, after much deliberation, have adopted a systematic course of instruction, which

they hope may prove advantageous to the pupils; and be a means of inducing some of them to prolong the period of their studies at the school. This system is two-fold, embracing a classical course, and an English course; either of which may be pursued independently of the other. The former is designed to supply a want long felt by those Friends who wish their children to receive instruction in the higher branches, so as to complete their education at the school; while the English course will embrace methodical instruction in some departments of natural science, combined with the usual branches of an English education, for those children whose parents may not wish them to acquire a knowledge of the ancient languages. In framing this system, the committee have endeavoured to secure careful and thorough instruction in the more elementary branches of knowledge, and to bear in mind the paramount importance of the great object, for which our predecessors founded this school, viz., the guarded and religious education of the youth. They have also made some change in the mode of conducting the periodical examinations, whereby a more frequent attendance of the visiting committee will be required. It is designed to conduct these examinations in a more private manner than heretofore; and to substitute in the higher classes, to a certain extent, written, for oral questions, the answers to which are to be written from memory only. It is hoped that by these methods, some of the inconveniences and disadvantages hitherto experienced from the want of a regular system of instruction, may be avoided, and a more accurate test of the proficiency of the pupils be attained.

Owing to the calendar year not being accurately divisible into weeks, an irregularity occasionally takes place in the length of the school terms. Thus, the next winter session will commence on the 4th of Eleventh month, and the following summer session of 1862, on the 12th of Fifth month; this, deducting four weeks for vacation, will leave 23 weeks for that winter session; this circumstance recurs once in about six years; and it has been concluded, that whenever it shall so recur, the additional week be thrown into the ensuing vacation, so that the length of each session shall be uniformly 23 weeks.

We desire again to impress upon parents and others who may send children to this school, the importance of adhering, in the outfit of their children, to the testimony of our religious society, in relation to plainness and simplicity of apparel, as well as to the printed directions, which are furnished on this and other subjects. The want of due attention thereto, adds materially to the labour of the care-takers, and committee, and is often a cause of difficulty and dissatisfaction to the pupils.

Believing that the management of this seminary, in a manner consistent with our religious profession, is intimately connected with the best welfare of the children placed therein, the committee are desirous that all who participate in its management, may more and more be imbued with religious concern to promote the important objects of its establishment. By the divine blessing upon the faithful persevering labours of these, with the cordial co-operation of parents and others, we may hope for its continuing to confer lasting benefits upon the rising generation.

It being the usual time for making a new appointment, the subject is mentioned for the consideration of the Yearly Meeting.

Signed on behalf and by direction of the committee,

JOEL EVANS, Clerk.

Philadelphia, Fourth month 5th, 1861.

### Discovery of Basaltic Columns.

A NEW GIANT'S CAUSEWAY.

The *Tuolumne* (California) *Courier* thus describes a natural curiosity, lately discovered in its neighbourhood:

A very great excitement among our miners has been caused by a singular discovery, made by Messrs. Cochrane, Russel and Lambert, on their claim at Dry Arroyo, about a quarter of a mile from Sonora. These gentlemen, while hydraulicizing a stream bank, about 70 feet in height, were suddenly surprised by the coming down of an immense amount of gravel, limestone boulders, and lava, which revealed beyond, in the heart of a high hill, some hundreds of basaltic columns of a dull brown colour, pentagonal in shape, and standing perpendicular, from 10 to 21 feet high. The open space between these pillars no where exceeds 4 or 5 inches, and rows of them run into the hill from 30 to 50 feet, closely packed together.

In some places, at certain angles, it is possible to see beyond this singular colonnade into an opening formed apparently of quartz rock, which is certainly exceedingly rich in gold; for even at that distance from the observer, in a kind of dim twilight, strong indications of the metal are distinctly visible. Rays of light seem to penetrate into this opening through fissures in the roof, sides, or from the rear, although the most diligent search of hundreds has not as yet led to the discovery of any of them, or of any other avenue through which light could enter.

The hill is thickly covered with chapparel, which makes the search difficult and unsatisfactory. The well-known geologist of Columbia has been to the spot, and examined the place with great attention. He reports that the columns are exceedingly hard, unusually regular in shape, and closely packed together; that their igneous origin is very apparent; and that on examination he found augite, feldspar, titanite iron, and olivin, in their composition. He is certain that this is the only instance that so perfect a basaltic development of rock has been found in California—although he has seen as good a development in the West Indies, and he considers it, among all the geological discoveries in this country, as by far the greatest and the most worthy of scientific observation. These wonderful natural pillars, interspersed here and there with immense stalactites, indicating a calcareous formation also, and the singular ornithological specimen which he had the pleasure to examine recently on Kennebec Hill, he considers, beyond all dispute, the greatest curiosities ever observed in Tuolumne county.

But in the quartzose walls of the grotto-like space behind these columns is gold, without a doubt, and that in no small quantities. It seems a Hercules task to tear away, even with the aid of repeated powder blastings, some 40 or 50 feet of this exceedingly hard rock, and the company will probably sink a shaft from above down about 60 feet of gneiss, unless they can discover the fissures through which the light now finds its way into the interior of the cavern. It is possible the quartz excavated in sinking this shaft may begin to pay some few feet below the surface.—Cochrane, who is an old quartz miner, is decidedly of opinion that this will be the case. As might be expected, the whole hill, and one or two adjoining, are staked off in claims, and excitement and speculation reigns supreme in Columbia, in Sonora, and in all the surrounding camps.

Be not fond of thyself, and thou wilt not carry take up an ill-will against others.

For "The Friend."

### An Interesting Epistle.

A copy of the following epistle was forwarded to us by an esteemed Friend some time since, and being laid by for future use, was for some time overlooked. It was written during the time of the American Revolutionary war, and it seems appropriate now to give it publication, as a season of trial is upon the church and upon our land, a great perhaps in many respects, as that which was upon them when this epistle was written.

The allusion to the "solemn silent service" Thomas Gawthrop, when on his last visit to this land, is peculiarly seasonable. Oh, how much good might be effected in the church Militant, if every minister, whether travelling abroad, or attending meetings at home, would dwell in that which alone can give ability in secret exercise of spirit before the Lord, to have "solemn silent service" in the assemblies of his people.

"From the Yearly Meeting of women Friends held in London by adjournment, from the 19th to the 22nd of the 5th mo. 1777, to the ensuing Yearly Meeting of women Friends to be held at Philadelphia, for Pennsylvania and New Jersey.

"Dear Friends, in an especial manner such as have been permitted in the unerring counsel of Divine Wisdom, to be renewedly baptized into suffering, we would in a degree of the fellowship of the gospel, affectionately salute you. We desire you may, by the invincible power of the Highest, be enabled to gird up the loins of your minds and hope to the end, remembering these encouraging expressions of a tried minister of the gospel in early times, though our outward man perish, the inward man is renewed day by day. For our light affliction which is but for a moment, worketh for us a far more exceeding and eternal weight of glory.' Keep this in view, dear Friends, and labour 'to trust in the Lord at all times.' Some of you, we believe, have known him to be 'as the shadow of a great rock in a weary land.' We trust there are among you and us, those who having been measurably faithful, according to their gifts, can say, He remains the same yesterday to-day, and forever, to his dependent children.

"Having been engaged in addressing a tried baptized number, we now tenderly entreat such among you who have been at ease in Zion, to call to mind the many favours which you have, in time past, been made partakers of, immediately from the Father of mercies, and instrumentally through his favoured faithful servants. Consider how far you have profited by each dispensation, which, in the wisdom of Providence may have been permitted. Time passes swiftly on,—days are dangerous,—neglect not therefore, the gift that is in you. Despire not the faithful and affectionate labours of those, who 'for Zion's sake cannot hold their peace,' and who are, and have been, as watchmen, or faithful warners upon your walls, and who have declared unto you that which they have heard of the Lord of Hosts, the God of Israel.

"We are persuaded that it is a time of deep trial, and some of our spirits have nearly sympathized with you. If it be the Lord's good pleasure to separate the precious from the vile by these proving dispensations, Oh! frustrate not his glorious purpose. May the aged among you be helped to repose the time;—the middle-aged, who may be strong for labour, and measurably baptized for service, be willing to submit to the will of their great Master, who in his wisdom requires nothing but that which he will give ability to perform;—and the youth be prevailed upon to give up the prime of their days to the Lord's requirements. He is ever worthy of obedience and love, can those say, who

have faithfully submitted their necks to the yoke. To such, 'wisdom's ways are ways of pleasantness, and her paths are peace.'

'We are favoured with the receipt of your acceptable epistle of the 9th mo. last. May the continuance of our Heavenly Father's regard, in affording you a renewed participation of Divine Love and uniting the spirits of a remnant in harmonious labour,' afresh excite you to diligence, and to a dependence on Him, who graciously declared to his disciples, 'Lo! I am with you always, even to the end of the world.'

'An epistle for your meeting, went from ours last year, but we suppose some adverse circumstance hindered its arrival in due time. Perhaps you have, before this time, been convinced of the continuance of our affectionate remembrance by the receipt thereof. We remark your satisfactory account of good order and discipline being preserved among you, and rejoice to find the hearts of some women Friends have been so opened, as to set at liberty the slaves in their possession. So merciful an act, we believe, will not fail to meet Divine approbation. May the example prevail, and those poor creatures become more and more the objects of compassionate regard, whether under male or female government.'

'We hope our ancient valued friend, Thomas Sawthrop's solemn, silent service may tend to his own peace, and the edification of those with whom his lot may be cast; some of us remember him with affectionate regard. We may thankfully acknowledge a good degree of the overshadowing of Divine regard has attended us in the course of our annual assembly. We have been favoured with the company of our esteemed friend, Thomas Carrington, from your land, also divers valued friends, ministers and others, from distant parts. Some of the most deeply baptised ministers, have been led fervently to exhort to a more entire dependence upon the inward teaching of Divine grace; encouragement has been renewedly afforded to our beloved youth, fervent and solemn supplications have been put up on their account, and we trust the Lord has been near to help all those who reverently wait upon him.'

'There appears a concern for the revival of discipline, and a care for the poor in this city and the several counties in England, and by an epistle from Wales we learn, that a like care subsists among our women Friends in that principality. Notwithstanding some instances of a manifest departure from the simplicity of truth, we trust a growth is experienced among some of our youth, of whom we have a comfortable hope, that in due time they will be made fruitful in righteousness, to the praise of him who hath called them.'

'May the visited of the Lord among you and us be enabled gratefully and acceptably to offer the sacrifices of obedience and praise to Him who is forever worthy. Amen.'

*A Bedfellow.*—I wandered about the town the rest of the day, watching the lazy negroes, and did not return to my house till after dark. I struck a match, and set fire to a torch to go to bed by, and, casting my eyes about to see if any thing had become disturbed, noticed something glittering and shining under my *akoto* or low bamboo bedstead. I did not pay much attention to the object, which did not seem important by the dim light of the torch, till, just as I approached the bed to arrange it, I saw that the glitter was produced by the shining scales of an enormous serpent, which lay quietly coiled up there within two feet of me. My first motion was to retreat behind the door; then I thought me to kill it. But, unfortunately, my two

guns were set against the wall behind the bed, and the snake was between me and them. As I stood watching, and thinking what to do, keeping the doorway fairly in the rear for a speedy retreat, I noticed that my visitor did not move, and finally mustered up courage to creep along the floor to the bedside, and quickly grasp one gun. Happily, it was loaded very heavily with large shot. I placed the muzzle fairly against one of the coils of the serpent and fired, and then ran out. At the report there was an instant rush of negroes from all sides, eager to know what was the matter. They thought some one had shot a man, and then ran into my house for concealment. Of course, they all rushed in, helter-skelter, and as quickly rushed out again, on finding a great snake writhing about the floor. Then I went in cautiously to reconnoitre; happily, my torch had kept light, and I saw the snake upon the floor. My shot had been so closely fired that it had cut the body fairly in two, and both ends were now loping about the floor. I gave the head some blows with a heavy stick, and thus killed the animal; and then, to my surprise, it disgorged a duck, which it had probably swallowed that afternoon, and then sought shelter in my hut to digest it quietly. This pretty sleeping companion measured eighteen feet in length. I must confess that I dreamed more than once of serpents that night, for they are my horror.—*Explorations and Adventures in Equatorial Africa. By Paul B. du Chaille.*

#### Relationship Proved.

'If ye endure chastening, God dealeth with you as with sons; for what son is he whom the father chasteneth not? but ye are without chastisement, whereof all are partakers, then ye are bastards, and not sons.'—1<sup>st</sup> Heb. xii. 7, 8.

Afflictions are often chastisements. They flow from a father's love, and are intended to correct us for our faults. Consequently, when brought into trouble, we should ask, "Is there not a cause?" and say, with the prophet, "Let us search, and try our ways, and turn again to the Lord." All the Lord's children need correction, and all are corrected. If allowed to sin without stripes, or to become conformed to the world without chastisement, our sonship is at best very questionable. But when our consciences are made and kept tender, when our follies are followed with trials, troubles, or painful convictions, our sonship is proved. God will not allow his children to wander from him far, or to wander from him long. "The rod and reproof give wisdom," and we shall be smitten and reproved often if we go astray from the right ways of the Lord. If I cannot sin without remorse, if I cannot rest until I confess it to the Lord, if I cannot be happy until I receive a renewed sense of his pardoning love, there can be no reasonable doubt of my relationship. God is my Father, and, however feeble, feeble, wayward and unworthy, I am his child. He uses the rod of a father that he may not use the sword of a judge. I will therefore arise and go to my Father; I will plead with him for grace, that I may approve the discipline, kiss the rod, and bless the hand that strikes me. Oh my Father, let thy child lay his aching head on thy bosom, soothe me with one of thy sweet words, assure me of thy love, and enable me lovingly to accept of thy correction! O Lord, correct me, but in mercy, not in thine anger, lest thou bring me to nothing.

As many as I love, I rebuke and chasten; be zealous, therefore, and repent.—Rev. iii. 19.

Modesty is to merit, as shades to figures in a picture, giving it strength and beauty.

*Effects of Sickness.*—Many of our greatest geniuses have been persons of some remarkable physical weakness at some period of their lives. In private life, as in public, the same thing is observable. Who cannot call to mind some member of a family always ailing, always sick, and yet the most exemplary and influential member of the family circle? In the backwoods such a child will grow up with tastes so pure and simple, habits so neat and refined, and affections so elevated, as to give all the highest results of a most finished education without going through any of the fashionable forms of city instruction. She may be the weakest of the whole, and yet her words of love and gentleness light up the whole family circle, and rule, and regulate, and refine the whole. Or in the humble walks of city life, one such weak and sickly child will contrive to establish habits of neatness, and cleanliness, and refinement in an attic or a cottage, such as are vainly sought in palaces and splendour. If she dies, her memory is fragrant; the whole family circle, perhaps the neighbourhood, are really elevated by the memory of the plans and habits she first established, and of the atmosphere she breathed. But if she recover, then she carries up into life and vigour the neatness, order, and quiet elevation first conceived through the refining processes of suffering and of sorrow.

Our best writers, our most ingenious inventors, our most acute metaphysicians, clearest thinkers and ablest discoverers, can generally trace some sharpening of the intellect and refining of the nervous system to a sickness or enfeeblement at some period or other of life. And thus it is that the sickness which weakens and wears for the time, and incapacitates for exertion afterward, capacitates for a tenfold and higher excellence and usefulness. So long as the depressing effects of sickness lasted, it was wasting and hindering, but these soon pass away and leave a permanent elevation and improvement on every side.

Nearly all sorrow has in the same tendency. While it lasts it depresses action, crushes hope, and destroys energy, but it renders the sensitive more acute, the sympathies more genial, and the whole character less selfish and more considerate. It is said that in nature but for the occasional seasons of drought, the best lands would soon degenerate, but these seasons cause the lands to suck up from the currents beneath, with the moisture, also those mineral manures that restore and fertilize the soil above. It is thus with sickness and sorrow—once surmounted, they fertilize the character and develop from the deep fountains of the human heart a joy and fruitfulness not otherwise attainable.—*Journal of Commerce.*

*A Submarine Fountain.*—Between Ruad and the coast of Syria the Greeks used to water their ships at a submarine fountain. Another has been discovered recently by Wm. A. Booth of the coast of Florida. It is a boiling fresh water spring, twelve miles north by east from St. Augustine and eight miles off shore. The water boils up with such great force that it can be seen at a distance of two miles. When first seen it has the appearance of a breaker, and is consequently generally avoided, but there are five fathoms of water between it and the shore. Ten fathoms of water are found to the seaward, but no bottom is found at the spring itself with thirty fathoms of line. The water in the spring is fresh and by no means unpalatable. When the St. John river is high this spring boils up from six to eight feet above the level of the sea, and it has been many times reported as a rock with water breaking over it.

## THE FRIEND.

NINTH MONTH 14, 1861.

In reading the epistle from the Yearly Meeting of women Friends of London, written in 1777, to which we have this week given place, we were very pleasantly struck with the passage "some of the most deeply baptized ministers have been led fervently to exhort to a more entire dependence upon the inward teaching of Divine grace." Ah, if the nominal professors in London Yearly Meeting, ministers, elders, overseers, and all those inoffensive, had but been brought into an entire dependence upon the inward teaching of Divine grace, a very different state of things would be found within their borders. Instead of seeking to lay waste some of the old fashioned testimonies, which our fathers bore so faithfully in their day and generation, as we sorrowfully behold many of them now doing, there would have been a united concern amongst them, to uphold the full spirituality and simplicity of the testimonies committed to this society to bear, and a fervent desire that not one jot or one tittle of the spiritual law should be set aside or lightly esteemed.

## SUMMARY OF EVENTS.

**Virginia.**—No important change has taken place in the position of the great rebel army near Washington. A part of their forces have been advanced very near to the Federal line within a few miles of the capital. The reports of great suffering and mortality from sickness are confirmed. Thousands of Beauregard's men are stated to be lying in the hospitals. The latest accounts from the western part of the State, show that the rebel army under General Lee, in the West and so far as they obtained any important advantage the Federal forces commanded by Gen. Rosecrank, number 19,000 men. Of these about 3,000 men guard the line of railroad from Cumberland to Wheeling, a division of 11,000 occupies the ground from Beverly to Cheat Mountain Pass, and about 5,000 were at Gauley's Bridge. The scattered condition of the troops is said to be necessary from the character of the district to be defended.

**North Carolina.**—Much alarm as well as exasperation has been produced by the capture of the forts on Hatteras and Inlet. The rebels have abandoned their fortifications on Ocracoke Inlet and carried off the guns. Since the Federal forces have taken possession of Hatteras, multitudes of North Carolinians have repaired thither to make a formal declaration of their loyalty to the United States, and the white flag was everywhere exhibited. The nation feeling is reported to be rapidly spreading in the interior. Secret leagues of loyalty it is said, exist in every county, and embrace one-half of the inhabitants. Since the capture of the forts, the North Carolina troops have been chiefly withdrawn from Virginia. Many of them are dissatisfied with the war, and those who entered the service are reported to be rapidly returning to the Confederate army. There is now no light at Cape Hatteras, the rebels having removed the lenses. Twenty-five wrecks were recently counted between Cape Hatteras and Henry.

**Kentucky.**—This State has hitherto aimed at occupying a neutral position which it will be difficult longer to maintain. The towns of Columbus and Hickman, near the Tennessee border, have been occupied by the Confederate forces, and Paducah at the mouth of the Tennessee river, has been occupied by General Grant, with a part of the Federal army from Gibson. The hostile armies have been thus brought within a few miles of each other and a collision appeared imminent. The Legislature now in session at Frankfort, consists in the Senate of 27 unionists and 11 secessionists and the House of 76 unionists and 2 secessionists. The Senate has just appointed a committee to visit Western Kentucky and acquire of the United States and Confederate military authorities, by whose directions, and for what reasons, they were occupying portions of the State.

**Missouri.**—The bold and vigorous measures taken by General Fremont for the restoration of order in Missouri are said to be attended with good results. Martial law has been submitted to without serious opposition, probably from the general conviction of its necessity. The

reports respecting the rebel armies in the southern part of the State are conflicting. One is that Gen M'Callough was at Mount Vernon organizing for a movement northward, another that he had separated his forces from the Missourians under Gen. Price, and had withdrawn into the States of Missouri and Arkansas. It is stated by the southern part of the State are equally vague, their numbers being rated at from 9,000 to 30,000. It is clear, however, that they have not of late made any progress towards St. Louis. Gen. Prentiss surprised a detachment of rebels at Bloomfield, in Boone county, about twenty-five miles from the Arkansas line, and made them all prisoners without firing a shot. The captives were taken to Bird's Point opposite Cairo, to work in the entrenchments at that place. The rebels had made an unsuccessful attempt to get possession of Lexington, on the Mississippi river. A passenger train of cars on the Hannibal and St. Joseph rail road was thrown into the Piate river on the 3rd inst, by some villain having burned the supports of a bridge. This villainish action caused the death of twenty persons, and about fifty were maimed and wounded. Gen. Fremont has been largely reinforced from the adjacent States. Gen. Prentiss has been superseded in his command by Gen. Grant, an officer of more military experience.

**New York.**—Mortality last week, 438.

There are increasing signs of a general revival of business and activity in all parts of Wisconsin. The grain trade is very active and exports large. Almost all kinds of domestic dry goods are in fair demand with prices tending upwards.

**Philadelphia.**—Mortality last week, 254.

**Crops in the Northwest.**—The Chicago Tribune says that wheat is raised in all parts of Wisconsin, Iowa, and Illinois concur in showing that the wheat crop this season will not be nearly as good as was expected. Some estimate the crop at two-thirds of an average, but nearly all agree that it will not exceed half of the crop of last year.

**Southern Items.**—The New Orleans Picayune says that the growth of grass in some of the streets of New Orleans is so heavy as to be well worth mowing.

Gen. Bragg, with three regiments of troops, has been ordered to join the army in Virginia. He left an equal force at Lynchburg, and the latter place has been made to raise the dry dock, but the workmen were fired upon from Fort Pickens and compelled to desert.

A despatch from Richmond says that there are about 2,000 Federal prisoners confined there. The Confederate Congress had adjourned until the latter part of the year.

The lighthouses at Jupiter Inlet and Cape Florida, have been blown up by the Confederates. That at Jupiter Inlet was erected by the Government at great expense and with much difficulty.

Major Lytle, who surrendered his command of U. S. troops in New Mexico to an inferior force of Texans, has been put under arrest by some of his subordinate officers. The privateer Jeff. Davis, has been wrecked on the coast of Florida. The Sumpter has made great ravages among American shipping. Vice-Admiral's advices, (via England,) state that the had taken and sunk no less than forty vessels.

**The National Loan.**—The subscriptions to the £ 7-10 loan are coming in freely in Boston, New York, and Philadelphia. A large proportion is taken in small sums, and it is expected that the Federal agents will close last week, nearly five millions of dollars.

**Affairs at Washington.**—The City is said to be quiet and orderly, and all the ordinary business of the inhabitants going on as usual, unobscured by the occupations of the army and the close proximity of the rebel forces. Notwithstanding the threatening demonstrations of the latter, it is not believed they will commence any general engagement. Everything connected with army preparations has for the last few weeks been kept as much as possible from public knowledge. There is no doubt that the Federal forces have been increased largely and are constantly receiving accessions of artillery and warlike supplies.

**The Grain Markets.**—The following were the quotations on the 9th inst. **New York.**—Sales of 190,000 bushels of wheat; at \$ 1.01, for Chicago, open; \$ 1.12 for St. Louis, and \$ 1.15 for New Orleans. **Wheat.**—Sales of 100,000 bushels of Kentucky. Oats, 33 a 34; rye, 66 a 67. Sales of 207,000 bushels corn, at 46 a 47; for eastern mixed, and 50 a 51 for western yellow. **Philadelphia.**—Red wheat, \$ 1.10 a \$ 1.15; white, \$ 1.24 a \$ 1.25; old rye, 60, 61, 62, 63, 64, 65, 66, 67, 68, 69, 70, 71, 72, 73, 74, 75, 76, 77, 78, 79, 80, 81, 82. **Cincinnati.**—Prices are depressed in consequence of the enormous quantity of freight accumulated at all the rail road stations, for transmission east-

ward. Superfine flour, \$3.60 a \$3.65; red wheat, 70 a 75; white, 83 a 85; corn, 27; whiskey, 14; lard, 8.

**Foxtrot.**—News from England to the 1st inst. The London Globe announces that the army in Canada is about to be reinforced by 22,500 men during the month.

The Times editorially calls on the Government to strain every nerve to develop the cultivation of cotton in India. Elsewhere, it says, that it believes that there will be no lack of will to assist the enterprise on the part of the Government, and that merchants and manufacturers will point out the way. The Government will avail itself scrupulously when the prosperity of the country and the existence of millions are at stake.

The Daily News in an article on fugitive slaves, concludes that the Federal cause is henceforth to be clearly identified with the abolition of slavery.

Queen Victoria had left Ireland for Balmoral. The Queen was enthusiastically received in Ireland.

Four tons of cotton seed are being shipped monthly to India from Suez. The prospect of an increased production of cotton in India is very favorable.

The Bombay mail of Seventh month 27th had reached Malta. The cholera was ravaging the famine districts. The harvest prospects were good.

The French had claimed protection over Madagascar. The Journals report that five cities of Turkey had been made over to the Russians by the Emperor of China.

A new insurrection had broken out near Peking. The Minister of Public Instruction has acknowledged the right of Protestants to open Schools in France.

The Independence Belge publishes the substance of an autograph letter from the Emperor to the Pope, intimating that if the condition of affairs be ameliorated, the present status quo will be maintained.

The Patrie says that matters look well in Lebanon. The harvest is excellent throughout Syria.

Wheat and corn are to be admitted into the ports of France temporarily for Poland.

The Hungarian Diet was formally dissolved on the 23rd ult, and a new one is to be called.

A resolution passed both Houses declaring the dissolution of the Diet illegal, and protesting against the unconstitutional and arbitrary conduct of the Government. A collision had taken place between the soldiers and the people, in consequence of the latter singing "National airs." Five persons were wounded.

A new receipt by the Emperor of Russia to the Governor of Poland is very conciliatory in its tone.

Reputation from Finland en route to Stockholm, to demand that the condition of Russia, had been arrested by the Russian authorities.

The sales of cotton in the Liverpool market for the week, reached 120,000 bales. Prices had advanced 1-16 a 3d. per lb. The total stock in port is estimated at 857,000 bales; including 558,000 American. The market otherwise advised continued favorable. The market for breadstuffs was quiet and steady.

The Bank rate of discount has been reduced to four per cent. Consols, 92½.

## RECEIPTS.

Received from L. A. Hendrickson, N. J., \$2, vol. 35; from F. O. W. E. N. Y., \$2, vol. 35; from Jehu Allman, O., \$2, vol. 35.

## FRIENDS' ASYLUM.

**Committee on Admissions.**—Samuel Bettle, Jr., No. 149 N. Tenth street; Charles Ellis, No. 724 Market street; William Bettle, No. 426 N. Sixth street, and No. 26 S. Third street; John C. Allen, No. 335 S. Fifth street, and No. 321 N. Front street; Horatio C. Wood, No. 612 Race street, and No. 1111 N. 11th street, No. 10 W. Whittall, No. 1317 Filbert street, and No. 410 Race street; Wistar Morris, No. 209 S. Third street; Nathan Hills, Frankford; Eliottson P. Morris, Germantown, and No. 805 Market street.

**Visiting Managers for the month.**—Jeremiah Hacker, John C. Allen, and J. M. G. Allen.

**Physician and Superintendent.**—Joshua H. Worthington, M. D.

## EVENING SCHOOLS FOR ADULT COLORED PER-

A Principal and Assistant Teachers are wanted for the Men's School, and a Principal and Assistants for the Women's School.

The schools will be opened on the 14th of the Tenth month at the usual place; they are held five evenings in the week. Apply to JOHN C. ALLEN, No. 521 N. Front, or to W. P. M. STILES, No. 252 S. Front Street, or SAMUEL ALLEN, 524 Pine Street.

# THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XXXV.

SEVENTH-DAY, NINTH MONTH 21, 1861.

NO. 3.

PUBLISHED WEEKLY.

Price Two Dollars per annum, payable in advance.

Subscriptions and Payments received by

JOHN RICHARDSON,

AT NO. 116 NORTH STREET, UP STAIRS,  
PHILADELPHIA.

Postage to any part of Pennsylvania, for three months, if paid in advance, three and a-quarter cents; any part of the United States, for three months, if paid in advance, six and a-half cents.

Selected.

## Robert Barclay's Proposition IV.

(Concluded from page 10.)

Fifthly, They object, That Christ, Luke xxii. 6, speaking to his disciples, commands them, that he that then had not a sword, should sell his coat, and buy a sword; therefore, say they, rms are lawful.

I answer, Some indeed understand this of the outward sword, nevertheless regarding only that occasion; otherwise judging, that Christians are prohibited wars under the gospel. Among which Ambrose, who upon this place speaks thus: O Lord! why commandest thou me to buy a sword, who forbiddest me to smite with it? Why commandest thou me to have it, whom thou prohibitest to draw it? Unless perhaps a defence be prepared, of a necessary revenge; and that I may seem to have been able to revenge, but that I would not. for the law forbids me to smite again; and therefore perhaps he said to Peter, offering two swords, it is enough] as if it had been lawful until the gospel-times, that in the law there might be a learning of equity, but in the gospel a perfection of goodness. Others judge Christ to have spoken ere mystically, and not according to the letter; as Origen upon Mat. xix. saying, If any looking to the letter and not understanding the will of the words, shall sell his bodily garment, and buy a sword, taking the words of Christ contrary to his will, he shall perish; but concerning which sword speaks, is not proper here to mention. And truly when we consider the answer of the disciples, fester, behold here are two swords; understanding it of outward swords; and again Christ's answer, It is enough; it seems that Christ would not hat the rest, who had not swords, (for they had only two swords,) should sell their coats, and buy an outward sword. Who can think that, matters tending thus, be should have said, Two were enough? But however, it is sufficient that the use of arms is unlawful under the gospel.

Sixthly, They object, That the scriptures and old fathers, so called, did only prohibit private revenge, not the use of arms for the defence of our country, body, wives, children, and goods, when he magistrate commands it, seeing the magistrate ought to be obeyed; therefore although it be not lawful for private men to do it of themselves, never-

theless they are bound to do it by the command of the magistrate.

I answer, If the magistrate be truly a Christian, or desires to be so, he ought himself in the first place, to obey the command of his master, saying, Love your enemies, &c, and then he could not command us to kill them; but if he be not a true Christian, then ought we to obey our Lord and King, Jesus Christ, whom he ought also to obey: for in the kingdom of Christ all ought to submit to his laws, from the highest to the lowest, that is, from the king to the beggar, and from Cesar to the clown. But alas! where shall we find such an obedience? O desperate fall! concerning which Ludov. Viv. writes well, lib. de con. vit. Christ. sub. Turc. by relation of Fredericus Sylvius, Disc. de Revol. Belg. p. 55. The prince entered into the church, not as a true and plain Christian, which had indeed been most happy and desirable; but he brought in with him his nobility, his honours, his arms, his ensigns, his triumphs, his haughtiness, his pride, his superciliousness; that is, he came into the house of Christ accompanied with the devil; and which could no ways be done, he would have joined two houses and two cities together, God's and the devil's, which could no more be done than Rome and Constantinople, which are distant by so long a tract both of sea and land. (What communion, saith Paul, is there betwixt Christ and Belial?) Their zeal cooled by degrees, their faith decreased, their whole piety degenerated; instead whereof we make now use of shadows and images, and, as he saith, I would we could but retain these. Thus far Vives. But lastly, as to what relates to this thing, since nothing seems more contrary to man's nature, and seeing of all things the defence of one's self seems most tolerable, as it's most hard to men, so it is the most perfect part of the Christian religion, as that wherein the denial of self and entire confidence in God doth most appear; and therefore Christ and his apostles left us hereof a most perfect example. As to what relates to the present magistrates of the Christian world, albeit we deny them not altogether the name of Christians, because of the public profession they make of Christ's name, yet we may boldly affirm, that they are far from the perfection of the Christian religion; because in the state in which they are, (as in many places before I have largely observed,) they have not come to the pure dispensation of the gospel. And therefore, while they are in that condition, we shall not say, That war, undertaken upon a just occasion, is altogether unlawful to them. For even as circumcision and other ceremonies were for a season permitted to the Jews, not because they were either necessary of themselves, or lawful at that time, after the resurrection of Christ, but because that Spirit was not yet raised up in them, whereby they could be delivered from such rudiments; so the present confessors of the Christian name, who are yet in the mixture, and not in the patient suffering spirit, are not yet fitted for this form of Christianity, and therefore cannot be undefending themselves until they attain that perfection. But for such whom Christ has brought hither it is not lawful to defend themselves by

arms, but they ought over all to trust to the Lord.

§ XVI. But Lastly, to conclude, If to give and receive flattering titles, which are not used because of the virtues inherent in the persons, but are for the most part bestowed by wicked men upon such as themselves; if to bow, scrape, and cringe to one another; if at every time to call themselves each other's humble servant, and that most frequently without any design of real service; if this be the honour that comes from God, and not the honour that is from below, then indeed our adversaries may be said to be believers, and we condemned as proud and stubborn, in denying all these things.

But if with Mordecai, to refuse to bow to proud Hamaan, and with Elishu not to give flattering titles to men, lest we should be reproved of our makor; and if, according to Peter's example and the angel's advice, to bow only to God, and not to our fellow servants; and if to call no man lord nor master, except under particular relations, according to Christ's command; I say if these things are not to be reproved, then are we not blameworthy in so doing.

If to be vain and gaudy in apparel; if to paint the face and plait the hair; if to be clothed with gold and silver, and precious stones; and if to be filled with ribbons and lace; to be clothed in modest apparel; and if these be the ornaments of Christians; and if that these be to be humble, meek, and mortified, then are our adversaries good Christians indeed, and we proud, singular, and conceited, in contenting ourselves with what need and conveniency calls for, and condemning what is more as superfluous; but not otherwise.

If to use games, sports, plays; if to card, dice, and dance; if to sing, fiddle, and pipe; if to use stage-plays and comedies, and to lie, counterfeit, and dissemble, be to fear always; and if that be to do all things to the glory of God; and if that be to pass our sojourning here in fear; and if that be to use this world as we did not use it; and if that be not to fashion ourselves according to our former lusts; to be not conformable to the spirit and vain conversation of this world; then are our adversaries, notwithstanding they use these things, and plead for them, very good, sober, mortified, and self-denying Christians, and we justly to be blamed for judging them; but not otherwise.

If the profanation of the holy name of God; if to exact oaths one from another upon every light occasion; if to call God to witness in things of such a nature, in which no earthly king would think himself lawfully and honourably to be a witness, he our duties of a Christian man, I shall confess that our adversaries are excellent good Christians, and we wanting in our duty; but if the contrary be true, of necessity our obedience to God in this thing must be acceptable.

If to revenge ourselves, or to render injury, evil for evil, would for wound, to take eye for eye, tooth for tooth; if to fight for outward and perishing things; to get a warning one against another, whom we never saw, nor with whom we never had any contest, nor any thing to do; being moreover altogether ignorant of the cause of the war, but only that the magistrates of the nations foment quar-

rels one against another, the causes whereof are for the most part unknown to the soldiers that fight, as well as upon whose side the right or wrong is; and yet to be so furious, and rage one against another, to destroy and spoil all, that this or the other worship may be received or abolished; if to do this, and much more of this kind, be to fulfil the law of Christ, then are our adversaries indeed true Christians, and we miserable heretics, that suffer ourselves to be spoiled, taken, imprisoned, banished, beaten, and evilly treated, without any resistance, placing our trust only in God, that he may defend us, and lead us by the way of the Cross unto his kingdom. But if it be otherwise, we shall certainly receive the reward which the Lord hath promised to those that cleave to him, and in denying themselves, confide in him.

And to sum up all, if to use all these things, and many more that might be instanced, be to walk in the straight way that leads to life, be to take up the Cross of Christ, be to die with him to the lusts and perishing vanities of this world, and to arise with him in newness of life, and sit down with him in the heavenly places, then our adversaries may be accounted such, and they need not fear they are in the broad way that leads to destruction; and we are greatly mistaken, that have laid aside all these things for Christ's sake, and to the crucifying of our own lusts, and to the procuring to ourselves shame, reproach, hatred, and ill-will from the men of this world; not as if by so doing we judged to merit heaven, but as if by so doing we were contrary to the will of Him who redeems his children from the love of this world, and its lusts, and leads them in the ways of Truth and holiness, in which they take delight to walk.

*The Sickle.*—"Let the sickles alone," said a farmer to his son, who was left in the field while the reapers went to dinner. James obeyed his father for a time; but at length he grew lonesome, and took up a sickle "just to look at it." He then felt its edge, and then thought he would cut "one handful." In so doing he cut his little finger, inflicting a wound which rendered the middle joint useless for the rest of his life. When it was healed, an ugly scar and a stiff finger were lasting mementoes of his disobedience.

Disobedience to his heavenly Father leaves a scar on the sinner's soul, and lessens his capacity for virtue. What a frightful appearance would make a soul present, could its scarred and maimed condition be made visible. Unseen facts are as real as those which are seen by the eye. Every sin leaves its mark on the soul. Every sin increases the soul's tendency to sin, and lessens its power for virtue. Every sin thus effects a change for the worse in the condition of the soul. It is not merely registered in the book of God's remembrance: it is registered in the very condition of the soul.

*Rhinoceros in the River.*—On the 10th ult., a collision occurred between the steamers Key City and Luzerne, on the Mississippi, in the vicinity of La Crosse. The Luzerne had on board the circumscribed animals, &c., belonging to Dan Rice. The cage containing the trained rhinoceros, weighing over four thousand pounds, was knocked into the river. The door of the cage was open, and the animal fastened with a chain and ring in his nose. Some of the men in the employ of Rice watched a day or two, in hopes the monster would make his appearance; but, supposing him to be drowned, they left. Subsequently he was discovered frolicking in the Mississippi, but sank on being approached. At the last accounts he had taken to

a slough, and the La Crosse Democrat, of the 27th ult., thus records one of his land pranks:

"Sunday afternoon, Charles Wrightson, F. W. Brown and Robert Eggleston, while roasting green corn on the bank of the slough, five miles below here, were half scared to death by hearing a heavy tramp, and in a few moments the rhinoceros, as he appeared here on the occasion of his first visit in July, minus the blanket and chain in his nose, rushed upon them with a terrible bellow, catching Eggleston on his snout and throwing him, as he says, at least fifty feet over a back of him, breaking an arm and two ribs in the fall. The other two monster plunged into the river, and the other two persons, badly scared, but not hurt, procured a buggy, took the seat out, filled the box with grass and a blanket, and brought Eggleston to his home in this city, where he is now under the care of Dr. Cameron. The ribs were evidently broken by the snout of the animal, as the flesh was badly torn."

The "slough" in which the animal had established himself is about five miles below La Crosse, and is very deep, with muddy bottom. The Democrat says:

"Though it is just such a place as he was captured in the East, there is no telling how long he may remain quiet without taking a notion to prow around the country in search of better fare. This forenoon several of our sportsmen went down to the spot to make arrangements for his capture, when, it was seen, they can start a show of their own. He was seen this forenoon swimming in the waters of the slough, but sank after spearing, if we may so call it, a few moments with hook and nose above water. About a hundred persons have gone down there to help in his capture."—*Ledger.*

#### Letter of John Barclay.

The following observations were made in the year 1832.

"Ever since I have attended this Yearly Meeting, my mind has been deeply exercised, according to my capacity, for the welfare of this people. As I proceed in my pilgrimage, I trust my confidence is increasing, that the great "I am," the King of Zion, still reigns, and will reign to the overthrow of all his enemies, and that he alone is equal to take care of his church, and to overrule all things for the good of his little dependent ones. Yet, oh! how awful do the times appear in which we live; and how awfully critical is our standing among the various professions around us: doubtless, it has always been so, perhaps more so than those of any particular age may have thought. Every period has had its dangers, its temptations, its responsibilities. Yet surely ours are, if not new, very specious snares, and when I look around, I am ready to think, who even among the highest in knowledge, in faith, or in gifts is not fearfully liable to fall into some of these snares. Oh! I have this day seen, as I think, in the light of the Lord, the enemy endeavouring to deceive, if it be possible, the very elect. There are baits already laid, golden baits, which if they are not seen and shunned, will even devour those who devour them. I see not how some, who now take the lead amongst us, will or can escape being carried away as with a sweeping flood, by that which they are now swimming in; unless the Lord prevent, I see not how this Society can escape being landed, yet stranded, on a rock. Every day, every fresh occasion of witnessing the spirit and proceedings of these times, convinces me beyond all hesitation, that we are fast verging to a crisis—an alarming crisis, and a shaking, sitting crisis,—when every foundation will be discovered,—every covering re-

moved. And though many will say, "Lo, here is Christ, and lo there!" he is not with us, and we do not own him and follow him? Yet a clean separation will take place between the chaff and the wheat; and nothing will be able to endure the refining heat of that day, besides the beaten gold. Oh! how low, how crude, how mixed are the views of many, how accommodating, how shifting is the ground they stand upon, how lofty and superficial is their edifice, though beautiful and apparently solid also. Oh! for less activity, less self-conceit, less waiting! Oh! for less ostentation, less self-conceit, less taking of the name of Christ in vain. Keep such a view of things conducive to drive and keep us yet nearer to the Source of all safety and of all succor, that I may abide in Him, and grow up in Him in all things, who is the Head!"

The concluding sentence of the foregoing impressive remarks is especially deserving of the most serious consideration. When the judgment is enlightened to perceive the snares into which others have fallen, and from which the Divine mercy may have preserved us, so far from any feeling of self-complacency being allowable, it should rather serve to admonish us of our own frailty and liability to err on the right hand or on the left. Without this care, there is great danger of a censorious disposition being indulged, which will feed the life of corruption itself, and thus our own preservation from some evils, may, in a certain sense, prove a stumbling block, and source of weakness and danger. Truly in this state of probation we stand as on a sea of glass mingled with fire" and it behooves us to seek in reverent humility to be kept under the continual influence of that Divine power which can alone give the victory, keep us from falling, and enable the soul to ascribe the glory and praise to Him to whom only they belong.

*Pardon and Grace.*—"When I first entered the Christian life," said Wilberforce, shortly before his death, "my prayer was for pardon and grace. And now that I am near the end of my course, I find that all my petitions, all the wants of my soul, may still be comprehended in those two requests—pardon and grace."

Here are the universal and perpetual desires of the renewed soul. When David said, "I have gone astray like a lost sheep, seek thy servant," he prayed for pardon and grace.

When the penitent and returning Church prays, "Take away all iniquity, and receive us graciously," Hosea xiv, what is it but a prayer for pardon and grace.

When Paul sends us to the throne of grace," Heb. iv, to obtain mercy and find grace to help us in time of need, pardon and grace form the whole burden of the supplications he enjoins upon us.

When God promises, in his last covenant, "I will be merciful unto their unrighteousness, and their sins and their iniquities will I remember no more;" and "I will put my law in their minds, and write it in their hearts," pardon and grace comprehend the whole boundless grant of divine compassion and goodness.

*Pardon and grace!* the very intensity with which the new-born soul longs for them, is a sure proof of the gracious life within.

*Pardon and grace!* The soul that has them has all things else, either in possession or sure reversion. Oh! "the mountain of light," and "the sea of light," those precious diamonds which glow on the wrists of the King of Persia, are worthless in comparison of those inestimable gems, "pardon and grace!"

That disposition is opposite to faith, which is only to be convinced by external evidences.

From "The Family Treasury."  
Wanderings over Bible lands and Seas.

THE CHURCH OF THE HOLY SEPULCHRE AND  
THE LAST VIEW OF JERUSALEM.

We had left our visit to the Church of the Holy Sepulchre until our last day in Jerusalem, not purposely, but because localities more satisfactorily ascertained, and less desecrated by superstition, had engrossed our attention.

In visiting this Church, we felt as if we were leaving the home of Jewish kings and prophets, and the earthly footprints of the Son of God, to enter on a region full, indeed, of deep human and historical interest, but altogether on a lower level.

Our thought, as we descended the steps into the court outside the Church, was not so much of Golgotha, or the tomb hewn in the rock, as of the countless pilgrim-feet which had trodden those steps for centuries, of the innumerable hearts which had throbbled with eager joy, or almost stood still with awe in approaching those sacred walls.

The front and the arched doors are very massive and elaborately ornamented. You compare them mentally, not with anything in the Bible, but with Venice, or Milan, or Cologne. You are transported into the middle ages, the middle ages orientalized. You pass from the burning sacrifice into the dark church. You are no longer in the city where David dwelt—where Nicodemus came to Jesus by night—by which the Brook Kedron flowed—to which her King came, lowly and riding on an ass—and which the little children entered, singing Hosannas, in the light of the spring morning—where the blind and lame were touched by those healing hands, and walked and saw. You are in another world, lighted, not by the blaze of the Syrian sun, but by the starlight of the Syrian night, but by faint rays stealing through medieval windows. The air around you is no breeze from the Great Sea, or the mountains beyond Jordan, but the air of a vault permeated with incense.

The group of Moslem soldiers sitting on a raised matted stone platform at the left of the entrance, reminds you for an instant of the scenes enacted here at Easter, when Turkish sabres have to restrain Christian worshippers from tearing each other in pieces in their eagerness to light their torches at the "sacred fire," a singular collision of three religions, Mohamammedan, Christian, and Pagan. But passing on, you forget this strange discord, and are back again in the days of Richard Cœur de Lion, or of Godfrey of Bouillon, and then medieval religion seems to rise before you allegorized in stone.

Surely the pilgrimages to the Holy Sepulchre are as arbitrary to the whole spirit of Christianity as the worship of the glorified Virgin Mother—"Mary the immaculate," which has succeeded them. To turn from the living Lord to the abandoned tomb is as strange a perversion as to turn from the dying Redeemer on the cross to the mournful mother beside it,—

"Thy life whereof our nerves are scant  
Oh life, not death, for which we pant—  
More life and fuller than we want."

And ours is a religion of life; our Lord the Prince of life, the Bread of life, the Life itself, who bursts the bands of death, because it was not possible that he should be holden of them. All this presses sensibly on the heart in the Church of the Holy Sepulchre. It is the religion of the Crusades petrified, and the spirit of the middle ages comes over you as you stand within these massive walls.

That flight of steps leading to a stone platform, which to you may seem little more than the road-

loft, or the Calvary of any medieval church, is what Crusaders died to win. Countless forums have been prostrated there in passionate adoration. We saw a man reverently embracing and kissing column after column.

Ours is a religion of life and light, not of sepulchres or relics. Our sanctuaries are not the twilight of umbrageous groves, or the night of arcaic caverns or monumental vaults. Precious, indeed, is every relic of the work of the hand we may touch no more, but the hand of Him we adore is working around us every where. Every star that shines, and every blossom that opens is not a relic of His absent work, but a token of His living presence. The voice which said, "It is finished," is not silenced for us. We know it. It speaks to us day by day in ever loving words. Let us treasure if we will, every relic of the dead we honour. But Christ is not dead. He is risen. He was dead and is living again, and behold he liveth for evermore.

There is, indeed, a sense in which we on earth are said to be absent from the Lord, but never it is said that the Lord is absent from us. On the contrary, He is with us always until the end of the world. Death removes us to be present with Him. But now to-day, and "all the days," He is with us. He makes his abode with us. He will never leave us nor forsake us.

Have not all representations of the Church as a "widow," or a "widowed bride," a tendency to sentimentalism? The Bible never uses this language. The image employed in Epistles and Apocalypse is one of an entirely different character. The widow is desolate, lonely, her gaze is toward the past, to the life finished and closed. The heart of the betrothed bride is in the future, in the day which ends separation, in the new life opening before her. The Bible compares the Church, not to the widow, but to the betrothed bride. The marriage supper has yet to take place. The new and everlasting home is being prepared; it has not to be entered. The attitude of all healthy Christianity is not stooping down and looking into the sepulchre weeping. "They have taken away my Lord," but looking up to the risen Lord, and listening to his voice, and answering, Rabboni.

We left the church and ascended the steps worn by the feet of knees of so many pilgrims, and descended the Via Dolorosa with its "vermillion of the Ecce Homo," and its various legendary stations.

What a strange reversal of the parables the Crusades were—a Pilgrim's Progress read the wrong way; the body making a pilgrimage to a material Jerusalem; the Christian armour, mail or steel, instead of faith, and the word of God, and prayer; the Christian warfare against the bodies of Moslems instead of against fleshly lusts and wicked spirits. If the Crusades had only been an allegoric drama enacted for the benefit of posterity, they certainly might be valued as tending to give vividness to our conceptions of the true warfare of the Cross. But the Crusaders were men and women with human hearts and deathless souls. Among them must have been some who really longed, like Christian, to get rid of that terrible burden, who travelled all that weary and perilous journey with the fond hope that at the Holy Sepulchre they would in some way be nearer heaven, would obtain spiritual deliverance, and receive spiritual blessing.

To such, what hours of agonizing conflict and bitter disappointment must have been spent here, when the first rush of enthusiastic devotion had subsided! The burden of guilt unremoved, the power of sin unbroken, heaven as far as ever, the Saviour as invisible! Yet, perchance on some such, as they turned their steps despondingly home-

ward, the glad tidings dawned that the crucified and risen Lord could be as near them in Germany or England as at Jerusalem, and that the Holy War, so often a defeat in Palestine, might in his strength be always victorious in works of faith and labours of love at home.

We returned from the Church of Helena and the Crusaders to the Turkish city of to-day. Everywhere we were surrounded by tokens which showed how the great conflict of the middle ages had ended. Moslem shopkeepers sat amidst the smoking of the bazars; Moslem women passed us with their veiled faces; Moslem domes crowned the heights of Moriah; Moslem muezzins called to prayer from the galleries of the minarets. The very name of Christian is a bond. We must lament that the curse of Moslem rule should fall on any spot on earth. Yet we cannot but feel that as regards the sacred association of the Holy Land, Moslem listlessness, and even Moslem fanaticism, have done less to destroy them than monastic superstitions. Two or three centuries of Crusading rule would have left little but a mass of medieval legends to guide us through Palestine. Turkish rule has, at least, left it Oriental. The language of the peasantry is still allied to that in which our Lord awoke the dead maiden to life, and uttered his own cry of agony. The names of villages, and fountains, and towns are still essentially the same as those in the Old Testament. The traditions of monks who would tell you the locale of any scriptural narrative (whether parable or history) within convenient distances of each other, on sufficient notice, are valueless indeed. But the traditions of peasants who have never read the Old or New Testament and yet speak of Silih, or Nazareth, or Tyre by names David could have understood, are absolutely satisfactory. Our wander in the Holy Land was, not that we could trace so little, but that we could identify so much. Once leave the narrow streets and Siraecenic gates of the city itself, and you are on the very hills and valleys where Jesus "went about doing good." Deeply did we feel this, as on the afternoon of the twentieth of June we at length collected our muleteers and horses, and set off two or three hours before night for Bethel. The hills which stand round about Jerusalem, the valleys and the brook, were real and familiar places to us for evermore.

We had toiled through the stony bottom of the dark valley of Hinnom. We had sat one sunny afternoon on the Hill of Evil Council, looking across the valley to the slopes of Zion. We had gone round about the walls of Jerusalem, commanding from different angles the table-land on the west, the deep valleys on the east and south. We had drunk of the clear, cold waters which flow underneath the temple. We had stood by the ancient reservoirs, one of which must have been Bethesda, and another the Pool of Siloam, for since Roman times no energetic and enlightened rule has continued long enough to commence useful public works of any such extent as these. We had groped our way through the rifled sepulchres, whose entrances no one, for centuries, had cared to "whiten" or adorn. We had carefully guided our horses over the rough ground outside the gates, and among the broken cisterns and deserted wells, which made such dangerous "pits" for them to fall into. We had rambled over the slopes of Zion, and gathered the long dagger-like thorns which grow on the prickly bushes there. We had explored the Temple area, and stood on the very place where the blind eyes had first seen, and the deaf ears had first walked, and the deaf ears had been unstopped at the touch or word of Jesus;—where, in the women's court, that all night ap-

proach and learn, our Lord taught openly, and even as he spoke words of eternal wisdom, and answered every subtle cavil, was at leisure to watch and mark with his approval the poor widow casting her mite into the treasury.

We had crossed the brook Kedron, and wandered up the valley, in some quiet nook of which, among the olives, was Getsemane. We had watched from Olivet the sunrise light up the roofs of Jerusalem, and the sunset glow behind them. We had seen the city over which, when He beheld it, He wept, burst suddenly on our sight, in that ascent on the road from Jericho. We had sat on the Mount of Olives, and gazed across the Kedron valley to where the goodly buildings had stood, now overturned. We had gone over and over again the footpath to Bethany, with the wild fig-tree beside it here and there, until its rugged way had grown familiar to us. Seated on those very slopes under the shade of trees, more abundant no doubt than now, treading those very paths, sheltered in the recesses of that same valley, the voice of Jesus had been heard in familiar conversation with the disciples. On that same level summit of Moriah, His voice, in more powerful tones, had taught the listening multitudes, and silenced the cavilling Pharisees and Sadducees, not with the majesty of thunder, or the voice as of a trumpet, or as the sound of many waters, but a human voice, whose tones would have been inaudible at a few hundred yards distance,—a human voice, thrilling with every emotion of the heart. The words have gone forth to the ends of the earth, the voice would have been inaudible across the Kedron valley.

Within sight of those walls near the city, the three crosses had been raised, with the three agonized sufferers on them, exposed to the un pitying gaze of the multitudes who came to see the sight, and the careless mockeries of those that passed by on the high road from Jerusalem. The mystical shadow of one of those crosses has since then embraced the world, and within it a great multitude, which no man can number, have found shelter, and safety, and rest. But then, before the midday darkness came over the land, there was nothing to distinguish it from the other two, or from the number of similar crosses which afterwards terribly exposed the agonies of their victims to the gaze of besieged Jerusalem. There was nothing gigantic about it, infinite as its results will be. It overshadowed, not the city, but only a few yards of earth beneath it, and at a little distance you would not have distinguished one of those three tortured forms from another, infinitely different as the sufferers were,—the Saviour, the saved, and the lost.

And on these heights of Olivet, above Bethany, that human voice had been heard again, in familiar tones, blessing the disciples. The hands that had been stretched out and nailed to the cross were lifted up to bless. And there, in the act of benediction, the well-known form was parted from them, and carried into heaven.

It was with thoughts such as these that we rode silently away from Jerusalem on the afternoon of the 20th of June. Our road lay across Scopus, and the site of the camp of Titus. On this ground the armies of Rome had encamped, slowly but surely clasp ing the infatuated city in their deadly embrace, and here those who may have been left to guard the camp in the day of the capture, must have seen the avenging flames burst forth from the Temple on Moriah, no more as from a sacrificial altar, but as from the funeral pile of the guilty city, from which every disciple of the Saviour it had crucified had previously been rescued.

Once more on the height to the north, we paused

to take our last view of Jerusalem. The only human feature in the desolate landscape, the city, rests couched on the edge of the high tableland of Judæa; the mural crown enclaves the brow of the hill, the white roofs, and domes, and minarets gleam from afar, still with something of a queasily dignity. The brown hills stand round about it, the blue mountains of Moab gird the distant horizon. Beautiful for situation it stands, the mountain city, the city where David dwelt, the holy city, the city which God chose, the city over which "Jesus wept," desecrated by man's darkest crime, consecrated by the most marvellous manifestation of God's redeeming love.

E. C.

*What can be done with Paper.*—A writer in *Blackwood's Magazine* says it is wonderful to see the thousand useful, as well as ornamental purposes to which paper is applicable in the hands of the Japanese. He states that he saw made into materials so closely resembling Russian and Morocco leather and pig skin, that it was very difficult to detect the difference. With the aid of lacker varnish and skillful painting, paper made excellent trunks, tobacco bags, cigar cases, saddles, telescope cases, the frames of microscopes; and he even saw and used excellent water-proof coats, made of simple paper, which did keep out the rain, and were as supple as the best Mackintosh. The Japanese use neither silk nor cotton handkerchiefs, towels, nor dusters; paper in their hands serves as an excellent substitute. It is soft, thin, tough, of a pale yellowish colour, very plentiful and very cheap. The inner walls of many Japanese apartments are formed of paper, being nothing more than painted screes; their windows are covered with a fine translucent description of the same material; it enters largely into the manufacture of nearly everything in a Japanese household; and he saw what seemed to be balls of twine, but which were nothing but long shreds of tough paper rolled up. If a shopkeeper had a parcel to tie, he would take a strip of paper, roll it quickly between his hands, and use it for the purpose; and it was quite as strong as the ordinary string at home. In short, without paper all Japan would come to a dead lock; and indeed, lest by the arbitrary exercise of his authority, a tyrannical husband should stop his wife's paper, the sage Japanese mothers-in-law invariably stipulate that the bride is to have allowed to her a certain quantity of paper.

*Jacob before Meeting Esau.*—To-morrow Esau and Jacob are to meet. There was a quarrel of long-standing between them, which had all the bitterness of a domestic feud. Jacob had deceived and deeply injured his brother. He had not seen Esau for many years, and dreading his vengeance, he now heard of his approach, at the head of four hundred men, with fear and trembling. Greatly alarmed, he cried, "God of my father Abraham, God of my father Isaac, deliver me, I pray thee, from the hand of my brother; for I fear him, lest he will come and smite me, the mother with the children." Pattern to us, when temptation threatens or dark misfortunes lower. Jacob, having done all that man's wisdom could devise, or his power could do in the circumstances, flies for help to God. He will prepare for to-morrow's trial by a night of prayer. Sending off his wives and children across Jacob's stream, to place them as far as possible out of danger, and leave these innocent ones to forget it in sleep's sweet oblivion, he seeks himself a solitary spot. With deepest silence all around him, and the bright stars above his head, he is alone with God. Suddenly some one grasps him. Folded in his arms, Jacob cannot cast him off.

Now it becomes a struggle for the mastery. Locked together, they wrestle in the dark; and, in some mysterious spiritual wrestling, the night passes, and the conflict lasts till break of day. "Let me go," said the other, "for the day breaketh." Jacob but held him faster. He had found out the other wrestler; danger gave him boldness; faith gave him confidence; and, clinging to God with the grasp of a drowning man, he replied, "I will not let thee go except thou bless me." And when he had prevailed, and got the blessing, "Jacob called the name of the place Peniel; for I have seen God face to face, and my life is preserved."

For "The Friend."

Musings and Memories.

LONG LIFE.

It is the duty of a Christian to be contented to remain on earth, toiling in the service allotted him by his Heavenly Father, just so long as all merciful and all wise caretaker shall see meet to continue him in the church militant, yet certainly, to those who have known the washing of regeneration, the forgiveness of past sins, and the adoption that maketh children of God, and heirs of eternal life, a long lingering here in probation cannot be very desirable. To the natural man, who hath not known a preparation for participating in the glories of the kingdom of perfect purity hereafter, this life embodying all of joy that he can understand, it is no wonder that he craves its continuance. Looking at it in this point of view, we can see how, wishing our friends long lives, that common form of blessing in use among certain classes, should have had its origin. Yet to the christian the realization of such a wish might be far from a blessing.

The following remark was made by the late William Wilberforce to a friend of his in the year 1807, at a time in which he was quite unwell, yet was not confined to his dwelling. "A man in the castle-yard this morning, in the honest ardour of his heart, seized my hand, and with peculiar emphasis wished me a long life. I was obliged to him for his kindness, but he forced on me the reflection, how unchristian are our common feelings and sentiments—that we should be ready to regard a long life as one of the greatest of blessings. "Did we really keep christian principles and christian views before us, we should assuredly think that 'to depart and be with Christ,' was for ourselves at least, far better."

I have met with a narrative to this effect; a mother was one day taking two of her children, a boy and a girl, to see a very old woman, one who had almost reached her hundredth year, when her son suddenly asked her if she would not like to live as long. To this she replied "certainly not." The boy demanded her reason for what appeared to him such an unnatural view as his mother had expressed, but she deferred any answer until after they had paid their visit.

They found the old woman living with her only daughter, her mind very much gone, and she, though poor, yet in a pretty comfortable condition. When aroused so as to notice the children she said, "blessings on them! I once had bairns myself." On being asked how many children she had had, she could not tell, but referred them to her daughter, who said there had been ten of them, and that she, who was the eldest, was the only one left of them all. Her mother, she said, had been nine years confined to her bed unable to walk. Whilst the children were sorrowfully wondering over such a long period of lying in bed, the old woman who had fallen into a momentary doze, aroused, up, and had quite forgotten that she had seen them before.

Sometimes, she acknowledged she did not know her own daughter, her constant and faithful nurse. She remembered, however, many precious religious truths, quoting "the Lord is my shepherd I shall not want," and some passages from the catechism learned in her youth respecting the Dear Saviour, and his Divine nature. Her visitor spoke to her of the precious truths she had repeated, telling her that in a world of change and sorrow, it was delightful that we had a Saviour, who being omnipotent, never wearied, whose love to his children never grew cold, whose mercy never failed them in the hour of need. But even as she spoke, the aged invalid dropped asleep.

The children began to see, that very long life, with its increasing weaknesses of flesh and spirit, its failure of strength of body and of mind, is not to be coveted. The mother pointed out to them, that it was a merciful provision of our Heavenly Father that but few of his children should attain very old age with its attendant trials, but expressed her confidence that when he does appoint them such a lengthened pilgrimage, it is for some good and wise reason, and that through the secret influences of his Holy Spirit he makes it up to them inwardly, by the comfort and peace bestowed.

Many years ago, I was told by a woman friend, whose benevolent heart often led her into scenes of suffering, that she had just visited a very aged woman, who had forgotten all the events of her past life, and even that she had ever been married. Her friends to her had become as though they were not, and all that was going on around her, the use of the care, the turmoil, reached her not. Yet upon being asked if she knew Jesus Christ, she frightened up as she replied, "yes, he is my Saviour." Religion is the only efficient comfort of old age. Kind friends may minister to the wants of the body, and may see that everything is done that can be done to alleviate the hours of sadness and suffering, yet, unless there is a large share of Divine grace afforded, in the decline of the powers of mind, fretfulness and impatience are apt to get in. They often render the closing hours of the aged, even of some who have passed reputable and apparently religious lives, less pleasant to the witnesses at the time, and less comfortable for them to reflect upon, than might have been the case if they had been taken away at an earlier period.

The frailties of flesh and spirit manifested by one as the mental powers have failed, have been used at times of great trial to their near friends, and have occasioned some stumbling to the evil judging world. We cannot tell in the progress of second childhood, when mental accountability ceases, and we know that God is rich in mercy, and that he will judge all things in righteous long kindness, through him who hath ever loved his own, and will love them even to the end.

Now and then, as though to exemplify the true meaning of the blessing "with long life will I satisfy him and show him my salvation," the Lord sustains some of his servants to a very green old age. Yea, in the weakness of the earthly tabernacle, he rants them to retain the mental vigour, whilst the spiritual seems even to strengthen, so that with holy alacrity, long after the friends of their childhood, the fellow-labourers in the Lord's cause, through the meridian of their days, have even gathered into rest, these continue filling up a desired sphere of usefulness in the church militant. Such an one is indeed, a great adorning to the rath, an exemplification of the sustaining power of Divine grace, and of the love and mercy of our Lord Jesus Christ.

Wilberforce spoke of our common feelings and sentiments being *unchristian*, and although he dwelt

particularly on the wishing long life, without doubt, other things had place in his thoughts. The wishing one's friends temporal blessings is a desire which a real true hearted Christian would feel some misgivings about uttering. Afflictions are so often ministers of mercy, and prosperity so often tends to deaden religious sensibility, and to alienate the soul from that humility and dependence upon God, which is the soul's only safety, that if a truly conscientious mind dared to give utterance to such a desire, it must be coupled with the hope that it might be granted only so far as it would tend to the everlasting well being of the beloved one.

The celebrated religious writer, Cecil, called to see a friend one day, and told him he heard that he was in a dangerous condition. His friend expressed his un-consciousness of any cause of alarm, on which Cecil told him that he supposed such was the case, and had therefore called on him. The danger to which he was desirous of awakening the attention of the earnest listener was, that he was attaining wealth,—prospering in the world,—increasing that which would necessarily require more and more attention, and which without a special blessing from above, would be likely seriously to interfere with his eternal well being.

*There is a Boy I can Trust.*—We once visited a public school. At recess a little fellow came up and spoke to the teacher; as he turned to go down the platform, the master said: "That is a boy I can trust. He never failed me." We followed him with our eye and looked at him when he took his seat after recess. He had a fine, open, manly face. We thought a good deal about the master's remark. What a character had that boy earned. He had already got what would be worth more to him than a fortune. It would be a passport into the best store in the city, and what is better, into the confidence and respect of the whole community. We wonder if the boys know how soon they are rated by other people. Every boy in the neighbourhood is known, and opinions are formed of him; he has a character, either favorable or unfavorable. A boy of whom the master can say; "I can trust him—he never failed me," will never want employment. The fidelity, promptness and industry which he shows at school, are in demand everywhere and prized everywhere. He who is faithful in little, will be faithful also in much.

*Live it down.*—If it is a false accusation that stings your sense of honour and justice, live it down. If your upright life is stigmatized with the appellation of righteous overmuch, walk humbly and softly the shadowed way. Soon your name will be gilded with light, all obscurity dissipated, and your character vindicated without a word dropping from your trembling lips. Yes! live it down, if your motives are impugned, and your life is made a kaleidoscope in the hands of men, varying in its form and colors, as each one turns it round and peers curiously in to detect some new appearance. If the friend who sat by your side when the storm-cloud was riven and your quivering form shook beneath the shock, now gazes unmoved upon your conflict with life's stern realities, and he who walked confidently by your side now seeks some other path, or meets you in the busy haunts of life with rigid lip and pulseless heart, bear on. You will come forth from the shadow of distrust into the sunlight of unclouded peace. Yes! live it down! A silent, consistent life will speak when the slanderer's tongue is silent in death, and the "busybody" stands in awe before Him who said, "Judge not that ye be not judged." —*Exchange.*

## Original Letters of Abraham Shackleton.

Dublin, Fourth Mo. 29th, 1769.

*Margaret Shackleton.*—*My very Dear Granddaughter.*—Thy welcome and acceptable letter was received. There are two worthy living ministers of the gospel of our Lord and Saviour Jesus Christ exerted from my native country in this city. They exhorted us to abide in the littleness; my very soul, and everything within me that's worth notice, says amen to it. I think I have been stripped to the very root since I came to town, but thanks to Him that hides his face for a moment and will never totally forget his little flock, He appears in the needful time and his hand is filled with consolation; let Him be thy chiefest joy, my dear, and then thou wilt step wisely in thy pilgrimage, little minding what people think of thee if thou hast but the smiles of his countenance. My health is much better this morning, and if I shall not live to see thee and the rest of you there, who are near and dear to me, I trust through mercy to be gathered to the generations of those gone before, whose robes were happily washed in the blood of the Lamb.—I am, with endeared affection to thy aunt, brothers and sisters, and my friends there, thine,  
ABRAHAM SHACKLETON.

Dublin, Fifth mo. 5th, 1770.

*Dear Margaret.*—My mind is mostly centred among those that are begging their bread, and had rather be honestly poor than be filled with unwholesome food, and lose my appetite for that which nourishes the soul up to eternal life. At times I thankfully acknowledge, to the praise of the bountiful hand that satiates the hungry babes with proper sustenance, I have partook with the poor of the flock of what keeps me from fainting, and encourages to hold on my way in watchful fear. I long that you there may be watchful and grow in the root of life. There is true and real comfort to be experienced.

Dublin, Third-day morning, Eleventh mo. 6th, 1770.

I have my dear Margaret's welcome lines, and am pleased with the account of your health, and that I am remembered by you. This morning and the preceding night I found some openness to make a return thereto, though indeed at times since I came to this town, and on the road leading thereto, as at many other seasons, my best beloved to me hath been like a fountain sealed, a well closed and shut up, and then I find it my place to sit like a fool and to wait diligently and patiently for the return who sets all right. This night, though I did not sleep so much as at some other times, I cannot but forbear inwardly humbly to return the tribute of thanksgiving to the God of my life, the heavenly Comforter having been pretty much my companion, the saviour thereof has not wholly left me, which is the reason that I sit down in goodwill to salute thee, else I should not have done it I believe. I strongly desire at present, as at other times, for all thy father's children, that you be a generation to serve the God of my life in this land of my pilgrimage unto which I trust and humbly conceive I have led as by a Divine hand for this purpose. And I trust, if you and yours are continued and abide faithful, a blessing will attend you.

And, my dear child, my spirit has been and is at this season nearly united to thee with a desire that thou mayst be so happy as, like Mary mentioned in sacred record, to sit in silence, love retirement, and choose such a part and portion as will abide with thee to endless eternity. Surely those that pursue such lying vanities, as the generality of mankind are led away with, forsake their own, or

what might have been their own mercies. Well, may thou be preserved in stability through the heights and depths, and honour Him that hath given existence for good purpose, even to serve Him here and be an example of uprightness to others in thy day, and to have a happy and blessed mansion in the heavens to all eternity; methinks I could write much, my mind being open, but time doth not allow.

#### COME UNTO ME.

I heard the voice of Jesus say,  
Come unto me and rest;  
Lay down, thou weary one, thy burden  
Thy head upon my breast.  
I came to Jesus as I was,  
Weary, and worn, and sad;  
I found in him a resting place,  
And he has made me glad.

I heard the voice of Jesus say,  
Behold, I freely give  
The living water; thirsty one,  
Stoop down, and drink of life.  
I came to Jesus, and I drank  
Of that life-giving stream;  
My thirst was quenched, my soul revived,  
And now I live in him.

I heard the voice of Jesus say,  
I am the dark world's light;  
Look unto me, thy mourn shall rise  
And all thy day be bright.  
I looked to Jesus, and I found  
In him my star, my sun!  
And in that light of life I walk,  
Till travelling days are done.—*Donor.*

#### For "The Friend."

#### Benjamin Ferris.

Benjamin Ferris, son of David and Mary Ferris, was born at Wilming, in New Castle county, on the Delaware, Fifth month 8th, 1740. He was a child of quick parts, and very early in life was sent to school, wherein he advanced rapidly in his studies. It is evident from some manuscripts left behind him, that he was a Latin and Greek scholar, and that he had gathered a goodly store of general knowledge.

He was, even in infancy, favoured with the visitations of Divine Grace reproving him for sin, one instance of which he narrates in a journal, or collection of memoranda, he left behind him. When about seven years of age, he, perhaps under the influence of the company he was in, made use of the Sacred name, in a rash, irreverent manner. For this, he says, "I felt great remorse and uneasiness. I mention this circumstance as a testimony of the early visitations of the Lord, and the efficacy of his inward appearance; for, though I escaped reproof from man, yet the inward conviction I felt was an effectual caution to me against repeating the like crime."

His piously concerned parents were anxious to do their duty towards their offspring, and he has recorded this instance of his father's care, about the period when the above mentioned sin was committed. "My father took my sister and me into his counting room, and told us there was a God in heaven who constantly watched over us, and observed our ways; and that we were accountable to him. He also informed us there was a heaven, into which all good men and good children would enter, with peace unspeakable, and live there forever. He also told us there was a place of torment, where all the wicked and evil-doers, and such as told lies and said bad words, would have woe and misery without end. This showed his tender and early care over his children; and it had some good effect to make me more careful afterwards not to tell lies, nor say bad words;—

practices which too much prevailed at schools; to check and prevent which, requires the watchful care of parents and tutors. I am fully persuaded, their pious endeavours for restraining from such practices, and their care to inculcate and encourage the principles of virtue, would often be aided by the Spirit of Truth in the tender minds of children. I have many times thought, that the right education of children is a subject of much greater importance than many seem to imagine. It is in their tender years that the seeds of virtue or vice usually take root, and it is the duty of those concerned in this important charge, to use their utmost endeavours to nourish the former, and to prevent [the growth,] or to root out the latter."

When about nine years of age, he visited his father's relations at New Milford, in Connecticut, where he remained about six months. It is probable that whilst there, he had more fleshly liberties granted him, than whilst under the paternal roof, which afterwards ministered trouble to him and his pious parents. He soon acquired most of the learning his Wilmington teacher could impart, and being anxious to study the Latin language, his father, who had received a liberal education himself, consented that he should go to Philadelphia as the best place to obtain it. Having the permission of his father to go, Benjamin then endeavoured to obtain liberty to have fashionable attire to dress in whilst there. But David would not consent to this, and Benjamin records this as a grateful testimony to his father's steadfastness in the Truth. He adds, "If there was more religious concern, and greater firmness in parents on the subject of plainness, it might prevent many undue liberties, and reform customs that have got into our Society. Although my father was thus strict, he was an idolator of forms, but he wisely adopted Solomon's advice, to train up a child in the way he should go, in hope that when he should be old, he would not depart from it."

The opposition of the father to the desired change in dress, probably caused some decrease of desire in the young boy to go to Philadelphia, and a Latin school, being soon after established in Wilmington, he entered it as a pupil and continued his attendance there, he says, "for a considerable time." It is probable that it was in the same school that he obtained his knowledge of Greek. Benjamin mentions his persuasion that his being prevented from going to the Philadelphia school was a providential interference for his good. At home he was almost always, except during school hours, much under the eye of his watchful parent, and his preservation in comparative innocence of conduct, may in good measure be traced to the influence for good exercised over him in the home circle.

He says in his diary "when I was about twelve years old, my father took me with him to Concord Meeting, at which was Mary Weston, from England. Thence we went to Chester, Mary rode in the chair with father, and I rode her horse; being early and frequently in the company of valuable Friends, was a favour to me, as I was induced to love them and value their society, and they often noticed me."

Great are the advantages which many of the children of pious Friends have had in the religious care and oversight exercised for them by godly parents, and also in the notice of ministers of the gospel travelling in the service of Truth. Often-times these latter are concerned to have meetings in the family, and at seasons many a child and weakling of the flock have been strengthened in righteousness; various instances are on record of a word dropped on such occasions, having been, through the

grace mercifully accompanying it, made conducing to the everlasting well being of the listeners, even of some, who, although blessed with pious parents anointed as ministers of the gospel, and often at home and at meetings hearing the truth declared with power, have yet never before been saved, reached.

In 1755, Benjamin was fifteen years of age, an making an exemplary appearance, and manifesting some concern for his own good and that of others, and being blessed with fine talents, great hopes were felt by religiously minded Friends that would become an eminent instrument of good to the Society of Friends.

He says, "In the year 1755, I attended the Yearly Meeting held in Philadelphia: and in the latter end of the Eleventh month, accompanied Comfort Hoag, from Hampton, and Elizabeth Dean, from Salem, New England, to Centre, Concord an Springfield. This was to me an instructive season. A few weeks before starting on this journey he addressed the following letter to his young friend Caleb Dean, of Birmingham, son of that eminent minister Lydia Dean, one of the children of Joseph Gilpin.

Dear Friend,—I am through Divine Mercy we in health at present, as are all our family. Fathe has gone to Lewistown with Comfort Hoag, a Friend from New England, and therefore I could not go to see thee. Do not think I have forgotten thee! Often thou hast come under my consideration, and indeed thou art near and dear to me. Many times we have been comforted together, and have measurably witnessed the joy of God's salvation to abound, to our great consolation, and a this time my soul is filled with love for thee, and in it, I salute thee, desiring that thy eye may be kept single to Him, that thy body may be full of light, and that thou mayest be faithful even in little things. Then will he bless thee with health and strength, and above all, with the pure peace of a quiet conscience, and through his blessing thou mayest be made an instrument in his hand of good to others.

I desire thee to be resigned to do the will of thy Lord without reserve. Then thou wilt know him to be the Physician of value, and whether life or death be appointed thee, thou wilt be his. To his I commend thee and tenderly bid thee farewell.

I remain thy truly loving Friend,

BENJAMIN FERRIS.

Wilmington, 11th mo. 6th, 1755.  
For Caleb Dean, in Birmingham.

(To be continued.)

*The Rhinoceros's Friend.*—The Rhinoceros's best friend, and the Rhinoceros's hunter's most tiresome enemy, is a little bird, the Buphaga Africans, vulgarly known as the Rhinoceros's bird. It stands, attends on the huge beast, feeding on the ticks that infest its hide, the bird's long claws and elastic tail enabling it to hold fast to whatever portion of the animal it fancies. If it rendered the Rhinoceros no better service than ridding him of these biting pests, it would deserve his gratitude; but in addition, it does him the favour of warning him of the approach of the hunter. With its ears as busy as its beak, the little sentinal detects danger afar off, and at once shoots up into the air, uttering a sharp and peculiar note, which the Rhinoceros is not slow to understand and take advantage of, he doesn't wait to make inquiry, but makes off at once. Cunning asserts that when the Rhinoceros is asleep, and the Buphaga fails to wake him with its voice, it will peck the inside of his ears, and other wise exert itself to rouse its thick-headed friend.—*Wild Sports of the World.*

*The Little Girl and the Thorn.*—A very little girl was running about in the woods, and gathering wild flowers to twine into a garland. But all at once her shouts of glee were changed to sobs, and her smiles gave place to tears. A thorn had run into her finger, and the smarting, pricking pain was something new and strange to her. To whom do you think she ran for comfort? Ah! you have guessed it. She ran to her mother; and her mother took out the thorn, wiped away the little one's tears, and soothed her, and talked to her till all the bright smiles came back again.

A few years rolled away, and that little girl had grown older. She had gone further on in the pathway of life. She had found it as full of happiness as the wood was full of flowers. But a time of trouble came. It came suddenly. It was a deep grief that filled her eyes with tears as she stood beside her little sister's coffin. And where was her mother! Far away over the sea, and not likely to come home for a month to come! But that young heart was not without a refuge. She knew that her God was her God. She knew the words, "As one whom his mother comforteth, so will I comfort you." She looked up to him, and he put strength and peace into her soul. He will do the same for us, if we are his. He will do it as often as we are a sorrow; ill at last he takes us to that better world, where there are no more thorns, no more trials, but where he will wipe away every tear from every eye.

'Twas an unhappy division that has been made between faith and works. Though in my intellect may divide them, just as in the candle I know here is both light and heat, but yet put out the candle, and they are both gone; one remains not without the other; so it is betwixt faith and works.—*Selden.*

For "The Friend."

#### A Testimony in favour of the Good Old Paths.

In an epistle written to the members of the Religious Society of Friends by a member of Ohio (early Meeting, and approved by it and Indiana Meeting for Sufferings, in the year 1841, we find sentiments and advice which it will be well for friends to recur to, and thereby test their present opinions and practice. At a time when great efforts are making to change our principles, our original views of worship, ministry and prayer, and to turn back to the ways of the world, some of the most important subjects, even some of the heads of the tribes have need to compare their sentiments and acts with what they then approved as sound christian practice, obligatory upon the society and its members; on page 1, the address says, when our forefathers, through a powerful visitation from on high to their souls, were drawn from lifeless forms and ceremonies that had sprung into the church during a long night of apostasy, and in a true hunger and thirst after righteousness, met together in small assemblies, reverently to wait upon Christ Jesus, the true teacher of the children of men, they found to their great comfort, that which they sought after. The Lord gave them to see the unsatisfying nature of a man made ministry, and to understand that in this glorious gospel dispensation, it was a prerogative that Christ and kept in his own hands, who is Head over all things to his church, to raise up and qualify his own ministers, each of whom must acknowledge with the apostle in regard to the gift bestowed upon him, "I neither received it of man, neither was I taught it, but by the revelation of Jesus Christ." Through the teachings of the Holy Spirit, our forefathers were led into that plain way of worship which has distinguished us as a reli-

gious Society from that day to this. The Lord was with them and wrought mightily for them; and notwithstanding the persecutions they suffered at the hands of wicked men, their number greatly increased. In a short time many able ministers were raised up amongst them, who went forth with the glad tidings of the gospel of peace and salvation; and visited souls, who had been waiting for the consolation of the Israel of God, could under a feeling of divine favour through them adopt the language, "How beautiful upon the mountains, are the feet of him that bringeth good tidings, that publisheth peace, that bringeth good tidings of good, that publisheth salvation, that saith unto Zion, thy God reigneth!" These bold, faithful advocates and sufferers for the cause of Christ, were favoured with a clear view of this last and lasting dispensation, and its spiritual nature and design, and very remarkable it was that in their ministry, in their disputations with their opposers, and in their writings, they all spoke the same language, and all advocated the same views of the doctrines of the gospel. This is a confirming evidence, that they were illuminated by the one Spirit, and thus in the mercy, wisdom and goodness of the Lord our God, they were brought forth under a special qualification to hold up a pure and perfect standard of Christian doctrine, agreeably to the Holy Scriptures."

True gospel ministry is a blessing to the church, and when a gift is given, it should be occupied to the praise of the Giver, the growth of the recipient, and for the feeding of the flock. If by some it may be too lightly valued, which is a hurt to the individual and to the good cause. A discerning spirit is needed to discriminate between that which comes from the living Spring, and that which an unsanctified spirit would thrust upon the church, and which ministers death instead of life, and it persisted in, may land in confusion, and final scattering of the flock. Persons who appear to think that little or nothing is done, without words are uttered to fill up time, would do well to look at the sentiments which their elders seriously adopted, and spread among the members at that day, and to ask themselves what has led to the almost disregard by not a few, of the indispensable guidance of the Holy Spirit, to qualify for the different acts in the performance of divine worship. Are they not in danger of abandoning that child-like dependence upon Christ, in order to know his will, and to teach them to forbear to move without his putting forth, and going before them in their religious service. Will not the original constitution, and the character for religious weight which has preserved and dignified our Society be destroyed, if this course should be followed? Worldly minded persons may destroy themselves, but the ordinations of the Head of the church, and the foundation on which he builds it, cannot be removed.

The epistle says: "As Christ comes to live in us, and to rule and reign in us, all that is high and lifted up will be laid low, and we shall become willing to be of no reputation, after the example of Him, who being in the form of God, thought it not robbery to be equal with God, but made himself of no reputation, and took upon him the form of a servant and was made in the likeness of men, and being found in fashion as a man, he humbled himself, and became obedient unto death, even the death of the cross. Thus only can we answer the design of our heavenly Father concerning us, steadily to maintain those testimonies which he has made us our duty to bear to the world for his glorious name and truth's sake, in this new covenant dispensation." "Let none be ashamed of a deep and reverent silent waiting in

our assemblies, for a qualification to perform acceptable worship unto God, nor of meetings that are held throughout in silence, when it is the blessed Master's will that it should be so; but let us show that we believe in, and do experience the truth of his saying, 'without me ye can do nothing.' He alone has brought us into the blessed lot of our inheritance, to sit under his teaching, who is indeed our great prophet, the minister of the sanctuary, and of the true tabernacle which the Lord hath pitched and not man. He hath brought us to feel the sweet and heavenly harmony experienced by the true worshippers within the temple, who are gathered in his name, out of the world and of its worship and ministry, and out of the activity of the creature. May we support unsullied this excellent testimony to the spiritual nature of gospel worship, and may the Lord by his divine power open more and more the understandings of the children of men, to come to partake of the blessed fruit thereof. 'For from the rising of the sun to the going down of the same, my name shall be great among the Gentiles, and in every place incense shall be offered unto my name and a pure offering.' As we are faithful, our ever adorable Head will continue to bless the provision of Zion, and satisfy all her poor with bread; and by his divine presence he will cause our religious assemblies still to continue to be holy convocations unto him, and to the rejoicing of the Israel of God."

The following sentiments, though penned twenty years ago, are applicable to not a few in the different Yearly Meetings at the present time, some of whom murmur against the faith and practice of the society, and want to take it back to a man made worship and preaching, in which the self-denial and cross of Christ are rejected. Others, under profession of being supporters of the Truth, cavil at brethren and encourage division, because the body cannot conform to all their wishes. The tendency of both parties is to disorganize the Society, destroy the love and unity which has heretofore remarkably distinguished it, and made it, as disciples of the Prince of peace, a shining example, and a blessing in the world. The address further says, "Let us hold fast the profession of our faith without wavering, and keep out all murmuring and complaining. Some for want of duly maintaining the watch, have in great measure lost that sense and feeling of divine things which they once had, and are very ready to find fault with the living, exercised members of the body, whose eyes are anointed to see the situation and danger they are in, and who through the constraining love of the gospel, are at times engaged to labour with them for their restoration, even as such who must give account of those over whom the Holy Ghost hath made them overseers. These complainers will cry out in language similar to some discontented spirits under the legal dispensation, 'Ye take too much upon you.' But the power of Truth is over them, and all the living members who keep their places in the body, by that living sense which they receive from God, are over them and all their murmurings. Oh! that such might submit to the teachings of Christ in their own hearts. This is the only way by which such can be brought into the unity of the body, into the fellowship of the gospel, and into a living sense of divine and heavenly things. As any come upon this ground of faithful obedience, great reduction of self will be experienced, and their dependence will be entirely fixed upon the source of divine light, life, wisdom and intelligence, Christ in them the hope of glory. As you search diligently with the Spirit or candle of the Lord, you will find the root and cause of your murmurings and discon-

tent is within yourselves, and you will feel that in divine mercy, the healer of breaches and restorer of paths to dwell in, is waiting to be gracious to you, to bring you into the enjoyment of the heavenly life, and to know the flowing of the living sap from the true Vine, in which all the faithful members abide, and wherein their unity and fellowship stand, agreeably to the beautiful simile, used by our blessed Lord and Saviour Jesus Christ; 'I am the vine and my Father is the husbandman. Every branch in me that beareth no fruit, he taketh away; and every branch that beareth fruit he purgeth it, that it may bring forth more fruit. Abide in me and I in you.' As the branch cannot bear fruit of itself except it abide in the vine, no more can ye, except ye abide in me.

(To be continued.)

#### SUMMARY OF EVENTS.

**UNITED STATES.**—The *National Loan*.—The subscriptions to the loan at the close of last week had already exceeded \$9,000,000. Several hundred subscription agents have been appointed all over the loyal States.

**New York.**—Mortality last week, 247.

**Philadelphia.**—A letter, dated March 23, 1861.

On the night of the 14th inst. a sad tragedy occurred at the Continental Theatre. The dress of one of the actresses took fire, and being of a very light and inflammable character the flames were quickly communicated to others of the ballet corps similarly apparelled. Twelve young women were terribly burned, six of whom soon died of their injuries.

**Kentucky.**—The Legislature of this State adopted resolutions directing the Governor to issue his proclamation ordering the rebel troops to withdraw forthwith. The resolutions were signed by the Governor, but being rejected by a two-thirds vote he complied, and on the 14th issued the following:

"In obedience to the subjoined resolutions adopted by the General Assembly of the Commonwealth of Kentucky, the governments of the Confederate States, the State of Tennessee, and myself, are hereby informed that Kentucky expects the Confederate or Tennessee troops to be withdrawn from her soil unconditionally."

The rebel army at Columbus under Bishop Polk, composed of thirteen regular regiments, three battalions of cavalry, with six field batteries and a siege battery. The Federal forces at Paducah, at the same time, consisted of five regiments of infantry and one battery of artillery.

**Missouri.**—The President of the United States has transmitted a letter to Gen. Fremont modifying the recent proclamation of the latter, in that part which relates to the slaves of the insurgents; as modified by the President, slave property will not be forfeited in Missouri, unless in those cases where the slaves are required by their masters, either to take up arms, or to join upon some military work to be used against the United States. On the 10th a rebel battery at Lucas Bend on the Missouri shore, was attacked by two of the U. S. gun boats. The battery was silenced and a rebel gun boat disabled. The loss of the rebels was severe, 68 having been killed and 100 men wounded. On the part of the attacking force only two men were wounded. A session camp at Dick creek, Monroe county, was recently broken up by the Federal troops and 300 rebels were captured. In an engagement at Ironville the rebels were again repulsed. The main army of the insurgents under Gen. Price, was approaching Lexington. Gen. Hardee was at Greenville with 800 men. The rebel army in northeastern Missouri is, it appears, being dispersed by Gen. Pope. The rebel forces under McCullough are near the Arkansas line, ready to act in concert with the Missouri troops as occasion might require. On the whole it would seem that the rebel cause was losing ground in Missouri. In many places the slaves have taken advantage of the disturbed condition of affairs to escape from their masters.

**Virginia.**—A better correspondence of the rebel encampments near Washington, shows that since the recent advance of some parts of the southern forces, the main body of the army has fallen back to Manassas, and is now encamped there. The object of the late movements is supposed to have been to draw the Federal troops into an engagement on ground chosen by the rebel commanders. On the 10th, a part of the rebel army in Western Virginia under the command of Gen. Floyd was attacked by Gen. Rosecrans. The rebels

occupied a strongly entrenched position on the west side of the Gauley River, but on the night succeeding, abandoned it, leaving behind a quantity of baggage, camp equipage, and ammunition. Having destroyed the bridge across the river, which here flows through a deep gorge, the rebels were secure from immediate pursuit. Their loss is not known, but it is estimated that about 30 of the Federal troops were killed and 100 wounded. In a skirmish near Cheat Mountain Summit two rebel officers were killed, one of whom proved to be Col. John A. Washington, of Mount Vernon. Several other partial engagements are reported, in all of which the rebels were obliged to retreat. The rebel batteries at Acquia creek extend a long distance on the shore. It is feared they will soon obstruct the navigation of the Potomac. The Richmond Examiner of the 9th announces that the Potomac is about to be effectually closed by powerful batteries.

**Southern Items.**—The report that the Governor of North Carolina has recalled ten thousand of the troops of that State from Gen. Beauregard's command, is confirmed.

A letter in the Savannah News assigns the sickness of the troops as one of the reasons for the inactivity of the southern army since the victory at Manassas. At the beginning of this month he estimated that about one-fifth of the men were unfit for duty.

One hundred and fifty six of the Federal prisoners, including many officers, are confined in Castle Pinckney, S. C.

Heavy and very general rains have prevailed in the cotton region, doing some damage to both rice and cotton.

Some southern papers complain of the fact that millions of dollars are sent north by the banks and capitalists of the south, for the purpose of buying the bonds of the State in the confederacy at a depreciated value, and say it is equivalent to giving money to their enemies to prosecute the war.

Some shoe merchants urge the discharge of all the shoemakers from the army, and their employment in the manufacture of shoes, composed principally of canvas.

The Richmond *Whig* has a bitter article against speculating capitalists for the winter clothing supplies for the army, and urges the immediate closing of the woolen mills into the public service to avoid speculating contracts. It states positively that the War Department has detailed from the army operatives to be employed in the cloth factories.

It has been passed by the Confederate Congress admitting Missouri into the Southern Confederacy. Jefferson Davis, the President of the "Confederacy" has been very ill, but at the latest dates was convalescent.

At New Orleans, John Ross, chief of the Cherokee Indians, publishes a statement that at a meeting on the 21st ult., his people instructed their authorities to form an alliance with the Southern Confederacy, and that a mounted regiment will be raised for the rebel service.

Charleston papers state that within a month, fourteen vessels of the *St. Cruzes* will be sent to the harbor of Wilmington, (N. C.) harbour, and that in the same time \$180,000 has been paid to collectors.

The forts at Hatteras Inlet have been repaired and strengthened by the U. S. troops, with a view to holding them permanently. Several valuable prizes have been taken by the U. S. cruizers in the Gulf of Mexico.

**Secession in Maryland.**—The continued mischievous plotting of influential parties in this State has, it is alleged, led the U. S. Government to order a considerable number of them to be put under arrest for safe keeping. On the 10th inst. the *Frederick* and *Frederick*, Baltimore, the editors of two obnoxious newspapers, Ross Winans and seven other members of the Legislature, were conveyed to Fort M. Henry. The legislature was coming to convene at Frederick, and from its known course, action of a treasonable kind was anticipated.

On the 10th, the police of Baltimore continued to arrest the secession members as they arrived in the city on their way to Frederic. So many of them had been secured that there would probably be no quorum on the 17th, the day to which the Legislature had adjourned. The *New York Herald* says that the United States Circuit Court in New York, has decided that the fact of a vessel being fitted out *with intention* to embark upon a voyage for slaves, works the forfeiture of both vessel and cargo. For some months past there has been increased vigilance at New York in suppressing this shameful traffic.

**Boston.**—The value of real estate and personal estate for 1861 is \$275,281,200. There is an *increase* in the valuation of real estate of \$3,444,900, and a *decrease* in personal estate of \$5,024,100.

**Cotton from India.**—At the latest dates, upwards of twenty ships were at Bombay, loading with cotton for England. From First mo. 1st, to Sixth mo. 1st, the shipments were 567,466 bales more than for the same five months last year, the whole amount being 837,621 bales. The total export of cotton from Bombay to England, this year, will be much larger than in any previous year. The cotton monopoly of our Southern States seems to be departing.

**Foreign.**—News from England to the 6th. The Times, in an editorial, argues that enough has transpired to show that the navigation of the South is next to impossible, and her submission in the highest degree improbable. All the incidents of the war thus far have been favourable to the South. The Times asks doubts much whether Americans, after the war is ended, will return to their old form of Government, and is of the opinion that there must be either two governments, and that they will be less democratic than hitherto, although that of the North will bear a resemblance to the last republic.

Another terrible rail road accident occurred near London by which thirteen persons were killed and fifty wounded.

It is reported that Austria and Spain have addressed a collective note expressing their intention, in the event of the withdrawal of the French troops from Rome, to place some regiments at the disposal of the Papal Government.

The policy of working short time was making progress among the leading manufacturers, as a precaution against the contingencies of the cotton supply and the state of the foreign markets for manufactured goods.

The Liverpool cotton market continued buoyant. Breadstuffs fell but unchanged.

#### RECEIPTS.

Received from Isaac Price, Pa., \$2, 34; from R. Woodward, Alb., N. Y., \$6, 30s, 30, 31; from Hiram Cook, Pa., per E. W. S., 34; from Alfred King, N. Y., \$3, 10s, 35; for Mrs. J. Roberts, Ind., \$2, 10s, 34; from Abner Corfill, and Co., Ind., \$2, 10s, 34; from S. Sharples, S. 4, to 27 vol. 34, and for Thos. Crozier, S. 4, 30s, 33 and 34.

**Diso.** at Byberry, Pa., Ninth mo. 7th, 1861, Sarah S. Scammon, of the Northern District, Monthly Meeting of Philadelphia, relic of the late James Scammon. She underwent a protracted illness with much patience and Christian resignation, repeatedly expressing the desire that her afflictions might work for "her a far more exceeding and eternal weight of glory." We humbly believe that, through her suffering love and mercy, her immortal spirit, refined by suffering, has been permitted to enter the Kingdom of everlasting rest and peace.

#### EVENING SCHOOLS FOR ADULT COLORED PERSONS.

A Principal and Assistant Teachers are wanted for the Men's School, and a Principal and Assistants for the Women's School.

The schools will be opened on the 14th of the Tenth month at the usual place; they are held five evenings in the week. Apply to JONAS C. WILLIAMS, No. 321 N. Front, or 355 S. Fifth Street; ALLEN FRANK, Jr., 252 S. Front Street, or SAMUEL ALLEN, 524 Pine Street.

#### FRIENDS' SELECT SCHOOLS.

The Primary Department of these schools, for the Northern District, has been re-opened under the care of Deborah Brooks, a well qualified and experienced teacher. The school young children of both sexes are instructed in the elementary branches, so as to prepare them for the higher departments of study, while their moral and religious welfare is carefully regarded. The school rooms are in Friends Meeting House on Sixth St., entrance on Noble Street.

#### WEST-TOWN SCHOOL.

The Committee to superintend the Boarding School at West-town, will meet in Philadelphia on Sixth day the 4th of next month, at 7 o'clock, P. M. The committee on Instruction and Admissions, meet on the same day the former at 4 o'clock, and the latter at 5 o'clock, P. M. The committee on the general management and re-organization of the Schools, commencing on Third day morning, and closing on Fifth day afternoon of the same week.

JOEL EVANS, Clerk.  
Ninth mo. 18th, 1861.

PILE & MELROY, PRINTERS,  
Lodge street, opposite the Pennsylvania Bank.

# THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XXXV.

SEVENTH-DAY, NINTH MONTH 28, 1861.

NO. 4.

PUBLISHED WEEKLY.

Price Two Dollars per annum, payable in advance.

Subscriptions and Payments received by

JOHN RICHARDSON,

AT NO. 116 NORTH FOURTH STREET, UP STAIRS,

PHILADELPHIA.

Postage to any part of Pennsylvania, for three months, if paid in advance, three and a-quarter cents; to any part of the United States, for three months, if paid in advance, six and a-half cents.

Benjamin Ferris.

(Continued from page 22.)

His diary continues:—"On the 5th of the First month, 1756, Samuel Fothergill and John Churchman were at our Monthly Meeting, and Samuel was remarkably favoured to speak to the state of the meeting, there being some unhappy differences among Friends. He had also an encouraging exhortation to the youth, and the visitation of Divine love was renewedly extended to the comfort of the honest-hearted. Praised and magnified be the name of the Lord for his mercies and favours on behalf of his children and people."

The following letter he addressed to his cousin Abigail Noble, Merryall, New England.

Dear Cousin.—These may inform thee we are all at present. Father has returned home in safety. By him I understand that a gracious land is reached out to thee in tender love and Divine regard. This made my soul rejoice and raise the Lord in a reverent sense of his goodness to us, who are but as the dust of Zion. Oh, how my heart leaped within me for joy, when I heard of the goodness of the Almighty to thee! His love unfathomable, his goodness unchangeable, his mercy endureth forever.

Dear cousin, let us forsake all the vain and transitory fading and perishing enjoyments of this life, rich in the end, create trouble to the mind, and sorrow to the soul. Let us follow the Lamb, and arm of Christ Jesus who was meek and lowly, meek in speech and apparel, wearing a coat without seam, yet adorned with the robes of righteousness and love. He is my beloved, and that he may be thine also is my desire. Oh, how lovely is He! He is the chiefest of ten thousand! Let us, my dear cousin, wait before him in humility, meekness and fear, for he giveth grace, saving grace, to the humble, and he beautifyeth the meek with salvation. Let us seek to be vain vessels of honour for his heavenly House, wherein the righteous dwell in everlasting peace. Joy unutterable and full of glory. There the redeemed sing songs of eternal praise to the Lord God, and to the Lamb immaculate, who reigns in the Holy city, and is one worthy to rule and reign world without end, amen!

Now, in a degree of love, which I believe is extended to thee, I bid thee farewell.  
Wilmington, Third Mo. 8th, 1756.

Towards the close of the Third month, he was in Philadelphia, attending the public meeting at the time of the Spring Meeting. He says, "I attended the Spring Meeting in Philadelphia, the Youth's Meeting at Concord, and a meeting at Hockessin, where was Catharine Payton from England, and divers other Friends. Dear Samuel Fothergill came with me to Wilmington. His kindly noticing me, had in it something encouraging to my mind. I was at a number of meetings with him and Catharine Payton, and Mary Piesly, to my comfort and instruction, and was also in Philadelphia at the time of their taking leave of Friends to return to England. It was an affecting, memorable season, in which many tears were shed. Dear Samuel Fothergill said we could not part better than under such a Divine influence as was then felt. I came in company with them and divers Friends to Chester, where after a comfortable sitting at Joseph Hoskin's, Samuel Fothergill, Catharine Payton, Mary Piesly, Abraham Farrington, and Samuel Emble, Jr., went on board the vessel, which fell down the river to New Castle, where the next day, being First day, they had a large meeting in the court house. They embarked for England on the 6th of the Sixth month, 1756.

"During the summer, I attended divers neighbouring meetings, and in the Eleventh month, my father sent me to New England to transact some business for him. I went by way of Richard Hallets, at Newbern, Long Island, and reached my uncle's, Benjamin Ferris, on the 1st of the Twelfth month, where I was received with gladness, and my heart was humbly thankful to the Lord that I had been preserved in my journey. I spent about six weeks among my relations at Oblong, New Milford, Merryall, and New Preston, to my satisfaction; and then having completed my business, I returned home. On my way, I stopped at an inn to lodge. It was late when I got there, but I found a company of young men, among whom were several Friends' children, drinking and making a noise. This being very disagreeable to me, I obtained a private room and passed the remaining part of the evening alone, to my comfort, the Lord being pleased to overshadow me in some degree, with his presence. During the most of this journey I had no company, except the good presence of the Lord; for which and his watchful care over me, I felt thankful, and enjoyed peace."

Copies of a number of letters addressed to his friends, written in 1756-7, are preserved, interesting as disclosing the religious bent of his thoughts at that period. In the Fifth month, 1757, he writes in his diary, "I was at a meeting in Philadelphia, in which 'the glorious Lord' was unto me 'as a burial of broad rivers.'" "25th, was at the funeral of Daniel Stanton's daughter, Abigail, who was a virtuous young woman."

"Ninth month 17th, I went to the Yearly Meeting in Philadelphia, the various sittings of which, according to the sense of of many Friends, were eminently favoured with the Divine presence and counsel. The affairs of the church were conducted with much concord and harmony, and the youth were encouraged in the attendance of these

meetings. Five European Friends attended this meeting, namely, Thomas Gawthrop, John Hunt, Christopher Wilson, William Reckett and Samuel Spavold.

"In the Tenth month, being in Philadelphia, I was at a meeting where Thomas Gawthrop attended, and it was a tendering time to me, under a renewed visitation of Divine love. Oh! that I may walk worthy of such favours. In the evening I went to see T. G., who was about departing for England."

"Tenth month 14th, being in company with Esther White and another Friend, on their way to attend Cecil and Choptank Yearly Meeting, in the evening I took a walk into the fields alone, and being humbled under a sense of inward want, I was enabled to cry unto the Lord for preservation during this journey. I believe my tenderities were graciously regarded, and a degree of holy fear rested on my mind, with a feeling of thanksgiving and praise to Him from whom cometh all good."

In writing about this time to his cousin Zebulon Ferris, whose father having attended our Yearly Meeting, was engaged visiting the subordinate meetings, thereof he writes, "I have been unwell for several days past, was taken at Centre Meeting with a fit of the ague, where was thy father whom I left proceeding on his journey towards Choptank. He was well and cheerful."

The diary of Benjamin Ferris has lost several leaves about this time, but it appears from scraps preserved, that he lost ground in a religious sense. He left off the daily waiting on the Lord for wisdom and direction, and grew fond of the exercise of his own faculties on religious subjects, and took pride therein. He says, "I thought to acquire a knowledge and understanding in the operations of Providence, and explore the unsearchable mysteries of the wisdom of God, without the influence of His own Spirit, and that barely by improvement of my natural reason." "I was careful to keep to morality, grew wise in my own eyes, and increased in this carnal wisdom, whereby my company was coveted, and I was delighted with such who preferred natural reason to revelation, but I became a stranger to the truly religious, and my once well beloved friends, who walked in the narrow way which alone leads to the paradise of God. I despised their simple \* \* behaviour and contemned their"

The parts of the diary which more particularly relate his sad spiritual downfall, are lost, and the scraps given above, are from a leaf, one half of which is torn off. He appears not to have departed from his principles, so as to cause reproach, and to have been diligent in attending meetings; he says, "I was an utter stranger to those refreshing joys the truly religious feel."

(To be continued.)

*Origin of the Word Spinsters.*—It is said that women in the olden time were prohibited from marrying until they had span a set of bed furniture, and hence they were called spinsters until they were married. Supposing the same requirements were continued in these modern times—what regiments of spinsters there would be!

*The Chameleon.*—An officer in Africa thus writes of the habits of this animal:—"As some of the habits of the chameleon may not be generally known, I will mention a few which came under my observation. One morning I saw close to my tent a very large chameleon, hanging on a bush. I immediately secured him, and provided a box for him. In the course of a few days he became quite familiar; and having seen them before, I knew how to gain his affections, which, in the first place, was done by feeding him well, and in the next place by scratching his back with a feather. I used to put him on my table at breakfast, and in the course of a very few minutes I have seen him devour at least fifty flies, catching them in the most dexterous manner with his long, slimy tongue; nor does he ever move from his position; but so sure as an unfortunate fly comes in reach, so sure he is caught, and with the rapidity of thought. In the forenoon I always gave him a slice of bread, which he devoured, and he generally supped on as many flies as he could manage to entrap. Promises would not have suited him at all, being at the end of each day considerably more like a crammed capon than an air-fed chameleon. It is not true that this animal will change colour according to what he is put on; he will change shade according as he is pleased or displeased. His general hue is a bright green, with small gold spots over his body; he remains at this shade when he is highly pleased, by being in the sun, or being fed, or scratched, which he delights in. When angry—and he is easily made so—his hue changes to a dusky green, almost black, and the gold spots are not to be seen; but I never could perceive any other colour on his body but green, in a variety of shades. The spots enlarge very much when he is in good humour—so much, indeed, as to give a yellow tinge to the upper part of the animal; but in general they are merely little yellow spots here and there, on the back and sides."

Selected.

*Look on the Bright Side.*—Look on the bright side of things. It is the right side. The times may be hard, but it will make them no easier by wearing a gloomy and sad countenance. It is the sunshine, and not the cloud, that makes the flower. Full one half our ills are so only in imagination. There is always that before or around us which should cheer and fill the heart with warmth.

The sky is blue ten times where it is black one. We have troubles it may be. So have others. None are free from them. Perhaps it is as well that none should be. They give sinew and tone to life; fortitude and courage to the man. That would be a dull sea, and the sailor would never get skill, where there was nothing to disturb the surface of the ocean.

It is the duty of every one to extract all the happiness and enjoyment he can without and within him; and above all he should look on the bright side of things. What though things do look a little dark! The lane will turn, and the night end in broad day. In the long run, and very often in the short, the great balance rights itself.

What is ill becomes well; what is wrong, right. Men were not made to hang down either their heads or their lips, and those who do, only show that they are departing from the path of true common-sense and right. There is more virtue in one sunbeam than a whole hemisphere of cloud and gloom. Therefore, we repeat, look on the bright side of things. Cultivate what is warm and genial; not the cold, repulsive, dark, and morose.

It is better to find out one of our own faults than ten of our neighbours.

### Musings and Memories.

A KIND PHYSICIAN.

A late female writer relates this anecdote. An unmarried woman of her acquaintance, afflicted with an incurable malady, with little society, and few loving ones to wait on her wants and administer kindly words to cheer her drooping spirit, was sinking through much pain, to a certain death. Through years of suffering, her outward comforts were few, consisting principally of the ability to read, and the caresses of a faithful dog. In the last summer of her life, she found some relief from the pain she was suffering under, by watching the movements of two little house-flies who had made their home in the curtains of her bed. Often in the morning after a night of extreme agony, her first enquiry would be, "are the flies there still?"

Her physician, a man of high intellect and with a great pressure of business upon his mind, entered into her feelings and manifested much sympathy with her in her fears lest her little favourites should die, or forsake her. "More than once," says the writer, "I have known him, amidst the pressure and hurry of a large, wide-spread practice, when time was capital and literally every moment had for him a solid, financial value, come from her chamber to the parlour with anxiety and pity in his face, exclaiming—'she is fretting so, because she has lost her flies. I must find her two others. We must not let her know they are gone; any irritation so exacerbates the pain—and she has enough to bear, poor thing!'" She adds he would not give up the search until he had found two flies and introduced them into the curtains.

The authoress alluded to, after moralizing on the vanity of man's boasted reason and elevation of intellect, because there was "once of the highest order of intelligence reduced to such isolation of feeling as to value and covet the society of an insect," then bestows her warmest eulogium on the physician. She desires that the blessing of the most High may be on him! "for this and multiplied instances of the exquisite apprehensive sensibility he manifested alike for the mind's laceration or the body's infirmity."

It is not the physician alone who should labour to appreciate the feelings of others, and to minister by kindly considerate actions to the comfort of those with whom they associate, this is a debt due by each of us to our fellow mortals. How numerous the kindnesses we each one of us have received at the hands of others. Let us then endeavour to return, with interest, kindness and sympathy to the members of the human family, as we find occasion, and surely no day can pass over our heads, in which opportunity does not occur, to those not isolated from the world, for kind thoughts, kind words, and kind actions.

A kind physician! There have been many such. Skilful men, who, whilst enjoying the utmost of their knowledge and judgment in ministering to the bodily wants of their patients, have human sympathy for them, and willingness as well as tact and ability to soothe and cheer the depressed or excited mind. Such are very desirable attendants in the chamber of sickness and suffering, when the mind often penetrates deeply in the weakness of the body. But, however desirable such may be, there is one, whose company, all knowing, all sustaining, all sympathizing, is more desirable still. The Physician of value. He knows our wants and sorrows, and to the soul thoroughly confiding in him, he condescends even to their weakness, and where it does not interfere with their soul's welfare, he gives them to feel the extendings of his mercy in granting their requests.

For "The Friend."

### FRUITS OF THE SPIRIT.

On earth we have no abiding,  
No certain repose or stay,  
Our moments are evermore gliding  
On noiseless pinions away.

The seasons in bloom and beauty,  
In budding and fruiting fly,  
Each fills its allotted duty,  
Each tends to the earth's supply.

First buddings in spring hours waken,  
Then summer gives fruitage for flowers,  
And from autumns bent boughs are shaken,  
Sweet store for the wintry hours.

Young christen! Oh may we labour  
To fill as life's seasons move,  
Our duty to earthly neighbour,  
Our duty to God above.

Within as his Spirit soweth,  
May we know a spirit bursting of seeds,  
Then a summer whose fruitfulness showeth,  
Ripe crop of obedient deeds.

Then an autumn of true dedication,  
With sheaves of increase richly blest,  
Giving winter ripe fruits of salvation,  
Rich store for the season of rest.

Then, as closes our life year of duty,  
We shall enter where grief cometh never,  
Where peace plants bloom perfect in beauty,  
And love fruits are ripening forever.

BE NOT DECEIVED.

Many a trembling, fainting Christian, who in an awful sense of the purity of the immaculate one, and of the holiness which becometh his worshippers, looks fearfully towards the close of their earthly pilgrimage on their own imperfections, and the want of thorough dedication through life, shall doubtless through the mercy of God in Christ Jesus, and a living faith in him, receive the glorious welcome "come ye blessed of my Father." The inward work of sanctification has been going on in them in the midst of their fears and faintings, and whilst it may be, acknowledged their salvation is all of free mercy, yet it is "by the washing of regeneration and the renewing of the Holy Ghost." Happy will it be for those whose terrors are all witnessed on this side of the grave; to whom death is swallowed up in victory. For whom the pains and sorrows of the parting moment of the earthly struggle, give place to the peace of God, and those good things which eye hath not seen nor ear heard, which are in store for those who love God.

But how tremendously awful will it be for those who go down to the grave in a condition of unconcernedness, a kind of dreamy hoping for heaven, if they waken up to a sense of condemnation, and hear the language uttered, depart from me ye cursed into everlasting fire, prepared for the Devil and his angels.

A captain of Holland who was wrecked at sea, and with his crew, for eight days tossed about in an open boat, gives an interesting account of their feelings and condition. Hunger occasioned them intense suffering, they felt little sleepiness, he tells us, towards the last part of their voyage, but that when it did overtake them, they all had similar dreams. "Each time it was a well laden table, a substantial dinner, that stood before us, and to which we set ourselves with lively shouts of joy. Every one of us dreamed this at least ten times. The waking up to the truth of our situation was horrible."

Far more horrible will it be, to waken up from our dream of carnal security, and find that our portion is forever fixed in the unutterable agony of that condition, where the worm dieth not and the fire is not quenched.

## Letter of John Barclay.

Thy last seemed to convey a low account. "Behold we count them happy that endure;"—the spirit of glory and of consolation is specially provided for these: and however bitter the chastening may be at the time, yet afterward it cannot but yield peaceable and blessed fruits to those rightly exercised, and endeavouring to be given up thereto. The furnace is even made and heated for the gold, and for nothing else but that which is worth refining; therefore, what a blessed thing to be counted worthy to be chastened, as a dear child of the Lord, and not to be left to one's self. Oh! thou knowest not what are the all-wise, all-merciful intentions of our Wonderful Counsellor towards thee, and how he would work in, and for, and also through thee. Nothing is too hard for Him; and all things are possible unto his simply obedient children who believe He is able to do all things for them. These he will never leave nor forsake, but keep in the hollow of his hand, and as the apple of the eye. Not one trial, not one pang will have to pass through, more than there is a 'need' for, or more than will be made to work for good unto them, both here and forever.

My secret petition is, that you may each discern what his good pleasure is concerning you, and concerning each other, lest in anywise you mistake it; and thus miss of any thing that did really belong to you. May you be wholly given up, and give up each other freely to His ordering and service, whose gifts you are to one another; lest if there be even the shadow of drawing back, the Lord should withdraw his hand so full of blessings temporal and spiritual. We may easily reason away the tender gentle touches of his hand, so as to doubt whether they are the requirements of the Lord; and those who are very jealous of his honour or clear in their discerning respecting the standing, and steppings, and out-goings of others, have the greater occasion to beware of placing so strong a guard against all out goings, as to cramp or cripple either themselves, or those with whom they have influence. These are days in which the enemy would persuade some of us, that we had better do nothing, lest we should do wrong, or in our attempts to aid the cause only give pain and trouble to the rightly exercised by our meddling. But oh! how otherwise is the fact! what preservation, what help, what direction and qualification, have the simple hearted received, whose strength is made perfect in a humbling sense of their own weakness;—out of weakness they are made strong. My beloved friend, I must go further, and urge on thee to weigh well, (but without undue carefulness, discouragement or distrust,) whether there is not a call upon you to double diligence in coming up, in a noble, disinterested, unbending, and unblushing way, to the help of the Lord and his church,—to stand in the breach, and fill up your ranks, as those that are deeply concerned for the spreading, as well as the upholding of the testimonies of Truth. Ah! it is a high time that all who have been awakened to a sense of the state of things in our poor church, were 'up' to retrieve and turn the battle to the gate. The enemy and his willing instruments are busy indeed; we see the fruits springing forth on every hand; and there are few given up to withstand him in a true-hearted, uncompromising plainness and boldness. May we then join in an unqualified surrender of our all, to the disposing of Him, who would work in us and for us, and also through us mightily, to the subduing of all within as that would choose, or refuse, or chafe out our own line for ourselves, entrenching ourselves in the certitude of our own wills and counsels: whereas,

we should be tender as the growing vine, and teachable as the weaned babe,—no fretting, but with unfortified wills, even slain and nailed to the cross. Eighth mo. 22nd, 1859.

*The Lute.*—It is a solitary feeling which is awakened by being left alone, and thinking of a great assembly from which we are shut out. A great assembly is now gathering. They come from the East, and the West, and from the North, and from the South, and are sitting down with Abraham, and Isaac, and Jacob, in the kingdom of God. Some of our dearest friends are there, with whom we once took sweet counsel, and walked to the house of God in company. Soon the assembly will be complete; and the door will be shut. Where, then, shall we be? What if we are shut out, and spend eternity thinking of that multitude, our friends amongst them, and hear the distant noise of their music, like the sound of many waters, and the voice of harpers harping upon their harps! We have sometimes been disappointed in our hopes of being present on some great and interesting occasion, and have been left behind. The feeling at such a disappointment is most painful. We have seen members of a travelling party reach the starting place too late, while their friends in sight depart from them; we know what we are capable of suffering at such disappointments. Christ seems to have had in mind the susceptibility of our hearts when he said, "There shall be weeping, and wailing, and gnashing of teeth, when ye shall see Abraham, and Isaac, and Jacob, and all the prophets in the kingdom of God, and you yourselves thrust out."

## Our Father.

"I will be a Father unto you, and ye shall be my sons and daughters, saith the Lord Almighty.—2 Cor. vi. 18.

Tried Christian, thou art not an orphan! Thou hast a Father. God, in all the glory of his nature and perfections, is thy Father. He has adopted thee for his own. He has regenerated thee by his Spirit. He has called thee out of the world, and has promised to do a father's part by thee. He says, "I will be a Father unto thee." Dost thou want advice? Consult thy Father. Dost thou need supplies? Ask them of thy Father. Art thou tormented with cares? Cast them on thy Father. Art thou alarmed at foes? Cry unto thy Father. Do thy difficulties appear insurmountable? Appeal to thy Father. God is not merely a Father in name: he has a Father's nature. He not only calls us his sons and daughters, but wishes us to act towards him as such. We should exercise confidence in his love. We should trust in his promises. We should appeal to his paternal heart. We should look for our supplies from his hands. In everything, by prayer and supplication, with thanksgiving, we should let our requests be made known unto God. He loves to see us confident in his care, rely on his promises, expect his communications, and acquiesce in his will. Believe, whatever trials may befall thee; whatever troubles may come upon thee: whatever enemies may rise up against thee; whatever changes may take place in thy circumstances, one thing can never befall thee: thou canst never be Fatherless, therefore thou canst never be friendless. Thou art God's child, however poor thy circumstances or trying thy path. What an unspeakable mercy!

"We are the children of God; and, if children, then heirs; heirs of God, and joint-heirs with Jesus Christ." Rom. viii. 16, 17.

The water without the ship may toss it, but it is the water within the ship that sinks it.

## Encouragement to the Awakened.

"Seek ye the Lord while He may be found, call ye upon Him while he is near, let the wicked forsake his way, and the unrighteous man his thoughts, and let him return unto the Lord, and he will have mercy upon him, and to our God, for He will abundantly pardon." When that ear is unstopped that can hear the still small voice, and that eye is opened that sees the exceeding sinfulness of sin, and we feel that the weight of our iniquities and transgressions are heavier than we can bear, what an unspeakable mercy is it to be given to believe there is a High Priest who can be touched with a feeling of all our infirmities, who, though He was rich, yet for our sakes, he became poor, and who said of himself, "I came not to call the righteous, but sinners to repentance, for they that are whole need not a physician, but they that are sick." Let not any physical soul be too much cast down or discouraged, but remember for their consolation that our compassionate Redeemer declared "like-wise joy shall be in heaven over one sinner that repenteth more than over ninety and nine just persons which need no repentance." And the eminent Apostle testified, "that Jesus Christ came into the world to save sinners, of whom he was chief." Now, if he who said he was chief amongst sinners could by the washing of regeneration and renewing of the Holy Ghost, adopt the language, "For me to live is Christ and to die is gain," let none faint or give out during the dispensation of condemnation, for it must be endured before we can experience the fulfillment of his language to the Corinthians "But ye are washed, but ye are sanctified, but ye are justified in the name of our Lord Jesus Christ, and by the Spirit of our God.

## The Groaning.

"For we that are in this tabernacle do groan, being burdened."—2 CORINTHIANS V. 4.

The body is a poor residence for the soul. It was at first a noble structure, but it is now like a poor canvas tent, affording few accommodations, and letting in all kinds of annoyances. It is the seat of pain, the medium of temptation, and often a great hindrance to us in our spiritual course. We groan in this tent, because of what we feel we want, as well as from what we positively suffer. Nor will our groaning cease but with our breathing. We shall have to groan over our carnality, worldliness, concupiscence, dullness, deadness, darkness and unbelief. We shall groan for liberty, holiness, and perfect, uninterrupted peace. We do groan now, as some of us have for years; and we shall groan until mortality is swallowed up of life. We shall go down to the grave groaning, but from thence the ransomed of the Lord shall return with singing, and everlasting joy shall be upon their heads; they shall obtain joy and gladness, and sorrow and sighing shall flee away. My brother, is thy poor body the seat of disease, of strong pain? Dost thou feel fettered by it, and pent up in it? Art thou groaning as a poor prisoner for freedom? Lift up thy head, for thy redemption draweth nigh.

"We groan within ourselves, waiting for the adoption, to wit, the redemption of our body."—ROMANS VIII. 24.

*Members of the Body subject to the Body*—I am persuaded it is our place, as members of the body to be subject to the body. Who ever prospered, in the best sense, by either going out, or acting in a way to be disunited. Especially, when did such as have once shown themselves deeply concerned for the upholding our principles, in their native character of simplicity and purity?—Sarah (Lynes) Grubb.

## BIOGRAPHICAL SKETCHES

Of Ministers and Elders and other concerned members of the Yearly Meeting of Philadelphia.

JOSHUA BROWN.

(Continued from page 326, vol. xxviii.)

Although now a close prisoner at Ninety Six, and not knowing in these days of civil commotion and excited partisan feeling what the result might be, he says that they were greatly favoured for the first two days with calmness, tenderness and holy quiet. On the third day, however, the quiet of his mind was somewhat disturbed, and he was brought closely to scrutinize his actions, to see whether his visit south was in the ordering of the Divine will, and if he had that authority for being there which would bear him out, in bringing suffering on himself and his friends. In this time of deep exercise, the enemy of all good, who is ever near to take advantage of our want of faith, suggested that he might have his liberty for himself and the rest, if he would only give security that he would return home and not come into those parts again without consent of the legislature. This looked to the eye of sense, as an easy remedy for existing evils,—but Joshua knew he had not gone there in his own will, and although tried with these fleshly reasonings and suggestions, he was not willing to close in with any plan on which he could not see some light, some evident token of the Master's approval. Ceasing from reasoning, although in great distress of mind, he was favoured to experience a fresh tenderness of spirit, and deep humility, in which fervent desires were raised in him, that his blessed Master would favour him once more with true judgment as to his duty. In this condition of mind he received a clear sense and a conviction without a doubt, that whatever suffering might come upon them, they must give no security to depart from that part of the country until his work was done, and that they could not, as followers of Him who had said "swear not at all" take the test oath. In a sense of the Lord's mercy in thus favouring him with the intimations of his duty, he was once more clothed with sweet resignation to the Divine will. In this condition of mind his companions participated, and he says, "In our being so resigned, we were favoured with the incoings of Divine love, and had the reward of obedience which is peace." They passed the time in great quiet, and on First-day, the 3rd of the 5th month, 1775, held two meetings. Two Friends from Little River, and three from Long Cane settlement were present, and the Lord's presence being with them in these little sittings, they were satisfactory. On the 4th and 5th of the month, his mind was brought into deep exercise, under a concern to hold a meeting with the inhabitants of Ninety Six, and he was made sensible that although many of the people were very wicked, yet the Lord ever rich in mercy, would willingly gather them into his fold of purity and peace. He thought of the Court House as a suitable place for the meeting to be held in, and wrote to Robert Stark, the sheriff of the county, in whose keeping they were, requesting the privilege. His mind then became easy, having done his part. On Fifth-day, the 7th of the month, they held a meeting at which some Friends who lived about eight miles distant sat with them. On the same day Joshua had a religious opportunity in one of the dungeons with some prisoners who were condemned to death. After some exhortation he was concerned to pray that the Lord might if it were consistent with his holy will, grant them the gift of repentance unto life, that they might witness reconciliation. On the 8th the poor fellows were executed in sight of the windows of the room in which Joshua and companions were confined. On the 9th, they spent the day in

much quietness of mind, reading some; and being favoured with near access to the Father of mercy in secret prayer. They were also visited by Joseph Davenport, a man residing about 17 miles from their prison, who sympathized with them in their afflictions though not a Friend. His visit was very acceptable and comforting to the prisoners. On First-day they held two meetings, and their morning meeting also, and several people of the town came. Joshua felt concerned to open to them the things concerning their eternal welfare, and to point out the necessity of their becoming a spiritually minded people, if they reaped any benefit from the coming of the dear Saviour. It was through attention to his law written in the heart,—obedience to the teachings of his Holy Spirit there, that reformation was effected, and that change of heart, without which no one can enter the kingdom of Heaven. At the next meeting on Fifth-day, they had the company of some Friends from Bush river and Henderson's Meeting, and the landlady also attended. Joshua's mind was still exercised under a religious concern for the inhabitants of the town, but no way opened for obtaining relief. During that week Joshua prepared an address to the President and council of South Carolina, requesting that he and his friends might be set at liberty, which two Friends who were visiting them undertook to convey to Charleston.

At their meeting for worship on First-day, the seventeenth, in addition to their Friends from Bush river, many of the inhabitants of Ninety Six attended. Joshua was on this occasion much engaged in testimony, pointing out the way to the kingdom of eternal rest and peace. He showed them that to obtain an entrance therein, they must receive the Lord Jesus Christ in his inward spiritual appearance, and know the effectual operation of the New Birth unto holiness, the washing of regeneration and the renewing of the Holy Ghost. Thus coming to partake of a true faith, and knowing that baptism which cleanseth from the pollution of sin, they would become of the Lord's chosen ones, who through his offering on Calvary, should witness the salvation of God. This opportunity was very relieving to Joshua's mind, and a comfortable help rested with him, that the day's labour would not be wholly in vain. On Fifth-day, the twenty-first, at their meeting were a number of Friends and some of the people of the town. Joshua pressed upon them the necessity of coming under the government of the blessed Saviour, and witnessing his inward baptism to cleanse the heart; and before the meeting closed, was favoured with ability to pray for them, to him who alone can grant spiritual blessings.

The exemplary conduct of the prisoners had so operated on the minds of those who had them in custody, that they were now treated with great kindness and allowed much liberty in passing about their prison-house. This was esteemed a great favour by the Friends, and whilst acknowledging the kindness shown them, their hearts rose in grateful aspirations to the God and Father of mercy, who had opened the hearts of their keepers towards them in tenderness and love. On the twenty-first, the First-day of the week, a lieutenant of the army came to them just before meeting time, and mentioned that he and the keeper of the prison had consulted together and were anxious that they should that morning hold a meeting in the court house. Many Friends had come from a distance to sit with them, and many persons in the town and the neighbourhood were anxious to attend. The way seemed clearly to open in Joshua's mind to accept the offered kindness, and the meeting was held. His service was much in the funda-

mental doctrines of the gospel, the universality of the love of God,—salvation by Christ, through his own offering, and the inward operation of his Holy Spirit working the regeneration of the soul, with its consequent deliverance from the thralldom of sin. Joshua says in reference to his labours that day, that he had cause to be humbly thankful in that the Great Master favoured him with strength so to express himself as to clear his mind to the people.

On the 4th of the Sixth mo., Captain Boughey, an officer in the American army, came to see the prisoners. He said he had a habes corpus to remove certain of the prisoners for political offences to Charleston to be tried, and if Friends would like it, he would insert their names in the list, which already numbered more than fifty. Joshua would gladly have gone to Charleston to trial immediately, but the warning was short, their horses were thirty miles off, and his fellow sufferers seemed unwilling at that time to go, unless they were taken under a command. Joshua mentioning that he refused with reluctance, adds, "we had on this occasion to pass through a dipping dispensation, lest we should do wrong. We were favoured at last to sit down in quietude of mind to wait how the Lord would further dispose of us."

On First day the 7th, in the morning, Joshua was concerned in the meeting, that the prisoners, as well as others, should through submission to the Lord's cleansing power, which was freely offered to each one in the day of their visitation, come to witness a preparation to answer the awful summons of death, come when it would. At the afternoon meeting he was enlarged in testimony on the different dispensations, which, in the providence of God had been meted out to his church and people. He showed from Holy Scripture that this latter house, the dispensation under which we now live, was to excel those which went before. They were legal and ceremonious, this was inward and spiritual. Outward forms now were without saving value. The new birth, the cleansing baptism of the spirit, these were through the Lord Jesus and his atoning sacrifice, the only things needful and of saving efficacy. They now held their First day meetings regularly in the court house, some of which were held in silence. On the 21st of the month, in the morning, there being many persons present, Joshua exhorted them to seek to know the only true God and Jesus Christ whom he has sent, which as the blessed Saviour himself has declared, is life eternal. He opened to them the way in which alone they could attain this knowledge, which was by receiving Christ in his inward appearance and witnessing the baptisms of his Spirit working the regeneration of the heart. He pointed out the inefficiency of the baptism of water, and the danger of dependence on that rite as of saving use. In the afternoon he was led to exhort those present to be in earnest in seeking the salvation of their souls. He pointed out the sorrowful consequences which must result from being deceived in a matter of such moment, urged the necessity of witnessing a real renovation of heart, without which all dependence on an imputed righteousness would fail. As an encouragement to all to endeavour after the salvation of their souls, he opened and enlarged on the universal love of God to mankind, in and through our Lord Jesus Christ. He rehearsed in proof thereof the proclamation of the angel at the birth of the Saviour, "as glad tidings of great joy which shall be to all people." In reference to the day's labour, Joshua writes, "I had cause to be humbly thankful to the Great Master for enabling me to pass through this day's service."

On the 25th, at the meeting in the court house, he exhorted the hearers to seek after a knowledge of the true soul cleansing, saving baptism, which is of the Holy Ghost and fire, and which is the only way through which the soul can be prepared for admission into that kingdom in which nothing that is unclean can enter. He exhorted them against a dependence upon the administration of water to themselves, and especially against trusting to a sprinkling of water on young infants, as regenerating them. He showed them that children, at an age in which they had no perception of good or evil, had no need of baptism, and quoted the loving saying of our dear Saviour, "suffer little children to come unto me and forbid them not, for of such is the kingdom of Heaven." He exhorted all to labour to be made partakers of the inward communion of saints, the true participation of the body and blood of Christ, and not to be depending on the outward bread and wine, which at the best was but the sign of the spiritual supper. On Seventh mo 2nd, their meeting at the court house was held in silence, except a "few seasonable words" spoken by Uriah Carson.

(To be continued.)

W. C. Preston and Little Henry.

BY WILLIAM MARTIN.

On one occasion, while the late W. C. Preston was an inmate of my family, I had been from home several days; and on my return, my little boy Henry (then in his seventh year,) as was his wont, manifested great joy on the occasion; so much so, as to attract the attention of my friend, who said to the little fellow:

"Henry do you love your father?"

"Yes," said Henry.

"Are you sure you love your father?"

"Yes, I am sure I do." And by way of proof the little fellow kissed me.

"Henry," he still asked, "do you know that you love your father?"

The little fellow was puzzled for a moment, but recovering himself, replied, with evident feeling, "Yes, I know it for I feel it!"—and again he threw his arm around my neck, and kissed me.

My friend was amused; so were we all; but there as far as we knew, the matter ended. Colonel P. was at that time an earnest seeker after the truth, and two years afterwards, when nearing the eternal world, having made his peace with God, and realized the power of converting grace, as he lay calmly waiting and patiently suffering the will of God, he said to a friend, in speaking of his confidence in God:

"I am like a little child with his father—like little Henry Martin—I know that I love God, and am in his favour, because I feel it—I feel it."

Truly his confidence was simple and child-like, his humility deep and genuine. He loved God—he felt that he loved him; and in this peaceful frame of mind he continued most of the time, until his happy spirit took its flight to the bosom of God. He had long been an inquirer after truth, and the simple remark of that little child, furnished him with an illustration of the spirituality of religion; that it is something that may be experienced, that may be felt. He sought it, and found it, to the joy of his heart and the salvation of his soul.—*Home Circle.*

Godliness is the tendency of the mind towards God, and is exercised in believing in Him, loving and fearing him, holding communion with him, and employing ourselves in his service, and consecrating all that we do to his honour.

Piety is the brightest ornament of youth.

## Valley of Esdraelon.

Ignorance of the geography of the Bible is a formidable barrier to understanding its history, or deriving the full benefit even of its moral lessons. The land of Palestine is so limited in extent that a few hours faithful study can make one acquainted with its chief points of interest, but many teachers have little more intimate acquaintance with it than with the interior of Africa. The following brief sketch shows how much of the sacred narrative often centres round a single locality:

"The valley of Esdraelon is a fertile plain in the southern part of Galilee; the largest one in the whole country, it being thirty miles in length, twenty in breadth, and extending 'from the Mediterranean Sea and Mt. Carmel to the southern extremity of the Sea of Galilee.' It is surrounded by Mts. Carmel, Gilboa and Tabor, and is watered by the river called by Deborah, 'that ancient river, the river Kishon.' This valley is noted for its battle-fields and encampment grounds. Here occurred the famous contest between Gideon, with his three hundred, and the army of Midian. At Megiddo, in this valley, Josiah was defeated by Pharaoh-necho. Here was Esdraelon, or Jezreel, a favourite abode of Ahab, where was Naboth's vineyard; and where Jezebel was killed, whose blood Hosea announced that God would avenge on the house of Jehu. In this plain was Shubem, where the Philistines met to oppose Saul, and from fear of whom he consulted the witch at Endor, also in this valley. Here was Nain, where Christ raised the widow's son. But the most memorable place in the valley of Esdraelon is Nazareth, where Mary dwelt at the time of the annunciation, where our Lord spent his life from the return from Egypt to the commencement of his ministry; where one day he entered the synagogue, opened the Scriptures, and read part of the sixty-first chapter of Isaiah, and spoke to the people; and where they took him to the brow of a hill to cast him down therefrom. On Carmel, which forms the western limit of this plain, Elijah and Elisha dwelt. On Gilboa, a mountain on the eastern extremity, Saul's army was marshalled previous to battle, and here Saul and three of his sons perished. There also arose in this plain Mt. Tabor, where Barak and his ten thousand encamped, and whence they issued forth to encounter and to defeat Sisera, the commander of Jabin's army. Thus have we seen that the valley of Esdraelon has been the scene of numerous conflicts; and even in modern times as late as 1799, Napoleon I., and travelled a body of Turks and Mamelukes; and here they tell us that almost always at the present day this valley serves as the encampment ground of some wandering tribe of Arabs."

## Recaptured Africans in Liberia.

During the past year, or a little longer period, the living freight of eight American slaves, captured by the U. S. cruisers, and consisting of four thousand five hundred of the natives of the Congo country, have been landed in Liberia. Most of these are very young persons, a large number ranging between the years of eight and fourteen. There have been fears expressed that the sudden accession of so large a mass of barbarism would have an injurious effect upon the population and prospects of the rising republic. Late and reliable information on the subject shows that the apprehension was not well grounded, and that on the contrary the strangers are likely to contribute to the prosperity of the people in whose territory they have found an asylum.

Alexander Crummel, one of the most respecta-

ble and intelligent citizens of Liberia, in a late communication expressed himself as follows:—I find in your letter a question which has already, even before leaving the coast, come to me from other correspondents in the United States.—It is this: "If you take further shipments of Congoes) will they not seriously affect the interests of the Republic, and may they not jeopardize the very existence of the people and the government?" To this I must reply to you: First, That the providence of God in the recaptures is one of the greatest blessings which could have been bestowed upon the Liberians, for the Liberians themselves. For it gives them first of all a labouring population, which is their great need in the cultivation of their great staple, sugar. The neighbouring nations do not supply this need, chiefly because they are more especially engaged in trade, and so well acquainted with our colonists and their habits, that they know well how to inconvenience our planters by a demand for high wages, and by irregularity in labour. The Congoes are apprenticed to our citizens; are remarkably pliant and industrious, and peculiarly proud and ambitious of being called "Americans." The result of their arrival on our borders is that already hundreds of acres are being cleared for sugar farms; and those citizens who for years have been satisfied to live in the midst of weeds, have been prompted by this auxiliary, to plant extensively, and are as ambitious of wealth as any of our citizens. Second, Its influence upon surrounding tribes is equally manifest. They dislike the Congoes, and as a consequence, the Congoes are thrown upon us. This leads them to the adoption of American habits, and prompts all Americans to adopt measures for the thorough assimilation of these people to our habits. They go to our schools. They crowd our churches. They adopt our dress. They speak English. They are trained with our militia. Third, So plastic is the Congo's character, that they are easily moulded into Americo-Liberians, and into their habits. In Palmas we have not seen a single relic of their heathenism. They are regular attendants at church, industrious, polite, contented. In Sison some have already intermarried with our colonist women, and in two cases are thrifty men and members of the church. Two years ago they were naked heathens in a slave ship. On the St. Pauls, masses of them are industrious peasants.

I need not speak of the benefit to them in thus being placed in juxtaposition with civilization, under an orderly government and Christian influence.

So far then as we are concerned, I am satisfied that President Benson does not exaggerate in the declaration that we can receive 20,000 without any detriment to our own civilization.

*Our Earthly Life.*—My life is a frail life; a life which, the more it increases, the more it decreases; the further it goes, the nearer it cometh to death; a deceitful life, and like a shadow; full of the snares of death. Now I rejoice, and now I languish; now I flourish, and now I fade; now I live, and now I die; now I laugh, and now I weep. O joy above all joy, without which there is no joy, when shall I enter into thee, that I may see my God!—*Augustine.*

*An Apostle's Humility.*—It has been remarked that soon after Paul was converted he declared himself "unworthy to be called an apostle." As time rolled on and he grew in grace, he cried out, "I am less than the least of all saints." And just before his martyrdom, when he had reached the stature of a perfect man in Christ, his exclamation was, "I am the chief of sinners."

## PETITION.

Gently, Lord, oh gently lead us,  
Through this gloomy vale of tears,  
Through the changes Thou'st decreed us,  
Till our last great change appears.

When temptation's darts assail us,  
When in devils' paths we stray,  
Thy goodness never fail us,  
Lead us in Thy perfect way.

In the hour of pain and anguish,  
In the hour when death draws near,  
Suffer not our hearts to languish,  
Suffer not our souls to fear.

When this mortal life is ended,  
Bid us in thine arms to rest,  
Till by angel bands attended,  
We awake among the blessed.

Then, oh, crown us with thy blessing  
Through the triumphs of thy grace,  
Then shall praises never ceasing,  
Echo through Thy dwelling place.

Selected.

For "The Friend."

## A Testimony in favour of the Good Old Paths.

(Concluded from page 24.)

The institution of the discipline in the direction and authority of the Great Head of the church, has been a blessing to the members of our religious Society, acting as a hedge about them, and encouraging them in the performance of their duties, and in the exercise of their respective gifts. To grow in the truth, every one must submit to the preparing, sanctifying power of the Lord, and act faithfully the part which he assigns, under his direction. This will show him his place in the body, keep him in it, restrain him from acting when he ought to be still, and make his labours a blessing to his fellow-members, for which he will receive the reward of the peace which Christ gives to his servants and disciples.

The address contains the following instructive counsel on the support of the discipline, which is as applicable now to Friends, as when first circulated among them. "And dear friends, it rests with me to make some remarks on the exercise of the discipline. The great design thereof is, that things may be kept decently and in order, that no reproach may attach to our holy profession, and that we may watch over one another for good. Where any, through unwatchfulness, turn aside from the footsteps of the companions of Christ, those members who keep their places, will feel it their duty to seek their restoration, agreeably to the apostolic exhortation, 'Brethren, if a man be overtaken in a fault, ye which are spiritual, restore such an one in the spirit of meekness, considering thyself lest thou also be tempted.' Here we find this great duty and service confided to those that are spiritual, that are under the government of the Spirit of Christ. Such, indeed, will feel the weight of the language, 'in the spirit of meekness, lest thou also be tempted.' As delinquents are laboured with in this restoring spirit of christian love, though it may not at the time have the desired effect, yet I doubt not it will often prove like bread cast upon the waters, which will return after many days. And such as have been engaged in this christian duty and service, as they have been faithful, receive a reward therefor. But how important it is, that those who step aside, should not suffer any wall of partition to get up between them and their best friends; those members of the body who, under divine influence, are engaged to labour for their restoration. When hardness and bitterness are permitted to grow in individuals, they place themselves very much out of the way of help.

"Seeing then that the work is the Lord's, that

he only can qualify us rightly to support the discipline, let us look daily unto Him that he may clothe us with his own Spirit, and strengthen us for every part of the service assigned, furnishing us with that wisdom which is from above, which is first pure, then peaceable, gentle, and easy to be entreated, full of mercy and good fruits, without partiality, and without hypocrisy. I have no doubt that the light and unfolding manner, in which the discipline in many instances has been exercised, has been an inlet to very great weakness in the church. Individuals have risen up, and obtained considerable influence, not from religious zeal and feeling, but from good natural parts, and their quickness of understanding the letter of discipline, and are even sticklers too in the observance thereof. Yet such not having experienced the one baptism, whereby all the living members of the body are raised from dead works to serve the living God, are a great hindrance to the good and necessary work of exercising gospel order in the church of Christ; hence the great necessity of a deep and fervent exercise in these meetings. Those only who are spiritual, who are in a good degree under the government of Christ, can to advantage be made use of, in restoring such as may have been overtaken in a fault.

"And dear friends, as our meetings for discipline were first established by divine authority, for the preservation of good order in the church of Christ, it is only as they are held and maintained under the same influence, that the blessed end can be realized. Hence the need there is for us in an individual capacity in such meetings as well as those held especially for divine worship, to feel the presence of our Holy Head to strengthen us for his service. I have lamented that in some there is a disposition, to move and act in their own time, way and wisdom, whereby the standard is lowered, meetings are greatly injured, and the living in Israel burdened. When the right authority is maintained, each member keeping in his proper place, looking to and waiting upon our blessed Master, who is jealous of his honour, and will be head over all things to his church, a divine and heavenly covering is often felt to overshadow, and to bring into oneness of spirit. Through this, such whose business it is to speak and act publicly, are strengthened according to the sense and feeling they are favoured with, to discharge their duty, whilst others, by the inward weight and travail of their spirits, bear up their hands, and so the work is carried on in the unity, and life spreads and prevails. Then, dear friends, let us strive together that our meetings for discipline may be held in that authority in which they were first set up, where the excellency of the wisdom of our great Head is seen and experienced, enabling each member of his body to keep its place; for although there is a blessed liberty in these meetings, all having an equal right to speak, as the renewed sense which may be afforded shall warrant, yet it does not follow that all shall speak on a particular subject, but only as they may feel inclined by the Spirit of Truth, or at least have a freedom in the light so to do. Hereby we shall be preserved on the one hand from a superabundance of expression of sentiment, which has a tendency to carry off the weight of such meetings, and on the other hand from falling into a dull and protracted prosecution of the business, which is also a great disadvantage. As all keep in the life, in that true authority wherein clear discernment is known, we shall be favoured to see how much is enough. Sometimes a very few voices on a subject leaves the meeting in a better situation than more. We should keep in the meekness and gentleness of

Christ, suffering no warmth of the creature to prevail, which brings distress in meetings, wounds those who give way to it, and grieves the Spirit of the Lord. As there is an abiding in that which gives the dominion, and preserves all the living members in the bond of sweet and heavenly peace, *submission one to another will be our blessed experience, even in honour preferring one another.* In the business of meetings for discipline, after we have given our views clearly, it is then our duty to leave it with the meeting, and cheerfully submit to its judgment, whether the subject makes its way in the minds of those present according to our wishes or not. Thus the bonds of christian fellowship are preserved, and in true dignity maintained, to the peace and prosperity of the church, and to the praise of her adorable Head."

In transacting the business of Yearly Meetings, as well as of the inferior meetings for discipline, where Friends are kept in the fear of the Lord, humbly depending upon Him to guide them by his counsel, as they act in conformity with it, their conclusions will support our christian doctrines and testimonies, and thereby preserve them in the unity of the Spirit and bond of peace. If they lean to their own understanding, and act in the will and wisdom of man, they forsake the true ground of sound judgment, and will land themselves in perplexity, producing division and confusion in the society. A departure from the immediate guidance of the Holy Spirit, is a fundamental error, and wherever it has crept into our religious assemblies, fervent should be our desires, that the Lord would cause us to see our condition, that he would enable us to renounce all self-dependence, and bring us to a humble reliance upon his will, and grant renewed strength to observe and adhere to it faithfully in all our proceedings. Then the ancient love and fellowship which once characterized Friends everywhere, would return, and again make us one another's joy in the God of our salvation.

The subjoined paragraph will close our selections from the Address—"All the branches that abide in the Vine partake of the same life-giving sap, and the fruit brought forth by them is of the same good kind, to the praise of the great Husbandman. In this blessed and heavenly unity, all the members of the body are strengthened to go forward in their respective services, and they know that there is no room for complaining, nor for any to say, because I am not the hand, or the eye, or the ear, I am not of the body. The different members feeling a portion of the same virtue, act unitedly and rejoice or suffer together, as may be consistent with the will and wisdom of our ever adorable Head. May this sweet and heavenly fellowship more and more spread amongst us, that those branches, which, having ceased to draw the due portion of sap from the living Vine, are in a dry and withered condition, might to being taken away, may be restored to life. Then, from living experience, such may adopt the language, 'Truly, our fellowship is with the Father, and with his Son Jesus Christ.' May the church arise from that wilderness state, wherein she has been long clothed as with a sable garment, because of her backsliding sons and daughters, and come forth in that beauty which adorned her in the first breaking forth and spreading of the day of gospel light and power. Blessed, honoured and magnified over all, be the name of our God, who is waiting to be gracious unto us, visiting us again and again by his Spirit, that he may all come and partake of the waters of life freely."

High buildings require firm foundations.

## Human Care Transferred to God.

Castig all your care upon him; for he careth for you."—1 Peter v. 7.

Were we to take the world's estimate of the real value and happiness of a life of faith in God as the true one, how gloomy, joyless, and forlorn a life would it appear! The world imagines that there is nothing substantial, bright, or social in the religion of Christ—no reality, sunshine or companionship! But how mistaken! where, in the world's wilderness, grows the flower of *heart's ease* as it blooms and blossoms here? "Casting all your care upon Him; for he careth for you." How full of soothing and repose are these words! What cares have they lightened—what anxieties have they removed,—what burdens have they unclasped,—and what springs of joy, and comfort, and hope have they unsealed in many a sad and oppressed heart! But do we not, beloved readers, need to be put in constant remembrance of this divine secret of rest amidst toil, of repose amidst disquietude, of soothing amidst corroding cares, and of confidence and hope in the midst of change and depression? Bewildered and oppressed by the multitude of anxious thoughts within us, is there not a danger of being so absorbed by the care as to overlook the Care-taker? Verily we think so. Hagar pining with thirst, and blinded by grief, saw not the well of water flowing at her side. The disciples in the storm, filled with alarm, and absorbed by fear, recognised not the Lord Jesus walking to them upon the waves, which threatened the foundering of their vessel. Thus often it is with us. We look at the want, and not at Him who supplies it; at the storm and not at Him who controls it; at the care and not at Him who assumes it. Is not the voice of the Lord mightier than the noise of many waters, yea, than the mighty waves of the sea? Is not the Care-taker greater than the care itself? Yet how we limit the Holy One, and magnify and multiply our cares and sorrows. But for the immutability of our redeeming God, whose unseen hand guides, and whose power, almost insensible to ourselves, sustains us, our care would consume us. How often we are upheld, we scarcely know how; preserved in safety, we scarcely know why. But, "the secret of the Lord is with them that fear him;" and sooner or later, we learn that Jesus has done it all, and has done it for His own glory.

The world through which we pass heavenward, and oh, forget not, Christian pilgrims, it is a passage soon passed—is a world laden with care. Earthly care confronts us at every step, and in all whom we meet. The knitted brow, the restless eye, the compressed lip, the fevered expression, are as true in index of the mind oppressed with care, of the heart shaded by human sorrow, as the dial is of the sun's altitude. It is true, the great device of the world is to conceal its care from others. But its transient gleam of artificial joy—the forced smile, the excited laugh, the unnatural levity, which imparts an air of happiness, but betray to the penetrating eye of the spiritual observer that inward restlessness of the spirit, that lowering anxiety of mind which can ill be concealed.

"If every man's internal care

Were written on his brow,

How many would our pity share

Who move our envy now?"

But it is of the care peculiar to the Lord's people that we particularly speak. And here we must be cautious to distinguish between the carefulness that is proper in a child of God, and the carefulness which is the result of a distrust of God—the offspring of unbelief. We are to be careful, un-

doubtedly, to maintain good works, or our faith is vain; to take care of our own houses, or we shall be worse than the infidel; we are to care for the interests and prosperity of Christ's Church or we ignore our individual membership; we are to be careful to walk boldly and circumspcctly, as followers of the Lamb, or we dishonour Christ. Now this implies a heavy weight of care, vigilance, and unceasing prayerfulness on our part. These are cares which especially appertain to, and are inseparable from Christianity. But let us consider that state of anxious carefulness which so much weighs down the spirits, belouds our spiritual joy, and is so corrosive of the best, holiest, and finest feelings of the soul, but which a simple, childlike confidence in our heavenly Father's promise, care, and love should chasten and moderate, yea, entirely remove. It would be impossible to enumerate the cares which contribute so much to the mental anxiety and depression of the Christian. The cares of this life enter deeply into the carefulness of which the Lord seeks to lighten us. In proportion to the spiritual tone of the mind, and the closeness of the heart's converse with God and heavenly things, will be the tenderness of the believer to the chafing and pressure of temporal cares. The more heavenly we grow, the more acutely sensitive do we become to the encroachments and influence of earth and earthly things.

\* \* \* Our temporal cares, to us often so depressing, are objects of God's consideration. If godliness has the promise of the life that now is, it follows that no earthly care that saddens the heart or shades the brow is beneath His notice or regard. How many a child of God is struggling with large domestic claims and but small revenues! Who can tell the troubled thoughts, the anxious feelings, the painful forebodings that pass through that mind! One only knows it. To Him there is nothing little, nothing insignificant, nothing beneath His notice and regard. Are there widows, with narrowed incomes and heavy demands? Are there orphans, combatting with loneliness and want? Are there men of business, sustaining heavy liabilities, involved in perilous investments, and weighed down by ceaseless anxiety and care? Veiled from every eye but God's may be your pressure. These worldly engagements, these temporal cares and anxieties, are not too mean for His notice. "Cast your care upon Him, for he careth for you." But there are greater cares than these—the *spiritual cares of the soul*—which often press heavily upon the heart. We are anxious to know that we have an interest in Christ's redeeming love,—that our names are written among the living in Jerusalem,—that our sins are pardoned,—that after death we may reign with Jesus forever. We are anxious too, that our Christian walk should be obedient, preceptive, believing; that we may be more heavenly-minded, growing in knowledge and grace, and divine conformity to the will of God, and the image of Jesus. Ah! these are cares before which all others vanish into insignificance! There are no burdens like those which touch the present and future well-being of the soul! How many a man would freely and joyfully part with all his worldly possessions for spiritual peace of mind, and for an assured hope of the future! Oh! to have an evidence that we shall be saved! What is rank, what is wealth, what is learning, what is fame, in comparison with this? the dust, the foam, the shadow, the shadow! Do we think that there is no wakeful eye to see us, that no ear is bending to listen, that no heart is interested to sympathise? Ah, yes! He who travelled in sorrow for our salvation, is tenderly cognisant of the profoundly anxious desire of our souls. We are not alone in

this exercise. Jesus is with us. The travail of our hearts after Him, the panting of our spirits for His salvation, the longing of our souls for an assured interest in His love toward us—awaken in our Saviour the deepest, the tenderest response.

Yes, we have one true Burden-bearer—one Almighty Care-taker, even Him whom God has made strong for Himself, and strong for us—the Mighty and the Almighty Saviour.

## The Limit.

"Now for a season, if need be, ye are in heaviness through manifold temptations."—1 Peter i. 6.

Temptations are trials, and are intended to test our principles, try our profession, and prove the strength of our graces. The temptations, or trials, of the believer, are manifold. They come from various quarters, they affect us in various ways; but they are all limited. They are but for a season. "In the day of adversity consider." "The hour of temptation." "Our light affliction, which is but for a moment." "For a small moment have I forsaken thee." Thus they are limited sometimes to "a day," "an hour," "a moment," "a small moment." God fixes the limit of every trial; and, however long that limit may be, it is confined to the present time. "I reckon that the sufferings of *this present time* are not worthy to be compared with the glory that shall be revealed in us." Beloved, however severe the trial, it cannot be long; however heavy the burden, you have not far to carry it. We shall soon lay down our cross, and ascend to receive our crown. If our Father from upon us now, he will smile again soon. "His anger endureth *but for a moment*, in his favour is life; weeping may endure *for a night*, but joy cometh in the morning." Thy present trouble is but *for a season*, and that season will soon close; therefore bear it patiently, prayerfully, and hopefully. Yield not to despondency, listen not to Satan; but hope in God, for thou shalt yet praise Him, for the help of his countenance. The darkness of night will soon be chased away by the rosy light of morning; the limit of thy trouble will soon be reached; and then joy, everlasting joy, will be upon thy head, and all sorrow and sighing will flee away forever.

"Now the God of all grace, who hath called us unto his eternal glory by Jesus Christ, after that ye have suffered a while, make you perfect, establish, strengthen, and settle you."—1 Peter v. 10.

*Christ's Family.*—The Church is Christ's family. It ought, therefore, to be a very loving family. The members ought to have great tenderness for each other, and to feel a deep interest in each other's welfare.

How solicitous the members of an affectionate family are to promote each other's happiness, and to assist one another in the business of life. How solicitous should the members of Christ's family be to promote each other's happiness, and to assist one another in making progress in the divine life in laying up treasure in heaven.

If the true idea of the Church were realized by its members, what a power it would be on earth.

—S. S. Times.

## SUMMARY OF EVENTS.

UNITED STATES.—*Missouri.*—This State is still the field of an obstinate and doubtful struggle. On the 16th inst., Lexington, on the south bank of the Missouri river was attacked by Gen. Price, with a large army of rebels, estimated by number from 15,000 to 20,000. It was defended by Col. Malignan who occupied a fortified position with a force of 3,500 men. The contest was renewed on the three following days with heavy losses of life on both sides, and terminated on the 20th in the surrender of the Federal forces, who were completely ex-

hausted with thirst and fatigue, the rebels having cut off their supply of water. A battle is reported to have occurred at Blue Mills in the western part of the State in which the rebels were defeated with a loss of from 200 to 300 killed and wounded. The Federal troops also about 200 men were killed. Collisions had also occurred at Booneville and Marattatow, in both which the rebels were defeated. There are few armed rebels in that part of the State which lies north of the river. The Union men in North Missouri are organized and determined to preserve the peace if possible. Gen. McClellan has a well-armed force of 18,000 men was reported to be advancing rapidly from the southwest in the direction of Jefferson City. He would probably unite his forces with those of Gen. Price. Gen. Fremont's administration of affairs does not give general satisfaction. Some of the reasons are the following: He has not in the manner in which he has performed his duties. The perilous situation of affairs has induced Gov. Gamble to convene the State Convention. The members are invited to meet in St. Louis on the 10th proximo.

**Kentucky.**—The conduct of the rebel forces here refused to withdraw them from Kentucky until the Federal troops have left the State and the Union camps been broken up. The Legislature has called out the militia for the purpose of expelling the Confederate invaders, and has also authorized Gen. McClellan to call out the militia. More troops from Indiana have entered the State. Some skirmishes between the rebels and the Union troops have occurred.

**Virginia.**—The rebel forces at Cheat Mountain have been attacked by Gen. Reynolds and driven from their position with the loss of nearly 1,000 men killed. The rebel Generals, Lee, Floyd, and Wise, appear to have been foiled by the superior strategy of Rosecrans, who has not permitted them to get at any time far from the mountain barrier which separates Western Virginia from the rest of the State.

**Florida Items.**—The rebel fortifications at Ocracoke Inlet which were abandoned after the capture of Fort Hatteras, were recently visited by a company of U. S. troops for the purpose of effecting their destruction. The Federal troops sunk the cannon and burnt the magazines.

It is said that the rebels were assembled in force at Washington and Newbern, and that two thousand of them had landed on Roanoke Island with the intention of destroying the lighthouse and the dwellings of the people. A large number of the islanders were accompanied by a naval force, were about to leave Hatteras Inlet to prevent this inroad.

It is reported that another naval expedition has sailed from Fortress Monroe and New York, its destination being unknown.

Walker, the Secretary of War of the "Southern Confederacy," has resigned in consequence of ill health. The post has been assigned to Gen. Bragg.

The banks of New Orleans have suspended specie payments. Treasury notes circulate as currency.

From various parts of the country it would seem that the main rebel army now threatening Washington, numbers not less than 189,000 men. The Charleston Mercury says that 15,000 of the southern troops are now lying sick at Manassas, and that numbers were being sent by every train from the camp to the hospitals at Richmond. It attributes the sickness to bad and insufficient food. The Richmond Whig also contains a letter, in which a gloomy picture is given of the state of the army. The government of Jeff Davis is censured for incapacity and inefficiency. The writer says "somebody must be taken out of the plain truth, or we are ruined." Freezing and starvation stare you in the face for next winter, and you call on the women and children to give up their blankets and bread for the soldiers. The women have to lay out for their war. You could be the Government for ten months and you confess your inability by your daily wails, and still you speak of 'confidence.' It is waning hourly, I assure you, and unless the press speaks out plainly, and at once, all is lost.

The evacuation of the Potomac has not yet been interfered with by the rebel batteries, but there is no doubt that such are being extensively erected along the river in the neighbourhood of Aquia creek.

**Miscellaneous.**—In Iowa it has been found necessary to send to England for 100,000 muskets. It is also probably soon taken in New York, only 7,500 men having volunteered for the last requisition of 25,000.

Gov. Curtin of Pennsylvania, has forbidden all enlistments in this State for regiments forming in other States. Hereafter recruits are to be subject to the control of the State authorities.

The crop of the United States in 1840, was estimated at 277,000,000 bushels; in 1850, 600,000,000; and in 1860, 900,000,000 bushels.

The census of Nova Scotia just completed, shows a population of 230,000 against 185,000 in 1851. There were imported into New York in the first eight months of 1859, dry goods to the amount of \$81,512,230, in 1860, during the same period, \$71,532,210, and in 1861, only \$18,949,502.

**Great advance in Cotton.**—"The mills of this city," says the *Philadelphia Ledger* (N. H.) Mirror, "have a large quantity of cotton on hand which has advanced in price since it was bought, about \$1,000,000. That owed by the Amoskeg Company would sell for \$480,000 more than its cost; that owned by the Sturk Mills, \$350,000; and that owned by the Manchester Mills, \$1,000,000, total, \$930,000. It would be a handsome profit enough if they would sell it, but they will not sell a single pound, though the advance of goods does not correspond at all with the advance on cotton."

**New York.**—Mortality last week 374.

**Philadelphia.**—Mortality last week 265.

**California.**—The San Francisco dates are to the 9th mo. 11th. The returns for the State election were still incomplete, but there was no doubt that the Republican and Union candidates had been chosen by large majorities. The migration from Indiana to Texas were arriving in the southern part of the State. They report a terrible condition of affairs as existing in Texas. All the Union men were disarmed as soon as the rebellion broke out, and they are therefore powerless, and their lives and property at the mercy of lawless men. The overland migration from Indiana, Illinois, Iowa, and other States was large the present season, being estimated at 25,000 or 30,000. There was also a large overland emigration to Oregon. At one point there were 2000 wagons travelling in a compact body. The whole region of the country embraced between Cascade and Rocky mountains is asserted to be gold.

The San Francisco merchants were firm and healthy. The export trade was heavy, consisting of copper ore, quicksilver, wool, wheat, oats, flour, &c. A vessel which sailed on the 9th for Hong Kong, had a cargo of flour and wheat, 1000 flasks of quicksilver, and \$502,000 in gold.

**Railroad disaster.**—On the night of the 17th instant, a train on the Ohio and Mississippi Railroad, containing a portion of a regiment of Illinois troops, while passing over a bridge near Haron, Ind., fell through, killing and wounding more than one hundred of the men.

**Maryland.**—In consequence of the arrest of nearly all the more active and noisy members with secession tendencies, the meeting of the Legislature at the appointed time was frustrated. It cannot again assemble unless called.

**France.**—News from England to the 16th inst. The policy of the English government in sending troops to Canada, having been seriously questioned, the arrangements were active at a small advance. It is stated that Spain, in conjunction with France and England, are about to intervene in the affairs of Mexico, by sending troops from Cuba. At a meeting of theologians at Palermo, a resolution was adopted declaring that the temporal power of the Pope is incompatible with and contrary to the mission of the Catholic Church. The wheat harvest of France is believed to be deficient; importations of grain will be needed. The monthly returns of the Bank of France show an increase in specie of nine millions of francs. It is stated that the American minister at Brussels, Mr. Garret, is expected to return to his command in the U. S. army. His acceptance was uncertain.

#### RECEIPTS.

Received from J. E. Pa., \$2, vol. 34, and for Eliz. Lowens and L. Lewis, \$2 each, vol. 34; from M. Alva, Agt. N. Y., for 100 Bina. Brewster, \$2, vol. 34; from M. Alva, Agt. N. Y., for 100 Bina. Brewster, \$2, vol. 34; from J. H. M. G. Haight, and Wm. Brachen, \$2 each, vol. 35, and for M. A. Baldwin, Pa., \$2, vol. 34.

#### EVENING SCHOOLS FOR ADULT COLORED PERSONS.

A Principal and Assistant Teachers are wanted for the Men's School, and a Principal and Assistants for the Women's School.

The schools will be opened on the 14th of the Tenth month at the usual place; they are held five evenings in the week. Apply to JOHN C. ALLEN, No. 321 N. Front, or 355 S. Fifth Street; WILLIAM EVANS, Jr., 252 S. Front Street, or SAMUEL ALLEN, 524 Pine Street.

#### WEST-TOWN SCHOOL.

The Committee to superintend the Boarding School at West-town, will meet in Philadelphia on Sixth day, the 4th of next month, at 7 o'clock, p. m. The committees on Instruction and Admissions, meet on the same day, at 10 o'clock, a. m. The latter at 7 o'clock, p. m. The Visiting Committee attend the semi-annual examination of the Schools, commencing on Third day morning, and closing on Fifth day afternoon of the same week.

For the accommodation of the Visiting Committee, car ferries will call at the Street and Second Station on the arrival of the 2 o'clock train on Second day the 30th inst.

Ninth mo. 18th, 1861.

JOEL EVANS, Clerk.

#### WEST-TOWN BOARDING SCHOOL.

The winter session of the School will commence on the 4th of the Eleventh month next. Parents and others intending to send children as pupils, will please make early application for their admission, to Dabne Knight, Superintendent, at the School, or Joseph Scattergood, Treasurer, No. 304 Arch St., Phila.

Died, at his residence in Ledyard, Cayuga Co., N. Y., the 1st of Seventh mo. last, JOHN KING, in the 49th year of his age, a valued elder of Scipio Monthly Meeting. In early life he chose the Lord for his portion, taking up the cross in his daily walk, whereby he became a preacher of righteousness to those among whom his lot was cast. Having set his affections on things above, he had no terrestrial enjoyments in their proper estimation, possessing them as though he possessed them not; yet viewing them as the gifts of his Heavenly Father, he would joyfully appreciate and relish the gifts and blessings of a beneficent Creator. Attached from heartfelt conviction to the principles of Friends, it was his desire that they might be preserved in their ancient purity, and for this purpose he devoted much of his time for the promotion of the cause of Truth. Meekness and humility were the clothing of his spirit, his words few and weighty, and being imbued with that charity which "thinketh no evil, rejoiceth in truth, becometh lowly, is without envying, is the most favourable light, scrupulously avoiding detraction himself, and giving no countenance to it in others. In the discipline of the church he endeavoured to act in meekness and lowliness, with a single eye to the honour of Truth. During his illness he communicated but little to his terrestrial friends, and he felt that he was called to express any thing, unless he felt authorized; yet the sweetness of his spirit and the serenity of his countenance afforded satisfactory evidence that all was peace within, replying to the question, "Is it perfect peace?" by saying, "Yes." At another time he said, "I have nothing to boast of, I have endeavoured to do what I thought was right." His day's work having kept pace with the day, it is believed he was only waiting the summons of his blessed Master, and to him might justly be applied that portion of Scripture, "There is therefore now no condemnation to them which are in Christ Jesus, who walk not after the flesh, but after the spirit." A few hours before his departure, though his breathing was difficult, he distinctly expressed these words, "I have been very much favoured during this sickness, in not having suffered much acute pain, and I am very thankful to the Lord for the same. I feel that I have been an entirely resigned to the will of the Most High, and my desire is that those who are left a little longer, may serve Him with full purpose of heart, that they may seek to know His will and do it above all other considerations. My desire is that those who are left in Christ Jesus, may have their mind continued clear to the last, and be peacefully departed, leaving to his beloved relatives and friends, the consoling assurance that his purified spirit had passed "to an inheritance incorruptible and undied, and that it doeth not away."

He was the son of Fourth mo. last, LYDIA ENGLE, widow of Joseph Engle, in the 81st year of her age. Also, SUSANNA B. HAINES, widow of Thomas Haines, on the 14th of Eighth mo. last, in the 70th year of her age, both members of Evesham Monthly Meeting, N. J. Her decease occurred on the 14th of last, after a sickness of three weeks duration, in the 70th year of her age, CALER FOWLER, a member of Plymouth Monthly and Particular Meeting, Washington County, Ohio. He was of an unassuming disposition and attached to the ancient doctrines of Friends.

He was the son of Ninth mo., 1861, at the residence of her husband, SARAH LARKIN, Chichester, Delaware County, Penna., SARAH LARKIN, an esteemed elder and member of Concord Monthly Meeting, in the 83rd year of her age.

# THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XXXV.

SEVENTH-DAY, TENTH MONTH 5, 1861.

NO. 5.

PUBLISHED WEEKLY.

Price Two Dollars per annum, payable in advance.

Subscriptions and Payments received by

JOHN RICHARDSON,

AT NO. 116 NORTH FOURTH STREET, UP STAIRS,  
PHILADELPHIA.

Postage to any part of Pennsylvania, for three months, if paid in advance, three and a-quarter cents; to any part of the United States, for three months, if paid in advance, six and a-half cents.

Benjamin Ferris,

For "The Friend."

(Continued from page 25.)

Diary continued.—"I continued in this broad way until the Ninth month, 1760, in the 30th year of my age, when it pleased the Lord in infinite mercy, to visit and awaken me, discovering to me where I was, and how I had spent my precious time for that which was not bread. I was brought to lament my being so far behindhand with my day's work, and I cried to the Lord, who heard me, and renewed his visitation of love to my soul. I then gave up all to follow him and became as a weaned child. I sought him, and he was found of me, glory to his name! His mercy endureth forever; I had been cut off from the land of the living. But he never leaves men until they leave him.

"I now saw the excellency of the glorious principle which we profess, and how far it transcends human reason, with all its boasted acquisitions. Let the learned world say what they will in the praise of reason, I testify, it is utterly insufficient, though never so carefully improved and obeyed, to effect any thing toward our redemption; this I know by my own experience. Reason is a favour from God, and necessary for the transaction of worldly affairs, which is its province. I firmly believe that Infinite Wisdom hath excluded it from having part in the work of our soul's salvation, except as it is subject and subordinate to the influence of the Spirit of Truth,—the grace of God. Then it may subserve the purposes of the Lord as an external means, sanctified by him for his immediate use and service. My soul doth magnify the Lord in that he hath by the working of his own power, brought me off from any dependence on human reason, and that I have received ability to renounce any confidence or trust in any former works of my own, or moral righteousness.

"It now appears to me, that I must begin again, do my first works, and not build upon things I have formerly known; but that I must seek after the Lord, being earnestly concerned faithfully to follow him from day to day. Yea, I find a necessity to seek his face oftener than the morning, from a sense of my weakness and inability to keep my place, unless his everlasting arm is underneath. He is the strength of his dependent children, and blessed be his ever-glorious name, his arm is often made bare for my help. As I carefully wait upon

him, he is found of me in every needful time. Many times hath he overshadowed my soul with the wing of his love, and renewed a feeling of thankfulness, which, through the help of his spirit, hath been offered in reverence and fear. He is worthy of all worship, honour and praise, now and forever, amen."

"I was now fully convinced of the necessity of a conformity to the plainness and simplicity that our ancient Friends were led into. Although I had been trained up in the plain, self-denying way, yet it required my understanding to be opened to see the reasonableness and necessity thereof, by the same divine principle which opened to our fathers. As I apprehended that I was favoured with a measure of this opening, I found a freedom, Eleventh month 3rd, 1760, to write as follows, as my testimony that amongst us, the present professors of the Truth, a humble conformity to plainness and self-denial is still necessary, agreeable to the practice of our worthy primitive Friends, viz:—

"It appears to me that the law of the Almighty by which burnt offerings, sacrifices, circumcision and other rites were required of the Israelites, his peculiar people, was intended more to distinguish them from other nations, than from any great benefit they would prove towards furthering the sanctification of those who made use of them. Yet as they were of Divine institution, being faithfully performed under a sense of duty to him, their honest intention therein was accepted, and they received a recompense for obedience. When the honesty of intention was lost, these very observances became unacceptable, yet, an abomination to the Lord. Israel i. 11-14.

"Many things required of them, seemed to the view of a carnally minded reasoner, as unsuitable to be offered to a Holy, All-wise Being, and such as he could not delight in. Yet being of his appointment, his people were bound carefully to observe them. It certainly would not have been proper for finite creatures, with their limited comprehension, instead of rendering obedience, to have entered into an inquiry as to the reason why Infinite Wisdom should thus bid them. Their duty plainly was in honest faith to keep all his commandments, trusting to his mercy and justice for such a recompense for obedience, as he should see meet to bestow.

"It has pleased Almighty God in the riches of his love through Christ Jesus our Lord, to introduce a more glorious dispensation for the children of men,—even the Gospel, through which he put an end to the law, abolishing its rites and ceremonies. He has pointed out under it, with indisputable clearness, to those who would be his followers, that the way to salvation was by and under the cross. They must deny themselves of many things pleasant to the flesh, and practice others contrary to their own natural wills, which require the unenlightened reason of the carnal man, appeared of as little moment towards the work of salvation, as the oblations offered under the law.

"The doctrine of our Saviour was so little consonant with the mode of worship and the religious observances under the law, that the wise and learn-

ed of that day, the self righteous Jews, Pharisees, and high professors, did not receive his doctrine, nevertheless there were those who did,—many of whom were illiterate, and added to these a remnant of the Gentiles also. Their new profession occasioned them no little reproach, with much persecution and suffering, from the then high professors of religion. Yet under all this the principles of Truth spread abundantly. About three hundred years, a great declension from the Christian religion, through the introduction of its purity and simplicity took place amongst its professed followers,—great innovations crept in, many outward rites were introduced, many flesh-pleasing allowances were made. The discipline of the cross had by degrees been laid aside, and an almost total apostasy from the spirituality of the truth ensued.

"For twelve hundred years the way of salvation was much hidden and obscured, until God in unspeakable mercy, began gradually to enlighten the children of men, to see the gross darkness and superstitions prevailing in christendom, and in the nominal Christian church. Many testimony bearers he raised up to declare against some of the grosser evils, of whom numbers sealed their testimonies with their blood. Persecution did not quench the zeal of those whose eyes were anointed to behold the degeneracy of the times and whose hearts were opened to crave better things. Through the faithfulness of such, a reformation was effected. So long as persecution endured, the reformation seemed progressive, yet when a time of tranquillity came, the reformed churches, so called, were contented to sit down at ease, although still under many of the shadowy observances which had been patched up and laid upon the nominal church in the night of apostasy. Thus the work of reformation was still incomplete.

"Once more the Almighty Father, in the counsel of his own will, caused the pure light of the everlasting Gospel to shine more clearly amongst men, whereby many of our worthy predecessors being illuminated, they were as faithfulness was abode in, led to see the inconsistency of the forms and shadows still retained by the reformed churches with the spiritual nature of the Gospel dispensation. Being brought to Christ Jesus, the substance and antitype, in whom the symbols and types of the law were fulfilled and ended,—they saw as to themselves primitive Christianity restored. As they proclaimed the Gospel of Christ in its ancient spirituality and beauty, thousands feeling the effectual working of the grace accompanying the word preached, were gathered to a saving knowledge of the Truth. These were enabled to lift up a standard for God and his Truth, against all false worship, unrighteousness of every sort, wars and oaths, and better still, to bear a constant unwavering testimony to the efficacy and preserving power of the Truth they upheld, by an unspotted conduct, holy conversation and habits, in unity with their profession, but differing from that of the world, whether professors of religion or not. Through obedience to the unfoldings of Truth, they were led into a strict, self-denying way, and into peculiarities which brought them no small suffering and

reproach, from the nominally religious as well as from the children of this world, who are ever enemies to the cross of Christ.

"It was no affectation of singularity which led them to a conduct and behaviour, repugnant to nature, and so opposed to carnal reason, which ever justifies us in our inclinations for fleshly ease and comfort, but it was obedience to the reproof of instruction, the discoveries of the light, grace and good spirit of the Lord Jesus Christ. The same Divine Light, as it is regarded and faithfully followed, still leads the humble, denying christian, into the same plain, narrow, self-denying way, under the cross. Although this path is foolishness to the natural mind, yet many can testify, that they have had and still continue to feel Divine acceptance in the faithful performance of these apparently small things.

"The Lord requires of us a testimony for his truth, in plainness of speech, apparel, address, furniture, and many other things, and we ought with all readiness to be obedient thereto, leaving the reason therefore, to his infinite, unsearchable wisdom. He hath doubtlessly a purpose therein, consistent with his attributes, though feeble-minded mortals, unless enabled through the instruction of his eternal spirit, cannot be able to comprehend it."

(To be continued.)

*The Condition of Ireland* was the subject of an address lately delivered before the Social Science Association at Dublin, by Judge Longfield, the chairman of the Social Economy Department. It was shown by reliable statistics that the progress of Ireland during the last quarter of a century in material prosperity has been both rapid and steady. Among other statements made in support of this opinion, the following are interesting:—The total area of Ireland is 20,000,000 of acres. Of these, in 1841, 13,464,301 acres were arable, 6,300,000 being waste. In 1860 the amount of arable land had increased to 15,400,000 acres, two millions or fourteen per cent. of the whole having been reclaimed during the intervening twenty years. In the same period, moreover, the total value of live stock in the Island increased in value from £21,105,808 to £33,839,899, or upwards of fifty per cent. The same progress is exhibited by investments in Government stock of Irish fund-holders, which had increased twenty-five per cent. during the ten years ending in 1860. Since 1851 eight hundred additional miles of railway have been constructed, while the traffic has grown in a much larger proportion than the mileage. The total amount of capital invested in Irish railways is now £19,000,000, the net receipts on which are equal to three and a half per cent. The public revenue at present derived from Ireland is greater by fifty per cent. than it was a decade ago, and seven-ninths of the population are now educated by the State in national schools.—*Ledger.*

Letter of John Barclay.

I can truly say, that with me often there has been no want of feeling and sympathy, when I have been but little drawn forth into expression, perhaps checked in myself from it, not that there are in the mind unpleasant reserves in such cases, but on the contrary, this course naturally leads to great plainness, undisguised simplicity, and honesty towards all. It is in my view of much importance, to endeavour to maintain entire the "uncorruptness," the genuineness, the unsophisticated artlessness, which is of the Truth. Every little habit, every compliance with custom in things that are thought indifferent, and which trenches upon these,

endangers the tender principle of life, and indirectly, perhaps almost imperceptibly, lands us in bondage, impedes us in a straight forward, unaffected course of acting, thinking, and judging. Thus the mind and character become involved and prejudicially affected. The character of George Fox is as good an illustration as I can give, of what I desire in this respect for myself and for my friends. If I might venture to throw in a little counsel, who am sensible that I also am not above the need of it, most certainly I would say, in a very tender feeling with thee, under whatever occasion of disquietude, "Look not so much at them, as for the poor mind to be much taken up therewith; endeavour to look over them up to Him, who orders all things that concern us, and will not lay out any thing for us to pass through, but what is really needful for us. Do not let us dwell too much upon anything that happens to us; but let us simply seek to be conducted through the circumstances that attend us, and our allotted conflicts, with filial simplicity and submission, and in a cheerful surrender of our all into the hands of our tender Shepherd and Preserver, our Father, and our constant friend. When we reflect upon the low condition we are in, it is seen to be a great mercy that we are not left to ourselves, but are led about and instructed by many painful dispensations. And when we look at the trials of the faithful in all ages, bitter almost in proportion to their faithfulness, also at the sufferings of the church as well as of the Head of the Church, what are we, that we should be spared, or rather what are we, that we should be honored with them? How light are our grievances, how great are our privileges and mercies, how gently are we dealt with; we are as wayward children, that are ready to complain if ought be taken from us with which we might have injured ourselves. Ah! like as a father, or a mother pityeth her babe, so doth He, who watcheth over us for good!

Second month, 1836.

For "The Friend."

#### Musings and Memories. ON THE ANIMAL INTELLIGENCE.

It is probable that man will never be able clearly to distinguish in the lower animals, where instinct ends, and memory, partial reasoning, and education commence, as guiding and directing influences. I remember that many years since, a Friend in this city passing along the streets, beheld two dogs in a quarrel; the larger dog had thrown his antagonist down, and was evidently preparing to inflict a severe punishment, when in an instant he relinquished his hold, ran toward a house with a double door, the upper half of which was open, leaped over the lower half into the entry and disappeared from sight. The friend was amazed at such an act of a dog in the moment of his victory, and he stopped and looked into the house, seeking for some clew to unravel the mystery. Being observed by one of the inhabitants, he frankly mentioned what he had seen, and his curiosity to know the "why and the wherefore." On this, he was invited into the back parlour or sitting room, where he saw the late conqueror busily engaged in rocking a cradle, in which was a sleeping child. The person who had invited him in, then briefly explained the matter. The child being put to sleep, it was the dog's business to rock the cradle and keep him so, but he was allowed to intermit the rocking when the child seemed to be sleeping soundly. On such occasions he would sometimes look out into the street for a little recreation, and on that particular time, he had seen a dog go by, who, because of some old affront, or some present dislike, he concluded to quarrel with. He had

accordingly sprang over the door and was inflicting the chastisement intended, when the voice of his young charge from the cradle, recalled him to his duty. His love of contest, the sweetness of revenge, the favourable opportunity offered by his overthrown enemy under his feet, all were forgotten. He sprang back to his post.

A more delightful anecdote of a dog is narrated in the life of Patrick Tiler. One of his brothers who resided at Aldourie, had an Isle of Skye terrier, named Cossack. The dog was very fond of the children of the family, and seemed to sympathize with them in their joys and in their troubles. One of them playing about on one day fell on the gravel, and being hurt by the fall, commenced crying. This induced Cossack to endeavour to comfort the child by leaping around it and on it, and licking its face. These old means of giving pleasure to the little one failing to pacify it, he sought for some other source of amusement for it. Running to a Mountain Ash tree near by, he leaped up, seized a branch of red Rowan berries, broke it off, and carried it to the child.

Towards the close of the past spring, being in Chester county, where sheep shearing was in progress, an interesting incident occurred. The Friend at whose house I was, had a flock of sheep of which ten had carried bells. Two or three weeks before my visit, a ewe who was honoured with carrying one of the bells, was accidentally killed, leaving a couple of orphan lambs, some six or eight weeks old. These lambs took no notice of the other sheep whose bells were continually sounding around them, but on the afternoon of my visit, something induced the son of my host to take up the bell which had hung round the neck of their mother. As soon as they heard its tingle, the lambs were roused into activity, and they approached where it was in the hands of the young man, and evidently expected to find their long lost mother. They seemed to recognize the peculiar sound of that bell, and associated it with the guardian of their infancy.

Cows sometimes appear to become attached to the sound of the bell placed round their necks, if they do not feel some degree of pride connected with it. A recent female traveller of the name of Best, in her work entitled "Abroad: and How to Live there: A Narrative of three years' residence in Germany and Switzerland," mentions this anecdote as having been related to her by a pastor in Switzerland. "M. Penchaud told us that the finest toned bell is placed on the neck of the handsome cow, and that one day a cow, having lost this ornament, became low-spirited and dejected refused her food, and the owner feared she would die. Day after day passed in this manner, until it was observed there was one particular part of the meadow she never quitted. Struck with the circumstance, the farmer went there, and in a rut discovered the treasure. No sooner did he fasten it round her neck, than her whole manner changed, her eye was no longer dull, she mingled with the herd, ate freely, and soon recovered her former beauty."

Memory in some animals is evidently very strong, yet how far it extends we probably shall never know. An anecdote I have recently met with, would seem to indicate that in the crow at least, it is not perfect. The dead body of some kind of an animal lying near a barn, some crows busily employed themselves in devouring it whenever no man was about that building. If they saw any person approach the barn they flew away from the carcass, and would not return to it, until they had seen that person leave it. Some young men desiring to shoot the crows, made many unavailing efforts to get into the barn unperceived, and remained at

times a long period in the place, in hopes the crows would forget they were there, but all was in vain. Reporting the case to their father, he said, "Crows can remember, but they can't count." He then advised that three of them should go to the barn together, and that after remaining there awhile, two should go away. They followed the plan, and on the two leaving, the crows immediately returned to their banquet, and a number of them fell victims to their inability to distinguish between two and three.

*Gentleness and Meekness.*—Gentleness is delicacy of action. It is a way of ease and tenderness in one's movements. It is the opposite of all that is rough, or hard, or coarse. It is a way of acting that does not irritate. It is not rough in it. It is not apt to provoke. It is not headless or abrupt. It is nice, thoughtfulness, kindness in acting. The gentle temper is the one that makes all its movements in fitness, as well as delicately.

Meekness is the same temper in reception. It is the quality that admits of being acted upon appropriately, delicately. So it becomes the accompanying complimentary grace of gentleness. One is active, the other passive. Gentleness is in its rest, meekness is gentleness in its exertion; meekness is gentleness in its rest. The gentle spirit does not do any thing roughly; the meek spirit does not receive any thing so. Gentleness fits its hand to that which is to be touched; meekness fits itself to the hand that touches it. Gentleness is the smoothly running way; meekness is the green meadow that opens to let it flow. One does not irritate; the other is not refractory in resisting. Gentleness gives but a soft blow, even at that which is rough; meekness takes the rough blow softly into one's rock; the dew drops gathers gently in its falling upon a rock; the still water closes meekly over the cheek of her enemy; gentleness kisses the cheek of her enemy; meekness turns her own to his second stroke. Gentleness is tender to do; meekness is quiet to bear. Gentleness goes out softly to act; meekness retires silently to endure. Gentleness is like the morning in its coming, that wakes the earth lightly to its life with its sweetly shedding rays through the hours of dawn; meekness is the evening twilight, that steals away to hide her shadows in the lap of night.

They are beautiful alone, each by itself; but more beautiful together; when they are joined in perfect harmony, they make life's "evening and morning" one day.—*Christian Mirror.*

*Conformity in Plainness without Conviction.*—But some may object against this conformity, if it be without conviction. I answer, there is no need of conviction in this case, it being no matter of conscience to have and wear fine and fashionable things, instead of plain; it then results into matter of condescension to the advice and counsel of worthy elders, to which they are absolutely enjoined by Scripture, or to what purpose do the Scriptures repeatedly advise thereto? And our worthy, esteemed friend and brother Robert Barclay, largely proves by Scripture the conformity of church government or discipline to the mind of Christ, as well as the necessity of condescension and submission to elders, &c., and that the church of Christ has power to give a positive sentence, &c., relating to matters of conscience. To this treatise, namely, his "Anarchy of the Ranters," I refer my reader, believing it to be one of the most excellent works which treat of church government, that has been written since the apostles' days. However,

let none mistake me in what I have said, as if I intended that those who are unruly or disorderly in their conversation in other respects, should be advised to outward conformity in plainness, while they remain so. No; these are to be dealt with another way, and if they cannot be reclaimed, I would rather choose they should go in their flaunting, fashionable dresses, and appear as they really are, by which they would not bring a greater reproach upon Truth and Friends.—*Joseph Fike.*

For "The Friend."

#### BIOGRAPHICAL SKETCHES

Of Ministers and Elders and other concerned members of the Yearly Meeting of Philadelphia.

JOSHUA BROWN.

(Continued from page 25.)

In the evening of the 4th of the Seventh month 1778, "they were informed by the high sheriff that they were to be banished," and he wished to know whether they were willing to go to those in authority in Charleston. This brought a fresh trial upon them. Joshua says, "We were favoured to unite in judgment not to move in it ourselves, but that if we were commanded, [by those in authority,] we were willing to go there. We were not easy to do anything towards furthering our banishment." The sheriff had received orders to keep them close prisoners. Joshua says, these more severe commands "must have proceeded from some evil disposed person, who had complained to the president of the State Council against us, envying our privilege of going out. But we have cause to be thankful in that we are favoured with resignation to the Divine will." They were now prevented from holding meetings in the Court House, but efforts made by some Friends at Charleston, had succeeded in obtaining a writ of habeas corpus, on which they were to be taken to that city for a hearing. On the 11th of the month, in custody of Fields Purdue, one of the under sheriffs, and accompanied by their friend Benjamin Eaton, they rode to one of the plantations of the latter, where they were that night obliged to lie on the floor, there being no beds there. The next morning they rode to Robert Stark's, the high sheriff, and started with him to go into Charleston, but he not being met by a file of soldiers who were to be his official escort, they all returned to his house, where they were kindly entertained that night. On the 13th, they started without the sheriff, and lodged in the woods that night, during which there was a thunder storm, which although very severe near by, was not so where they were encamped. On the 14th, they rode forty-five miles to a tavern and lodged;

—The next day rode to Orangeburg to breakfast, where they were met by William Pearson, a Friend from Bush river. That night they lodged at the house of one Johnson, having ridden thirty miles. The next day they rode into Charleston, and went to the house of Daniel and Thomas Latham, whom they received them hospitably, and took charge of them and their horses. Joshua felt concerned to have a meeting in Friends Meeting-house there, which was held at 4 o'clock that afternoon. In this he was concerned to press on those present the importance of seeking first the kingdom of God and his righteousness, re-asserting the promise to those so exercised, that all things necessary should be added. He also treated on baptism, and as usual on the necessity of a real change of heart. The sheriff, and Abraham Livingston, continental agent, went to the judge of the district, in hopes that he would release them, but he concluded that in their case he had no authority to interfere. The prisoners were then taken before the President of the council, who treated them very civilly, but told them

they could not be discharged from imprisonment without being banished from the state. On the request, however, of the continental agent, the President discharged the sheriff of Ninety Six of any further care over them, and committed them to the custody of the agent.

They were brought before the council on the following Third-day, and from some of the members, suffered much insult for not removing their hats, which faithfulness of theirs to their Christian duty gave great offence. After a hearing they were dismissed, being directed to be at the house of the President, at 5 o'clock that evening, to hear the conclusion of the council concerning them. They went there accordingly, and found that although the President wished to set them at liberty, the council would not agree, but they were to be continued as prisoners, but the President was willing that they should go and remain with their Friends at Bush River, until discharged from custody.

Leaving Charleston on the 22nd, they finished a wearisome journey by reaching Bush river on the 25th, Joshua being obliged to leave his horse, which was taken up by the way. At Bush River Meeting on the 26th, Joshua had to urge his favourite theme of reformation, and the necessity of witnessing the baptism of Christ to cleanse them, before they could become acceptable in the sight of him who is pure. He was brought under exercise in a prospect of duty devolving upon him towards the families of the Friends of that meeting, and desiring the Friends to remain after the meeting for worship closed, he appeared before them his prospect of visiting at least some of the families. This was united with, and in company with Enos Elliot, Mary Pearson and some other Friends these visits were paid to satisfaction, although part of the time Joshua was in great pain, his body being much bruised. His bodily infirmity occasioned them to move along slowly in the service, and at times to intermit the work for a day. He attended the meetings of Bush Creek as they came in course, sometimes setting an example of silence, and at other times exhorting to reformation, regeneration, freedom from sin, and exalting the universality of the love of God. Sometimes telling them that the stone which the very builders of an outside religion rejected, was Christ, the power of God and the wisdom of God. On the 11th of the Eighth month, they rode to the Long Cane settlement of Friends, where Joshua made his home at the house of his son Samuel Brown, who was living there. At a public meeting held there on the 13th, many neighbours attended, amongst whom were some Presbyterians of the most rigid sort. In this meeting Joshua says, "I had to set forth the plain path to the kingdom, through the operations and instructions of the Spirit of Truth in the inward parts, of the necessity of experiencing the new birth, through the effectual cleansing of the baptism of Christ, and of a knowing a deliverance from sin in this life." Some of those who had been present came to his son's, and dined with Joshua. One of them, William Caboon, was very stiff and rigid in his views, and too full of talk and disputation to gather much good,—but a Patrick Caboon, a member of the legislature of the state, was moderate, and he and Joshua had much conversation on religious matters, and their parting was very friendly. On the 14th, they rode to Richard Henderson's, thirty miles. Joshua says that Hannah Smith and Hannah Kelly accompanied him and companions in the visit to Friends' families in that neighbourhood, indeed "we were favoured together, so as to be glad we were there."

Being now near Ninety Six, they rode there and

paid a friendly visit to their late keepers at the prison, and then went on to the house of William O'Neal at Little River. After visiting the families of Friends at that settlement and attending a meeting there, they on the 18th rode to Pagors Creek, twenty-five miles. They were at two meetings at Pagors Creek beside visiting the families, and then proceeded towards Cane Creek; after attending a meeting in the latter place, and sitting with the Friends there, they returned to Bush River on the 25th. On the 29th, was held the Monthly Meeting at that place, in which he had good service, and on the meeting on the 30th, which was the first day of the week, he was much enlarged. His concern was that his hearers might be prepared for a future state of existence, and had to show them by the example of his life and Lazarus, what the sad end of living in earthly comforts, without the love of God ruling in the heart—must be in eternity; and what happiness a proper submission to our lot, if it be that of suffering and affliction, in humble acquiescence to the will of God, will assuredly bring us when the trials and sorrows of earth are over. The rich man died,—riotous feasts cannot retard the advance of death,—he died, and was buried, and in hell he awoke. The poor man died, and notwithstanding his despised earthly condition, he was carried by angels to his everlasting reward. Joshua then was led to open the way which under the blessed Gospel dispensation, our heavenly Father hath appointed, to restore his fallen creature man to a state of acceptance, and to prepare him for everlasting enjoyment with the saints in light. He pointed out the operations of the Holy Spirit in the heart, preparing for and perfecting the new birth, which was of absolute necessity for all to witness before they can enter into the kingdom of God. This work of the Spirit, being the baptism of the Holy Ghost, must not be confounded with water baptism, upon which no dependence for assistance in the work of salvation ought to be placed. He particularly the sprinkling of infants, called baptism by many, as a mere relic of the superstitions of the Church of Rome, a man-made invention, which had neither example nor precept to give force to it, in all the scriptures.

For several days after this Joshua was engaged writing an address to the assembly of the State, and letters to Friends and friendly people at Charleston. After this he was for some weeks busily engaged visiting families and attending meetings at Bush River, Cane Creek, Pagors Creek and Little River. He was informed on the 17th of the Ninth month that the petition he had sent to the Assembly had been rejected, because of some plain expressions in it concerning liberty of conscience. Joshua had quoted a saying of Oliver Cromwell in favour of toleration, which seemed to him pertinent and clear, and expressed the opinion that the downfall of the cause he espoused might have been permitted as a punishment, because of his allowing persecution, and his want of faithfulness to the good principles he professed. These remarks, which were intended to apply to those in authority in Carolina, who were pleading for their own liberty and rights, and yet were interfering with the conscientious scruples of others, gave them some offence.

Joshua still continued his labours of gospel love, although for some days after hearing of the rejection of their petition he was under some depression of mind. This continued until the 20th, when being at a meeting at Little River, he was much favoured by his Divine Master. In this meeting he had to open the case of Naaman the Syrian, and the simple means made use of in heal-

ing him of his leprosy. In commenting thereon he spoke of the simplicity of the appearance of Christ in the heart, when he works therein to cleanse us of the leprosy of sin. As in the days of old, Naaman could not be healed without obedience to the directions of the prophet, so in this day, man cannot witness the defilement of sin removed, and spiritual health restored, except as he is brought into a state of obedience to the Lord's requirements. He spoke of the soul cleansing, soul saving efficacy of Christ's baptism, and the insufficiency of that of water, to bring about inward purity, the necessity of which he strongly urged. In the love of the gospel he set forth the universality of the work of God through Christ Jesus, extended towards every soul whom he hath created during the days of their visitation, but from which, with the sufferings, death and perfect righteousness of Christ, they will derive no benefit, and have no resort to trust in, unless they have witnessed the Saviour's baptism which cleanseth the heart.

After a week of laborious service in family visiting, he was at Bush River meeting, on First-day the 27th, which was attended by many persons not members with Friends. He spoke of the case of the young man who came to the Saviour desiring to know what good thing he should do that he might inherit eternal life. This young man had kept the moral duties from his youth up, and in commenting on his case Joshua opened the necessity of knowing something more than the mere performance of these, which nevertheless was also obligatory. This opened the way for preaching the Lord Jesus Christ, his free gift of grace in the heart, the baptism of his spirit to regeneration, the universality of God's love to mankind, and many other comforting doctrines of the Gospel. At the close of this meeting, Joshua was favoured with much peace of mind, and his service in South Carolina appearing much ended, he received a returning certificate from the Monthly Meeting of Bush River to his Friends at home. So now he was ready to start homeward whenever the term of his open imprisonment should be over, yet whilst waiting he continued diligently to attend to the openings of duty, visiting the settlements of Friends, and fervently labouring therein. At a meeting at Bush River on First-day, the 4th of the Tenth month, he was led to dwell on the loss mankind experienced through the fall of Adam, and how the image of God then lost, was to be regained through the propitiatory sacrifice of Christ opening the way of restoration, and his spiritual appearance in the heart perfecting the holy change therein. There, in the New Covenant dispensation, his law is written, and there are the baptisms of the Lord Jesus Christ, which cleanseth, regenerates and restores not only that innocence which was lost in Adam, but gives spiritual sonship and maketh us heirs of His blessed kingdom of eternal glory. At subsequent meetings at the same place, he was much favoured in opening various branches of gospel truth. On the 22nd being at Bush River, he was informed that the Assembly of South Carolina had passed an act releasing him and companions from their bonds, but no official notice had been received.

(To be continued.)

*Servants have no Pockets;* for we brought nothing into this world, and surely we can carry nothing out. Grasp the gold we gather ever so tightly, there is no pocket in the grave-clothes we will wear, in which we can hide any treasure that will be of use to us when God takes away the soul. Foolish, then, it is to lay up treasures on the earth, when there is no currency here that is not worthless in that better country, whither we ought to be going.

*The Ginseng Trade of Minnesota with China* is much greater in amount and value than might be supposed. One shipment was made recently from St Paul to China, by the way of New York, of fifty tons of clarified ginseng, and it is said that the total annual shipments are not far from one hundred and fifty tons, which, at the present cash price of the article at the place of shipment, namely, fifty cents per pound, amounts to the round sum of one hundred and fifty thousand dollars. The root, which only costs our backwoods-men the labour of digging it out of the ground where it grows wild and in that profusion, is used by the Chinese as a tonic, and whether it has any such virtue or not, the export of the article to the Celestial Empire serves to square the account of the people of Minnesota with China for tea. Thus it is that a little drug, springing up spontaneously in the deep recesses of our western forests, tends to unite, commercially, two antipodal people. Mysterious, indeed, but most beneficent, are the providences of nature. What is comparatively worthless on one side of the globe is an almost indispensable necessity or luxury on the other, and by these opposite wants and products of various regions mankind are brought together.—*Ledger.*

*Dedication of the Heart in Youth to the Service of God.*—Though sharp in reproof to those in general who trampled upon the testimony of truth, or lived in a carnal security, yet he greatly rejoiced to see the budding forth of good desires in any of the youth, and was a tender nursing father to such. Strong and fervent were his desires that the youth amongst us, and particularly his own children and their offspring, might dedicate their hearts fully to the service of God, that there might be a succession of faithful members in the church whereof Christ is the head, following the ancients in that self denying path which they had walked in, at times observing, that when Friends lived more retired and inward, the revelation of the spirit and divine help was witnessed in a larger degree: often desiring in his declining years, when his natural strength and faculties gradually decayed, that he might never survive the inward sense and feeling of that which is the life of the soul, also sorrowfully remarking, that some by grasping at the present visible enjoyments, had left large possessions to their families, but their table had become a snare, and to several there was left neither name nor memorial among us.—*Memorial of Samuel Watson, 1762.*

*A Promise to the Victor.*—*To him that overcometh, I will give to eat of the tree of life, which is in the midst of the paradise of God.* Refreshing promise! The inward and outward life of the believer is a warfare. There is a contest to be maintained with indwelling sin, with an opposing world, and with its malignant prince. We are to fight the good fight of faith. But how joyful this assurance! how invigorating the foretaste to a saint, as, weary and wayworn, he approaches his end. "I feed on angels' food," said Rutherford. Was that the first time he had tasted it? No; it had been his nourishment, as it is every true Christian's. The children of God do from day to day taste the hidden manna of life while on earth, and are strengthened by it. Through everlasting ages its freshness will be found gladdening and vivifying. "To him that overcometh, I will give to eat of the tree of life that is in the midst of the Paradise of God." There never will the petition be heard, "Give us this day our daily bread," for "they shall hunger no more, neither thirst any more."—*A. C. Thompson.*

## GRATITUDE.

Selected.

I thank thee, oh my God, who made  
The earth so bright;  
So full of beauty and of joy;  
Splendor and light;  
So many glorious things are here,  
Noble and right!

I thank thee too that Thou hast made  
Joy to abound.  
So many gentle thoughts and deeds  
Circling us round,  
That in the darkest spot on earth  
Some love is found.

I thank thee more that all my joy  
Is touched with pain;  
That shadows fall on brightest hours;  
That thorns remain;  
So that earth's bliss may be our guide,  
And not our chain.

For thou who knowest, Lord, how soon  
Our weak heart chings,  
Hast given us joys, tender and true,  
Yet all with wings,  
So that we see, gleaming on high,  
Diviner things!

I thank thee, Lord, that thou hast kept  
The best in store;  
We have enough, yet not too much  
To wish for more;  
A yearning for a *deeper peace*,  
Not known before.

I thank thee, Lord, that here our souls,  
Though amid a host,  
Can never find, altho' they seek,  
A perfect rest;  
Nor ever shall until they lean  
On Jesus' breast!—*Proctor.*

## EVENING HYMN.

Selected.

The shadows of the evening hours  
Fall from the darkening sky;  
Upon the fragrance of the flowers  
The dews of evening lie:  
Before thy throne, O Lord of heaven,  
We kneel in close array;

Look on thy children from on high,  
And hear us while we pray.

The sorrows of thy servants, Lord,  
Oh, do not thou despise;  
But let the incense of our prayers  
Before thy mercy rise;  
The brightness of the coming night  
Upon the darkness rolls:  
With hopes of future glory chase  
The shadows on our souls.

Slowly the rays of daylight fade;  
So fade within our heart,  
The hopes to earthly love and joy,  
That one by one depart:  
Slowly the bright stars, one by one,  
Within the heavens shine:—  
Give us, O Lord, fresh hopes in heaven,  
And trust in thine divine.

Let peace, O Lord, thy peace, O God,  
Upon our souls descend;  
From midnight fears and perils, thou  
Our trembling hearts defend;  
Give us a respite from our toil,  
Calm and subdue our woes;  
Through the long day we suffer, Lord,  
Oh, give us now repose!

## Coins of the New Testament.

BY JAMES ROSS SNOWDEN.

*Director of the U. S. Mint, Philadelphia.*

"And when he had agreed with the labourers for a penny a day, he sent them into his vineyard."—Matt. xx. 22.

A penny a day seems a small compensation for a labourer; but we have, in our previous article, shown that the coin in question was not the penny of the present day, but was a *denarius*, a silver

coin, the intrinsic value of which was fifteen cents. This gives one a better idea of the value of labour at that time. And it shows that the good Samaritan was more liberal and generous than the usual reading of the text would indicate. Luke x. 35. He gave the poor man that fell among thieves two silver coins of the value of thirty cents. We have reason to believe that silver was at that period ten times as valuable as it is at present; in other words, thirty cents then would buy as much as three dollars would now. It thus appears that the Samaritan, besides the other valuable things, wine and oil, which he bestowed upon the injured man, gave the "host" money enough to pay the boarding of his guest for some time, perhaps for several weeks, because this interesting event happened in the hill country of Judea, between Jerusalem and Jericho, where the charges at the inn were probably quite moderate. Thus a liberal provision was made for the intervening time which would elapse before the benevolent man would return from Jerusalem. And in case he should be delayed in his return, he said to the inn-keeper, "Take care of this man, and whatsoever thou spendest more, when I come again I will repay thee." This generous and neighbourly conduct of the good Samaritan our Lord commends, with the injunction, "Go thou and do likewise."—v. 37.

The ointment with which Mary anointed our Saviour, is said to have been "very costly," John xii. 3, and "very precious," Mark xiv. 3. "Some had indignation within themselves, and murmured against her," because her ointment might have been sold for more than *three hundred pence* and the money given to the poor, Mark xiv. 4, 5. The propriety of saying that it was very costly, and very precious, appears very clearly when we ascertain that the price at which it was said it might have been sold, was equal to forty-five dollars of our own money.—Mary's offering was therefore a valuable one intrinsically; but much more so as she wrought a "good work, which is spoken of throughout the whole world as a memorial" of her love and devotion to the Saviour—v. 9.

Again, when the five thousand persons were miraculously fed, we are told that the disciples asked, "Shall we go and buy two hundred penny worth of bread, and give them to eat?"—Mark vi. 37. The present value of a penny is about two cents. It would seem to be very unreasonable to talk of feeding such a multitude with four hundred cents worth of bread. But when we know that two hundred pence were equal to thirty dollars of our money, we can readily understand how, with that sum, bread enough might have been purchased, not only to enable "every one of them to take a little"—John vi. 7; but if the proportionate value is considered, the money would have bought a loaf of bread for each one of the great multitude that were assembled. The great Master of the feast, however, preferred to feed them by his creative power, and thus the five barley leaves, and the two small fishes, were miraculously increased; and "they did all eat and were filled; and they took up twelve baskets of the fragments."—Mark vi. 42, 43.

It is difficult to determine with accuracy the relative value of money in different periods of the world. The pieces of the same denomination, coined at different times, greatly varied in weight and in fineness, or in the proportion of pure silver to the alloy of base metal used in the coinage. The denarius of Tiberius weighed about sixty grains, and contained about ninety per cent. of silver and ten per cent. of alloy, and was worth, as we have seen, about fifteen cents; but as the Roman Empire declined, the denarius was dimin-

ished in weight and fineness, until at length it fell to about the value of six cents. It was perhaps on the model of this reduced denarius that the English penny was established. The pound sterling, as originally constituted in England, and up to about A. D. 1300, was composed of *a troy pound weight of silver*. As there are 5760 grains in a troy pound sterling, and as a penny is the two hundred and fortieth part of a pound sterling, it will be seen that the penny of our English ancestors weighed twenty-four grains, from which comes the term "penny weight." At the present mint value of silver, namely 121 cents per ounce—twenty-four grains, or one pennyweight, is worth six cents; but, as one pound troy of silver is now in England coined into three pounds and six shillings sterling, the weight of the penny would be only about seven grains. This being too small for a coin, the copper penny has been substituted for the silver penny. The Roman term is still preserved in the English account of pounds, shillings and pence; thus *£ s. d.* From these considerations it would appear that the translation of the word *denarius* into *penny* is legitimate and proper in one sense, although it gives an incorrect idea of the value of that ancient coin.

We have thus endeavoured to show that it is useful as well as interesting to learn something of the value of the *denarius*, inasmuch as it serves to render more clear several passages in the sacred writings.

It is an excellent thing to be true subjects of Christ's kingdom, baptized into his nature, and therein to abide. Great has been his mercy in visiting our souls with his blessed truth, and it highly behoves us to watch with all diligence. It is our duty to look to him daily; this comprehends all; here is our strength and safety, other stays or temporary help will fail and leave us destitute and inwardly lean.

That Holy Spirit, which was and is the ground of truth for ever, is a substantial operative principle, its directions are not imaginary, nor its doctrines loose and indeterminate, but it is life and light to its possessors, and causes them to inherit substance. It teaches access in heart to God, whose attributes cannot be defined fully, but experience teaches them, supplying the wants of the Lord's children, supporting their steps, and opening their understanding into those divine truths that are higher than human wisdom. Let this spirit be leaned on above all!—this will help us to stand upright, and walk steadily in the faith delivered to the saints. Retirement will be pleasant in meetings, and out of meetings; the inward feelings of the divine power to live and act to God's honour and our own preservation will be dear and precious to us, and He that delights to hear the language of his children will not be slack in the performance of his gracious promises.—*S. Pether-gill.*

*The language of the Spirit to the church of Ephesus.*—Nevertheless, I have somewhat against thee, because thou hast left thy first love. Remember therefore from whence thou art fallen; and repent, and do the first works; or else I will come unto thee quickly, and will remove thy candlestick out of his place, except thou repent. He that hath an ear, let him hear what the Spirit saith unto the churches; To him that overcometh will I give to eat of the tree of life, which is in the midst of the paradise of God.—Revelations ii. 4, 5, 7.

The language of humility, true watchfulness, and self-distrust, ever is, "I am nothing, Christ is all."

## Manufactures of Philadelphia.

The following interesting statement appeared in a late number of the *North American*.

The Board of Trade has just published an authentic census of the manufactures of Philadelphia, the official census of 1860 in substance, since it was prepared according to the forms of that census, and the two have been mutually corrected, and rendered duplicates of each other on all important points. Nearly a year has been devoted by the Secretary of the Board in thoroughly completing and verifying the results now put forth, and they should therefore be entirely reliable. The preface to the publication says that

"The utmost pains have been taken to verify every return in detail, and to prepare every summary from accurate original details only. The summaries were computed with care, and no attempt was made to anticipate any portion of the aggregates, or to bring them up to any preconceived standard. They stand just as the final additions made them, no class having been estimated for; and where, as in some cases was necessary, a single establishment was estimated, care was taken to be below rather than above the probability."

An accurate statement of the extent of manufacturing industry of this city so prepared ought to develop its actual condition, and though this canvass related to the year ending June 1, 1860, and is therefore in excess of the production now going on, it is still no more than can be done in average years in future. We address ourselves to the statisticians, therefore, as to facts finally put in a form which the public may rely.

First, there are catalogued no less than four hundred classes of distinct manufactures conducted here, numbering, within the city limits, 6314 separate establishments, producing more than five hundred dollars worth each in value yearly. The average production of each establishment is \$29,550, an average larger than would be supposed under the fact that all are conducted by individuals or firms, and none by incorporated companies. This number and proportion is stated to be exclusive of some eight hundred establishments of a kind usually reckoned in manufactures elsewhere, but only partially taken as such here—bakers, blacksmiths, butchers, carpenters, rectifiers, milliners, photographers, &c. The summary of this alphabetical list gives the following aggregates:

## SUMMARY OF THE AGGREGATES.

Establishments.	Capital.	Value of Raw Materials Produced.	Manufactures.	Male Population.	Female Population.	Total Population.
Philadelphia, 6314	\$73,697,852	\$72,555,809	\$26,900,000	341,045	358,000	700,000
County of Philadelphia, 106	5,038,040	3,223,859	3,564,309	6,777,349	6,777,349	13,554,698
State of Pennsylvania, 34	5,944,000	1,602,000	2,450,000	3,885,113	3,885,113	7,770,226
United States, 13	1,829,800	est. 250,000	300,000	78	641,000	641,000
County of Philadelphia, 6407	\$81,668,892	\$77,473,577	\$27,555,266	352,966	364,775	717,741
Total number of persons employed, 107,351.						
Total number of establishments, 6,947.						
Average production of each person, \$1,411.60.						
Average production of each establishment, \$25,558.88.						

It is well known that a large circle of country adjacent to the city is occupied with manufacturing establishments, of which the whole business belongs to it as much as if they were actually within its limits, and for this reason, a part of them have been put in connection with the return from the city proper as a natural supplement. The aggregates are very large without this supplement, however. The number of workmen is, in fact, quite 70,000, and of workwomen, 30,000, within the city, a total of 100,000. Their labour, with the capital employed, earns to the city, exclusive of the value of the raw materials used, about seventy millions of dollars yearly. The proportion shown in the figures above is a little over fifty per cent. paid for raw materials, while the true proportion is

undoubtedly less, and below fifty per cent. of the value of the goods made. The value reported for the finished goods, \$141,000,000, thus establishes it that the increase given to values by our manufacturing processes exceeds \$70,000,000 yearly, a sum really marvellous in its magnitude.

The exchangeable values of these manufactures with all other places is of course more than the sum just named, since probably not more than one-third of this value of raw material is paid away from us. A part of it is iron produced in the vicinity, and in many cases in establishments owned and conducted by residents here. A large part is yarns and cloths, also originally produced in a way not to require payment away from the city, and in many cases natural products are worked, costing nothing as raw material but the labour required to bring them to the spot of further manufacture. Deducting from these products of partial manufacture everything which can in any manner be twice counted in passing from one establishment to another, we may take at least thirty millions more as the commercial value of raw materials not paid for away from the city, making one hundred millions annually as the net receipt from all the world outside in exchange for the manufactures of this city. In the words of the Secretary's report, it is reasonable to say that

"The exchange which this export brings to Philadelphia is the main source of its wealth, the basis of its prosperity, and the assurance of its permanent growth."

*Things worth forgetting.*—It is humiliating to think how much there is in the common on-going of domestic and social life, which deserves nothing but to be for ever forgotten. Yet it is amazing how large a class repeat and perpetuate these very things. That is the vocation of gossips,—an order of society that perpetuates more mischief than all the combined plagues of Egypt together. You may have noticed how many speeches there are which become mischievous by being heard a second time; and what an array of both sexes see to it, that the repetition shall be had. Blessed is that man or woman that can let drop all the burrs and thistles, instead of picking them up, and fastening them to the next passenger! Would we only let the vexing and malicious sayings die, how fast the lacerated and scandal-ridden world would get healed and tranquilized.—*Dr. Huntington.*

*Christian influence.*—In a life of a Christian lies the secret of all true Christian influence. It is the easiest thing in the world to talk about religion. But mere talk about religion is the poorest thing in the world. Every true Christian will, indeed, talk about the Saviour. Out of the abundance of the heart the mouth speaketh. And if the voice doth not speak of Christ, sure you may be the soul is not filled with Christ. Nevertheless, here, as elsewhere, the utterance of the lips is as nothing to the influence of the life. In the divine economy all grand forces are comparatively gentle and silent. The shallow rill, that is dry on the mountain side half of the year, brows more noisily at times than you mighty river. The boy's sparkling rocket makes a louder demonstration in the night air than all God's starry constellations. And yet, in the silence of their sublime manifestations, how eloquently do these great forces of the universe bear witness for God.

And so it is of moral forces. The gentle movement of the "man out of whom the devils were departed," amid his wondering countrymen, did more to convince them of Christ's saving power than a thousand noisy utterances. And so it is

with the convincing power of Christian life. The converted man is left in this world a witness to Jesus—a living illustration of the power and blessedness of a religious life. He is to the theologian the truth of the Bible what practical experiments are to scientific truths in nature. As the chemist analyzes technically elements in analysis and synthesizes and exhibits, in illustration, free gases and ponderous compounds; and as the botanist discourses scientifically of the structure of plants, and the scientificity of their parts, and shows you his meaning by producing the petals of a lily, or a spike of lavender—in the same way with spiritual science, in the hands of the Great Teacher. In the Bible the graces of the Christian are described as in the epistle—in Christian life they are illustrated as in a "living epistle." And in this sense we are, main witnesses for Christ. As the Gadarenes saw, that demonic was restored, so must the world see that the sinner is converted. He must speak for Christ as the flower and the star speak of God, in its beauty and glory of their physical manifestation. Without this abiding savour of a holy life, all will prove but a mockery.—*Charles Wadsworth.*

*My Peace I give unto You.*—Every believer permitted to feel that his afflictions, usually with his mercies, come from the hand of a loving God. They form a part of the Divine plan of his life. He is all designed to draw him into closer union with God here, and to minister to his final blessedness and glory in heaven. Nothing can happen to him contrary to the Divine plan; and if, in time of trouble, he wait on God, he shall never fail to be comforted.

"I had before prayed with much uneasiness, wrote the German poet, Klopstock, of his feeling at the time of the decease of his amiable and beloved Christian wife; "I could now pray quite differently. I entreated perfect submission. My soul lung on God. I was refreshed. I was comforted and prepared for the stroke that was all ready near, nearer than I thought. I believed that she would yet live some hours; that was my hope, and that, according to her wish expressed not long before I left her, I might one more be permitted to pray with her. But how often are our thoughts not as God's thoughts. I said soon after her death, 'She is not far from me; we are both in the hand of the Almighty.'"

"After some time I wished to see what I had just before called my Meta. They prevented me. The second night came the blessing of peace. Till then I had considered it only a trial. The blessing of such a death in its full power came on me. I passed above an hour in silent rapture. Only once in my life did I ever feel any thing similar, when in my youth I thought myself dying; but the moments of my expected departure were then somewhat different. My soul was raised with gratitude and joy; but that sweet silence was not in it. The highest degree of peace with which I am acquainted was in my soul. This state became to my recollecting that her Accomplisher and my Advocate said, 'He who loveth father or mother more than me is not worthy of me.'"

"It is impossible to describe all the blessings of that hour. I was never before with such certainty convinced of my salvation."

The experience of Klopstock affords a beautiful illustration of the sympathy of God with the believer in affliction. It is a common experience that the Christian is blessed with his highest spiritual joys in the time of trial. It was to the children of God in the fiery furnace that one like unto the Son of God appeared. It was to the bereaved sisters of Bethany, and to the sorrowing disciples

about to be bereft of his presence, that the Saviour spoke the most comforting words ever uttered on earth. It was when the disciples had gathered together in sadness and fear, closing the door to hide them from an adverse world, that the risen Redeemer came, and breathed on them the Holy Ghost. It was to the exiled evangelist at Patmos, grown old and feeble with sorrows, that were revealed the glorious vision of the Apocalypse.

"I will not leave you comfortless; I will come to you." Precious words! sweet consolation! Rejoice, in this cloudy and dark day, is it thine?

**Lavender.**—The following account of the cultivation of lavender in England will be interesting to our readers. The writer says:—"In this little island no less than about two hundred and seventy acres of its precious land is devoted to lavender farming. Each acre yields, say 6200 pounds of flowers, every one hundred pounds of flowers giving up by distillation about one pound of the oil of lavender; and thus we learn that there is an average production of 7000 pounds of lavender oil annually. It requires six ounces of this to make a gallon of lavender water; so that Britannia and her children—together with their names, Jamaica, Canada, Australia—you know, with a few visitors, America, Germany, and Russia, use, and take more with them the enormous quantity of 1,000 millions of this favourite spirit. These lavender farms are situated in Surrey and in Herefordshire. The lavender, when in blossom, is resorted to by all the bees for miles around. The sound of their hum, such vast numbers, is quite enchanting; nor do the butterflies neglect to visit so luxurious a feast, the taste of which appears to be particularly grateful to them. The bee's love for the lavender is so excessive, that at the harvest time they will follow even at a sacrifice of life, into the still!"

**The Christian's Glory and Strength.**—During her last illness she had to endure great bodily suffering, and at times depression of spirit, yet was seasons much favoured, through the Lord's mercy, with the lifting up of the light of his blessed outpouring, and uttered many comfortable and edifying expressions. It was a time of great commotion in the land, and she one day heard the sound of a drum passing, on which she remarked, "The Spirit of Christ is the Christian's glory and strength. It makes us humble, meek and wise, it is the teacher that cannot be removed, a guide into all righteous way, which, if lived in, would have kept off this impending storm. Oh, that they could even now, humbly seek to learn of the Christian warfare, and be earnestly engaged to fight under the banner of Christ, to know their own carnal lusts totally subdued."—*Memoir of Sarah Morris.*

**Deep baptisms followed by abounding consolations.**—Oh! the deep baptisms the Lord's precious are made to pass through! Oh! the bitter cup they are to drink of, as years revolve! and to be enabled to continue with Christ through all temptations or proving, is indeed that which sorely tries the faith, and exercises the patience; but it is not suffering alone which Infinite Wisdom dispenses to his own; their consolations abound likewise; and I fully believe that the truly dedicated, lowly flower of the crucified Immanuel, would not alter their privileges, and peace, and rest in the full Beloved, for all the case, the fleshly indulgence, the transient joy and gratification of such, seek their "good things" in this life, too regardless of pursuing the "one thing needful."—*Sarah Lanes' Grub.*

**The Poor Shoemaker.**—In an upper street of New York city, there lives a certain poor shoemaker whom it would do any one's heart good to see. The man and his wife have five children, and not every day in the week are three meals forthcoming for all these little mouths. Want has brought these people just next door to wretchedness, and yet they are not wretched. A casual visitor would never suppose that their cupboard was bare, and even an old friend, if he did not ask questions, would not be much wiser about it.

It takes a good deal of love to gild the bitter pill of poverty, but there is a good deal of love here. There are cheery words in plenty, though the loaf be scanty, and merriment may be heard among the children as they munch their unuttered crusts.

Now in these hard times, when many people can't buy new shoes, and poor folks wear theirs without mending, our good man sometimes leaves his bench and turns pedlar. Away he starts of a morning with his little basket of homely wares, (and often with tears in his eyes, for he leaves his children hungry,) and patiently going from house to house of his poor neighbourhood, endeavours to entrap a purchaser. In all these commercial rambles his sharp knife bears him company, and we betide the stray boot or shoe he may meet, having any morsel of wearable upper or sole. A notable quick eye has his shoemaker for a bit of good leather. Rip goes his blade round the sole or through the leg, and pop go the good hits into his pocket. Next rainy day or long evening these come out again, to be inspected and remustered into service.

With pockets always growing heavier, and basket not always growing lighter—for the pennies to spend for matches or shoestrings come slowly in these days—up and down the stairs he goes of tenant house and basement, and if in a morning's climbing he effects small trades to the amount of a "quarter," he counts that doing business on a princely scale.

If in his walks he lights upon two whole big shoes, he they never so old he calls these a prize. Now and then he encounters a couple of these ancient wanderers resting by the way-side, thinking perhaps that their earthly race is run. All in their age and weakness he captures them, and like many a cotemporary, they are impressed into the service of the rising generation. Down they go into the great pocket, and so home with him, up his narrow stairs, and into his little room. And when with the light of next morning they step forth into the world again, no one could guess that these were the two old travellers who went up the stairs last night.

The rejuvenating process has gone on while the world round them slept. In the light of our shoemaker's sputtering candle, and by dint of much hammering, turning, and polishing, he every moment looking more worn out, and they every moment looking fresher and newer—at last they are made ready. To all seeming, they come forth a couple of sturdy youth, ready for much service. Hitherto it has been their mission to attend the footsteps of age and discretion; now, their future duty will lie in the devious paths of childhood. To think that they should ever go hop, skip, and jump! Off they are hurried by their sleepless and breakfastless master. The arm which carries them is boat and spar, and there are peepholes in the coat-sleeve; but his heart is light, for he has the hope of a sale before him. Thirty cents he has for the little shoes, and he will come home rich, and get a big breakfast for his family.

So he goes, half cobbler half pedlar, with his two trades eking out a slender living for his dear

ones, never, no matter what ill success may attend him, coming home vexed or unhappy. Would that everybody who is downhearted in these sad times could have a glimpse of our cheery, hopeful shoemaker.—*Sunday-School Times.*

#### Divine Sympathy.

"In all their afflictions he was afflicted, and the angel of his presence saved them; in his love and in his pity he redeemed them; and he bare them and carried them all the days of old."—ISAIAH lxiii. 9.

How sweet is sympathy! Yet human sympathy is very often feeble: it may soothe, but cannot help. The kind visit, the loving word, are at times precious; but they reach not our ease, they bring us no permanent relief. Love is often without power to assist the beloved object. Not so when God loveth, for then the loving heart moves an omnipotent arm and opens infinite resources. But there is something astounding in the thought, that in the afflictions of a worm—a sinful worm—our dear Redeemer should be afflicted. Yet such is the testimony of Holy Scripture. What an expression of love is that! "They put away the strange gods from among them, and served the Lord; and his soul was grieved for the misery of Israel." What exquisite tenderness is manifested when the God of the universe declares, "He that toucheth you toucheth the apple of his eye!" Tried fellow-traveller, when thy road is rough, when thy strength is small, when thy heart is pained, when thy sighs are heavy, God sympathizes with thee. His eye sees, his ear hears, and his heart feels; for "like as a father pitieth his children, so the Lord pitieth them that fear him; for he knoweth our frame, he remembereth that we are dust." Believe this, and be sad if thou canst. Believe this, and complain if thou darest. Believe this rather, and go on thy way rejoicing. What canst thou desire more? God thy Father! God, as a father, pitying thee—pitying thee, as his beloved child! The sympathy of God should be thy solace, thy comfort, and thy joy.

"For we have not an high-priest which cannot be touched with the feeling of our infirmities, but was in all points tempted like as we are, yet without sin."—HEB. ii. 15.

**Commercial value of Insects.**—Who thinks of it? And yet, in the economy of nature, of what immense importance they are in all seasons, every naturalist knows, while in commerce the amount derived from them is astounding. We have no figures to produce in regard to our own trade, for our statistics do not yet reach that state of perfection which will admit of it; but Great Britain pays annually \$1,000,000 for the dried carcases of that insect known as the cochineal; while another, also peculiar to India, gum shellac, or rather its production, is scarcely less valuable. More than 1,500,000 human beings derive their sole support from the culture and manufacture of the fibres spun by the silk-worm, of which the annual circulating medium is said to be \$200,000,000. In England alone, to say nothing of the other parts of Europe, \$500,000 are spent every year in the purchase of foreign honey, while the value of that which is native is not mentioned; and all this is the work of the bee; but this makes no mention of 10,000 pounds of wax imported every year. Besides all this, there are the gall nuts, used for dyeing and making ink; the cantharides, or Spanish fly, used in medicine. In fact, many an insect is contributing in some way, directly or indirectly, in swelling the amount of our commercial profits. Even those which, in some cases, prove a plague and become destructive, have their place in the economy of nature, and prevent worse.—*Late Paper.*

*Then will all see the God who made them.*—The earth can never enjoy her sabbaths again; till the righteousness of faith is established in it; and nothing short thereof can produce peace on earth and good will to men; this the Lord hath made us witnesses of in our day. And that the glory and beauty of true Christianity can never be restored to the nations and kingdoms of the world, so much now lost and decayed, till they be turned to, and live the life of righteousness and holiness; then they will all see the God who made them. This was the beauty of the ancient gospel Christians who were baptized into the death of Christ, and so were made partakers of his resurrection. This is the baptism that now saves all the true followers of the Lamb, in the strait way of self-denial. Here the unclean cannot walk, nor the defiled enter; it is only open and easy to the redeemed, whose garments are washed in the blood of the Lamb, being come with many and great tribulations.—*Ambrose Riggie.*

*Profitable advice to Youth.*—She gave good exhortation to her sisters, and left some things as a charge to be remembered by them, as that they might be careful what company they kept, and to avoid all such as are light and airy, which draws the mind further from God; but rather to choose the company of such who are religious; and also to avoid the reading of all vain and unprofitable books, which tend to corrupt the minds of youth. She charged them to read the holy Scripture, and such books as promote godliness; and desired they would be watchful against sleeping in religious meetings, and set forth the evil of it, as also of singing of songs, and warned them against it, and further added, that she hoped they would remember her words when she was gone. Speaking of the visitation of God to her very early, she said, "I heard his call before I knew what it was."—*A Memorial of Sarah Marriott, in her 18th year, 1732.*

*A Character Unspotted.*—Money is a good thing, especially in hard times, but there is something a thousand fold more valuable. It is character—the consciousness of a pure and honorable life. This it should be a man's first aim to preserve at any cost. In such times of commercial distress, while some are proved and found wanting, others come forth tried as by fire. Here and there one comes out of the furnace far more of a man than before. Amid the wreck of his fortune he stands erect—a noble specimen of true manhood. We have occasionally witnessed an example of courage in such a crisis, of moral integrity, that deserved all honour. Let it be the aim of every business man, above all things else, to keep this purity unstained. This is his best possession—this is a capital which can never be taken from him—this is the richest inheritance which he can leave to his children.—*Evangelist.*

#### SUMMARY OF EVENTS.

UNITED STATES.—*Affairs in Virginia.*—The whole line of the rebel army immediately in front of Washington has fallen back. Munson's and Upton's Hills, and Falls Church have been abandoned, and are now occupied by the Federal troops. The advance of Gen. Smith's force from the Chain Bridge to Falls Church was attended with a serious disaster. During the darkness of the night, a Philadelphia regiment, mistaking three other regiments for a body of the rebels opened fire upon them, killing and wounding a considerable number. A large rebel force has been concentrated at the mouth of the Accoquan river, twenty miles below Alexandria. Incursions have been made some distance into Virginia, from the Federal army on the Potomac, to obtain forage, and observe the position of the rebels. Such of them as were discovered retreated on the approach of the Union troops.

A rebel force of 1400 men having taken possession of Romney in Western Virginia, were attacked on the 24th inst. by some of the Federal troops, the result was that 35 men killed and a number more wounded. The rebels retreated to the mountains.

*Kentucky.*—The number of U. S. troops in Paducah is about 7,000. A floating bridge is there thrown across the Ohio river. More troops from the north are entering the State and taking possession of such points as it seemed important to hold. Both Houses of the Legislature have passed a bill calling 40,000 volunteers into service from one to three years. Notwithstanding the prevailing Union sentiment of the State, thousands of Kentuckians are taking up arms for the rebel cause. Gen. Backer was at Bowling Green with 10,000 rebel troops, and Columbus is held by a strong force. A number of skirmishes between the contending parties had taken place.

*Missouri.*—The rebel army at Lexington under Gen. Fremont were reinforced, and is reported to number 40,000 men. The rebels have ravaged the country for a circuit of twenty miles around Lexington, stripping fields, dwellings and barns, in order to provide themselves with provisions and the necessaries of life. A Federal force of 12,000 men, under the legitimate authority of a town and passed an ordinance of secession. The Federal troops captured at Lexington have been set at liberty on the condition that they shall not again take up arms against the Confederates. An engagement took place at Lexington on the 21st inst. in which the rebels were defeated and 100 captured. The loss on both sides was severe. A large number of Federal troops had been sent up the Missouri towards Jefferson city, at which point Gen. Fremont was preparing the means for retaking Lexington. Nearly all the Illinois papers support President Lincoln in his modification of Fremont's proclamation. The troubles in Missouri are understood to occasion much uneasiness to the Administration, with serious doubts of Fremont's ability for the very difficult and arduous post he occupies. It is, however, supposed that the Government will do so safely to the present critical state of affairs. In a letter, written on the 26th, Gen. Fremont complains of the bitter attacks upon him, and acknowledges some of the great difficulties and disadvantages under which the defence of Missouri has to be maintained. The rebels, he says, have no posts toarrison and no lines of transportation to guard, and can therefore turn their whole force at will to any point, while the whole line from Leavenworth to Paducah has to be protected by Federal troops.

*Southern Items.*—It is reported that the blockading squadron have taken a Mississippi city, thus cutting communication between New Orleans and Mobile. They have also taken some important points on the Texas coast. The privateer Judith lying under the guns of the Pennsylvania Navy Yard, was recently cut and destroyed by a boat expedition from the U. S. frigate Colorado.

*Men for the Army.*—The government has satisfactory assurances that there will be as many volunteers tendered as will be needed, without resorting to drafting, and has, therefore, refused to sanction the latter process for filling the ranks of the army.

*The Expenditures.*—About \$1,200,000, are now paid out daily by the Secretary of the Treasury.

*The Loan.*—The banks of Boston, New York and Philadelphia have agreed to contribute \$50,000,000 on the 1st of the first. The subscriptions by the people to the loan, in all parts of the country, amounted at the close of last week to about \$20,000,000.

A difference of opinion has arisen in regard to the intent of the recent act of Congress relating to the Sub-Treasury. When that act was passed it was believed that it amounted in fact to the abolition of the Sub-Treasury for the time being, and that henceforth, or during the war, the government would keep its account with such solvent banks as lent it money. In effect, however, there has been no change in the plan, and the Sub-Treasury balance has swelled from \$4,000,000 to \$12,000,000 in the course of six weeks, at the expense of the banks.

*New York.*—Mortality last week, 347.  
*Boston.*—Mortality last week, 219.  
*The Political Prisoners.*—Robert Mansons, of Baltimore, and several other prominent individuals, have made formal declarations of their loyalty to the United States and been released from confinement. A large number remain at Fort Lafayette.

General Sherman, Major-General and Commander-in-Chief has issued an order, requiring every man in the State between the ages of 18 and 45 capable of bearing arms, to immediately enroll himself in some military company, and such company is ordered to hold itself in readiness

for immediate marching orders. The refusal to obey this order will be taken as evidence of disloyalty.

*The Grain Markets.*—The following were the quotations on the 30th ult. *New York.*—Sales of 240,000 bushels wheat, at \$1.18 a \$1.20, for Chicago Spring; \$1.20 a \$1.32, for Red Western, and \$1.30 a \$1.45, for white Kentucky; Oats, \$1 a 2 1/2; mixed corn, \$1 a 3 1/2; *Philadelphia.*—Red wheat, \$1.23 a \$1.26; white, \$1.31 a \$1.38. Oats, 30 a 3 1/2, for new, and 31 a 3 1/2 for old, prime yellow corn, 5 1/2 a 56.

*India.*—By the overland mail via London, most distressing news from Northern India have been received. That terrible scourge, the Asiatic cholera, had again broken out, and carried off a large number of its victims. In one place sixteen were attacked in the morning, and of that number only one was alive in the evening of the same day. The physicians account for the present appearance of the cholera in the failure of the summer crops, having been cut off by the heavy rains, and the famine which had prevailed for some months. The rains came earlier than usual, and they were so long and so heavy as to cause a deluge which overflowed the entire country and caused the loss of many lives and vast amount of property.

*Cuba.*—The present government of Cuba appears disposed to enforce the laws against the African slave trade. A recent letter from Cuba says that two cargoes had for western sailed by the Spanish Government, and the same fate will fall to two other cargoes daily expected. Parties engaged in the traffic say it is no longer a paying business, and will have to be abandoned on account of the increased expense and heavy risks attending it.

#### RECEIPTS.

Received from Jehu Fawcett, Agt., O., for S. Hole R. B. Fawcett, T. Murlan, and D. Parry, \$2 each, vol 34; for Isaac Bonall, \$2, vol. 33; for Jos. Lynch, \$4 vols. 34 and 35; for David Whitney, \$5, to 53, vol. 34 from Susannah Marriott, N. Y., \$2, vol. 35; from H. Eaton, N. J., \$2, vol. 35; vol. 35, from J. H. Knowles, Ab. A. Knowles, Robt Knowles, J. J. Peckham and D. Peckham, \$2 each, vol. 35.

#### WEST-TOWN BOARDING SCHOOL.

The winter session of the School will commence on the 14th of the Eleventh month next. Parents or others intending to send children as pupils, will please make early application for their admission, to Duhig Knight, Superintendent, at the School, or Joseph Scattergood, Treasurer, No. 304 Arch St., Phila.

#### EVENING SCHOOLS FOR ADULT COLORED PERSONS.

A Principal and Assistant Teachers are wanted for the Men's School, and a Principal and Assistants for the Women's School.

The schools will be opened on the 14th of the Twelfth month at the usual place; they are held five evenings in the week. Apply to JOHN C. ALLEN, No. 321 N. Front or 335 S. Fifth Street; WILLIAM EVANS, Jr., 232 S. Front Street, or SAMUEL ALLEN, 544 Pine Street.

#### WEST GROVE BOARDING-SCHOOL FOR GIRLS.

Near West Grove station, on the Philadelphia and Baltimore Central Rail Road. The winter session will open on 2nd day the 4th of next month. For information or circulars apply to,

THOMAS CONARD, Principal.

Tenth mo, 1861. West Grove P. O., Pa.

MARRIED, on the 25th ultimo, at Friends Meeting, house, Sadsbury, Lancaster Co., Pa., JOSEPH J. HOPKINS, of Baltimore, Md., to MARY BRINTON, daughter of William Brinton of the former place.

DIED, in this city, on the 16th inst., at the residence of her son-in-law, Isaac C. Stokes, PIERRE PERCEVAL, nephew of the late Benjamin Perceval, and member of the Monthly Meeting of Friends of Philadelphia for the Northern District, in the 75th year of her age. Of dear Friend, it may perhaps be safely said, she lived without malice, and without guile. Having learned early in life in whom to trust, she experienced in Saviour a refuge from the tribulations of life, a support in suffering, and the foundation of hope, and an anchor of the soul, both sure and steadfast unto the end.

FILE & MELROY, PRINTERS,  
Lodge street, opposite the Pennsylvania Bank.

# THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XXXV.

SEVENTH-DAY, TENTH MONTH 12, 1861.

NO. 6.

PUBLISHED WEEKLY.

Price Two Dollars per annum, payable in advance.

Subscriptions and Payments received by

JOHN RICHARDSON,

AT NO. 116 NORTH FOURTH STREET, UP STAIRS,  
PHILADELPHIA.

Postage to any part of Pennsylvania, for three months, if paid in advance, three and a quarter cents; to any part of the United States, for three months, if paid in advance, six and a half cents.

Benjamin Ferris.

For "The Friend."

(Continued from page 24.)

Diary.—"12th month 13th, 1760. Often of late I have been ready to doubt whether I was in the right way, feeling such great poverty and leanness of spirit. Being earnestly solicitous that the Lord might give me an evidence of his favour, I seemed thus answered, 'Follow on to know the Lord, and in his appointed time, thou shalt witness his favour and approbation.' I was thus encouraged, and endeavouring to be still and possess my soul in watchful fear. As I was sitting by the fireside, with my mind retired and waiting upon Him, he was graciously pleased to overshadow me with the wing of his love, and to cause me reverently to worship and to praise him, who is worthy forever. I was then enabled to covenant that I would make a sacrifice of the residue of my days to his service, submitting myself to his all wise disposal. He is ever-astingly worthy of the service of men and angels! His life-giving presence is more precious than all subsidiary joys. His love is better than wine."

On the day of the above entry in his diary, he wrote thus to his friend, H. Bunting.

"Dear Friend.—Since I saw thee last at Burlington, I have often thought of thee, and not without warmly well-wishing thy progress in the way to peace. I hope the freedom I now use will not be taken away, since I have no motive therein, but sincere love to thee, and desire for thy present and future welfare. Mayest thou go forward, keeping thy rank in righteousness in the little army our God is raising, devoted to his service, engaged to contend for the honour of his great name and for the good of his church. Yes, he is at work in the hearts of many, persuading them to enlist in his service. Blessed be his name! he hath prevailed on sons and daughters, and as they are faithful and obedient to him, he will make them as angels to his praise. Dear friend, I believe the merciful call of the Lord has been extended to thee, and that through the powerful operation of his Holy Spirit, a willingness was wrought in thee to run the way of his commandments. Thou hast necessarily known, I believe, a redemption from attachments to terrestrial things, and hast found the rays of the Lord to be pleasantness and his paths peace. Thou hast likewise been taught that there can be no advancement therein, without partaking of that Divine Bread which can alone nourish, sat-

isfy and strengthen our souls, enabling us to go forward rejoicing in his fear. Notwithstanding these happy attainments, I fear thou hast set down, too much contenting thyself with the remembrance of former experience of good, and art not enough in earnest to follow on to know the Lord, and to experience the renewings of his life-giving presence from day to day. Without this constant care and engagement of soul, there can be no growth nor progress in the truth. The remembrance of former spiritual enjoyments, can no more nourish or support the inward man, than the remembrance of partaking food formerly can satiate our present appetites.

"My heart is engaged that thou mayest no longer content thyself with that which is not bread, but seeking to the Lord for substantial food, thou mayest be strengthened thereby rightly to grow up before him. I believe he is yet near thee,—I think I feel his good will is yet toward thee, and that his precious arm, heretofore extended for thy help, is now ready to be revealed for thee, if thou turnest to him with full purpose of heart to serve him faithfully.

"Dear friend, I need not multiply words, yet I could not well omit writing this much. I desire thou mayest accept it as a testimony of love, which desires the welfare of every branch of our heavenly Father's family. The united endeavours of all which, seem as needful now for the maintenance of the cause and testimony of Truth, as ever. That cause I believe will yet spread, if the visited of the Lord come up in faithfulness unto him. Then many will be made standard bearers thereof, and that thou mayest be one, is the desire of thy well-wishing friend, Benjamin Ferris, who hath in measure witnessed the sorrowful disadvantage of neglecting to renew acquaintance with the Lord from day to day."

Diary.—"12th month, 22nd. I have for several days past been exceedingly poor and empty. Although ready to conclude at times I am not yet in the way to peace, yet there has been a living cry raised in me to the Lord, that I may be enabled to follow him, in that way and after that manner, he, in his infinite Wisdom, may point out for me. I may now say, that though often destitute, I feel his regard is yet to his little ones, who have no strength of their own, nor any comfort, or resting place but in him. Oh! that I may be preserved in a daily concern to follow him and obey all his requirements. For I feel that he is worthy of all service, obedience and reverent worship for ever!

"I desire I may stand in his counsel and move in his awful fear. Then if in his wisdom, he should put me forth in any service in his family, it may be performed to his honour. It is my cry that he may lay his hand on every bad, that is not of his own engraving, and nip it before it bringeth forth its unsavoury fruit. That restrained by his power I may neither say nor do anything, even though it appear to be for his name and Truth, which is not by the immediate dictates and puttings forth of his own spirit. This alone can our actions and sayings be sanctified and made of use in his church and family.

"Twelfth month, 23rd. My father and I went to Marcus Hook to see our Friend George Mason, re-embark for England, together with An Moor who is going on a religious visit to Europe.

"24th. We had a sitting with them in an inn, and we were comforted in the Lord. About the eleventh evening, they went on board [the ship], and we took leave of them and returned.

"1761, 2nd month 12th. I have of late had deeply proving exercises to wade through. My poverty was great; I have often felt destitute of comfort, and ready to conclude I was not in the right path, or I should have had more refreshing seasons than had fallen to my lot. Although thus fed with the bread of adversity and oftentimes with little hope that I should ever attain to rest, yet at seasons a degree of faith has been given me, that through all these trials dispensed I should be supported. I have been almost afraid to rest on this assurance, lest it should not be rightly given me from above, for the engagement of my mind is, that I may never build on any thing, but Christ Jesus, the Rock of ages, the foundation of the righteous in all generations.

"In the feeling of my weakness, I have often been afraid to go home, even about my necessary business, lest I should not keep my proper place, but by unguarded words, or improper conduct, hurt the cause of Truth, and injure my own state. The precious testimony of Truth ought to be maintained by us in all our conduct and conversation amongst men,—this should be written as it were on the lintels and door posts of our houses; they should be exemplified in all our words and actions, so that in every thing we may demonstrate to observers whose followers we are. If this was truly our care, I believe we should experience our goings out and our comings in, to be ordered and established by unerring wisdom."

(To be continued.)

*Foolish Thoughts.*—We are apt to believe in Providence, so long as we have our own way; but if things go awry, then we think, if there is a God, he is in heaven and not on earth. The cricket in the spring builds his little house in the meadow, and chirps for joy, because all is going so well with him. But when he hears the sound of the plow, a few furrows off, and the thunder of the oxen's tread, the skies begin to look dark, and his heart fails him.—The plow comes crunching along, and turns his dwelling bottom side up, and as he is rolling over and over, without a home, his heart says, "Oh, the foundations of the world are destroyed, and everything is going to ruin!" But the husbandman, who walks behind his plow, singing and whistling as he goes, does he think the foundations of the world are breaking up? Why, he does not so much as know there was any house or cricket there. He thinks of the harvest that is to follow the track of the plow; and the cricket, too, if he will but wait, will find many blades of grass where there was but one before. We are like the crickets. If anything happens to overthrow our plans, we think all gone to ruin.

For "The Friend."  
Musings and Memories.

## RICH IN FAITH.

It often happens that the poor in this world's goods, are rich in faith, and those without earthly inheritance, are heirs of the kingdom of grace and of glory. The illiterate as to human knowledge, are sometimes learned in the school of Christ, and those very poorly clad as to outward attire, are found inwardly adorned with spiritual graces, whose jewels are far more precious than ever shone in earthly diadem.

Heber tells us that on a certain occasion, he, with a friend, paid a visit to the inmates of a country almshouse. Among the tenants they found an aged man, very deaf, and one of whose legs was so shaken with the palsy that the wooden shoe on its foot kept a constant pattering on the brick floor. Although rendered nearly helpless by his various infirmities of the body, they found him sound in mind, cheerful in disposition, and in the present feeling of the Saviour's love, and heartfelt faith in its eternal endurance, he was very happy, under all his privations. His name was Wisly. When the visitors enquired of him what he was doing, he sweetly answered, "Waiting." To the question, what he waited for? He replied, "For the appearing of my Lord," adding, "I expect great things. He has promised a crown of righteousness to all that love his appearing." When asked the foundation of his hope, he pointed to the text, "Therefore, being justified by faith, we have peace with God through our Lord Jesus Christ, by whom, also, we have access by faith into this grace wherein we stand, and rejoice in the hope of the glory of God."

Heber, in moralizing on the condition of mind in which they found this poor invalid, says, "although we may possess untold wealth, yet if we are not the possessors of the faith which made Wisly happy, we are poor. With that faith, being rich toward God, we would count it all joy, even though we were as poor as Lazarus or Wisly, in worldly possessions. Our heavenly inheritance is as sure as the promise of Him who cannot lie, yea, as transcendently glorious as a throne, a crown, and eternal happiness can make it." He concludes, "better have Wisly's hope, than Victoria's sceptre, Lazarus' rags than Dives' purple. Better is poverty with piety, than riches with perdition."

Another religious writer relates, that he on one occasion, more than twenty years since, received a lesson from a poor man, a suffering invalid, yet one rich in faith and patience, and abundantly supported by the love of God, which had been a lesson to him ever since. The man had been a common labourer, and now in his age, was so afflicted with peculiar infirmities, that he was confined to his chair, being unable to lie down night or day. He had, through the mercy of God in Christ Jesus, in the days of his health, been favoured to witness the washing of regeneration and the renewing of the Holy Ghost, and being thereby made a child of God and an heir of his kingdom, he now felt him as a loving Father, dealing with him as with a beloved child, and administering to him the consolations of his grace. On the occasion referred to, to the enquiry as to how he was, he replied, with a cheerful smile, and a strong provincial pronunciation, giving greater emphasis to the christian pleaantry with which he spoke, "I am promoted noo," "I was lang the Lord's *workin* servant, and noo he has promoted me to be his *waitin* servant."

The writer who gives the anecdote, says that at times when he has felt weary on his heavenly journey, and been disposed to complain at his lot, he has

recalled this old suffering christian's words of cheer, and has thereby silenced his murmuring thoughts. He tells us he has found it far easier to do the Lord's will in active service, than to bear it in silent, submissive, quiet endurance. Greater grace is requisite cheerfully to *wait* the Lord's time in suffering long continued, with few to sympathise in our affliction, than to *work hard* in what appears to be active benevolence and public labour, when we feel that the hearts of our Christian brethren and sisters are with us in our work, and bidding us heartily God speed. "The silent, secret bearing of his will, in faith and hope, is as pleasing to God, as the most faithful public witnessing." The true Christian, who has been enabled through the strengthening influence of Divine grace, to *work* according to the Lord's will, *should be*, if he has been made conformable to the example of his Divine Saviour, *he will be* as ready to serve him by *waiting*. This condition is hard for flesh and blood to attain, yet it *may be*, it *must be*, known by the perfected Christian. He cannot reach it through his own exertions, but the message to Paul "*my grace is sufficient for thee*;" is intended for the support of all the true hearted children of our Lord Jesus Christ, in every exigency and close trial.

An English woman who spent some time in a small village in Germany, gives the following interesting account of an old peasant she met with there. The old man was named Gottlieb, quite a common name in that country, and among the German inhabitants of this. It means "God's love," or as it would be translated, "the love of God." Although the name gave no heavenly help to the peasant, yet he had, through the Lord's assisting power, witnessed a being created anew in Christ Jesus, and a being richly adorned with the grace of the spirit. Love to God was the pre-eminent feeling of his soul, love to his fellow creatures a mainspring of his actions.

During the winter season he was confined to a little room in his small tenement, being unable to bear the cold winds, but when the warm days of summer came, he spent much of his time in the fresh air, moving about with a kind word of comfort, or it may be of exhortation, to those he met with. Although poor, he had just out of the village a small spot of ground, on which grew two or three large apple and pear trees. There was a little shed near the trees, and in that he sometimes lay and rested after having been employed himself in gathering the fruit which had fallen. Once whilst walking, the English visitor came up to him as he was stooping to pick up an apple, she asked him if he did not weary of the work of stooping so often after the fruit, and also of lying there so much alone. He smiled kindly and offering her a handful of fine ripe pears, he said, "No, no, I don't weary, I am just waiting—waiting. I think I am about ripe now and I must soon fall: and then, just think, the Lord will pick me up! Oh! thou art young yet, and perhaps just in blossom; turn well round to the sun of righteousness, that he may ripen thee for his service." On another occasion he addressed her, pointing along the public road, "That seems a straight road, but I can't see the end of it, but the road to heaven is a straighter road than that, and blessed be God I can see the end of it clearly. Perhaps God is letting thee seek a little bit of the way at a time, Oh! then, walk straight in that little bit with his help, and as thou goest along, thou wilt see it better and better, till the bright end comes in view."

She says, that not long after this last conversation, the end to him came. In holy confidence and a most loving faith, he entered cheerfully into that

blessed country, on which he had for so long a period fixed the earnest and desiring gaze of his spiritual eye. His season of waiting was over and now the fullness of perfect peace was his forever.

Benjamin Trotter, a beloved minister of the gospel in this city, having retired from money making business with but a small amount of property, his friends, as he grew aged, felt many fears as to his having a sufficiency to make him comfortable, and various profusions of pecuniary assistance were made him; all these he quietly, yet gratefully refused, because his Master had promised to the effect that his little store, the meal in his barrel, and the oil in his cuse should last him to the end of his life. He lived very frugally, from day to day waiting for the coming of his Lord, yet day by day performing the duties laid upon him by his Divine Master with cheerful alacrity. At last the end came. At a shock of corn fully ripe, he was gathered to the heavenly garner; as a waiting pilgrim, thankful for the preservation vouchsafed through a long life, and for the holy comfort and heavenly enjoyment granted him whilst waiting for his admittance into the Heavenly Jerusalem, he gladly laid down with this feeble frame, the staff of faith, which had supported him, passing into the certainty of his eternal rest and peace. Just enough of his property was left to pay all funeral expenses, and thus he realized, and his anxious friends with him, the faithfulness of the promise of his Lord and Saviour. Poor in earthly treasure, yet rich in faith, he waited in love, in hope, in assurance, until death led him into his inheritance of glory, to spiritual riches far transcending in value, aught which this world possesseth, or than any thing that man can conceive.

Often in looking back to our friend, John Letchworth, I can see him, as he appeared in the closing hours of his life, when, though poor as to this world's goods, he was rich in faith, and looking sweetly forward to the mansion prepared for him in Heaven, and to the treasures there laid up for him: "I am poor," he said, "but I serve a rich Master, who loves his own."

*Intellect and Morality.*—The older I grow the more clearly I see that intellect is *not* the highest faculty in man, although the most brilliant. Knowledge, after all, is not the greatest thing in life; it is not the "be-all and the end-all" here! Life is no science. The light of intellect is truly a precious light, but its aim and end is simply to shine. The moral nature of man is more sacred in my eyes than his intellectual nature. I know they cannot be divided—that without intelligence we should be brutes—that it is the tendency of our gaping, wondering dispositions to give pre-eminence to those faculties which most astonish us. Strength of character seldom, if ever, astonishes us; goodness, love, and quiet self-sacrifice, are worth all the talents in the world.

*How every one may Preach.*—All cannot preach from the pulpit; but there is a kind of preaching that is permitted to all men, and sometimes this kind is the most effectual. Offices of kindness to the bodies and souls of those around us; words of encouragement to the weak, instruction of the ignorant, of brotherly kindness to all; in a word, earnest, active, self-denying love to our fellow-beings, springing from our love to God: this will form a most impressive sermon—a most convincing proof to the world around us that we have been with Jesus. All Christians are called on in this way to preach the gospel and owe to them if they neglect the call.

For "The Friend."

## BIOGRAPHICAL SKETCHES

Of Ministers and Elders and other concerned members of the Yearly Meeting of Philadelphia.

## JOSHUA BROWN.

(Continued from page 36.)

Joshua Brown now prepared to go to Charleston in search of the discharge granted by the assembly, and Benjamin Heaton agreed to bear him company thither. His companions agreeing to meet him on his return at Camden or Waterce. On the 24th, they rode to the house of Robert Stark, the high sheriff, who had had them in custody, and there were furnished with the discharge of the Governor of the State, setting Joshua and companions at liberty to return to their several places of abode. This obviated the necessity of going to Charleston, and he returned to Bush river. On the 26th, with Achilles Douglas and Mary Kelly, he rode to the house of John Gibson, a Baptist teacher. There being lodged mostly on the floor they had little rest. On the 27th, they rode towards Camden, and spent the night at a public house. Here Achilles was taken with a fit of ague, which disease he had been suffering under for some time. Mary Kelly staying to nurse him, Joshua rode on to Camden alone. Although entirely unacquainted with the way, he was favoured to reach the place late that evening, and found entertainment at the house of his friend Zebulon Gant. The 28th, he attended the Monthly Meeting held there, and on the 29th, a public meeting, in both of which he had service. After a sitting with the family of Zebulon Gant, whose wife was sick, he rode to the house of William Tomlinson, where he met his companion. On the 30th, they set out for the settlement of Friends on the Peedee, taking Samuel Tomlinson as a pilot. The ride was very trying to Achilles, whose ague still hung heavily upon him. They stayed at a tavern one night, and at a private house the second, reaching Peedee on the morning of the third day, having ridden seventy-five miles. It being the first day of the week, Joshua attended the meeting, in which he had to set forth the utter helplessness of man in the fall, and the necessity of Divine help to prepare him for fulfilling his duty on earth, and bringing him into a condition to be happy forever hereafter. He set forth the great favour God had shown to his fallen children, in sending his Son to redeem them, through the offering upon Calvary, and the inward operation of his spirit, whereby he effectually cleanseth and regenerates them. He pressed upon his hearers the necessity of believing in the spiritual appearances of the Lord Jesus, through submission to which they would know a redemption from sin, and obtain the benefit designed for them, by their heavenly Father, in sending his Son. Having a public meeting the next day, he was largely opened in many of the most important Christian doctrines.

Achilles Douglas being unable to travel as Joshua felt best for him, he concluded to go by the nearest way to his home in Virginia, whilst Joshua, with Thomas Moreman and Joseph Crew, started for the settlement of Friends on Neuse river, in North Carolina. On the 3rd of Eleventh month, they rode fifty miles into a Scotch settlement, where they were refused lodgings, or indeed admittance into the houses. They obtained, however, some fire, and having bought a few sheaves of corn leaves, to feed their horses with, they laid down, and passed a night of some suffering from the cold, it being an unusually frosty night for that part of the country. In the morning the ground was frozen, and as they had no blankets to cover them, it is not to be wondered at, that they had obtained little rest or sleep. On the 4th, they crossed Cape

Fear river, and near night stopping at a poor man's, he told them they might pass the night there, but he had no bed for them. At hearing this, a young woman who was weaving, said if Joshua would go with her to her place of abode she could find him a bed. He accepted her kind offer, whilst his companions abode at the poor man's house. Joshua had a good night's rest, which much refreshed him. On the 5th, they reached Neuse river settlement, and found that it was the day on which their meeting was held, and that although the meeting had broken up, the Friends had not all gone away. This enabled Joshua to appoint a meeting to be held the next day. At the house of Richard Cox, they met with John Uthank and Hezekiah Sanders, two Friends from New Garden, North Carolina, on a religious visit. These Friends having been at the meeting held that day at the Neuse, went forward towards Trent, a place fifty miles distant, where they were to appoint a meeting to be held on the 8th, at which time Joshua hoped to join them. He had a comfortable meeting at Neuse river, and reached the appointed meeting at Trent, which was held in the house of Joseph Daws, a newly convinced Friend. The meeting was satisfactory, and on the 9th, in company with his fellow labourers in the gospel, John Uthank and Hezekiah Sanders, he rode towards Core Sound. They went forty miles that day and lodged at a tavern. The next day they reached Core Sound. On the 11th, they attended meeting there, visited Friends, and on the 12th, attended two meetings, one of which was the Monthly Meeting. On the 13th, they left for Contentuey, rode forty miles that day, crossing the Trent river at Newbern, and lodging at the house of Fraudeford Green, whom Joshua styles, "a very civil, friendly man, who used us kindly, and would not take any pay of us." On the 14th, after riding forty miles, they stopped in a heavy rain at the house of a poor man named Harper, who gave them the best entertainment he had. On the 15th they reached Contentuey, and attended the Monthly Meeting there, at which they had some service. On the 16th, an appointed meeting was held there, in which Joshua was largely opened on universal grace,—the one offering of Jesus Christ, for all men—of baptism, the supper, and of the necessity of freedom from sin. The meeting was very relieving to his mind, but one of the hearers after meeting made some objections, asking him how freedom from sin could be obtained. Joshua replied, "by attending to the inward manifestation of grace, and living in obedience thereto." He then asked the inquirer in return whether he believed in purgatory, or a place in which the soul might be purified after death. He promptly replied in the negative, and Joshua then desired to know when we were to be made free from sin, for we were clearly told that no unclean thing could enter the kingdom. The man was not prepared to answer, and so left the matter.

Still in company with John Uthank and Hezekiah Sanders, he went on to Rich Square, where on the 18th, they attended an appointed meeting, and a Meeting of Ministers and Elders. In this last meeting the strangers were exercised in endeavouring to stir the members up to give their negroes an education suitably to prepare them for freedom. Proceeding on their way, they had meetings at Pinesy Woods, Old Nech, Little river, and beside various family sittings. On the 24th, at a meeting at Simon's Creek, Joshua was led to draw the attention of those present to the long period of peace and tranquillity with which the country had been favoured, and that now many parts of it had become scenes of bloodshed. In

past years our religious society had been highly esteemed by many of those who held the first place in civil society, but that now we were every where evilly spoken of. He exhorted them seriously to consider the change which had taken place, and see whether they had not contributed thereto. He thought one cause of the blessing of peace and prosperity being withdrawn from the land was the slavery of the African race tolerated and encouraged therein. And he earnestly pressed those there assembled, to clear themselves of any participation in that great sin, as well as calamity, and seek to witness for themselves the work of reformation to be begun and carried forward. The meeting seemed favoured.

After attending some other meetings, they were at the Quarterly Meeting near Perquimans, on the 27th and 28th. In the meeting for business, after quoting our Lord's saying, "This is life eternal to know thee, the only true God, and Jesus Christ whom thou hast sent," he opened the way in which this knowledge was to be obtained, even by giving heed to the openings of the spirit of the Lord Jesus in the secret of the soul. He then quoted various passages of Scripture, to prove that upon Christ Jesus, and this spiritual revelation within, fitting and preparing each one for the work of their day upon earth, and for an eternity of happiness, the church was built. He also pressed on them the necessity of bearing a faithful, consistent testimony to the peaceable principles of the Gospel, in their life and conversation, so that those around them might have no cause of saying anything against them, except for their humble obedience to the law of their God. In encouraging them in endeavouring to exalt the peaceable doctrines of the Gospel of Christ, he expressed his firm conviction, that having broken forth in the view of the world, it would never again be totally eclipsed. After another meeting held at Wells, near Perquimans River, in which he was largely opened on "True Christian Worship, Baptism, and immediate Revelation," and which ended "in prayer to the Author of all good," he took leave of Friends of that Quarterly Meeting, and rode northward towards Virginia. On the 1st day of the Twelfth month, he attended a meeting at Sommerton, wherein he was led to mention the passage "Every tree is known by its fruit," and in commenting on it is to say, that no one could bear spiritually good fruit, without abiding in the true vine, Jesus Christ. By attiding in him, they would know the life of christianity within them, and a change from the corrupt, fallen nature, through the new birth unto holiness. On the 2nd of the month he and Eliza Copeland, rode down to Robert Jordan's, and attended a little meeting at Beuat's creek, after which they had a meeting on the 4th at Naseuwond. In this last he was concerned to inform the hearers that the inducement of our forefathers in becoming a separate society of people, was, that they might witness life in their meetings. Their zeal in attending these meetings caused them to suffer much, but the great comfort they derived in them, and the conviction that it was a duty required of them, enabled them to bear the contradiction of sinners, which their faithfulness herein brought on them, with patience and resignation. He exhorted those present to endeavour to build on the foundation which those worthies had built on, to know through the effectual work of regeneration a state of acceptance with the Lord Jesus, the Great High Priest, in this Gospel dispensation.

On the 5th at Black Creek Meeting, he commented on the healing waters of Bethesda, when stirred by the angel under the old dispensation, and of the inward all-healing water under the new, when the Lord Jesus by his living, stirring influence, causes

the hidden virtue to spring up in the heart. On First day, the 6th, at a meeting at the house of Jacob Vicks, he had to open the only inducement which a true minister of the Gospel had to labour for the benefit of others. This was not filthy lucre, but a sense of religious duty, and the outflowing of the love of God, which made them long for the ingathering of souls unto Christ.

*Saving for old Age.*—No one denies that it is wise to make a provision for old age, but we are not all agreed as to the kind of provision it is best to lay in. Certainly, we shall want a little money, for a destitute old man is indeed a sorry sight, and suggests to every one the suspicion that his life has been foolishly, if not wickedly spent. Yes, save money, by all means. But an old man needs just that particular kind of strength which young men are most apt to waste. Many a foolish young fellow will throw away on a holiday a certain amount of nervous energy, which he will never feel the want of until he is seventy; and then, how much he will want it! It is curious, and true, that a bottle of champagne at twenty may intensify the rheumatism of three-score. It is a fact, that overtaking the eyes at fourteen may necessitate the aid of spectacles at forty, instead of eighty. We advise our young readers to be saving of health for their old age, for the maxim holds good with regard to health as to money—waste not, want not. It is the greatest mistake to suppose that any violation of the laws of health can escape its penalty.

Nature forgives no sin, no error. She lets off the offender for fifty years, sometimes, but she catches him at last; and inflicts the punishment just when, just where, just how he feels it most. Save up for old age, but save more than money; save health, save honour, save knowledge, save the recollection of good deeds and innocent pleasures, save pure thoughts, save friends, save love. Save rich stores of that kind of wealth which time cannot diminish nor death take away.

*Paper made from Corn Leaves.*—The London *Mechanics Magazine* states that excellent paper is now made in Europe from the leaves of Indian corn. There is one paper mill in operation in Switzerland, and another in Austria, in which paper is made from such leaves exclusively. The husks, which envelope the ears of corn, make the best quality. As we are dependent upon Europe, in a great measure, for our supply of rags to make our paper, if we can obtain as good qualities from Indian corn leaves, we may yet become the manufacturers of paper for the whole world, as the greatest supply of cheap raw material is found in America. This is a subject worthy of deep attention, as we import rags to the value of about \$1,000,000 annually, and paper manufacturers to the value of about one million of dollars.

The same paper says that a man in England has made the discovery that paper pulp can be manufactured at less cost, by using green, instead of dry grasses, for its production. He has taken out a patent for the improvement, and he states that when grass becomes dry its silica becomes hard and difficult of solution, whereas, when it is taken green, the silica and other odiferous substances in it are more easily separated. He takes any green plants, such as sea grasses, which are abundant and cheap, and first washes, then steeps them in warm water, and after this he boils them in weak alkaline solution. They are now easily reduced to pulp by passing them between crushing rollers, or through the common beating engines used in paper mills. The pulp is bleached in the usual manner with chlorine.

## THE DAY-LABOURER.

In the morning sow thy seed, and in the evening withhold not thine hand; for thou knowest not whether shall prosper, either this or that, or whether they both shall be alike good. *Eccl. xi. 6.*

So ye heide all waters,

Where the dew of Heaven may fall;  
Ye shall reap if ye be not weary,  
For the Spirit breathes o'er all.

So, though the throats may wound thee,  
One sows the thorns for thee;  
And 'though the cold world scorn thee,  
Patient and hopeful be.

So ye heide all waters,

With a blessing and a prayer;  
Name Him whose hand upholds us,  
And sow thou every where.

So, though the rock reelp thee,

In its cold and sterile pride;  
One sows the thorns for thee,  
Where the little seed may bide.

Fear not, for some may flourish,  
And, though the tares abound,  
Like the willows by the waters

Will the scattered grain be found.  
Work while the dew is fast;  
Ere the shades of night come on;  
Ere the Lord of the vineyard cometh,  
And the labourer's work is done.

Work! in the wild waste places,  
Though none thy love may own,  
God guides the down of thistle

The wandering breezes blow.  
Will Jesus chide thy weakness,  
Or call thy labour vain?

The word for him thou hearest  
Returns to him again.

O! with I thine heart in heaven,  
Thy strength in Jesus' night,  
Till the wild waste places blossom  
In the Saviour's warning light.

Watch not the clouds above thee;

Let the whirlwind roud them sweep;  
God may the seed-time give thee,  
Though another's hand may reap.

Have faith, though ne'er beholding  
The seed burst from its tomb;

Thou knowest not which may perish,  
Or what he sows to bloom.

Room on the narrowest ridges  
The ripened grain will find,  
That the Lord of the harvest coming,  
In the harvest sheaves may bind.

—Church Gleason.

## BEARING THE CROSS.

FROM THE GERMAN OF SCHMOLK.

The heavier cross, the sorer Heaven;  
No cross without, no God within.

Death, judgment, from the heart are driven,  
Amidst the world's false glare and din.

Oh! happy he, with all his loss,  
Whom God has set beneath the cross!

The heavier cross, the better Christian—

This is the touchstone God applies:  
How many a garden would he waste,  
'Grown by show'ers from weeping eyes!

The gold by fire is purified,  
The Christian is by trouble tried.

The heavier cross, the stronger faith;  
The loaded plow strikes deepest root;

The vine juice sweetly issueth,  
When men have pressed the clustered fruit.

And courage grows where dangers come,  
Like pearls beneath the salt-sea foam.

The heavier cross, the heartier prayer;  
The bruised berbs most fragrant are.

If wind and sky were always fair,  
The sailor would not watch the star;  
And David's palms had ne'er been sung,  
If grief his heart had never wrung.

The heavier cross, the more aspiring;  
From vales we climb to mountain crest;

The pilgrim, of the desert tiring,  
Longs for the Canaan of his rest.  
The dove has her no rest in sight,  
And to the ark she wings her flight.

The heavier cross, the easier dying;

Death is a friendlier fare to see;  
To life's decay, one bids defying.—  
From life's distress one then is free.  
The cross sublimely lifts our faith  
To him who triumphed over death.

Thou Crucified, the cross I carry—  
The longer may it dearer be;  
And, lest I faint whilst here I tarry,  
Implant thou such a heart in me,  
That faith, hope, love, may flourish there,  
Till for my cross the crown I wear.

Letter of John Barclay.

Whilst writing, I cannot well forbear expressing something of the sense I often have, of thy deep unremitted interest in the welfare of our Society, and the sympathy which I believe, very many may beside myself, feel towards and with thee under the many exercises and engagements which are thy portion, and which may be said nearly to absorb the whole man. I trust it will not prove unwelcome, if I venture to say how I have longed that thy hands may be strengthened according to all thy need. No doubt thou hast at times occasions of dismay and discouragement on various accounts; but it is consoling and animating, to have the truth of the declared decree sealed afresh to our wearied spirits,—“yet have I set my king upon my holy hill of Zion;” and again,—“the enemies of the Lord shall be as the fat of lambs, into smoke shall they consume away.” Be assured there are many with thee, (and with others that desire to be true hearted labourers) when and wherein thou little thinkest this to be the case; and though the fathers and mothers in our Israel be removed, without any doubt, it is the same Almighty, All-wise hand, who removes these, that is able of the stones to raise up children. It is often remarkable, how from time to time the Head of the church, possibly after a time of treading down and humiliation, raises up instruments and aids in all the different offices, one here and another there; even so, that we cannot find any cause to murmur against “the good man of the house,” although it be according to his own purposes, grace, and good will, and not according to our mere human apprehensions of what would be best. Thus he renews the face of his earth, spiritually, and brings forth a song in the hearts of his children, somewhat similar to those beautiful words in Psalm 89,—“who in the heaven can be compared unto the Lord,” &c.

1821.

*Vezantions Forgetfulness.*—One of the expedition to North Spain, organized by Professor Airy, for the sake of carefully observing the late solar eclipse, confesses, in an interesting account he has published, that although a practised hand, his fault was in not noting the moment of totality of eclipse—making another of the curious instances of sudden absence of mind at the critical moments of observation, which are apt to take place.

He states that an eminent photographer went overlaid with immense paraphernalia, at a great expense, on purpose to photograph the eclipse. Every thing was prepared, the day was splendid, the totality came on, and the slide of the camera was carefully inserted. When all had passed, and the dark chamber was opened, it was found that the operator had forgotten to *put his plate into the slide.*

That only can with propriety be styled refinement, which, by strengthening the intellect, purifies the manners.

Vain thoughts defile the heart as well as evil thoughts.

## The Common Lot.

"Many are the afflictions of the righteous; but the Lord delivereth him out of them all."—Psalm xxiv. 19.

The Lord's people are all righteous. In them the work of the Holy Spirit is wrought. By them the righteous precepts of God are observed. The work of the Holy Spirit prepares them for glory. Their practical conformity to the moral requirements of the gospel proves them to be justified before God, and sanctified by his grace. All the righteous are afflicted, some more, some less, but none are exempt. Nor have they merely one source of affliction; for "many are the afflictions of the righteous." There has been more than one Job, or one Lazarus, in God's family; though all suffer not so severely as they did. Every son is scourged. But however numerous, however great, their afflictions may be, they are more than a match for them. As their day, so is their strength; and they ever find that the grace of Jesus is sufficient for them. "The Lord delivereth him out of them all." God has undertaken to sustain us, to bring us through, and deliver us out of, all our troubles. God's deliverances are always perfect. He delivers every one of his children, and he delivers every one completely and forever. 'Israel shall be saved in the Lord, with an everlasting salvation: they shall not be ashamed nor confounded, world without end.'" No believer ever perished in his affliction. No Christian ever found his burden greater than his strength. We have often doubted, often feared, often questioned our safety; but we, even we, can testify that God's faithful, that his promise is true, and therefore we have persevered until now.

"Thou, which hast showed me great and sore troubles that quicken me again, and shalt bring me up again from the depths of the earth."—Psalm lxxi. 20.

*Sources of the Nile.*—The British Consul, —Petherick, in Soudan, who is about to proceed to Africa to explore the sources of the Nile, delivered an address to the merchants of Liverpool. Consul Petherick has been fifteen years a resident in the interior of Africa; and, under the auspices of the Royal Geographical Society, he is about to commence an expedition from his residence at Khar-tum, in the hope of meeting and assisting Captain Speke, who is starting from Lake Nyanza to explore the yet unknown district lying between there and Kondokoro, and where he hopes to be able to trace the sources of the Nile. — Petherick said:

"Unbiased by theory myself, I propose what appears to me the most practical way of solving the mystery as to the source of the Nile, namely, simply to follow the course of the stream. Captain Speke, in examining the northern confines of the Lake Nyanza, might probably discover a watershed, dipping westward, and be enabled to throw additional light upon a stream of considerable magnitude, the existence of which I learned from the Neam-Neam during my last trading expedition in the year 1858. When, according to my crude calculations, unassisted with instruments, I believed I had landed near the equator, I learned that the southern extremity of the Neam-Neam territory was defined by a large river, the course of which was distinctly described as flowing from the eastward the setting sun. Taking into consideration that our knowledge extends but a very inconsiderable distance from the west coast into the interior, and that, with the exception of the Niger, our knowledge of the course of other streams is but conjecture, I am induced to believe that this reported river might be either a large tributary to the Congo, or some one or other of the large streams that discharge themselves into the South Atlantic

Ocean. It is to this large and navigable river, in the most central point of Africa, that I look forward to establish the first fruits of geographical discovery in connection with British commerce. If a channel, such as described, should be proved to lead from the seaboard into the very heart of Central Africa, the whole produce of the country, in addition to ivory, such as oils, seeds, hides, indigo, cotton, gums, and India-rubber, may be obtained in exchange for our manufactures. In addition to India-rubber I have also discovered cochineal.

—Col. Jour.

## Address.

At a Stated Meeting of the Committee to Superintend the Boarding School at West-Town, held in Philadelphia, Tenth month 4th, 1861, the following Address was read and considered, and being united with, it was directed to be signed on behalf of the Committee, and circulated among our Members, viz:

TO FRIENDS OF PHILADELPHIA YEARLY MEETING.—*Dear Friends.*—The religious training and literary education of the children of Friends has long been a subject of much concern and lively interest in our Yearly Meeting.

Many of its members early saw and lamented the injurious consequences which often result to the youth from exposure to the indiscriminate association of mixed public schools—presided over by teachers indifferent, or inimical, to our Christian principles and testimonies; where children attend, over whose moral and religious education, little or no care has been exercised at home, and whose conduct and language have a corrupting tendency; and Friends felt it to be a religious duty, to endeavour to provide means of literary instruction, where these disadvantages should, as far as possible, be obviated.

One of the first objects which called forth the advice of the Yearly Meeting was, the establishment and support of schools, to be taught by members, and under the care of Monthly or Preparative Meetings.

In recommending this important subject to the attention of the subordinate meetings and members, the following language is used, viz:

"The education of our youth in piety and virtue, and giving them useful learning, under the tuition of religious prudent persons, having for a great number of years engaged the solid attention of this meeting; advices thereon have been, from time to time, issued to the several subordinate meetings. It is renewedly desired that Quarterly, Monthly and Preparative Meetings may be incited to proper exertions for the institution and support of such schools;—there being but little doubt that, as Friends are united, and cherish a disposition of liberality for the assistance of each other in this important work, they will be enabled to make such provision for the accommodation and residence of a teacher with a family, as would be an encouragement to well qualified persons to engage in this arduous employment; for want of which, it has been observed, that children have been committed to the care of transient persons, of doubtful character, and sometimes of very corrupt minds; by whose bad example and influence they have been betrayed into principles and habits which have had an injurious effect on them in more advanced life. It is, therefore, indispensably incumbent on us, to guard them against this danger; and to procure such tutors of our own religious persuasion, as are not only capable of instructing them in useful learning, to fit them for the business of this life, but to train them in the knowledge of their duty to God, and one towards another."

In the exercise of its tender supervisory care for the best welfare and preservation of its youthful members, the Yearly Meeting subsequently enjoined the daily reading of the Holy Scriptures in all these schools, and that, where it was practicable, the scholars should regularly attend a meeting for Divine worship near the middle of the week.

The advice thus given, was followed by strenuous efforts on the part of concerned Friends to procure for their offspring the benefits of the graded religious education, consistent with our Christian principles and testimonies, thus contemplated by the Yearly Meeting. Large sums of money were subscribed: liberal donations and bequests made; school-houses were erected; suitable teachers employed; and in many places permanent funds created, the interest of which was devoted to the support of those schools, or to paying for the education, in them, of the children of Friends in indigent circumstances.

These schools continued in operation for many years, conferring important benefits on the Society, and a few are still sustained. But the separation of 1827 took many of them out of the control of Friends; and the effect of the present Public School system has closed others; so that the Society in most parts of our Yearly Meeting is probably now more destitute of such schools, than at any time since the year 1790; and its children exposed to the temptations and injurious influences, from which the Yearly Meeting was so zealously engaged in endeavouring to shelter them.

In the year 1792, the establishment of a Boarding school for the children of Friends, to be under the care of the Yearly Meeting, was proposed at that meeting by Philadelphia Quarter, as a further important means of promoting the right training and education of the Youth.

After mature and solid deliberation the proposal was adopted in 1794, and a committee appointed to receive subscriptions, and digest and submit a plan, rules, &c. In alluding to this important conclusion, the Yearly Meeting states, that "it originated in a concern on account of the exposure of the rising generation, in the common modes of education, to vitiating examples, corrupting customs, and opinions; which was an occasion of solicitude, and excited earnest desires in many minds that the benefits accruing to society, both religious and civil, from well-ordered establishments for the more select and guarded tuition and instruction in piety and virtue of our off-spring," should, under its watchful care, be extended to its members.

Our predecessors entered with lively zeal and industry upon the prosecution of this work, and subscriptions were made with a liberality which showed that they viewed the right education of their off-spring as of more value than any pecuniary consideration.

In 1796 the amount of funds raised, to that time, was reported to be £12,000 (\$32,000), which was afterwards largely increased. The farm was purchased in 1796; the buildings soon after begun, and in Fifth mo., 1799, the school was opened. From that time it has been sustained; sometimes with a small number of pupils, at other times full, but generally with an average number sufficient to defray its current expenses.

Extensive additions have since been made to the buildings; many valuable improvements, promoting the health and comfort of the family, introduced; the course of instruction has been enlarged and systematized, and the number of teachers increased; by all which, its advantages as a seminary of useful learning, and the opportunities of improvement offered to the pupils, are much enhanced, while a concern is maintained to endeavour to shield them

from injurious influences, and to promote their moral and religious culture, in accordance with the principles and testimonies of Friends.

The large and valuable library, comprising a variety of works in the different departments of History, Biography, Science, and general literature; the extensive philosophical and chemical apparatus, adding greatly to the interest and instruction of the lectures; the regular course of studies, judiciously selected and arranged, so as to confer the greatest amount of benefit on the students, and carried on by competent and conscientious teachers; all combine to render West-Town School a very efficient and desirable place for the thorough education of Friends' children in the various branches of useful and valuable knowledge.

In contemplating the great benefits it has already conferred on many of our members, and which it still offers, the comparatively small charge, much below the actual cost; the long-continued religious concern of the Yearly Meeting in which it originated, and under which it has been sustained to the present time, the noble generosity which has furnished abundant means for the very large outlay incurred; and also the serious objections which exist to educating the children of Friends at the mixed Public Schools; it is a cause of regret to the committee that more children do not partake of the advantages West-Town confers.

They have, therefore, deemed it due from them, to bring the matter to the serious notice of Friends throughout the Yearly Meeting, and to invite them to unite more generally in sustaining an Institution which originated, and has been continued, under a feeling of religious concern for the welfare of the rising generation; and to encourage such as have children to educate, to use every reasonable effort, and to make every proper sacrifice, in order to give them the benefits of an education at this valuable seminary.

Signed on behalf, and by direction of the Committee.

JOEL EVANS, Clerk.

Phila., Tenth mo. 4th, 1861.

**Promptness in Duties.**—There is always a joy in duties performed, and promptness in the execution heightens that joy. To wait and look on a business we ought to do at once, exerts and disheartens; to arise and do it immediately, strengthens and enlarges the heart. Delay begets hesitancy and timidity; direct performance brings zeal and courage. They that wait upon the Lord renew their strength; but they that postpone till to-morrow present duties, are weaker for them than to do them. Promptness in duties, then, gives greater strength for new duties. Enduring hardness as a good soldier in our campaign, qualifies the Christian for more manly feats in the next. We grow on food and exercise morally, the same as we do physically. Christian promptitude helps to develop that noble, full stature of character and life which the Gospel enjoins—gives grace to discipleship, and energy and efficiency to the churches.—*Morning Star.*

**The Internal Trade of the United States.**—Hall's European Circular of 9th mo., 17th, furnishes the following statement.—The first effect of an intestine or civil war is the destruction of the internal trade of a country, for the reason that production ceases, and merchandise cannot be safely sent over its highways. No rebel soldier has set his foot upon the free states, and their industries are pursued without any more apprehension of being interfered with on account of the war than those of Birmingham or Manchester. In

proof of this, we give the following table of the earnings of all the railroad companies of the Northern States that report regularly their earnings with those of the Erie Canal, for 1861, compared with corresponding periods for 1860. It will be borne in mind that the table embraces all the roads that are accustomed to report their earnings monthly, and are those that bear the most intimate relations to the internal trade of the country:

Roads.	1861.	1860.	*Inc.
N. Y. & C. 10 mos,	\$6,614,298	\$6,098,252	\$515,046

Hart., 8 months,	741,364	764,540	23,484
Erie Canal, 5 mos,	3,266,822	2,381,301	985,521
Total	\$29,543,707	\$26,742,568	\$3,301,139

The table shows that the earnings of the great lines of railroads and canals of the country, in this year of disasters, when if we are to believe the statements that are coming to us by every steamer from abroad, our Government is destroyed, anarchy triumphant, and our material as well as our political destruction sealed, are greater by nearly 11 per cent., than in 1860, a remarkably active and prosperous year. We commend this result, with some comparative statements of the condition of our internal and foreign commerce of the country, to those with whom our utter ruin is a foregone conclusion. The activity of the internal trade of the country is strikingly illustrated by the enormously increased movement at the great centers. The receipts of grain at Chicago, in 1861, are nearly four times as great as they were in 1859, fifty per cent. greater than in 1860.

**God's plan in Geography.**—The physical geographer now claims that the particular arrangement of seas, continents, mountains, and rivers, which the earth has received, is the very best that could be given for the purpose to which the earth is destined. As the divine wisdom is manifested in the order and adaptation of the parts of the human body, of animals, and of plants, so there is an object in the particular shape the continents have been made to assume. Every thing works in harmony with a divine plan, which we claim to be beginning to comprehend.

Change the position of Asia and Europe, and you would have ruin and death. Ireland, now always green, would have the climate of Labrador. Compare the British Isles, Norway, and Sweden, with the corresponding latitudes upon our own coasts, and we see the dreadful consequences. Take away the Andes, which arrest the rainclouds and South America, that most wonderfully watered continent, would be a desert. Take away the Rocky Mountains, or change their direction to East and West, and we have our own fertile country ruined. Elevate our Southern coast so as to change the direction of the Mississippi, and what mischief would ensue!

There is literally a face to nature, as there is a face to man. As we have our circulation of the blood, so there is the circulation of the earth's

great heart of fire, the circulation of the water and the ventilation of the air. We have yet to consider these varied shades of nature in their relations to each other, and to man, the animal life. But we are not to stop here. The physical geographer claims that the influences bearing upon the intellect of man can be explained by the peculiar arrangement of the earth's surface. We know the civilization has marched from East to West, from Asia to Europe, and even across the Atlantic to the New World—growing and expanding in its course. We can see what has been developed in Asia and Europe, and may predict something for America.—*Prof. Dorems.*

From Hunt's Magazine.

#### Sea and Upland Cotton vs. Flax and Hemp.

Cotton is found growing naturally in the tropical regions of Asia, Africa and Armenia. It is distinguished in commerce by its color, and its length, strength and fineness of its fibre. White is usually considered characteristic of second quality. Yellow, or a yellowish tinge, when it is natural, is usually considered as indicating greater fineness. There are many varieties of raw cotton but they are usually classed under the denominations of long and short stapled. The best of the first is considered the Sea Island, the product of Georgia. A small quantity of very superior cotton has been imported into England from New South Wales.

The manufacture of cotton has been carried on in Hindostan from the remotest antiquity. The manufacture obtained no footing worth mentioning in Europe till the last century. The rapid growth and prodigious magnitude of the manufacture of cotton in Great Britain are, beyond all question the most extraordinary phenomenon in the history of industry. When the manufacture commenced in England the material was obtained from Hindostan and China, where the inhabitants had arrived at such perfection in spinning and weaving that the lightness and delicacy of their fine cloths initiated the web of the gossamer, and seemed to set competition at defiance. Such has however, been the stupendous discoveries and inventions as to overcome these difficulties, as well as the cheapness of labour in Hindostan. The precise period when the manufacture was introduced into England is not known, but it is probable that it was the early part of the seventeenth century. Authentic mention of it is made in sixteen hundred and forty-one, (1641.) From the first introducer of cotton into Great Britain, down to 1773, the web, or transverse threads of the web only, were made of cotton—the warp or longitudinal threads consisting wholly of linen yarn, imported from Germany and Ireland. Prior to seventeen hundred and sixty, (1760) weavers were dispersed in cottages throughout the country, and furnished themselves as well as they could with the web and warp for their webs, and carried them to market when they were finished. The Manchester merchants, at this period, began to send agents into the country, who employed weavers, whom they supplied with foreign Irish linen yarn for warp and with raw cotton, which, being carded and spun by means of a common spindle and distaff, in the weaver's own family, were then used for wefts.

The entire value of cotton goods manufactured in Great Britain in seventeen hundred and sixty, (1760,) is estimated at only two hundred thousand pounds a year, but in sixteen hundred and sixty-seven, (1667,) the spinning jenny was introduced, by means of which eight threads were spun with the same facility as one; and subsequently a little girl was enabled to work no fewer than from eighty

\* This column gives both increase and decrease.

to one hundred spindles. By the spinners' frames, afterwards introduced, a thread of sufficient fineness was produced to answer for the longitudinal threads for warp. Since seventeen hundred and eighty-five, (1785), the progress of improvement in every department for the manufacture of cotton has been most rapid. The estimated amount of the cotton crop of the United States, after and including 1832, are—

	Pounds.
In 1821, . . . . .	110,940,000
" 1822, . . . . .	121,485,000
" 1823, . . . . .	136,125,000
" 1824, . . . . .	152,880,000
" 1825, . . . . .	169,860,000
" 1826, . . . . .	211,680,000
" 1827, . . . . .	285,120,000
" 1828, . . . . .	213,840,000
" 1829, . . . . .	255,780,000
" 1830, . . . . .	292,040,000
" 1831, . . . . .	311,655,000
" 1832, . . . . .	296,245,000

The lowest average price in England during this period was in 1831, 5½ pence, and the highest in 1825, 11½ pence. Previous to 1790 the United States did not supply the English market with a single pound of cotton; so says McCullough, whose authority there is no reason to question in so far as Upland cotton is concerned, but there appears to have been shipments of a superior quality of Sea Island cotton prior to this date. This will account for what appears to be a discrepancy between McCullough and the Congressional report and at the American Institute. According to these last, the first arrival of cotton at Liverpool from the United States was—

January 20th, 1785, . . . . .	one bag.
May 4th, 1786, . . . . .	two bags.
Total during the year, . . . . .	six bags.
Total during the year 1787, . . . . .	one hundred and eight bags.

Total import from 1785 to 1790, one thousand four hundred and forty-one bags.

After the termination of the American war the cultivation in Carolina and Georgia succeeded so well, that it now forms the principal staple production of the United States. The cotton gin, according to McCullough, was invented by Whitney in 1793, and has done for the planters what the enus of Arkwright has done for the manufacturers, and that at present (1835) the export of cotton from the United States exceeds 300,000,000 pounds a year.

The cotton product of the United States in 1843 is 1,200 lbs.

	lbs.	1,601,700
1794, . . . . .		38,118,041
1814, . . . . .		17,806,479
1824, . . . . .		142,369,063
1834, . . . . .		413,925,240
1843, . . . . .		792,297,106

In 1842 the product of the United States is given in bales at 1,658,174, and in 1843, 2,378,755. (*U. S. Doc.*) The estimated product of the United States for the year 1859 was 3,400,000, and for 1860, 4,600,000 bales. The average weight of a bale of cotton is assumed to be 470 pounds. The actual result of the year 1860, however, showed the product to have been but 4,000,000 bales.

The Merchant's Magazine for May, 1861, gives an estimated cotton crop in 1820 at 425,000 bales; in 1830, at 870,415; in 1840, 2,177,532; in 1850, 2,796,706; in 1860, 4,600,000 bales. Congressional reports show the United States exports of cotton to have been in—

Year.	lbs.	av. cost per lb.	value.
1821, . . . . .	124,893,405	16 2-10c.	\$20,157,484
1822, . . . . .	144,675,906	16 6-10c.	24,035,058
1823, . . . . .	173,723,270	11 8-10c.	20,445,529

(To be concluded.)

**Home Conversation.**—Children hunger perpetually for new ideas, and the most pleasant way of reception is by the voice and the ear, not the eye and the printed page. The one mode is natural; the other artificial. Who would not rather listen than read? We not infrequently pass by in the papers a full report of a lecture, and then go and pay our money to hear the self-same words uttered. An audience will listen closely from the beginning to the end of an address, which one in twenty of those present would read with the same attention. This is emphatically true of children. They will learn with pleasure from the lips of parents what they deem it drudgery to study in the books; and even if they have the misfortune to be deprived of the educational advantages which they desire, they cannot fail to grow up intelligent if they enjoy in childhood and youth the privilege of listening daily to the conversation of intelligent people. Let parents, then, talk much and talk well at home. A father who is habitually silent in his own house may be, in many respects, a wise man, but he is not wise in his silence. We sometimes see parents, who are the life of every company which they enter, dull, silent, uninteresting at home among their children. If they have not mental activity and mental stores sufficient for both, let them first provide for their own household. Ireland exports beef and wheat and lives on potatoes; and they fare as poorly who reserve their social charms for companies abroad, and keep their dullness for home consumption. It is better to instruct children and make them happy at home than it is to charm strangers or amuse friends. A silent house is a dull place for young people—a place from which they will escape if they can. They will talk or think of being "shut up" there; and the youth who does not love home is in danger. Make home, then, a cheerful and pleasant spot. Light it up with cheerful, instructive conversation. Father, mother, talk your best at home.

The most important of all questions is: "What shall I do to be saved?" The only true answer is: "Believe on the Lord Jesus Christ, and thou shalt be saved."

It is difficult to determine by the eye the precise moment of daybreak; but the light advances from early dawn, and the sun rises at the appointed hour. Such is the progress of divine light in the mind; the first streaks of the dawn are seldom perceived; but, by degrees, objects till then unthought of are disclosed. The veil of sin, the danger of the soul, the reality and importance of eternal things are apprehended, and a hope of mercy through a Saviour is discovered, which prevents the sinner from falling into absolute despair; but for a time all is indistinct and confused. In this state of mind many things are anxiously sought for as pre-requisites to believing, but they are sought in vain, for it is only by believing that they can be obtained. But the light increases, the sun arises, the glory of God in Jesus Christ shines in upon the soul. As the sun can only be seen by its own light, and diffuses that light by which other objects are clearly perceived; so Christ crucified is the sun in the system of revealed truth, and the right knowledge of the doctrine of his cross satisfies the inquiring mind, proves itself to be the one thing needful, and the only thing necessary to silence the objections of unbelief and pride, and to afford a sure ground for solid and abiding hope.—John A. Nevin.

**Coming Home.**—One may be very happy while away from home, but he is very glad to return to it. The plainest old familiar dish is better than the daintiest fare abroad. One's own little room, with its handy, compact belongings, is preferable to all the marble halls, swept through by silk-clad dames. "Home!" One is more than ever impressed by the insignificance of that word, when in the roughest hamlet and most desolate looking but, but it may mean much to those who were born in it. It is a beautiful trait, this clinging to the very soil of one's own birthplace, sterile and unattractive as it may be to those who have no such associations.

THE FRIEND.

TENTH MONTH 12, 1861.

The present time is in various respects dark and gloomy. Pecuniary trials, growing out of the peculiar condition of our country, embarrass more or less very many of us, and trials in religious society, added to the affliction which the Christian must experience at seeing the fierce spirit of war so widely spreading throughout the community in which we live, produce such a sorrowful state of feeling as almost to lead us to consider that every thing is against us, and every thing opposing the growth and increase of the religion of our Lord Jesus Christ,—the religion of light and purity, the religion of peace and love. In such a time as this we need true, living, soul-sustaining, soul-comforting life. If our trust and confidence in our blessed Care-taker is unshaken, although we must suffer with the sufferings of our fellow creatures around us,—although we must mourn for the afflictions of Joseph, the captivity of the true Saviour; although we must feel the trials which beset our own path in life, yet will we not be utterly cast down. God yet ruleth in the earth,—his purposes of mercy will not be thwarted by the perverseness of man, and the afflictions meted out to those who love him, are all in tender mercy, and limited by his Fatherly compassion, and omniscient, all-controlling will.

We need a faith proof against all changes in the condition of things around us. Fair weather faith abounds. Theodore L. Taylor has some

very pertinent remarks on this subject. He tells of an enquiry made of a relative, how she felt when the horses were running away with the carriage in which she was, down a hill. Her answer was, "I trusted in Providence till the breeching gave way; then I shut my eyes and gave up all for lost." He says, "the good woman in question was not the only Christian whose faith held only by a strap. We are all more or less weak on this very point. It is the easiest thing in the world for us to exercise fair weather faith." In times of civil quiet, of mercantile prosperity, of health and happiness, it is easy to trust God. When the wind blows favourably into my swelling canvases, and my well rigged bark flies like the sea-gull over the azure waters, why should I distrust the great Disposer of winds and waves? When my business thrives, why should I tremble for my daily bread? When the health of my household is perfect; when we can gather around our table, a happy, hungry group, and do justice to the steaming cakes, redolent of the buckwheat field and beehive, we think not of the need of the great Physician. We are all believers then if ever, and our confidence in God as a kind, loving, and affectionate Father, is complete. A prosperous Christian, who walks in the sunshine of favour, and feels the warmth of assurance beaming in through every window of the soul, is not often afflicted with distrust. His danger lies in the opposite quarter. He is in peril of presumption and self-complacency. We can all trust in fair weather. But if the tempest begins to marshal its cloud-squadrons;—if the sun and stars appear not;—if the sea lash into foam; and its great, green, greedy caverns open to swallow up our trembling bark; can we trust God then? Will the cheap confidence of the calm, hold through the hurricane? There is the question; there is the true test of faith.

"What is that trust good for that only abides with us in the bright hours of life? It is just as good as a lantern that shines when the sun is up but goes out in the darkness. The trust we need is a trust in integrity, though every bank fail;—a trust in God though desolation darkens our fireside and death dig a grave beneath our couch or our cradle. The faith we need is a lantern that will gleam the brighter as the night of trouble grows darker,—a light unto our timid feet,—a lamp unto our broken, up-hill pathway. The trust that honours God is a trust through all; through noon and midnight, through poverty and reproach, through prosperity and adversity, through hard words and hard blows."

This is the kind of faith we need,—this is the very faith which our dear Saviour requires of us, which he is ready to give us, if we will truly open our hearts to him.

#### SUMMARY OF EVENTS.

UNITED STATES.—*Affairs in Virginia.*—The strongest position of the rebels is believed to be behind Manassas Junction, where it is represented the entire available reserves of the South are concentrated. More than 12,000 rebel soldiers were recently in the hospitals at Richmond. The Richmond papers say that a favourable change was taking place in the character of the camp diseases. The typhoid fever was less virulent than it had been, and measles and ordinary fevers, were also abating. Partial engagements between the Federal forces and the rebels had occurred at Chapmanville and Cheat Mountain, in Western Virginia, in both which the insurgents sustained considerable loss.

*Southern Intent.*—The Charlotte, (N. C.) Democratic State Gov. Clark is making great exertions to defend the coast of the State. His application to the Confederate Government for a few well-ordered regiments to aid in the defence has not been complied with. The United States armed propeller Fanny has been captured

by the rebels in Pamlico Sound. She was sent with supplies to a detachment of U. S. troops, who held a position at an inlet farther up the coast. The crew escaped in their boats, but thirty soldiers were made prisoners.

Much alarm is felt at New Orleans lest the city should be attacked by a naval expedition. The Governor of Louisiana has ordered all the stores in the city to be closed at 2 o'clock each day, and all persons capable of bearing arms have been ordered to display the remainder of the day. Cannon have been planted on the river, both above and below New Orleans. The United States forces have taken possession of Ship Island and the Chaudelais islands near the mouth of the Mississippi. Two hundred prisoners of the U. S. prisoners have been sent from Richmond to New Orleans.

*The U. S. Mint.*—The operations for the Ninth month were quite large. The deposits amounted to \$23,219,939. The coinage consisted of 2,533,282 pieces, of the value of \$5,170,324.

*Kentucky.*—Gen. Anderson's military department has been divided and part of it assigned to the command of Gen. Sherman. The rebel army under Gen. Buckner was stationed at Bowling Green, that of Pillow at the latest dates remained at Columbus. No serious collisions have yet taken place between the two armies.

*Missouri.*—The rebels under Gen. Price have mostly evacuated Lexington. The main body is said to have moved towards Independence, on the western border of the State. Many of the citizens of the Southwestern part of Missouri are removing with their families and effects to the South. The movements and positions of the Federal troops, nor are those of the rebels stated by any thing like certainty. According to some reports, Gen. Price with a large part of the army, was again moving to the southward, and would probably avoid a battle with Gen. Fremont, but the apprehension was felt by others that he intended a surprise of some unexpected point.

*New York.*—Mortality last week, 398.

An indication of the revival of business is afforded by the auction sales of real estate, which have of late been unusually numerous, and at prices showing but little falling off from previous rates. The last week closed with marked activity in the stock market and with an upward tendency in prices. The export of grain to France and England continues on a large scale.

*Philadelphia.*—Mortality last week, 216.

The antiracite coal trade at the close of last week had amounted to 5,888,869 tons, against 6,164,633 tons to corresponding dates last year.

The mean temperature of the Ninth month, according to the record kept at the Pennsylvania Hospital was 52° below zero during the month was 82°, and the lowest 48°. The amount of rain 4.40 inches.

Average of the mean temperature of the Ninth mo., for the past seventy-two years, 65.93 deg.

Highest do. during same period, 1793, 1804, 70 deg. Lowest do. do. do. do. 1840, 60 deg.

*The Great Markets.*—The following are the quotations on the 7th inst.—*New York.*—The market for wheat less active. Sales of 300,000 bushels, at \$1.19 a \$1.23, for Chicago spring; \$1.30 a \$1.35, for red winter western, and \$1.38 a \$1.45, for white western. Oats \$1.00 a \$1.05, for No. 1, and \$1.00 a \$1.10 for mixed.—*Philadelphia.*—Red wheat, \$1.30, white at \$1.10, Rye 65c. Corn scarce and in demand, sales of yellow at 60c. Oats 34 a 35.

*FOREIGN.*—News from England on the 25th inst. The London cotton market was excited and prices were still advancing. The advance from Birmingham report a slight advance in all descriptions of goods, but the sales are small. Breadstuffs were lower. Red wheat 10s. 6d. a 11s. 10d. per 100 pounds; white, 12s. a 13s. American flour, 28s. a 30s. per barrel.

The new breakwater has just been completed at Portland, on the southern coast of England. The whole work was done by convict labour. It is described as a mole of loose stones, three hundred feet in breadth at the base, one hundred feet in height, and a mile and a half in length. It has cost, in round numbers, 2,900,000, twice the estimated expense. At the end of the mole a first-class fortress will be built.

The passport system has been abolished for British travellers in the Netherlands.

The Secretary of India has delivered an address to the British Association, and other merchants, relative to the natural advantages of India, for the cultivation of cotton, and advocated the necessity of advancing capital to growers.

A letter from Paris says several superior and substantial orders of the French artillery were offered great advantages for their services in the United States army;

but the French government, which did not appear as verse to their acceptance of the offer at its first mention decided on the 14th against granting them the necessary permission.

It is reported that a Spanish expedition against Mexico is now in progress of organization at Havana, and a corps of 5,000 infantry will disembark at an early day at Vera Cruz, and thence march direct to the city of Mexico.

Six screw frigates, two steamers, and numerous transports, will be employed in this expedition. An important decision of Marshal O'Donnell, directed to the Captain General of Porto Rico, has been published, which declares that when a slave touches the soil of Spain he must be emancipated, even without the consent of his former master.

An attempt was made at Kanagawa, Japan, on the 11th of Seventh mo. to murder the inmates of the British Legation. Two persons were wounded, but all the escaped.

Received from Ezekiel Bandy, A. C. O., \$3, vol. 35 for K. Planmer, Geo. Talam, Jr., B. Vanderson, \$3 each vol. 34; for H. Stanton, J. Bandy, Ed. Hodgson, \$2 each vol. 35; for Wm. Green, \$3, to 52, vol. 36; for N. Ha \$4, to 14, vol. 37; for N. Hartley, \$2, to 16, vol. 38 from M. Mickel, R. Jones, and S. C. Paul, N. J., \$2 each vol. 34; from J. Huestis, Agt. O., for David Smith, \$ to 27, vol. 35.

#### WEST-TOWN BOARDING SCHOOL.

The winter session of the school will commence on Tuesday the 4th of the Eleventh month next. Pupils who have been regularly entered and who go by cars from Philadelphia, will be furnished with tickets by the ticket agent at the depot, N. E. corner of 18th and Market streets. Conveyances will be at the Street Road Station on the 8th, 10, 12, 14, and 2 o'clock trains on Second and Third days. Small packages if the pupils left at Friends' bookstore, No. 304 Arch St. on Sixth days before 12 o'clock, will be forwarded. Tickets as heretofore will meet the first train of cars on arrival at the Street Road Station every day except First days.

West-Town, Tenth month, 1861.

#### WEST-TOWN BOARDING SCHOOL.

The winter session of the School will commence the 4th of the Eleventh month next. Parents or others intending to send children as pupils, will please make early application for their admission, to Dab Knight, Superintendent, at the School, or Joseph Sen Terving, Treasurer, No. 204 Arch St., Phila.

#### EVENING SCHOOLS FOR ADULT COLORED PEOPLERS.

A Principal and Assistant Teachers are wanted for the Men's School, and a Principal and Assistants for the Women's School.

The schools will be opened on the 14th of the Tenth month at the usual place; they are held five evenings in the week. Apply to Wm. C. Ayles, No. 351 N. 2nd or 325 S. Fifth Street; WILLIAM EVANS, Jr., 257 Front Street, or SAMUEL ALLEN, 524 Pine Street.

#### WEST GROVE BOARDING-SCHOOL FOR GIRLS.

Near West Grove station, on the Philadelphia and Baltimore Central Rail Road. The winter session will open on 2nd day the 4th of next month. For information or circulars apply to,

THOMAS CONRAD, Principal.  
Tenth mo., 1861. West Grove P. O., Pa.

#### WANTED.

A young man to assist the subscriber in his school Haddonfield; for particulars address,

RICHARD J. ALLEN,  
Haddonfield, N. J.

DIED, at the residence of her mother, near Chesterfield Morgan Co., Ohio, on the 17th of Ninth mo., 1861, LEO SMITH, (daughter of the late William Smith,) in the 26th year of her age. She bore a lingering illness with patience, resignation, and Christian friends have the consolation to hope that her spirit is admitted into the mansions rest and peace.

FILE & MELROY, PRINTERS,  
Lodge street, opposite the Pennsylvania Bank.

# THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XXXV.

SEVENTH-DAY, TENTH MONTH 19, 1861.

NO. 7.

PUBLISHED WEEKLY.

Price Two Dollars per annum, payable in advance.

Subscriptions and Payments received by

JOHN RICHARDSON,

AT NO. 116 NORTH FOURTH STREET, UP STAIRS,  
PHILADELPHIA.

Postage to any part of Pennsylvania, for three months, if paid in advance, three and a-quarter cents; to any part of the United States, for three months, if paid in advance, six and a-half cents.

Benjamin Ferris.

For "The Friend."

(Continued from page 41.)

Diary, 1761, Second month 12th.—"My mind as often of late been affected with sorrow, at the present state of our meeting in Wilmington. Although there is a little remnant in it concerned for the maintenance of the cause of Truth, in its several branches, yet it may with grief in truth be said, there are too many unconcerned for their own everlasting well being, and for the good of the church. These are really laying waste our precious testimonies which the Lord gave our forefathers to bear, and which he still lays on his faithful children to maintain, and without the support of which, he has abundantly shown them they cannot have true peace.

"One thing which has proved a great exercise to me, and which I think has caused many inconveniences to arise, is the too great familiarity and sociation of many under our name with those of her religious societies, particularly with some of settled principles and dissolute lives. These ten get together at the doors of their houses, the corners of the streets and other places, whilst the principal subject of their conversation, is the latest news of the war, a subject, which by Epistle from the Yearly Meeting, we are advised not to make a subject of our conversation. Of this matter they talk, and such other worldly things, as indicate too plainly, that their minds are taken up with the affairs of this life, and that they are not engaged to seek after the chief and only durable good, the Divine favour. For as out of the abundance of the heart the mouth speaketh, the conversation of the true christian must have someavour of truth and righteousness with it. I have times been at such street conferences, and have my mind thereby stripped of good, whilst contention has attended me, that they are not well casing in the Lord's sight, and that it does not become us, a people, making a high and holy profession, to spend our precious time, either amongst others, or our own members, in trifling, impertinent discourse, intended to provoke merriment and increase levity; to waste time, which should be dedicated to answering the great end of our being, which is to prepare for another state of existence, and in provoking one another to love and to good works. With such as are thus engaged to prepare for eternity, our heavenly Father is well pleased,

and he hath promised, that in the day when he maketh up his jewels, he will spare those who fear him and think upon his name, as a man spareth his only son that serveth him.

"Another cause of sorrow to me, is one of the consequences of a too great familiarity and freedom with those of other societies. Some who are active even in putting the discipline in practice, are so nearly attached to men of the world, they do not keep up the testimonies against the formal worship and ways, which the Lord required our forefathers to bear, and which he still requires at our hands. These under a pretence of universal love or charity, for fear of offending those without, are for letting fall the testimony, seeking to gain their favour, and to recommend the way of Truth by familiarity and freedom, and by going half way to meet them." My mind is affected with grief under the consideration of these things, seeing that the work of reformation is retarded, the precious testimony balked, and our strength consumed. We are encouraging others in that which the Lord hath a controversy with, and are seeking to obtain the favourable opinion of the world by unwarrantable means. We were once despised, and the Lord's people to this day, are rejected for his name's sake. There was never more need than at this time for those concerned for Zion's welfare, to unite in a fervent travail and engagement of spirit to maintain the cause and testimony of the ever blessed Truth against all false liberty, and unlimited charity, which seems as a torrent to threaten to sweep all zeal for the support of sound principles and practices away; Oh! may the Lord arise for Zion's sake, and for the help of his faithful labourers, and give them wisdom and power to move forward and rebuild the waste places, notwithstanding the rebukes and discouragements of the deceitful Schemaiahs, who would now attempt, as their pattern of old sought to do, persuade the faithful Nehemiah's to hide themselves from their enemies, and let the broken down wall alone. With the Lord's assistance, the faithfulness of his children may yet conduce to cause our Zion to become once more a quiet habitation, her ancient beauty restored, and a shout of a king be heard in her. Then the name of the Lord, who alone is able to make his church triumphant, shall be honoured and adored in her, and her children shall give him glory and worship for ever and ever. Amen.

On the 4th of the Third month that year, Benjamin addressed the following epistle to one of his friends.

"Dear Friend.—In love, with which my mind is often affected towards thee, I would in great tenderness, signify a few things to thee. Every testimony, be it ever so small an one, which the Lord our God hath given to his people to bear, ought to be exceedingly precious to them, yea, regarded as a choice jewel. It pleased Infinite Wisdom in the first rise of this society, to lay a necessity on our predecessors in the Truth, to bear a testimony for him, against all pride, vanity, the world's ways and fashions, and whatever had a tendency to support them, and this testimony ought to be precious to

us in this day. Our forefathers maintained it at the expense of outward substance, and with the loss of liberty in hard and tedious imprisonments, yea, many sealed this testimony with their blood. The Lord was graciously pleased to favour them with Divine refreshment, supporting them in all their sufferings, enabling them to triumph over death itself. The testimony so dear to them, to support which they so cheerfully underwent grievous sufferings, should be no less dear to us in this time of outward ease and quiet, for we profess to be fellow labourers with them. My dear friend! there is a remnant in this day, so engaged at heart, who find the same necessity as our forefathers did to maintain the testimony of truth in all its branches, against pride, vanity, the world's ways and fashions, superfluities in dress, address, and the furniture of houses, yet weakness in those points greatly prevails among us as a society to the grief of the honest-hearted in Israel, who mourn for the dejection of the daughter of Zion. This testimony was once so universal amongst us, it was, as it were written generally, as on the lintels and door posts of our dwellings, as among a remnant it is at this day. May the Lord multiply the number of these, so that Zion may yet again shine, and become the beauty of nations, and Jerusalem the praise of the whole earth. It is often my desire that of the younger class, whom the Lord in mercy hath visited with the knowledge of his Truth, engaging us to love and serve him, may be exceedingly careful not to lay waste his precious testimony in any of its branches. May we, being concerned to do nothing against the truth, join heartily in holding up the hands of the faithful, who are bearing as it were, the ark of the testimony of the Lord, on their shoulders. I know not that there was ever more need of a united engagement, than at this time; I fully believe that the very hindmost of us in the camp, have a share of the work and burden to bear. Oh! that we may be faithful burden bearers, standing valiantly for the cause and testimony of the ever blessed truth. Thus the worthy name of the Lord our God may be glorified. He gathered our forefathers who were no people, to be a people to his praise, and in unmerited mercy he visits us in this day, and gathers near to himself those who were in the broad way, and unacquainted with his saving power. May the consideration hereof, bow our souls in reverence and awful fear before him, who is worthy to be worshipped, served and obeyed by men and angels. We praise him, not only because he is our salvation, but for his unsearchable loving kindness and mercy to the children of men."

This letter concludes with referring to some conduct of his correspondent, through which he feared the testimony of Truth would suffer.

Diary continued.—Fifth month, 1st. "Often of late I have had low times. It has been through hard exercise I have kept in exercise true living Faith, and have feared I had not been rightly settled on the true foundation. Oh! the inexpressible anxiety and distress of soul I have at times felt. It seemed the very hour and power of darkness, in which I had no strength to lift up my eyes

towards heaven, and not a tear to shed. Yet the Lord in his infinite mercy, had regard to my desolate and afflicted state, and renewed a degree of hope, that if I kept steadily looking unto and waiting upon him, he would yet lead me forward. "Glorified be his name forever." "Although he has been pleased to withhold seasons of rejoicing from me, such as I have known in time past, yet as he has mercifully engaged my heart under the sense of want to cry unto Him, I have been enabled to trust, and have felt a degree of peace, which the world knows not."

(To be continued.)

For "The Friend."

#### Musings and Memories.

##### INFLUENCE OF THE OUTWARD UPON THE INWARD.

It is recorded that an officer in one of the late English expeditions in search of John Franklin, was of a frank and open disposition, fond of gayety, and very thoughtless as respected his future state. During his journey as leader of one of the sledge parties, his mind was awakened to serious considerations. He saw the utter worthlessness of many things highly prized and eagerly sought after in the world of civilized life. He thought what would all the wealth of Europe avail him, if he should lose the judgment and self possession which alone would enable him to conduct his party back to the ships? Then came the thought how would it be with him, if they should be stricken down by disease amid the snowy wastes?

The difficulty of directing their course, from the variation of the compass, was great, and much care was required to keep the chronometer from stopping; and feeling the responsibility heavy upon him, he walked much alone. After a time one of the party was struck with the snow-blindness, as soon afterwards was another. These events added much to the weight of his care and anxiety. The next day, after the malady attacked them, before starting in the morning, the twenty-third Psalm was read, beginning, "The Lord is my shepherd." As they journeyed on that day, amidst all the fears which beset his mind, relative to the safety of his party, this passage from that Psalm kept sounding through his mind, "yea, though I walk through the valley of the shadow of death, I will fear no evil." At night as he lay, kept awake by his anxiety; through the merciful visitations of the grace of God, he was brought to look back with contrition on his past life of folly, and to covet in secret, that if spared to return to his native country, he would never forget how the Psalmist had been enabled to rejoice in communion with God. Lessons of instruction he had received in childhood, came back to his memory, and a comfort he had not felt for years, stole into his mind. Greater trials came upon them than they had yet experienced; at one time they encountered a violent snow storm, and were buried in the drift so deeply, that it was thirty-six hours before they could proceed. Provisions were growing scarce, and the weather was so thick that it was doubtful if they could find the ship. During this time of distress, his mind was consoled as the text, "The Lord is my shepherd, I shall not want," was again and again presented to it.

The company reached their vessel in safety, and the officer, it is testified, became "through the grace of God, a wiser and better man." The visitations of mercy to his soul, and in the hours of his lonely, anxious, Arctic travel, and in the sleepless watches, whilst his worn out men were sleeping soundly around him, were savingly blessed to him.

Many of those who have been faithful labourers in the Lord's vineyard, have received sensible

visitations, and precious awakenings, apparently springing from outward things. Some, during seasons of quiet retirement, and when walking in solitary places; some whilst musing amid rural scenery, others whilst feeling the fury of a storm, threatening to destroy them. When the Lord has prepared the heart for his service, there lacketh not outward events through which the sensible operations of his Holy Spirit, taketh hold of the awakened mind. In a list of worthies in our own Religious Society now before me, in which is given the outward circumstances, apparently tending to their conversion, or at least the means through which the Divine quickening virtue of Grace awakened them from the slumbers of sin, I find noted, "walking in the woods," "woods," "solitary walks." One, pressed in a crowd so that his bodily life was in great danger, was thereby driven to seek and find life eternal. Sickness and the fear of death drove many of them with strong cries and earnestness of spirit, to seek to the great Physician of value, who in his own time, as they continued depending upon him, healed all their maladies. Some have been driven by the terrible, some drawn by the gentle, into the paths of peace. Daniel Wheeler could tread deep and abiding effects on his mind from a hurricane at sea, whilst Mary Hagar could remember visitations of Divine Love granted her amid the flowers of a garden.

##### PRAY IN FAIR WEATHER.

In a recent number of a religious paper, an anecdote to this import is told. A number of years ago, a ship bound to New York, suddenly encountered a dreadful storm, whilst far out in the ocean. All hands were called to take in sails and put the ship in the best trim to stand such a hurricane, and all seemed too few. At this moment one of the men, the most hardened, wicked person in the ship, was missing, the captain, himself an irreligious man, looked round for him and found him below, on his knees, repeating the Lord's prayer over and over again, seizing him by the collar, the captain jerked him on his feet, and shouted with a voice heard even amid the roaring of the storm, "Say your prayers in fair weather."

The ship, through the good management of the skilful mariners, and the blessing of a merciful God, was saved, and in a few days reached her port. The man who prayed in the storm was at once discharged, having been through his wickedness, a perfect pest in the ship for the preceding fifteen months. But Divine grace had touched him. The blunt speech of the captain, "say your prayers in fair weather," seemed ever sounding in his ears, and deep distress for his past sins and present state, came upon him. Through the mercy of God, and the cleansing baptisms of his spirit, the work of regeneration went on, until the late hardened sinner became a child of the kingdom, an heir of God and joint heir with Christ.

Years after this event, this man being engaged on a certain occasion in preaching, was startled at perceiving the captain, who had been made the instrument of so much good to him, sitting among his hearers. At once, the scene of the storm came vividly before him, and with a voice so loud as to startle all present, he exclaimed, "Say your prayers in fair weather." When he had recovered in measure his composure, he proceeded to narrate the circumstance we have given above. The captain, on finding who the preacher was, and how it had pleased the Lord God of mercy and loving kindness, to make use of him and of his scornful condemnation, in turning a hardened sinner into a labouring saint, was much affected. Now the influence for good he had unwittingly exercised, was brought

home to himself. His mind was awakened, and Divine grace operating through the saving change he saw effected in another, led him also forward in the path of purity and peace, until through the baptisms of repentance and the renewings of the Holy Ghost, he also was made a partaker of the blessed hope of the gospel of life and salvation.

These words "pray in fair weather," so eminently blessed in these two instances, may well claim the serious consideration of each one of us. The paper in which the narrative is given, puts the enquiry to each of its readers if they say their prayers in fair weather, or whether they wait until some storm, fraught with sorrow and danger, comes upon them, to drive them in anguish and terror to seek comfort and security in God. We have need to be doubly watchful and prayerful in times of prosperity. When God gives us most outward blessings we are most likely to forget Him. Reader, whether it be fair weather, or foul weather with thee, seek ever for the spirit of prayer then, through a full surrender of thy own will to the Lord Jesus, his redeeming and sanctifying mercy will prepare thee to bear the afflictions of time without terror, and the blessings of prosperity without injury to thy immortal soul.

For "The Friend."

#### BIOGRAPHICAL SKETCHES

Of Ministers and Elders and other concerned members of the Yearly Meeting of Philadelphia.

JOSHUA BROWN.

(Continued from page 44.)

At a meeting at Black Water, held Twelfth month 8th, 1775, Joshua was led closely to warn those present who were making excuses for not fulfilling their religious duty in setting their slaves free. To him it seemed evident that the wrath of God was gathering against the people for the crime of keeping their fellow men in bondage, and that it would be poured forth. He attended Burleigh meeting on the 9th, went home from thence with Edward Stabler, who with his wife accompanied him to Gravelly Run meeting on the 10th. In this meeting he quoted the passage, "If a man's wife please the Lord, he maketh his enemies to be at peace with him;" he earnestly entreated those present to know their ways to be acceptable to the Lord, and showed them that this could only be through the washing of regeneration and the renewing of the Holy Ghost. On the 12th, he had a meeting at Curles, in which he said that all the professors of Christianity agreed in this, that it is by Jesus Christ we must be redeemed from our state of separation from God. Some believe that the outward use of water is necessary to make us children of God, and some deem that if we believe in Christ, even without purity of heart, his righteousness will be imputed to us, and that through it they are safe. Joshua then found the opportunity of enforcing his frequent doctrine, Ye must be born again. If the inward work of the spirit had cleansed and regenerated the heart, the outward type of washing of water could not be necessary,—but without the inward cleansing, the baptism of Christ, salvation could not be obtained. He had excellent service at Wainock, Black Creek and Beaver dam, in which the fundamental doctrine of the gospel were much opened, and at the last one especially, the nature of the true ministry and its call and necessary qualifications. A Presbyterian minister who was present dined with him, but made no objection to the doctrine preached, and was quite friendly.

On the 16th, at Cedar Creek meeting, he commented on the care exercised in the construction of an outward building. The workmen had to square

their work and make it all plumb, and if they were always careful in these respects and the foundation they built on was good, the building would stand. He told them that in a religious sense, the building must have Christ Jesus for a foundation, and must be squared and properly constructed by his Holy Spirit, or it would fall. He showed how in the building of the tabernacle of old, every thing was made according to the pattern God showed to Moses; man's invention and contrivance must have nothing to do with it; and so in the spiritual, all must be of God, and of the operation of his grace and spirit. Joshua now proceeded more directly homeward, taking on his way, Caroline Meeting, Goose Creek meeting, Fairfax, and Warrington Quarterly Meetings, and Deer Creek meeting. On the 28th, crossing the Susquehanna river, with difficulty, he reached his own residence. He says "I found my wife and children well, which is cause of great thankfulness to the great Preserver of men. My mind is filled with that peace which the world can neither give nor take away, and I am greatly thankful to the Master who hath enabled me through many tribulations to fulfil my journey and return safely to my own house and family again."

After this laborious and deeply exercising visit, Joshua remained at and near his own home for some time, labouring with many others at that time for the reformation of many of their friends and neighbours, who had departed from the simplicity of the Truth and from under the cross of Christ. In the Twelfth month, 1779, having been appointed by the Quarterly meeting with others, to go to Lancaster and examine the condition of the meeting house there, he went, and was engaged to visit each of the five families of Friends who lived in that town. The visit although a short one, afforded him satisfaction in the retrospect.

With a minute of the concurrence of his Monthly Meeting, he left his home Fifth month 31st, 1780, to attend the Yearly Meeting for Maryland, held at West River. With George Churchman and Joseph England, he rode to Baltimore, Sixth month 1st, and the next day went to West River to the meeting of Ministers, "which was in a good degree favoured with the Great Master's presence." He had some service in the meetings for business, but during the sittings his mind was under exercise on account of many in the neighbourhood having been disowned for taking the test oath, and he felt constrained to visit them in their families. When the Yearly Meeting closed, Sixth month 7th, with Evan Thomas, Benjamin Hough, and John Elliot of Philadelphia, he commenced the visit. The first visit was to Joseph Pemberton. He received the Friends kindly, and expressed a willingness to liberate his slaves, which Joshua says, "I hope will be complied with in a little time. All those I was concerned to visit, were in the practice of holding slaves." On the 9th, they visited Philip and John Thomas, and Joseph and Richard Richardson. On the 9th, he says, "we visited Joseph Cowman's family, on much satisfaction, he appearing free to set his slaves at liberty. I much desire he may be preserved in the mind we left him in." They then rode up South River and visited some Friends named Hopkins, who were not clear of holding slaves, and lodged that night at one named John Hopkins. Johns had set his slaves free, when they were twenty-five years of age, and the Friends he concerned to have a sitting with him, in which he intimated that something more than merely their liberty was due them. After attending Little Falls meeting on the 11th, Joshua lodged at William Cox's, and the next day rode home, he says, "well satisfied with the journey."

Many were the labours of love, Friends of that day were called on to perform on behalf of the poor children of Africa. At the Second month Western Quarterly Meeting, in 1781, Joshua Brown, Joseph Husbands and Abraham Gibbons, were appointed to visit the sheriff of Accoonac county, Virginia, who had taken a negro lad, who had previously been manumitted by Daniel Millin, and had sold him to John Cropper, for a war tax, which Daniel was not easy to pay. They performed this visit, and at the same time Joshua says his wife was appointed to accompany Mary Husbands and Hannah Harlan on a religious visit to the free negroes in the lower counties on the Delaware and the eastern shore of Maryland and Virginia.

On the 8th day of the Fifth month he left his habitation to attend Virginia Yearly Meeting. On his way down he was at many meetings and had much labour in some places on behalf of the slaves. He mentions in one place having the satisfaction of seeing one Friend manumitted forty-three. He visited his friend Joseph Cowman, mentioned before as one who by taking the test oath, had lost his right of membership amongst Friends. He found him now under exercise on account of that mistake. Joshua felt a word of encouragement to him and his wife, and endeavoured to stir them up to faithfulness in filling up their proper places and duties. Joshua then crossed Chesapeake bay in a small boat, and attended Choptank Yearly Meeting, where he met his wife. The several sittings of that meeting were large and favoured. His companion on this journey was Joseph Reynolds of Nottingham, whose company he says was of use to him, and satisfactory. "When I reached home, my mind was very thankful to the great Master, who I apprehend had been pleased to be with me in this journey, enabling me to perform some exercising services,—and who had brought me safely back to my home."

(To be continued.)

From Hunt's Magazine.

### Sea and Upland Cotton vs. Flax and Hemp.

(Continued from page 47.)

This much has been said in reference to cotton, as preparatory to the consideration of the articles of flax and hemp, more particularly the former, to which public attention has been more particularly directed by the transpiring events of the day.

"Flax, (*Ger. Flachs*; *Da. Vassch*; *Fr. Lin*; *Lin*; *Ita. and Sp. Lino*; *Rus. Len, Lon*; *Pol. Lin*; *Lat. Linum*), an important plant, (*Linum usitatissimum*) was at one time an article of considerable export from the United States, and may be again profitably raised for its seed without further reference to the use of the stalk.

"In 1790 the quantity of the seed exported amounted to 312,000 bushels. For twenty years previous to 1816 the average annual exports were 250,000 bushels. The smooth, rich prairie lands of the west afford an excellent opportunity for raising flax to any extent; and since lincseed is an article that bears exportation so well, many thousands of acres might be cultivated to advantage, especially as the crop might be pulled by machinery, or, if the seed is the only object, it might be cut with like facility." (*U. S. Doc.*) The estimated hemp crop of the United States in 1844 was 22,800 tons.

Flax is an important plant, and has been cultivated from the earliest ages in Great Britain and many other countries, its fibres being manufactured into thread and its seed crushed for oil. The principal sorts of flax imported into Great Britain are Petersburg, Narva, Riga, Nivel, Liebau, Mel, Oberland and Dutch flax. It comes in bun-

dles of twelve, nine and six heads. The Riga flax seems to deserve the preference, and is imported from the Baltic. It is the growth of the provinces of Maninberg, Druanin, Thausenhausen, and Luthcrana. Flauders or Dutch flax is well dressed, and of the finest quality. Flax is extensively cultivated in Egypt of late years; some of the Italian ports, which used to be supplied from Russia, have been supplied on lower terms from Alexandria. New-Zealand flax is said to exceed every other species in strength of fibre and whiteness, qualities which, if it really possesses them in the degree stated, must make it particularly fitted to be made into canvas and cordage. It has been obtained, within these few years, at second hand, from Sidney and Van Dieman's Land, the imports from them amounting, in 1831, to 15,725 cwt. Attempts are now being made, but with what success remains to be seen, to raise it in Great Britain.

When flax is shipped to the principal Russian ports where it is brought, it is classified according to its qualities, and made up by sworn inspectors, appointed by the government for the assortment of that and all other merchandize. These functionaries are said to perform their task with laudable impartiality and exactness. A ticket is attached to every bundle of assorted flax, containing the names of the inspector and owner, the sort of flax and the period when it was selected and inspected.

Good flax should be of a fine, bright color, well separated from tow codilla or coarser part of the plant, and of a long, fine and strong fibre. In purchasing flax it is usual to employ an agent wholly devoted to this particular business.

Of 936,411 cwt. of flax and tow imported into Great Britain in 1831, 623,231 cwt. was from Russia, 128,231 cwt. from the Netherlands, 101,721 cwt. from Prussia, 53,324 cwt. from France, 1,415 cwt. from Italy, 15,276 cwt. from New South Wales, &c. Almost the whole of the quantity was retained for home consumption.

Flax seed contains a great deal of oil, which it yields by expression, and is cultivated either that it may be used in sowing, or sent to crushing mills to be converted into oil. The quantity of the crop depends much on the seed employed; a good deal of care is requisite in selecting the best; generally speaking, it should be chosen of a bright brownish colour, oily to the feel, heavy and quite fresh. Dutch seed is in the highest estimation for sowing; and it not only ripens sooner than any other that is imported, but produces larger crops, and is of the quality that best suits the principal British manufactories. American seed produces fine flax, but the produce is not as large as from the Dutch seed. British seed is sometimes used instead of Dutch, but the risk of the crop mis-giving is so much greater that those only who are ignorant of the consequences, or who are compelled from necessity, are chargeable with this act of ill-judged parsimony. Crushing seed is principally imported from Russia, but considerable quantities are also brought from Italy and Egypt. Of the 758,128 bushels of lincseed imported into Great Britain in 1831, 221,702 were brought from Russia, 172,069 from Prussia, 106,244 from the United States, 103,448 from Italy, 98,847 from Egypt, 53,738 from the Netherlands, &c.

Hemp is supposed to be a native of India, but long since naturalized and extensively cultivated in Italy and many other countries in Europe, particularly Russia and Poland, where it forms an article of primary importance. It is stronger and coarser in the fibre than flax, but its uses, culture and management are pretty much the same. When grown for seed it is a very exhausting crop, but when pulled green, it is considered a clearer of

the ground. In England its cultivation is not deemed profitable, so that, notwithstanding the encouragement it has received from government and the excellent quality of English hemp, it is but little grown, except in some few districts of Suffolk and Lincolnshire. The quantity raised in Ireland is also inconsiderable.

From what precedes, the great expansion of the cotton product of the United States appears to have been after the year 1829. Prior to 1829, if not to a still later period, the flax product was deemed of more importance than cotton. Flax was manufactured by the families that produced the plant, in their own houses, and it furnished them with table-cloths, bed-linen, and under garments and outer clothing in summer. Prior to 1810, if not later, the raw cotton furnished the country merchants in the towns on the North River and back, was the East India, by way of England to New York. It was very imperfectly cleaned of its seed, and packed in large bags without being pressed. The common retail price of this cotton was 2s. 6d., or 31¢ cents per pound. It was used for bats for quilts and dresses, and spun into yarn for mops. At that period a coarse muslin was also imported from the East Indies, and sold in the country towns above referred to, at the like price of 31¢ cents per yard. The same article might to-day command some 4 or 5 cents per yard for book covers or like purposes. At that period there was but a single store for the sale of domestic cotton goods in the city of New York, and, as far as known by one manufacturer in the United States; this was — Slater, of Rhode Island, who produced a superior fabric of this description of goods. They were sold by William F. Mott, who is still living, then doing business in Pearl street, near Peck slip. Public attention for the last few years has been again directed to the article of flax, and, from present indications, it would seem that it is again to occupy an important place in the productions of the country, and equal, if not exceed in value and importance, the cotton product of the United States. By the simple application of steam, at a pressure of some two hundred pounds to the square inch, the gummy or resinous matter is separated, and afterwards removed from the fibre of the plant together with the woody substance, and a product as soft and delicate as cotton is the result, better adapted than it to a vast variety of uses for which cotton is now used. The invention is calculated to work a revolution in flax as great in magnitude, if not greater, than has been effected by the cotton gin in cotton, and eventually to clothe the nation in linen, clean and white, for there is evidently no limit to the production of the plant in almost any part of the world. The prairie lands of the great west are more particularly adapted to it, and to these the public attention is particularly directed, where almost the entire labour can be performed by the use of machinery.

**Conflicts of Life.**—There are victories won by men over themselves, more truly honourable to the conqueror than any that can be achieved in war. These silent successes we may never hear of. The battles in which they are obtained are fought in solitude, and without help, save from above. The conflict is sometimes waged in the still watches of the night, and the struggle is often fearful. Honour to every conqueror in such a warfare! Honour to the man or woman who fights temptation, hatred, revenge, envy, self-hness, back to its last covert in the heart, and then expels it forever. Although no outward show of honour accrues to the victors of these good fights, they have their reward—a higher one than fame can bestow.

#### Letter of John Barclay.

As the tidings reach me in my chamber, of different movements and circumstances that transpire, my mind seems permitted to travel on into the future, and to see what some are contriving and concerting to strengthen their cause, and to possess themselves as it were of the strongholds and the passages. Oh! the deceit and the workings of that spirit, in those that despise and forsake the light of Christ in their own consciences! Yet, through all, though I have sorrowful cause to believe some of understanding must and will fall, yet, many tall and beautiful cedars,—I never felt more strongly confirmed in the ground taken by our early Friends, and in the belief (as thou expresses it,) that all will be made to work together for the good of the poor little remnant who are concerned through all sufferings to keep to this ground. Oh! I often fell inwardly cheered and animated, in the midst of the most gloomy prospects, for the power of Truth is the same whatever it was, and the Lord can confound, even by feeble instruments and unlikely means. It matters not through whom help comes, so that it comes from Him that made heaven and earth, and has set a bound to the roaring waves. Ah! I often think of the language of one of our ancestors on his death bed, "the spirit that now lives and reigns in me, shall yet break forth in thousands;" and this is my full belief, even if the number of active and influential members in our Yearly Meeting were greatly diminished or even swept away. Oh! the Lord can turn the fruitful field into barrenness, and make the desert to blossom as the rose.

First mo., 1836.

#### Wanderings over Bible Lands and Seas.

##### BETHEL, SHILOH, AND THE WELL AT SYCHAR.

The daylight which had served us for our last view of Jerusalem began to decline soon after we turned northward from that point, and descended the hills which hid from us the holy city and the bill country of Judea.

It is seldom possible to start on a long expedition in the East early in the day. Our departure had been delayed by a stormy debate in the courtyard of Simon's hotel, between the dragoman and the muleteers. The Arab muleteers had endeavoured to persuade us to take two or three inferior horses, and on a journey which was to last a month this was a point which could not be yielded, and the English consul for Caiapha and the French consul kindly came to our aid.

We felt sure the contest would end as we wished, and meantime could do nothing but watch the progress of the debate, and regret the loss of time. Voices were raised to angry shrieks and lowered to fierce menacing murmurs; the faces of the disputants expressed the most violent passions. The dark eyes glared and flashed, and the lips of some foamed with rage, and hands were raised in deprecatory or threatening gesticulation. The muleteers began to detach the trunks, and seemed on the point of leading away their animals and abandoning the bargain. Our dragoman helplessly stormed and pleaded; the English consul took calm amidst the tempest, occasionally throwing in a few strong quiet words which at first increased the clamor, but finally calmed it. The whole was to us like a most vivid drama or pantomime, the gestures and expression of the disputants rendering the knowledge of the language scarcely necessary to the comprehension of their meaning.

At length the horses we declined were led away, the horses we wanted were brought in their stead,

and our whole caravan clattered out of the courtyard and over the rough stony streets. But the loss of time in this debate had left us only one hour's daylight for the four hours' journey to Bethel, where our tents were to be pitched for the night.

After we turned from our last lingering gaze at Jerusalem the sun sank behind the western hills, and almost before we had begun to think of the decline of day the brief twilight was over, and it was dark.

The guide, who rode before us, was deaf to all our entreaties to relax his pace. We scrambled on after him in the dark over the rough roads. The darkness deepened; no moon rose, and the stars which glittered so brilliantly above us, and the fireflies which darted to and fro on each side or across our path, only made the blackness of the night more apparent. To attempt to guide the horses was in vain; nothing was visible but the ghostly apparition of a white horse before me, of which I must on no account lose sight. Up and down the stony paths we scrambled, but might have been quite tranquil if we could have trusted our safe agile little Syrian horses as they deserved. They never made a false step; but we were not sorry to find our tents pitched at Bireh (Beeroth), when we reached it, instead of having to ride an hour further to Bethel, our original destination.

We had to rise very early on the following morning. A long day's journey was before us to Nablous (Shechem), and the lost hour of the preceding day had to be made up.

The way between Beeroth and Bethel lay over craggy hills, reminding us again of Dartmoor, only brown and grassless, and of limestone instead of granite. On the height of Bethel are the ruins of a Greek church and several old foundations of houses with large stones. Beyond these was a rocky hill strewn with many rough stones, of which Jacob might have made a pillow, or afterwards Jacob's altar-stones for his rival temple.

And this is Bethel, "the house of God," where in tradition the angel's ladder rested, linking Jacob's pillow to the throne of God. What made it "dreadful" and sublime? Certainly not any intrinsic beauty or sublimity in the scenery. When Jacob lighted on it it was "a certain place." No more characteristic word is found to describe it. He rested there, not because it was a place of streams or groves, or shady rocks, or in any way a tempting shelter, but just for the same reason we had tarried at Beeroth, "because the sun was set." It was no snowy Alpine summit, forming naturally a flight of spotless altar-steps from earth to heaven—a pedestal on which one could well imagine the angelic ladder might have rested. It was an ordinary brown hill-side strewn with rough stones, over which passed the high road. Nor was it fenced off from common ground, like Moriah, by precipitous ravines. You could not define the moment when you arrived at it or left it. There was nothing to distinguish it from any of the undulating hills around.

When Jacob laid down to sleep, it was to him a bare featureless hillside strewn with stones, which he could not have recognized when he returned from Haran among the many similar places around. When he awoke out of sleep he said, "Surely the Lord is in this place, and I knew it not." There was no terror, or majesty, or beauty inherent in the place, especially to reveal or symbolize the divine presence. But God was there. This was its consecration and its glory. Heaven had been opened to Jacob's vision there. The voice of the Lord had spoken to his spirit there in human words, and therefore the place was full of solemnity and majesty to him. It was the house of God. And then

when he returned, a patriarch and a prosperous man from his long exile, he built an altar and called it place El Bethel, because there God appeared unto him,—an altar of the religion whose highest manifestation is not in nature, or sun or stars, or noumatics, but in the Son of man.

The subsequent history of Bethel has little more religious interest for us than that of any heathen shrine—a scene of idolatrous worship, with the old Egyptian animal symbols recalled by Jeroboam on Egypt, of feasts and sacrifices mocking and parodying God's ordinances at Jerusalem, of prophetic denunciation, and at last of judgment, when the bones of false priests and prophets were exhumed from the tombs among these hills, and burnt and strewn to the winds on an altar formed of these shattered stones.

Temple, city, altar, shady grove, all the relics of that idolatrous ritual have perished without a trace, and the bare hill-sides lie again ordinary and tony, and solitary and dreary, as when sunset surprised Jacob upon it, and the heavenly vision transformed the place in his eyes from a sweep of barren moorland into a gate of heaven.

From Bethel we rode along a rough watercourse, through a richly wooded valley among figs, olives, and vines, to a dell where was an ancient well. From this we crossed a plain to the foot of a steep hill crowned by a village, called by our guides Sinjel. Its situation was more picturesque than usual. The height on which it stood was rocky and precipitous, with an abundant ice-cold spring in the centre of the poor rough cabins, rising under the shadow of an arch, ruddy hewn in the rock. As we dismounted, some of the women at the well their pitchers from the deep spring, and poured water into the stone troughs for our horses, and then gave us to drink, women and children looking round us, and curiously examining our Frank dresses and faces while we rested. This ice spring is probably the cause why this village is still inhabited, among the numbers of deserted towns and villages which are dotted over the hills and valleys of this old inheritance of Benjamin. We led our horses down the precipitous rocky path from Sinjel to the plain, and after a short gallop across the level, reached another village on the plain, which the dragoman called Turmus Aych. The scriptural names I do not know, and yet, probably there is not a village we pass but dates back to early Hebrew times, if not beyond these to the days of the Hittite and the Perizite, with their gigantic stones, and cities walled up to heaven. Everywhere when you come amongst human dwellings in this country, you find traces of more energetic and prosperous races, large regularly squared stones, tanks hewn in the rocks for rain-water; broken cisterns once cemented and lined with iron, now holding no water; threshing floors levelled on the rocky hill-sides, where the wind would cut as a natural fan,\* sweeping the chaff from the rain; wells with stone seats on their edge; fine led terraces for vines and olives, broken in many places and bared by the winter torrents. Everywhere traces of industrious and skillful men, yet no uns, only heaps of stones, squared and chiselled carefully, it may be, but scattered, except here and here the remains of a church built by the Crusaders, patched and twisted into a mosque. The wheels of time, and conquest, and misgovernment have ground too heavily over the land, to leave anything of value above the surface. It is only the *Intaglio* relies that are left perfect; it traces of labour graven in on the solid rock in tanks, and threshing-floors, and terraces cut out of the hill-sides.

(To be continued.)

## WAITING IN HOPE.

Selected.

A little longer still,—patience, beloved!  
A little longer still, ere heaven unroll  
The glory, and the brightness, and the wonder  
Eternal and divine, that wait thy soul.

A little longer, ere life, true, immortal  
(Not this our shadowy life) will be thine own,  
And thou shalt stand where winged archangels worship,  
And trembling bow before the great white throne.

A little longer still, and heaven awaits thee,  
And fills thy spirit with a great delight,  
Then our pale joys will seem a dream forgotten,  
Our sun a darkness, and our day a night.

A little longer, and thy heart, beloved,  
Shall beat forever with a love divine,  
No joy so pure, so mighty, so eternal,  
No mortal knows and lives, shall then be thine.

A little longer yet, and angel voices,  
Shall sing in heavenly chant upon thine ear;  
Angels and saints await thee, and God needs thee;  
Beloved, can we bid thee linger here?

## HASTE, TRAVELLER, HASTE!

Haste, traveller, haste! the night comes on,  
And many a ship will soon be gone;  
The storm is gathering in the west,  
And thou art far from home and rest;  
Haste, traveller, haste!

Oh, far from home thy footsteps stray,  
Christ is the life, and Christ the way;  
And Christ the light. You setting sun  
Sinks ere the moon has scarce begun;  
Haste, traveller, haste!

The rising tempest sweeps the sky,  
The rain descends, the winds are high,  
The waters swell, and death and fear  
Beset thy path, no refuge near;  
Haste, traveller, haste!

Oh, yes, a shelter thou mayst gain,  
A cover from the wind and rain—  
A hiding-place, a rest, a home—  
A refuge from the wrath to come;  
Haste, traveller, haste!

Then linger not in all the plain;  
Flee for thy life, the mountain gain;  
Look not behind, make no delay;  
Oh speed thee, speed thee on thy way;  
Haste, traveller, haste!

Poor, lost, benighted soul, art thou  
Willing to find salvation now?  
There yet is hope, hear mercy's call—  
Truth, life, light, way, in Christ is all;  
Haste, traveller, haste;

—Bonar.

*Faithful Watchman.*—When Pompeii was destroyed, there were many buried in the ruins of it, who were afterward found in different situations. There were some found in deep vaults, as if they had gone thither for security. There were some found who were in the streets as if they had been attempting to make their escape. There were some found in lofty chambers. But where did they find the Roman sentinel? They found him standing at the city gate, where he had been placed by his captain; and there when the heavens threatened him, there when the earth shook beneath him, there when the lava-stream rolled, he stood at his post, and there, after a thousand years had passed away, he was found. So let Christians learn to stand to their duty, willing to stand at the post on which their Captain has placed them, and they will find that grace will support and sustain them.

*War.*—I know not whether any war ever succeeded so fortunately in all its events, but that the conqueror, if he had a heart to feel or an understanding to judge as he ought to do, repented that he had ever engaged in it at all.—*Erasmus.*

For "The Friend."

## Letter to Mildred Badell.

The following letter from a late valuable elder of Philadelphia, speaks so plainly her attachment to the ancient principles of Truth, that it seems appropriate to give it publicity at this time.

Philadelphia, 5th mo. 28th, 1836.

My beloved Friend.—Thy letter was truly acceptable, I may say my love unfeignedly flows towards thee. It remains the same as when our acquaintance commenced. I at that time felt much sympathy with thee, out of meeting, and in meetings both for worship and discipline, lest through diffidence the church and thou also might sustain loss,—what if I should say, partly from the fear of man, or of taking up the time that others might occupy. Far be it from me to hold out an idea that proper care should not be exercised by the true ministers of the gospel, that there should be no premature offering. But bear in remembrance, my dear friend, that the fear of man bringeth a snare. May the hands of thy arms be made strong through the power of the mighty God of Battle. He has covered thy head in the day of battle, and will, I confidently believe, continue to do so, to the end. Thanks be unto him, his weapons are spiritual, and mighty even to the pulling down the strongholds that Satan is striving to erect, the world over. Happy! thrice happy is it for poor man that the adversary's power is limited.

I believe that some of my dear friends in your Yearly Meeting have been deeply tried by his subtle working in the minds of certain members\* of it, who have thought fit to offer sentiments, not in accordance with those held by those who have kept their first love. The members of the Church of Christ, should all speak the same language;—no confusion of tongues ought to be heard amongst us. Our worthy predecessors suffered great persecution in their day, when the command was, "come out from among them,"—Episcopalians, &c.

The sentiments above alluded to, are calculated to mislead the minds of our young Friends, finding those of elder brethren and sisters eluded, yet I know some of the dear young people,† several years ago, clearly discovered the snare, [of such sentiments] and avoided it,—and were strengthened to speak plainly on the subject to those who were endeavouring, evidently, to my mind, to make proselytes to their views. Sorrowful reflection! after our society had passed through a sore conflict in endeavouring to support inviolable the principles and doctrines of our Religious Society [such a defection as this should occur.]

Oh! may we, my beloved friend, endeavour to hold fast the profession of our faith without wavering. I know it is not in man that walketh to direct his steps aright,—and man's steps are ordered of the Lord. Yet feeble and helpless as we feel ourselves, the heavenly Shepherd, who watcheth over his flock by day and by night, would keep all to perfect safety, by the crook of his love. Why should any be weary, those who have turned aside from following the footsteps of Christ's companions!—It is because man doth not attend to the injunction formerly given, 'watch and pray, that ye enter not into temptation.'

Thy sisterly salutation I felt whilst reading it, was offered in that love which the spirit of the gos-

\* Elisha Bates, and some others.

† Referring amongst others, to one of her children, whose spiritual eye having been anointed to perceive the snare in modern modified Quakerism, was faithful in exposing the progress, and in warning its advocates. His course of consistent usefulness in the church; was finally finished, and he gathered to his heavenly home, ere the storm he saw approaching, had burst with desolating effect on the religious society he loved.

pel inspires. Thy wishes in regard to our having a good Yearly Meeting have been realized, as thou wilt no doubt see published in "The Friend." I therefore need no more on the subject than that I am, I hope, thankful therefor.

Thy messages of love were given to our mutual and justly valued Friend J. E. and children, with thy request that some of them should indolge thee with a few lines. This I doubt not has been complied with. Their love to thee has not diminished. Thou hast many friends in this city and elsewhere.

I may now give thee, my dear friend, a brief account of my own situation. [I am still confined to my chamber, with the exception of being able to get into some rooms nearly on a level with it. My complicated infirmities have varied but little for many months past. I often have had to admire that my stay in mutability has been thus lengthened out, yet it is not for me to say "what didst thou in removing from works to reward, those who were in the prime of life and useful members of society." His ways are inscrutable and past finding out by us poor short sighted beings. Although I thus speak, I may say, I have frequently been brought secretly to utter this language, "not my will, but thine, O Lord! be done. Thou hast an undoubted right to do with me according to thy good pleasure."

We have had the company of J. T. from Nine Partners, at our Yearly Meeting. He made us a visit, and read to my husband and self, all his wife's letters, forming a kind of diary whilst crossing the mighty ocean, and on her arrival at Liverpool. \* \* \* \* \* Oh that all who go forth as ministers to the people, may minister in that ability which God gives. What will preaching avail without the holy unction accompanies it.

I have often remembered the kind reception our mutual friends E. K., S. L., and I, met with at your house. It was a comfortable resting place to us. Dear E. has often expressed, in her letters, a strong attachment to her American friends. It is now a very long time since I have written to her, or to any of my friends. Leaving over to write is difficult in my situation, and is always attended with more or less pain. The little notes or memoranda I make, are generally done sitting erect in my chair, holding in one hand a light book on which I place my paper. My dear friends, I think, will excuse my not writing as often as could be desirable. I hope this will not discourage them from writing when they feel an inclination to do so. It is truly gratifying to receive a line from them. My husband unites in love to thee. I now bid thee farewell. From thy affectionate friend.

#### The Legacy.

Selected.

"Peace I leave with you, my peace I give unto you; not as the world giveth, give I unto you."—John xiv. 27.

Jesus knows from experience what his people need. His life on earth was a life of trial, trouble and grief. He was the "Man of Sorrows." Yet, in the midst of all, he enjoyed peace. His faith was in lively exercise, and his repose on his Father's love was perfect. When all was confusion and strife without, he had peace within. And when he departed out of this world, to go unto his Father, he left us peace as a legacy: "Peace I leave with you, my peace I give unto you." Our souls may be peaceful, let our outward circumstances be what they may. By the exercise of faith in Jesus, by staying the mind on Jesus, and by acquiescing in the will of Jesus, we shall have peace. So it is written, "Thou wilt keep him in perfect peace, whose mind is stayed on thee, because he trusteth in thee." My soul, I charge thee to cast every care

on Jesus. Submit to his will, nay, prefer his will to thy own. Let the word of Jesus be thy rule and comfort, let the glory of Jesus be thy aim and object, and let the legacy of Jesus be taken to the throne of grace, that it may be paid thee by his heavenly Father. Pray, pray for holy tranquillity of mind amidst all the storms of time, and expect an inward calm of spirit both in life and death. Believe, and the legacy is thine. Pray in faith, and the legacy will be paid thee. Thy Saviour, who left thee this legacy on earth, lives in heaven to see it paid to all applicants. Therefore, present it in confidence, expect to receive it, and thou shalt soon enjoy it. We that believe, do enter into rest.

"Be careful for nothing; but in everything, by prayer and supplication, with thanksgiving, let your requests be made known unto God. And the peace of God, which passeth all understanding, shall keep your hearts and minds through Christ Jesus."—PHILIPPIANS IV. 6, 7.

*The Island of Java.*—Batavia, the capital city, is a brilliant specimen of Oriental splendor. The houses, which are white as snow, are placed two or three hundred feet back from the street, the intervening space being filled with trees, literally alive with birds, and every variety of plants and flowers. Every house has a piazza in front decorated with beautiful pictures, elegant lamps, bird-cages, &c., furnishing accommodations for the family, who sit here mornings and evenings. At night the city is one blaze of light from the lamps. The hotels have grounds of eight or ten acres in extent around them, covered with fine shade-trees, with fountains, flower-gardens, &c. Indeed, so numerous are the trees, the city almost resembles a forest. The rooms are very high and spacious, without carpets and but few curtains. Meals are served up in about the same style as at first-class hotels in the United States, although the habits of living are quite different. At daylight coffee and bread are taken to the guest's room, and again at eight o'clock, with light refreshments. At twelve and tea are always ready day and night.

No business is done in the street in the middle of the day, on account of the heat. The nights are serene and cool and delightful; birds are singing all night. The thermometer stands at about 82 degrees throughout the year. The island city of Java contains a population of 10,000,000; the tigers, leopards, anacondas, and poisonous insects of all kinds. The finest fruits in the world are produced in great profusion.

*Obedience of Children to their Parents.*—My mother lived to the year 1688, and was a good one. I loved her very tenderly and carried myself towards her with dutifulness; this she fully expressed on her death-bed, and of her dear love for me. I can say in truth, that I have very often looked back, and seriously reflected upon the whole course of my behaviour towards her, and have found great peace and satisfaction of mind; my conscience on the nicest scrutiny has not reproached me; had it been otherwise, I am sure it would have laid very heavy upon me. I write this as a memorial to all children in general into whose hands this may come, but more directly and particularly for my own children and their children's children. For, indeed, it is the incumbent duty, both natural and divine, of children towards their parents, to obey them in all their just and lawful commands; without which, they are not to expect the blessing, but instead thereof, the displeasure, if not the curse of the Almighty, which, I could abundantly prove, by numerous texts of the Holy Scriptures.—Joseph Pike.

#### The Sugar Pines of the Sierras.

We were very tired when we dismounted at Clarke's log hut and canvass dining tent in the glorious forest, thirty miles from Mariposa—fire in body and in brain; tired by our seven hours horseback riding, and by the perpetual feast of floral beauty and sugar-pine magnificence which had delighted eye and heart. But it did not require a long time to restore us. Half an hour's rest under one of the stately firs that towered above the cabin, and a cup of tea with our noot meal, fit for a mandarin, put us in good working trim for the afternoon's excursion. We were only five miles from the mammoth trees. An easy upland ride of an hour would lead us to the grove where the vegetable Titans we had so often read about, with a wonder tinged with uubelief, held their solemn court.

And I confess that I began to doubt, as the time for mounting again approached, as to the existence of the marvels. Was it possible that before sunset I was to stand by a living tree more than ninety feet in circuit, and over three hundred feet high? Think what these figures mean, my hasty reader, when transformed into solid bark and fibre. Take a ball of cord, measure off a hundred feet from it, cut it and tie the ends, and then, by the aid of four or five of your companions, stretch it into a circle, (if you have a parlour spacious enough to permit the experiment,) and imagine that space filled with a column of a vigorous cedar. Now conceive this tree rooted on the common near the entrance. What do you say to the idea of looking up its smooth trunk to a point higher than the topmost leaf of any elm on the Tremont-street mall, and of seeing there a bough thicker than the largest of those elms shooting out from it? What do you say to the fact that its plumes would nod a hundred feet above the vane at Park street spire? What say you to the possibility, if it lay hollow on the ground, of driving a barouche and four through it without their being able to touch the highest point of its curved ceiling "with a ten-foot pole?" Then think of it cut up into six thousand cords of wood.

The Mariposa grove stands as the Creator has fashioned it, unfronned, except by fire, which, long before the advent of Saxon white men, had charred the base of the larger portion of the stalwart trees. We rode on for an hour, climbing all the time, till we reached a forest plateau, five thousand feet above the sea. This in New England, is the height of Mount Washington, where not a scrub can grow. Riding on a few rods, through ordinary evergreens with dark stems, we at last catch a glimpse of a strange colour in the forest. It is a tree in the distance, of a light cinnamon hue. We ride nearer and nearer, seeing others of the same complexion starting out in the most impressive contrast with the sombre columns of the wilderness. We are now in the grove of the Titans. We single out one of them for a first acquaintance, and soon dismount at its roots. I must confess that my own feelings as I first scanned it, and let them roam up its tawny pillar, was of intense disappointment. But then I said to myself, this is doubtless one of the striplings of the Anak blood—only a small affair of some forty feet in girth. I took out the measuring line, fastened it to the trunk with a knife, and walked around, unwinding as I went. The line was seventy feet long. I came to the end of the line before completing the circuit. Nine feet more were needed. I had dismounted before a structure eighty-four feet high, and should not have guessed that it would measure more than fifteen feet through. It did not look to me twice as large as the Big Elm

on the Common, although that is only eighteen feet in circumference, and this was twenty-eight feet in diameter. During the day I had seen a dozen sugar pines which appeared to be far more lofty. The next one we measured was eighty-nine feet and two inches in girth; the third was ninety feet. There are nearly three times as many of the giant species in this grove as in the Calaveras cluster. Divided into two groups there are six hundred and fifty of them within a space of one mile and three quarters. Colonel Warren, the faithful and self-sacrificing friend of agricultural interests in this state, proprietor and editor of the *California Farmer*, measured the principal trees of one group on this ridge, some three years ago, and found one of 102 feet, two of 100 feet, one of 97 feet, one of 92 feet, one of 82 feet, one of 80 feet, two of 77 feet, three of 76 feet and thus gradually diminishing, till more than a hundred trees were on his list that measured fifty feet and upwards in circumference. This crowd of majestic forms explains the disappointment in first entering the grove. The general scale is too immense. Half a dozen of the largest trees spread half a mile apart, and properly set off by trees of six or eight feet in girth, would shake the most volatile mind with awe.

Four days afterwards, on the homeward path by another trail, I struck off the track with one of our party to see some "big trees" that were reported to be a mile from the path, near Crane's Flat. We found them. The first one we approached was the only one of the species in the range of vision, and reared its snuff-coloured columns among some ordinary firs. How majestic it swelled and towered! My companion and I both exclaimed: "This is the largest tree we have yet seen; this will measure more than a hundred feet." We gazed for a long time at its soaring stem from which, a hundred feet above us, the branches that shot out bent suddenly upwards, like pictures of golden candlesticks in the Hebrew temple. It seemed profane to put a measuring tape upon such a piece of organized sublimity. But we wanted to know how much more than a hundred feet could be claimed for it, and I made the trial. It was just fifty six feet in circuit, but little more than half the size of the monarchs in Mariposa, which it seemed to excel so much in majesty. There were a hundred trees in the Mariposa grove larger than this, and all of them together did not make half the impression on me that this one stamped into the brain at first sight.—*From a California Letter in the Boston Transcript.*

**Humility, with the growth of the better seed of the kingdom.**—I think I have seen the danger of young men or women dwelling anywhere else than in the valley of humility. Human learning, human attainments and excellencies,—I mean all those things that are obtained by the memory, judgment, reasoning powers, and mental abilities, separate from any immediate influence and assistance derived from the source of all true wisdom, natural acquisitions and talents, are well in their places and are serviceable to us, when kept in subjection to the pure teachings of Him, "who teaches" by His Spirit "as never man taught." But when any natural faculty or talent of the mind, or acquisition by virtue of that talent or faculty, usurps and domineers over the little seed of the kingdom sown in the heart, it had been better that such an enemy were cast as it were into the sea, than that such mischief should be done. I have been in company with some young persons of our Society, who have been not a little injured by giving way to pride and foolish talkativeness, in respect to

many matters, in which, though they seem well informed, yet not keeping in the littleness and lowliness, they have acquitted themselves but ill, through letting in a forward, prating spirit. Now the best light in which we can view true talents and virtues, and in which they are set off to the best advantage, is the sombre shade of humility. For the more the frame-work is clouded, or gilt, or carved, or ornamented, the more there is to take off the attention of the eye from the picture itself. So that it seems to me best for each of us to dwell in the littleness, in the lowliness; always bearing in mind whence we are, even from the dust, and whither we shall return, even to the dust; and that we should not forget from whence all that is good, either immediately or mediately comes, even from the source of all good. This would make us backward and timid at giving our judgment; it would render us ready and willing to esteem others better than ourselves; quick to hear, slow to speak, slow to wrath; because we should be patient, humble, forgiving one another, loving one another, pitying one another; for we should then know how frail man is.—*John Barclay.*

**How to Disarm an Enemy.**—It is said that bees and wasps will not sting a person whose skin is imbued with honey. Hence those who are much exposed to the venom of these little creatures, when they have occasion to give bees, or to take a nest of wasps, smear their face and hands with honey, which is found to be the best preservative. When we are annoyed with insult, persecution and opposition, from perverse and malignant men, the defence against their venom is to have our spirit bathed in honey. Let every part be saturated with meekness, gentleness, forbearance and patience; and the most spiteful enemy will be disappointed in his endeavours to inflict a sting. We shall remain unharmed, while his venom returns to corrode his own malignant bosom; or what is far better, the honey with which he comes into contact will neutralize his gall; the coals of forgiving love will dissolve his hatred, and the good returned for evil will overcome evil with good.—*Golden Rule.*

**Schemes of trade and unprofitable worldly care.**—Though absent in body, my heart yearns for my brethren at home, with desires for their preservation and advancement in the Truth. I am very sensible that a field of labour will open, to guard Friends and keep them from stepping into schemes of trade and unprofitable worldly cares. It will indeed be sorrowful, if any who have been brought to see the vanity of the world and its friendships, and had their prospects towards enduring good, should lose the sense thereof, and run with a giddy multitude into the pursuit of earthly treasure. In obtaining this they may be greatly disappointed, and may lose the enjoyment of that favour which is better than life.—*John Pemberton, while in England.*

**How the life of Truth growth in dominion.**—I have found myself much stripped as to a sense of good, and tried with poverty many days. I suppose I have been accounted by some, as one of the better sort of people, but have seen great occasion to beware of a disposition that would feed upon the praise or commendations of others; a carnal selfish spirit is very apt to present and creep in here if possible, and I have seen it hurt many who have had right beginnings; it always introduced dimness and oppression, to the pure, precious, innocent life of truth, which only growth up into dominion, through deep abasement of soul and the entire death of self.—*John Churchman.*

**Talebearing and Detraction.**—Talebearing and detraction are great evils, often destructive to the peace and comfort of civil, social and religious society. In order to be quite clear of them, we must avoid repeating circumstances injurious to the reputation of another, unless we are clear in our minds that we have some good end in view by so doing. If we know them to be true, it is still a violation of the golden rule of "doing unto others as we would they should do unto us," and if we are not quite certain of their truth, it is a manifest injustice. "Thou shalt not go up and down as a talebearer among my people." "A whisperer separateth chief friends."

The more we help others to bear their burdens the lighter our own will be.

## THE FRIEND.

TENTH MONTH 19, 1861.

There is no way in which we can promote the well-being of the coloured people in this country so effectually as by giving them an education which may prepare them for filling higher positions in the community, than those which generally are occupied by them. This consideration induces us to look with a favourable eye upon the re-opening of the evening School for them in Camden for the winter, and we hope that the requisite funds for its support will be promptly and cheerfully furnished by Friends. Instances have come to our knowledge of great good having arisen to some from the education received at the kindred school in this city, and we hope that the Association having charge of the schools may be encouraged in the re-opening of their friends, to less than by their liberal pecuniary aid.

### CAMDEN EVENING SCHOOL.

Application having been made by the coloured people in the vicinity of South Camden, N. J., to the Philadelphia Association of Friends for the Free Instruction of Adult Coloured Persons, to have the Evening School held there last winter, re-opened this season; the Association has concluded to again take charge of it, if sufficient funds can be obtained to defray the expenses of the school: to conduct which from \$200 to \$300 will be required, depending upon the length of the session.

One hundred and forty persons entered at the school last winter, and there was an average attendance of forty for each evening during the whole session. The school is believed to have been of much advantage to those who partook of its benefits, and the Association hope that Friends will feel disposed to contribute the funds necessary to have it re-opened this year.

Donations for the support of the school may be left with,

### SUMMARY OF EVENTS.

UNITED STATES.—*The progress of the Struggle.*—So far as appears, no important change has recently taken place in the positions of the hostile armies near Wash-

# THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XXXV.

SEVENTH-DAY, TENTH MONTH 26, 1861.

NO. 8.

PUBLISHED WEEKLY.

Price Two Dollars per annum, payable in advance.

Subscriptions and Payments received by

JOHN RICHARDSON,

AT NO. 116 NORTH FOURTH STREET, UP STAIRS,  
PHILADELPHIA.

Postage to any part of Pennsylvania, for three months, if paid in advance, three and a-quarter cents; to any part of the United States, for three months, if paid in advance, six and a-half cents.

For "The Friend."

Benjamin Ferris.

(Continued from page 50.)

Diary continued, 1761.—"In the Sixth and Seventh months I was at many meetings abroad, as Haddonfield, Philadelphia, Concord, Kennett, New Castle, &c. It was still a low time with me, and fear sometimes prevailed that I had not entered in at the right door. What to do, I knew not. There is nothing in the world I desire, riches, wisdom, honour, pleasure or anything else in comparison of the love and favour of God. I am ready with Peter to say, 'Behold, I have left all, to follow thee,' and am a fool among men for thy sake.

"Seventh month, 24th. It has long been my desire to accompany some public Friend, on a journey, being weary of business, and the hurries of the world, and hoping it would be a better time with me, if I was from home, and free from cumber. Such an opportunity now offered. It was to accompany Ann Newlin to Sassafra, where we were to join Jane Crossfield, [from England,] in a visit to the meetings on the eastern shore in ryland, and to those in the lower counties in Delaware.

"I went the journey proposed; and with Jane at all these meetings, [being absent] about three weeks. Eighth month 10th, after returning home, I attended our Quarterly Meeting at Concord. Before I went this journey I had been very desirous to get a little from home, expecting I should not have such heavy, distressing seasons, but it proved a low time with me throughout the journey, which I think has afforded me instruction. I have been taught that I was mistaken in concluding, that either the company of good Friends, or a total deliverance from secular affairs could procure me repose. I am sensible that with the Lord are the issues of life and peace, which are only to be obtained when he is pleased to open and hand them forth, and no engagements in business or want of instrumental help, will hinder those from obtaining peace, who diligently seek for it.

"Ninth month 4th. All the Lord's merciful visitations are worthy to be had in remembrance. This evening I walked solitarily out to our pasture, and there sitting down on the ground and turning my mind inwardly towards the Lord, he was graciously pleased to be near me. Under a sense thereof, my spirit was bent in reverent worship, and I was sweetly comforted in him, who is still

mindful of those whose desire is to him for strength and preservation. These, praised be his holy name, he mercifully vouchsafes in the needful time, well knowing that his children cannot live without him. I was afresh encouraged to hold on my way Zionward, and to offer to him the remainder of my days, to be what he would have me to be.

"Ninth month 20th. I went to Philadelphia on our Yearly Meeting. My mind for a considerable time before leaving home, had been bowed with reverent desire that I might be prepared to attend this, our yearly solemnity. As I turned my mind to the Lord, who never fails to regard those who depend upon him, he was pleased in good degree to grant me a consolatory season. His love dwelt in my mind, and fervent desires, and earnest cries were raised to him in secret, that he might grant me preservation from evil in all my conduct.

"During the several meetings for worship and discipline, in the main I had pretty good satisfaction. I staid over the week-day meeting in Philadelphia, and many country Friends were there. It was a very large meeting, and a very memorable time. The Lord's merciful regard was vouchsafed to us, greatly confirming Friends in that holy fellowship and union, into which all the Lord's children, according to their measures, are gathered.

"Tenth month, 13th. I went to the Monthly Meeting at Centre, having no prospect of anything but to suffer, which I was made willing to bear. After meeting, I came home without company but not without renewed cause of thankfulness and praise to the Lord, the great and good shepherd of his flock. His regard greatly increased my love to him, and my desire that I might be preserved from falling, and be conducted in the way that is acceptable to him, receiving him on his own terms.

"17th. Joseph White being on his return from England, where he has been on a religious visit, I accompanied him to Philadelphia. On the way we had conversation upon divers matters, some to satisfaction, and others sorrowful, such as that there was a great declension amongst Friends in many parts of England and Ireland from primitive zeal and concern for the maintenance of the discipline of the church. There is some hope of a revival, through the labour of a committee of about sixty Friends, who gave in their names at the last Yearly Meeting in London, to visit all the Meetings for Discipline throughout the nation.

"We went to see our Friends John Stephenson, Robert Proud, Hannah Harris, Elizabeth Wilkinson and Alice Hall, who came over in the ship with Joseph White, and were just landed at Philadelphia, as we arrived there.

"Eleventh month, 9th. I was at our Quarterly Meeting at Concord, where were three of the above mentioned Friends, viz., J. S., R. P. and A. H. They had good service.

"11th. I accompanied them to Wilmington, and they were at our Monthly Meeting. The next day I went with them to Kennett Monthly Meeting,—the day following to Bradford, and from thence to London Grove.

"16th. In the morning, before I arose, after a

painful travail and exercise, I thought I was in some degree made sensible of Divine regard extended, which renewed a strong desire in me, that I might be preserved in the way of Truth. I have at times distressed myself when in company with good Friends, considering how valuable, eminent and serviceable they were, and favoured with the enjoyment of heavenly goodness, whilst I seemed good for nothing, miserable and never likely to be otherwise. Through these thoughts I have been discouraged and ready to give out,—but I am now sensible that it is not right to make such use of the example of the good and worthy. I ought to be content under the present dispensation of Divine Providence, patiently awaiting his time for moving forward, not being discouraged, or giving up the struggle because I cannot go so fast as I wish, nor be of as much service as I desire to be; for this very desire may have something of self in it."

On the 25th of the same month, writing to one of his cousins, who was a communicant among the Presbyterians he says, "I have often remembered thee with strong desire for thy advancement in the Truth, and increase in an experimental knowledge of the riches and efficacy of Divine grace, which would, if given my way, to have redeemed thee from all shadows, and directed thee to the substance. The secret operations of this grace, I believe thou hast felt in time past. Oh! may thou diligently wait for it, attend to it, for the work of thy salvation must be effected by it. It is an eternal truth, that 'by grace are ye saved through faith, and not of ourselves, it is the gift of God.' To this grace I commend thee; observe its directions, faithfully and honestly obey its requirements, then thou wilt have peace here and a happy resting place hereafter."

In a letter of the same date to his cousin, Reed Ferris, of Oblong, after informing him of the arrival of the five Friends from England on a visit to the churches of America, he says "they are at this time to the southward. I spent about a week with John Stephenson and Robert Proud, whose company and conversation were both agreeable and edifying. I believe they will be of good service in this country. Joseph White of Bucks county, came in the same vessel, having visited the meetings in England and Ireland to good satisfaction. By him I learn that Ann Moore is well received, and likely to have acceptable service in that nation, which I was glad to hear of."

In a letter to his cousin Gaius Talcott, dated Eleventh month 26th, he says, "In answer to thy desire of knowing how it fares with me, I can just say, that I find it safe for me at present to keep pretty still and quiet, saying very little concerning myself; as on the one hand I have nothing to boast of, so on the other I ought not to murmur or complain at the Lord's dealings, who best knows how to prepare us for his use and service. I was truly glad to hear so good an account of my cousins Mercey and Sarah, and much desire their preservation from all hurtful things. I doubt but as thou suggests, they may be in danger of hurting themselves by too much talking about religion. This is an error people too frequently fall into. It tends

lapse of centuries, the name of Shiloh is heard again from the lips of the prophet of lamentation (Jer. vii. 12-14; xxvii. 8.) It had passed into a by-word of desolation and ruin. "But go ye now unto my place which was in Shiloh, where I set my name at the first, and see what I did to it by the wickedness of my people Israel. And now, because ye have done all these works, saith the Lord, and I spake unto you, rising up early and speaking, but ye heard not; and I called you, but ye answered not; therefore will I do unto this house, which is called by my name, wherein ye trust, and unto the place which I gave to you and to your fathers, as I have done to Shiloh."

The prophecy evidently made a deep impression, for "Now it came to pass, when Jeremiah had made an end of speaking all that the Lord commanded him to speak unto all the people, that the priests, and the prophets, and all the people, took him, saying, Thou shalt surely die. Why hast thou prophesied in the name of the Lord, saying, This house shall be like Shiloh, and this city shall be desolate without an inhabitant? And all the people were gathered against Jeremiah in the house of the Lord."

Through the crimes of the later monarchy this desolate hill stood a warning to Jerusalem. To us who had stood so lately on the site of the levelled temple of Jerusalem, and had thus seen both desolations accomplished, the ruin which the Jews of Jeremiah's time knew so well, and the ruin which they thought so impossible, this dreary hill of Seltun had indeed a solemn interest, rare even in this land of promise and of doom.

We turned away from the scene of so many tender and terrible memories, where human hearts had throbbled with such varied passions of grief, and joy, and despair, and resumed our journey.

On the side of a hill near Shiloh we saw the cavities of many tombs. On another height near it we explored two considerable, but not very ancient ruins, of an Egyptian-looking church, supported by pyramidal buttresses, with a few olives near it, and three broken Corinthian columns prostrate inside,—and of a mosque, shaded by a beautiful evergreen oak.

Our visit to Shiloh had taken us out of the main route; for Shiloh (Judges xxi. 19.) is on the north side of Bethel, on the east side of the highway that goeth up from Bethel to Shechem, and on the south of Lebonah.

From Bethel we came; and we had turned to the east out of the highway to see Shiloh, and now we resumed the caravan route at Lebonah (El Lubban), on our way to Shechem (Nablos).

Near El Lubban we made our mid-day halt, in a valley under the shade of olives, and refreshed ourselves with oranges and hard eggs—the contents of our saddle-bags. Here a disappointment befell us, which certainly gave us a strong practical illustration of the value of water in these lands. We had sent the German servant, Wilhelm, to a well a mile off for water, and after waiting for some time, had the satisfaction of seeing him galloping up to us with the water-skin trickling at every step, so that, when he reached us, it only contained a wine-glass full. In a small way we could understand what the Israelites felt at Marah. But there was no resource. We had too long a journey before us to risk fatiguing the horses with any further expeditions, and the precious drops were generously declined by all, and at last conscientiously divided among all, and mixed with wine,—at that moment by far the least valued beverage of the two. That, however, and oranges consoled us; and in an hour or two we remounted and went on our way, over one rocky hill after another, with

occasionally a white village cresting some height in the distance, or a grove of olives dotting the hillsides, until on the summit of one of the hills we caught a glimpse, far off, of a tower which we wroted told us on a height above Nablos. Between us and it rose other lower hills, and a plain or broad valley, in which the brown earth was chequered by a mosaic of that greenest green of young corn. In this valley was "the parcel of ground which Jacob gave to his son Joseph."

In descending from the brow of this hill we again lost sight of our landmark and of the plain. In the side of the hill the path wound by a well deep in the shade of a rocky arca. We were too thirsty to consider what the character of the water might be, and eagerly filled our water-bottles to drink. But the water was green and very objectionable. A little further on, at the commencement of the plain near Nablos, we met a shepherd boy with a flock of sheep and goats. We asked him for some of the milk of the flock, and he milked some of the goats for us and gave us a draught. I would recommend no one to try this remedy. The new milk certainly increased our thirst, and in a very short time, made our throats and lips feel more parched and dry than ever.

But while we were waiting for our beverage we had leisure to consider the scene. We were probably just in the district where Joseph, the shepherd boy, went to see if it was well with the shepherds, his brethren, and well with their flocks. "Jacob sent him out of the vale of Hebron, and he came to Shechem, and a certain man found him wandering in the field."

These fields, just such flocks as these, and Joseph a shepherd boy, with probably just such a dress as the lad who gave us the milk to drink,—a short tunic, with a wrap like a plaid, over his shoulders, and a crook,—a boy with a clear, brown skin, and a lithe agile figure. He recalled vividly to us the shepherd prince's son, except that Joseph was clothed in the coat of many colours, the coat which was afterwards dipped in the blood of a kid, and taken to bear its false tale of death to the father who gave it.

We turned away with some reluctance from our suggestive shepherd lad, with his quiet white sheep and black goats browsing around him, and rode along the hillsides towards the entrance of the valley of Shechem. The valley became very rich, in some places, green with young corn, which we believed to be maize, and in others golden with wheat-fields ripe already to the harvest.

Two bandit-like Bashi-Bazouks joined us here, and gave us a specimen of their ingenuity as horsemen, and their regard for the property of the people they profess to protect, by galloping their swift Arab horses through the corn-fields, wheeling round and round among the ripe grain, and ruthlessly trampling it down. We remounted in vain through our dragoon. They evidently stood as much in need as any of their predecessors in this oppressed land of the lessons of John the Baptist.

Towards evening we reached the entrance of the valley of Nablos, one of the few places in Palestine which has preserved the intrusive Greek name (Neapolis) instead of the earlier scriptural one, Shechem or Sychar. The narrow valley of Shechem branches off from the broad valley we had been skirting, to the left, between the mountains Ebal and Gerizim.

(To be concluded.)

Christ comes with a blessing in each hand—forgiveness in one, and holiness in the other; and never gives either to any who will not take both.

#### Letter of John Barclay.

When the will is slain,—when we can say, "It is no more I," then how easy is the task of dedication, and how clear are the pointings, how light the burden of the cross of Christ. Then self is of no reputation indeed, and all crowns are laid down; nor does any snare of the enemy prevail.

The most unanswerable arguments, of which this day can give to the gain-sayers, is, to live down their misrepresentation; and the best argument, perhaps, for the early Friends, as was the case with the primitive Christians, is their life and conversation. At times, the low standing and feeble state of those that have a love for the cause of Truth, and the short comings of most of us, depresses me. Those who live within the hearing of the shouts of the Philistines, are taken, and perhaps disturbed by them. \* \* \* We must keep low, keep quiet, minding our particular calling, our inward condition, and feel the Lord inwardly as the Rock and Sanctuary, where none can make afraid.

Undoubtedly it is a trying day, a sifting time, and I think it must be yet more so, for though a few leaders of faction and of error have left us, and have swept away a number of followers, whom they have deluded, and who were not settled in the faith, and some of these hardly knowing why they belong to us, yet of those who remain, Oh! what a remnant really are *one with us!* Unless wonderful mercy, wisdom and strength, be manifested towards the unstable, as towards all of us, what can hinder their being scattered and driven away. Though the society seems somewhat relieved, yet grievous exercises remain to be borne, and a great deal to be worked through and worked out, before this once self-denying and redeemed people, can be reinstated to their former brightness and ancient purity. The Lord wants to be gracious, and I believe will hasten this work in his time. And Oh! that we may be so preserved and strengthened as to be made willing, through all baptisms, to be instrumental in our day, in ever so little a way or degree, to bring about that period, when the salvation of Zion shall go forth, as a lamp that burneth.

Second No. 6th, 1837.

*Too great anxiety after worldly possessions.*—First-day. The morning meeting was large, and I thought favoured with the overshadowing of that invisible Power which would gather the mind from the lo lores, and lo theres, and stay the thoughts and wandering imaginations, bringing all into captivity. I was thankful to feel this, but a fear possessed my mind, in respect of some, that there was too great an anxiety after worldly possessions. It is possible to pursue lawful things too eagerly; so as to be unfitted for higher and more noble attainments. It is a good thing, and becoming our Christian profession, to be content with such outward gain as may enable us to procure things convenient for us, without the appearance of grandeur or superfluity.—*Mary Copper.*

*Blistered Feet.*—I had for several years two sons at school at Geneva, Switzerland. In their vacations they, in company with their tutor, made excursions through Switzerland, Italy, Germany, &c., on foot, bearing with them knapsacks, containing their necessary wares for a month. They were provided with a small bar of common brown soap, and before putting on their stockings, turned them inside out, and rubbed the soap well into the threads of them, consequently, they never became frosted, or had blistered feet.

*The way true Religion affects us with regard to Dress.*—I am sensible that silks, ribbons and lace, are not anywhere in Scripture directly forbidden, but I learn from thence, that pride, and all manner of superfluity is. And if by wearing this rich silk, or adorning ourselves with the other superfluous ornaments, we feed and nourish a proud, vain desire, it becomes by this circumstance as unlawful as pride itself, and that they do so, I have greatly experienced. For though religion stands not simply in clothes, yet true religion stands in that which sets bounds and limits to the mind with respect to clothes as well as other things. And to strengthen this assertion, or rather, to prove it, I shall offer an instance of my own experience. When it pleased the Lord to visit my soul, and to appear to me in his glory, the view of which discovered to me my unworthiness, and caused me not only to despise and abhor myself, but my splendid apparel also. I had now no delight in dress and ornament, nor other things I had usually taken much pleasure in; true christianity, which I began to be acquainted with, set a bound to my desires, and directed me to plainness, before I had any intention of joining the society of the people called Quakers, and indeed, all earthly and transitory objects were and are in my view and estimation as loss and dross, in comparison of the excellency, glory, and beauty I beheld in God, and find in the enjoyment of his Divine favour, and at times I am ready to cry out, "Oh! how great is his glory, and transcendently great his beauty."—*Sophia Hume.*

*A word to Children.*—Children, where do the birds sleep?

"In the trees," answers a little voice.

Do they sleep in the nests?

"Yes, they do when they are little baby-birds; but when they grow up to be men-birds and women-birds, they sleep on the branches of the trees."

"I wonder they don't fall off," says little Molly.

Well it is a wonder. But see that bird sitting on a limb, and the wind blowing, and the branch swinging in the air, and even the peaches or apples shaken off, whilst it holds fast in its sleep, and wonder more still. God has been very good to the little birds, and has made them on purpose to hold on to the branch while they sleep. Little stragglers run down their legs under the skin to their toes, and when they rest down on a branch, these strings draw their toes tight round the branch, so that the more soundly they sleep the more tightly they cling to the twig. But Tommy, there, has been trying to speak for some time; let us hear what he has to say. Well, Tommy, what is it?

"Why, I wonder the birds are not afraid in the dark night, when the wind blows so."

Oh, God takes care of the birds. Read what Jesus says in Matthew vi. 26.

"Why is a child better than a bird?"

Why, when a bird dies there is no more of him. His body wastes away, and he has no soul. Now, what is it that looks out through our eyes? Does the eye itself see? No; no more than the window sees. We look through the window, and our soul looks through our eyes, and hears through our ears.

If, then, a child, is so much better than a bird, and God takes such care of the birds, why should children ever be afraid in the dark? When in the dark night the wind is blowing, think of the hundreds of little birds rocking in the wind on the branches of the trees, while God takes care of them, and then think how foolish it is for a good child to be afraid.—*Presbyterian.*

### BIOGRAPHICAL SKETCHES

Of Ministers and Elders and other concerned members of the Yearly Meeting of Philadelphia.

JOSHUA BROWN.

(Concluded from page 31.)

Having a concern to attend West River Yearly Meeting, Joshua Brown left his home on the 3rd of the Sixth month, 1783, for that purpose. He found Benjamin Sweet of New Jersey at the Yearly Meeting, and after the several sittings of that body were over, these two with Barnard Taylor and Mary Cox, appointed meetings at the Cliffs and at Herring creek. The number of members of these two meetings was very small, but there were a few hopeful young persons. Joshua not feeling clear of West River appointed a meeting there. He says that it appeared to him the abolition of desecration was there, in the keeping of slaves. This he deemed a great means of making their meeting houses desolate of members. He was also at meetings at Indian Spring, Sandy Spring, Elk Ridge, Baltimore, Gunpowder, Little Falls and Duer Creek. His labours appear to have been abundant, and well calculated to build his hearers up in our most Holy Faith, in the simplicity and spirituality of the Gospel dispensation. He reached his home on the 22nd, thankful for the favours received in his journey, and for the blessing of preservation bestowed on his family in his absence.

On the 15th day of the Fourth month, 1787, accompanied by his step-son, Jacob Maule, Joshua Brown with the concurrence of his Monthly Meeting, left his home to pay a visit in gospel love to the meetings constituting Warrington and Fairfax Quarterly Meeting. Lodging that night at the house of Joseph Udegraf, they next day, the 15th, attended a morning and afternoon meeting at Little Britain. At this meeting they met with John Townsend from old England, and Thomas Scattergood from Philadelphia. Finding these Friends were about proceeding to attend the upper meetings, as Newberry, Warrington, Huntingdon and Manalapan, Joshua was brought into a strait, these being the meetings he himself had thought of taking first; after a time of some exercise of spirit, he thought it best to go to Pipe Creek. The visit to all the meetings he had in prospect, appears to have been accomplished to the peace of his own mind, although he sat many of them through in silence. As usual, the fundamental truths of Christianity were at times largely opened by him.

Having a concern to visit the meetings of Friends in New York and New England, Joshua Brown was set at liberty by his Monthly and Quarterly Meetings to fulfil it. Leaving his own dwelling, Fifth month 13th, 1790, he attended London Grove Quarterly Meeting. On the 19th he attended Radnor Meeting, and on the 21st rode to Philadelphia, Jacob Maule bearing him company. Passing through Trenton, Stony Brook and Woodbridge, they went into New York. After attending the meetings in New York, he passed into New England, throughout which he had abundant labour, and many precious opportunities of urging the necessity of clean hearts and clean hands. After a diligent service of nearly five months, he became so well as to be obliged to be conveyed to Philadelphia by water. His wife and son, Joshua, met him at Radnor with his own carriage, and with difficulty and much suffering to him, succeeded in conveying him home. He reached his residence, he says, "thankful in my mind to the allwise Disposer of events, that I was favoured to see my wife and family again. After this, I minded very fast, and was quickly restored to a pretty good

state of bodily health, for which I was humbly thankful, being also favoured with a quiet and peaceable mind for having endeavoured to comply with what I believed to be my duty."

Of the many notes made on this last journey, we may quote one. "The 20th attended meeting at Long Plain. In it I had to tell them to build on the right Foundation, that they might not be easily moved by seducing spirits, as many had been at that place. I earnestly exhorted those who had gone out from Friends, to return to the right fold of rest and peace. Timothy Davis had led them to hold a separate meeting, and had much afflicted the faithful members in that place."

This appears to have been the last journey out of his own Yearly Meeting made by Joshua Brown. He was now aged, and as his strength of body decayed, the powers of his mind sensibly weakened. It has been said of him, "he maintained a faithful testimony against slavery, and in younger life was the means of setting free a number of coloured persons, attached to an estate in which his first wife had an interest. Some of his acquaintance considered this conduct an act of injustice to his posterity, but others viewed it as a christian duty. Some of these last would often, in advanced life, refer to Joshua Brown's faithfulness in this respect, and contrast his course, favoured with the blessings of Divine Providence, with that of some of his contemporaries, who had preferred their outward interest, and kept their slaves, and whose inward and outward prosperity seemed blighted. Joshua was early concerned to discourage the use of spirituous liquors, and often desired his friends to set their faces against a practice so fraught with awful consequences to both soul and body. He pointed out the gradual depravity of mind which overspreads the drinker, and the loss of that composure and quietness, wherein alone true obedience to the Divine will can be known. He at times was concerned gratefully to commemorate the kindness of Providence, in that he had been enabled to get his harvest work done more to his satisfaction without, than he had formerly done with, such liquor."

When towards the close of his life, through weakness, he was deprived of the ability of attending religious meetings, he continued sensible of the Divine presence, in his quiet sittings at home, and he felt the reward of peace, in that he had been diligent in meeting with his brethren and sisters for worship, when his strength enabled him. In childlike innocence, he lay peacefully resigned to his condition, and throughout the period of his great weakness he gave no evidence of a fretful temper. Although his mind was weakened, yet his conduct was very instructive, and plainly manifested that Divine grace was sustaining and comforting him, and that in health he had dwelt under the influence of pure religion, which reduceth the selfish will, and prepares for a putting off the shackles of mortality with joy. His death took place on the 15th of the Tenth month, 1798, he being in the 82nd year of his age.

*Philosophers and Saints.*—I was walking through the streets of a great town on a warm Autumn evening. A high wind was driving huge masses of clouds across the sky, a sight which, by some curious association, always awakens the deepest thoughts in my mind. So it was on this evening. I think I never had such a profound feeling of the emptiness and worthlessness of human life. How futile, and vile, and God-forgotten we seem! What shadows we are, and what shadows we pursue! So thinking I turned into a literary institute which stood near. A man was speaking there, and he

was no more habbler. He spoke eloquently and well of science, and literature, and art, and the more he spoke my heart sunk within me the more. I looked round upon all these half-interested faces, of men immortal and sinful, and went out from among them in deep dejection. The wind was still stirring overhead, and the sky gray and troubled, as I turned to go home. But on my way, seeing another door open, and hearing a noise inside, I went in. It was a poor, uncomfortable room, not like the hall I had left, and the men and women there were simple and uneducated people, and many of them with faces filled with care, yet not without a grave gladness. The rich and refined people had been talking of art and science. The poor people were praising the Lord. My despair vanished, as a cloud dissolves into rain. I went out once more, and the wind roared overhead; but seemed now filled with the voice of the Eternal One,—that voice which calls sinful worias to the present possession of eternal life.

*True courage.*—A company of boys in — street, Boston, one day after school were engaged in snowballing. William had made a good hard snowball. In throwing it he "put in too much powder," as the boys say—he threw it too hard—and it went farther than he intended, right through a parlour window. All the boys shouted: "There, you'll catch it now. Run, Bill, run!" They then took to their heels. But the brave William straightened up and looked sober, as he said, "I shall not run." He then started directly for the house where the window had been broken. He rang at the door, acknowledged what he had done, and expressed his regret. He then gave his name, and the name of his father, and his father's place of business, and said the injury should be repaired.

Was not that noble? That was true courage. It is cowardice that would lead a boy when he has done an injury like that to sneak away and run to conceal it. How noble and brave it is to see a boy confess a fault, and not be afraid to face the consequences! Give us William whenever any real bravery is called for, rather than all those boys together who cried out, "Run, Bill, run!" He'll run the danger while they will sneak—*Wellspring.*

A true Christian, who feels the power of the grace of God, and is in the continual exercise of true faith, is like a watchman or sentinel, that hath his armour on and his shield ready; he knows he is on the borders of his enemies quarters, and keeps himself in perpetual watchfulness; in daily expectation of the devil's fiery darts, he keeps his shield in readiness; I see a temptation lies in such a thing, but I see the Lord's power is able to keep me out of it.

I see there is profit or pleasure in the snare; it is a hook that is baited, but I see the hook through the bait, blessed be God, and confidence I have in his power, that he is able to keep me from that thing, from all the baits of profit, pleasure or the friendships of the world.—*Stephen Crisp.*

*Teaching Children.*—Do all in your power to teach your children self-government. If a child is passionate teach him by gentle and patient means, to curb his temper. If he is greedy, cultivate liberality in him. If he is sulky, charm him out of it by encouraging frank, good humor. If he is indolent, accustom him to exertion. If pride makes his obedience reluctant, subdue him by counsel or discipline. In short, give your children a habit of overcoming their besetting sin.

## A LITTLE LONGER YET.

selected.

A little longer yet, a little longer,  
Shall violets bloom for thee, and sweet birds sing,  
And the lime branches where soft winds are blowing,  
Shall murmur the sweet promise of the spring.

A little longer yet, a little longer,  
Thou shalt behold the quiet of the morn,  
While tender grasses and awakening flowers  
Send up a golden tale to greet the dawn.

A little longer yet, a little longer,  
The tenderness of twilight shall be thine—  
The rosy clouds that float o'er dying daylight,  
Nor fade till trembling stars begin to shine.

A little longer yet, a little longer,  
Shall stary night be beautiful for thee,  
And the cold moon shall look through the blue silence,  
Flooding her silver path upon the sea.

A little longer yet, a little longer,  
Life shall be thine—life with its power to will—  
Life with its strength to bear, to love, to conquer,  
Bringing its thousand joys thy heart to fill.

A little longer yet, a little longer,  
The voices thou hast loved shall charm thine ear,  
And thy true heart that now beats quick to hear them,  
A little longer yet shall hold them dear.

A little longer yet, joy while thou mayst;  
Love and rejoice, for time has naught to store;  
And soon the darkness of the grave shall bid thee  
Love and rejoice, and feel and know no more.

## HE CARETH FOR YOU.

"Casting all your care upon Him, for He careth for you."  
1 PET. V. 7.

What is it to cast the care on God?  
Is it to keep the heaviest load,  
And lay some trifling weight aside,  
Still taking thought for every hour,  
As if the Lord's sustaining power  
Were still unknown—at least untried?

Is it to shrink at future things,  
To start at what the present brings,  
To groan, when we but fear the rod,  
Not to rejoice ill we receive,  
And only when we see, believe,  
Is this to cast the care on God?

No, the believer doth not so—  
As Shiloh's waters softly go,  
He keeps his smooth and even way;  
No evil tidings doth he fear;  
His heart is fixed, his help is near,  
His strength is equal to his day.

Before he started for his crown,  
He laid a heavy burden down,  
A weight that the pilgrim could not bear,  
His foes without, his fears within,  
His griefs, his weakness and his sin,  
And everything that caused his care.

Should doubts arise, should ill's betide,  
God will protect, God will provide  
He saith—and pondering in his breast  
The promise of his faithful Lord,  
He doth believe his plighted word,  
And so, he enters into rest.

*The Fear of Man.*—The inspired writers commend themselves by their faithfulness in recording their own faults. If Mark wrote his gospel under the direction of Peter, as many suppose, we are constrained to admire the humility of Peter, because his own fall is related more strongly, and his repentance dwelt on more lightly, by this than by any other of the sacred historians. But while his conduct shows us the folly of promising anything in our own strength, it also forcibly points out to us the danger of yielding to the fear of man. Peter was naturally of a bold, intrepid spirit, but the dread of scorn and suffering caused his courage to fail, and except Judas, the traitor, none of his brethren fell so low as he.

He purchased a temporary peace at the expense

of his honour, his conscience, and the risk of his soul. It is justly said that the "fear of man bringeth a snare," and, perhaps, one of the greatest that lies in our way to the kingdom of heaven. Let all those, therefore, who are in any danger of yielding to this temptation, and who would wish to be spared the bitter tears that its indulgence must cause, keep these words continually in mind: "Whosoever shall deny me before men, him will I also deny before my Father which is in heaven."

*Just as much good.*—A young friend of mine, walking through one of the pleasantest streets in New York, was accosted by a little girl with a basket on her arm.

"Will you buy something from my basket?" she said, as she displayed a variety of book-marks, watch-cases, needle-books, and other things made of worsted.

"I am sorry I cannot buy anything to day," replied my young friend kindly; "the things are very pretty." She manifested her sympathy for the little pedler by talking with her for a minute or two, and as she passed on again said, "I am sorry I cannot buy any thing to day."

"You have done me just as much good as if you had; I have spoken kindly to me. Most persons I meet say, 'Go along off.'"

The trials and sorrows of life are not sent to shroud us in mourning, but for our instruction, and spiritual growth and usefulness. The temper and dispositions of the heart, as well as the expansion and capacity of the faculties, depend much upon the trials and disappointments of life. These are forces developing the race. Hence the Christian should not murmur and repine at his lot, but with confident trust in God's goodness and wisdom, regard every trial, however severe, as a stepping-stone to usefulness here, and brighter joys above. The Christian warfare must be uniformly maintained, and waged according to God's will, to be successful. The skillful general plans his battles according to military science, and not according to impulses, feelings, and whims of the moment. So the consistent soldier of the cross, to ensure success, must seek diligently on the Lord, in a living faith in Jesus. Difficulties will then seem light.—*S. S. Times.*

*The true learning of Christ the Groundwork of all true Religion.*—How few there are who can say to the great, the learned, the wise, the noble among men, "We have not so learned Christ," for it is common, ah! too common, to try to learn Him, without learning of Him, for He saith, "I am meek and lowly in heart." Now, as this meekness and lowliness is the groundwork of all true religion, does it not behoove us to submit to the experience of "the axe" being "laid to the root of the tree?" that as in the fallen nature we cherish pride, and are repugnant to that which annihilates self, the heart being prepared for the growth of the true seed or "root," our "fruit" may be "unto holiness, and the end everlasting life." This likewise produces peace to all those who seek peace, and pursue it in a way to find it, even in humble acquaintance with the Divine will.—*Sarah [Lynne] Grubb.*

Christ himself is the Christian's armor. Are his loins girt about with truth: Christ is the truth. Has he on the breastplate of righteousness: Christ is our righteousness. Are his feet shod with the gospel of peace? Christ is our peace. Does he take the shield of faith and the helmet of salvation? Christ is that shield and all our salvation.

*Materials for Paper.*—Flax holds the first place among fibres which, from their strength, flexibility, and other practical qualities, are fittest for the manufacture of paper. Flax has hitherto been grown in India in large quantities, but almost entirely for the sake of the seed. Various kinds have from time to time been used to exceed the cultivation of this useful plant in India, and it has been produced in the Punjab of a quality equal to that of the best kinds received from Russia. The plant which stands next to flax for the quality of its fibre is the reed, of Assam and other parts of India. This plant grows to a height of from three to four feet, and being a perennial, the expense of cultivation is less than that of most plants. It will bear cutting down three times in a season; the first crop yielding coarse, the second and third fine fibres. Probably about ten per cent. of useful fibre may be extracted from the stems of this plant. The Neigherry nettle, the mudar, the well-known jute of commerce, the salt bariala, the anbaree, the hemp, the suna, the jetea, the pine-apple, the Moorva, the agave Americana, the foreyna gigantea, the plantain, the yuca gloriosa, the phorium tenax, or New Zealand flax, &c., &c., may also be employed for the same purpose. All of these, except the last enumerated, are indigenous to India, and contain fibres which may be more or less usefully applied to the manufacture of paper, and to textile fabrics.—*Cussett's Paper.*

*Fill through a Glacier in the Pyrenees.*—Charles Paëke, Jr., writing from Bagneres de Luchon, describes an ascent of the Maladret, in the course of which one of the guides suddenly fell through a crevasse in a glacier.—There was no sound, either cry or cracking of the ice, but the glacier quietly swallowed up its victim. It was horrible to witness; but, of course, there was only one thing to be done. We speedily disengaged the rope from our bodies, and carefully holding it in our hands, approached the hole, which was not a large one. We let down the rope through the hole, and anxiously expected a reply to our shout; for some seconds, however, we could get none. At last it came, but the voice sounded fearfully indistinct and distant. The man, the guide said, fell eighteen metres, but the rope let down, I should say, about thirty feet. Thanks, however, to the bed of snow that fell with him, and in which he was partly buried, he was not hurt, and he was able to fasten the rope around his body, so that in about five minutes we drew him up, none the worse, but fearfully cold. He described his position as having been very perilous." The party continued their ascent, and reached the top.

*How the White Bear goes a Sealing.*—The white bear, as is well known, subsists principally on seals, and he kills many of them on these sheets of "fast" ice; but how he manages to get within arm's length of them, that is beyond what I can understand. When the seals are floating about on loose drift ice, Bruo's little game is obvious enough. He "first finds his seal," by eyes or nose, in the use of both of which organs he is not surpassed by any wild animal whose acquaintance I have ever made, and then, slipping into the water half a mile or so to leeward of his prey, he swims slowly and silently towards him, keeping very little of his head above water. On approaching the ice on which the seal is lying, the bear slips along underneath the edge of it until he is close under the hapless seal, when one jump up and one blow of his tremendous paw generally settle the business. The seal cannot get so fastly enough to escape by crossing to the other side of the iceberg; if he jumps down

when the bear is close to him, he does the best he can for his life, for, if he does not jump actually into the arms of his foe, and gets into the water, he is very likely to escape, the bear having no chance whatever when the seal is once fairly afloat. It cannot be very easy, even for an animal of such prodigious strength as the Polar bear, to keep hold of a six-hundred weight seal during the first convulsions of the latter, and a furious struggle must often take place. That the seals often escape from the grasp of the bear is certain, for we ourselves shot at least half a dozen of large seals which were deeply gashed and scored by the claws of bears. It is evidently fear of the bear which makes the seals so uneasy and restless when they are on the ice, as very many of these seals, in all probability, never saw a man or a boat in all their lives.—*Lamont's Northern Seas.*

For "The Friend."

#### Musings and Memories.

##### OUR LITTLE TREASURES.

We almost all of us possess some little thing or other to which we attach a value far above their intrinsic worth. Or perhaps it would be more correct to say, which have a value for us far beyond the value they would possess for others. Some little legacy of love, some little memento of a departed friend, something closely connected with important events in our own lives, or in that of those we have loved. I have many such. Among those which occasionally awaken pleasant thoughts, is a small book, of a very unattractive exterior, given to me forty-eight years ago as a kind token of remembrance, by my school-teacher. I was then but nine years of age, and all trace of his personal appearance has long since faded from my memory, yet the book is valued for his sake, and because it was his gift. On the fly leaf he has written "—'s book, A. 1813." The next year he was struck down with paralysis, and in a few months was released from the troubles of time. I look back with interest to the school-days of my childhood, although few are the incidents remembered with distinctness. I well know that the giver of this book, my first instructor in learning, except the dear ones, who for love's sake taught me under the paternal roof, had a sad character for severity amongst the little boys and indeed, among all his scholars, and I have a vague impression that the rattan was often in his hands, even in school hours. Yet he never struck me; and memory furnishes me with other instances of his special kindness beside this gift. The book has another charm in my eyes. It is the only volume owned by me before I had entered my teens, which has been preserved. My school-books were thumbed to pieces,—my little reading books all perished in my hands, or in those of other children after I was done with them; but this is in nearly as good a condition as it ever was.

Among my other relics, there is a pincushion of green morocco, heart shaped, made for me more than thirty years ago, by a beloved young female friend, who was then on a bed of sickness, from which it seemed doubtful if she would ever recover. She did, however, regain her health, and being a true hearted lover of the Lord Jesus Christ, she laboured for years as she could, to promote the everlasting well-being of her fellow creatures. At last her day's work being accomplished, in comparatively early life, she was released from her often infirm and afflicted tabernacle of clay, and graciously received into the rest and peace prepared for those who have endeavoured to serve the Lord Jesus in sincerity. The little memento of her affectionate interest I have carefully preserved,

and although fully convinced that there is no virtue in the relics of the best of saints to administer spiritual or temporal good to the possessor, I sometimes feel glad that this pincushion is yet in my keeping.

I have no thought of making out a list of my treasures of this sort, but these recollections arose whilst pondering an anecdote which recently met my eye. An author mentions that being in the house of a skilful physician, she saw a poor, withered, shrivelled apple, which from the care taken to preserve it, she felt convinced had some history connected with it making it precious to its owner. On enquiring respecting it, the physician replied, "that poor apple I shall never part with while it is possible to keep it. It is one of the few offerings of gratitude, through a great many years of practice, I have ever received." I was attending the death-bed of a dear child, and just as his little life was about to close, when his last kiss had been given me all around, he turned to me, and in faltering accents, in the sweet lisping tones of infancy, said, 'Doctor, you have been very kind to me, when I was naughty, and would not take my medicine, and I was naughtier to give you but this beautiful apple dear grandmother sent me,—will you take it?' I did take it, and I am not ashamed to say she died as I did so. There are few things in this house that I set such a value on as that dear child's little apple."

The apple, which to the child seemed so beautiful in its high condition, when as a loving token of gratitude he presented it to his physician, had lost all its outward fulness and fairness to the eye,—yet never did it lose its moral beauty,—the sweetness and loveliness which the dear child's affectionate feelings imparted to it, in the view of the physician. To him it still spoke of the dear, patient sufferer, just about to part with all things earthly; and to enter on the joys of that blessed state, where the spirits of the redeemed children, the lambs of our Lord Jesus Christ's fold, do always behold the face of their heavenly Father, yet gratefully remembering and acknowledging by that apple the kindness shown him by his medical attendant and friend.

##### FRIENDSHIP, TRUE AND FALSE.

Samuel Neale gives us in his life, the evil effects of a false friendship,—a friendship which induced those who felt it, to use their influence in supporting the religious feelings he was favoured with, and to lead him into the scenes of vanity and dissipation in which they themselves indulged. When through the visitations of the love of God, he was brought into contrition for past sins, and they could see from the sober seriousness of his countenance that he was under condemnation, they would say "this is a religious fit," and forthwith they would carry him off to some scene of amusement to dissipate it. Through the mercy of his God he was at last effectually reached, and forsaking his gay associates, he found sweet friendship and fellowship with some who being lovers of the Lord Jesus Christ, were anxious to promote his furtherance and growth in grace.

An incident recently took place at Belfast, of great interest. Two young men,—thoughtless, irreligious,—met together. One invited the other to go with him that night to the theatre. The invitation was declined, not from a want of inclination, but because he had promised his parents to go with them that evening to a religious meeting. They parted, one to the scene of vicious dissipation, the other to a place where through the mercy of God, a word spoken in season, was blessed to the awakening of his thoughtless soul. A time of sore con-

fiat came on him, and having been brought to see that through the Lord Jesus Christ, a way was opened for his salvation, he felt his mind impressed with desire that his friend, his companion in many a wrong deed, might also be favoured to seek and find that mercy, which he thankfully believed was offered to him. On the second morning he called at the residence of his friend, and when the door was opened he passed in and was going quickly up to the chamber of his friend as he was accustomed to do, when a female with a very serious countenance inquired where he was going. He replied "to see John." "Stop, stop," she said, "he is dead." He had been taken ill during the night, and before the morning he was no more.

**The Nebulae.**—It is probable that not even William Herschel, nor Maeder, nor any other man ever formed an adequate idea of the distances of the nebulae from us; still, the mere effort to do this, however imperfectly successful, has a powerful influence in enlarging our ideas.

We have frequently thought that but one man ever fully realized the size of the United States; and that was the man who, in 1850 and 1851, went from Maine to California with an ox team. If it requires so much exertion to understand the meaning of 3000 miles, how utterly impossible must it be to form any conception of 192,000! And yet this is the distance through which a ray of light moves in a single second of time.

Directly in line, between us and the great nebula in Orion, are four stars, entirely invisible to the naked eye, and called from the geometric figure which they form, the Trapezium. Now, since the ray of light which entered our eye from those stars started forth into space, children have been born, have slowly grown to manhood, have moved through the varied scenes of life, have lived to old age, and died; they have been succeeded by their children, their grand-children, their great grand-children, through many generations; and still this ray of light was speeding ever onward in its straight track, till at last, at 20 minutes past 9 o'clock, in the evening of March 1, 1861, it darted through the great lenses of the telescope, and its long journey was ended. The more the mind dwells upon the subject, the larger will be our ideas of the distance required for the passage of light through such length of time, and with such velocity. And yet, this distance is inconsiderable in comparison with that which separates us from the nebula. When the light by which we saw the great nebula in Orion had arrived at the Trapezium, or the outermost stars of our stellar system, its course was nearly completed. Its swift flight had continued through the growth and decay of empires. It started on its journey in ancient times—before the pyramids were built—probably long before the human race was created. William Herschel estimated that some of the nebulae which were faintly visible by the aid of his great reflector, were so remote, that light in coming from them to us, would occupy two millions of years.

The number of the stars in the system to which our sun belongs, are beyond the power of computation, and those in some of the nebulae are probably more numerous still. The numbers of the nebulae themselves, which we can see, increases regularly with the power of our telescopes, and how many of these vast groups of stars there may be in the whole universe, no astronomer presumes to conjecture.

"When I consider the heavens, the work of thy fingers, the moon and the stars which thou hast ordained; what is man, that thou art mindful of him?"—*Scientific Amer.*

### The Ice Cave in Tuckerman's Ravine.

A man who recently visited the Snow Cave in Tuckerman's Ravine, in the White Mountains, thus describes it:

"We had now ascended some five thousand feet, and catching a glimpse of a small snow-bank, I pushed on in advance of my companion, and he was soon dodging behind the rocks to avoid my snow-balls. What a grand thing it is to have a snow-ball fight in August! And that within a hundred miles of Boston! Verily, times are changing. Up, up, we go, and at last what a sight greets our vision! There, far away, high up the steep precipice, lay the snow in one broad, vast field. The dimensions must have been, at the least, one thousand feet by five hundred, in width and height, while in many places the depth was over forty or fifty feet. If piled together at a depth of ten feet, it, without doubt, would have made a field of a square form five hundred feet on a side. Thus there must have been twenty-five thousand cubic feet of snow in Tuckerman's Ravine, on the 2d of August, 1861.

"But 'wonders never cease,' and as we turned to catch the mouth of the famous ice-cave met our gaze. Picture to yourself the ribs and bows of an unfinished ship, whose gigantic depth is more than a thousand feet, and you have before you the shape of this sublime mountain gorge. Huge landslides and detached masses of rocks lie around on every side, which, together with the awful stillness of the place, tell man what a puny creature he is, compared with the works of nature. The mouth of the cave measures about forty feet. Its direction is up the almost perpendicular precipice, and its length is three hundred feet. From the highest shelf of the cliff, down to the bed of the stream, more than a thousand feet, innumerable runs of water spring forth, which, glistening in the sunlight, show a natural waterfall, to which art can never approach.

"Mostly apt are these called the Thousand Streams. Especially noticeable is a stream formed by many of these minor runs, which plunges into a hole in the highest part of the snow-bank, and forcing its way through, forms the cave so renowned, and seen by so few. The roof of the cave is arched, and in the centre about eight feet in height. The whole span the entire distance is wrought into beautiful scallops and casings by the melting and dropping of the snow within; the whole reminding one of Henry the Eighth's chapel, and the architecture of the feudal ages. From each point a continual stream of water falls, so that it seemingly rains in the cave. The appearance of the roof inside is like highly polished white marble, though the lies are beyond the skill of a human sculptor. Such is the Ice Cave in Tuckerman's Ravine, and a more beautiful and wonderful sight could not be found on this continent."

**Faith.**—"I am sure of home," said a little child on the street. "I am sure of home, father, for I have thy hand, and thou wilt lead me there."

Yes, yes, thought I, little one, thou art right. Father will lead thee home. Now, if my readers will seek an interest in the Saviour, they too will be "sure of a home" in heaven. Jesus will lead them there.

A medical friend, begs us to suggest that the per-chloride of iron, an article to be obtained from all our larger druggists, will check hemorrhage even from large blood vessels promptly and effectually. Four or five drops are sufficient to check completely the flow of blood from any thing except the largest arteries, and half a teaspoonful will arrest bleeding even from these.—*Late paper.*

**An Intelligent Elephant.**—"Tell my grand-children," said the late Daniel Wilson, writing home from India, "that an elephant here had a disease in his eyes. For three days he had been completely blind. His owner, an engineer officer, asked my dear Dr. Webb if he could do any thing to relieve the poor animal. The doctor said he would try nitrate of silver, which was a remedy commonly applied to similar diseases in the human eye. The huge animal was ordered to lie down, and at first, on the application of the remedy, raised a most extraordinary roar at the acute pain which it occasioned. The effect, however, was wonderful. The eye was, in a manner, restored, and the animal could partially see. The next day, when he was brought, and heard the doctor's voice, he laid down of himself, placed his enormous head to one side, curled up his trunk, drew in his breath just like a man about to endure an operation, gave a sigh of relief when it was over, and then, by trunk and gestures, evidently wished to express his gratitude." What sagacity! What a lesson to us of patience!

**A magnificent piece of masonry.**—The Union Arch, which spans a gorge over one hundred feet above the bed of the Potomac, at Calin John Run, seven miles west of Washington, was planned by Captain Montgomery C. Meigs, and is a triumph of engineering skill. It is a single arch thrown from the natural abutment of solid rock at the base of one hill to the corresponding one on the other side. It is a most beautifully proportioned stone arch, of greater span than any other in this country or Europe. That which approaches it nearest in magnificence is the famed bridge of sandstone, across the river Dee, at Chester, in England—a circular arch of two hundred feet span and forty feet rise. The Union arch is circular (a segment,) with a span of two hundred and twenty feet, and fifty-seven feet three inches rise.

**The Lord will have a lovely People.**—I was led on, with tender expostulation, and with a call to come home to the heavenly gift, the *lovely life*, to follow Him who took not upon Him the nature of angels, nor the splendor of princes, but who appeared in this world in "the form of a servant;" who said, "The foxes have holes, and the birds of the air have nests, but the Son of man hath not where to lay his head."—*Slovak [Lynce] Grubb.*

**The Mont Cenis Tunnel.**—The Paris *Patrie* publishes the following letter from one of its writers, who lately visited the works going on at Mont Cenis, the tunnel through which is to form a speedy means of communication between France and Piedmont:

"The cutting of the tunnel advances day and night, with a regularity which excites the admiration of engineers. At the commencement of this great enterprise, only the pickaxe and blasting were employed; but since the machines invented by M. M. Gratton and Soummerer were brought into use, the cutting of the rock has been carried on with remarkable celerity. The machines, which are worked by compressed air, are very ingenious; they are each of 250 horse power, and act simultaneously on both sides of the mountain. They set in motion different instruments of great power, which operate in any direction that may be required. The section of the tunnel is about 60 metres, and when the cutting was commenced, only twelve men could, from the limited space, be occupied at each end, the work they did being only 40 centimetres (about 16 inches) per day; but the machines employed a force equal to 2500 men, and cut out daily two metres, that is, one at each end. In a few

months arrangements will be made for making the men employed relieve each other every eight hours, and an electric light will be established, and then the extraction of rock will be three metres per day. The tunnel will be 12 kilometres ( $7\frac{1}{2}$  miles) in length. It is 1330 metres above the level of the sea, and 1060 below the summit of Mont Cenis. It will gradually rise  $\frac{1}{2}$  per 1000 to the centre, descending from that point towards Savoy on the one side, and towards Piedmont on the other. In the centre of the way a small canal has been formed for carrying off the waters which filter through the rock. Every fortnight an examination is made, for the purpose of ascertaining the direction of the tunnel, and level of the roadway, instruments of great precision being employed in the operation. Thus far, the cuttings on both sides of the mountain have been found to coincide exactly. The rock is easily penetrated by the machines. When bored from 40 to 60 centimetres (16 to 23 inches) when bored, they are filled with gunpowder; the workmen retire to a distance of about 100 metres, and strong doors of iron are closed to prevent fragments of the rock from flying out. Then the mine is fired, and masses of rock are heard to strike against the doors, afterwards a current of compressed air is driven into the tunnel to expel the smoke, so as to allow the workmen to enter. The removing of the fragments of rock is effected in the way employed on cuttings of railways, and the machines are again set in motion."

#### SUMMARY OF EVENTS.

**UNITED STATES.**—*Funds for the War.*—It is stated that certain foreign capitalists have offered the Secretary of the Treasury to take \$100,000,000 of the Government loan at  $\frac{3}{4}$  per cent. interest. Subscriptions to the 7.30 loan, continue to come in freely.

**THE ARMY.**—The main army in the vicinity of Washington, numbered less than the expected amount of sickness. There are only about 1200 sick soldiers in the different hospitals at Washington and Alexandria. Gen. Rosecrank's army in Western Virginia has suffered severely from disease, not less than one third of his force has been incapacitated.

**Defence of the Sea Coast.**—Congress having neglected to provide for the fortification and defence of our sea-coast and lake harbors, the government asks the Governors of the States to call the attention of their legislatures to the subject, and have measures taken for defence in concert with the general government, the latter promising to refund the cost.

**New Mexico.**—From New Mexico we learn that a detachment of Navajo Indians had arrived at Santa Fe and made a treaty of peace with the government. The U. S. force in the territory is 1500 regulars and three full regiments of volunteers.

**The Pacific Telegraph.**—The Pacific Telegraph line has been completed to San Francisco, and in a few days will be finished to San Francisco, so that the distant shores of the Pacific will be in direct communication with us by telegraph in a few days.

**Pennsylvania Troops.**—Governor Curtin says that Pennsylvania has already a sufficient number of regiments to meet all requisitions made by the National government, and that, therefore, he has no power to accept proffers of new regiments at present.

**Southern Items.**—The prevalent idea in the north that the rebel army is badly equipped and armed, deficient in food, and inferior in numbers to that of the government, is probably incorrect. The southern papers, certainly convey no such idea, and the prices of the more important articles of food, prove that there must be an abundant supply of most of them.

Despatches from New Orleans state that the U. S. vessels engaged in the blockade of that port, were attacked on the night of the 11th inst., by a schooner from New Orleans, and that the ship of war *Frederic* was sunk, one vessel captured, and the others driven ashore. It is, however, believed that the account is somewhat exaggerated, and that the injury inflicted on the U. S. squadron was so great as reported.

A Savannah paper says the likelihood of the rebel troops going into winter quarters south of the Potomac has a very depressing effect upon the minds of the people in that quarter. They had been promised and ex-

pected that the rebels should winter in Washington and Baltimore, and possibly in Philadelphia.

Winter quarters at Petersburg were being made out to the Department of the Interior, of debts due to alien enemies with the utmost promptitude, and that from the city of Petersburg there would be realized a sum not less than \$600,000, and from Richmond at least \$200,000.

**New York.**—Mortality last week, 386.

**Virginia.**—Mortality last week, 233.

**Philadelphia.**—The threats which the rebels have been long making, that they would close the navigation of the Potomac, appear now to be accomplished. They were reported to have succeeded at Aquia Creek, Evansport, and various other points upon the river, which enable them effectually to command the channel and prevent the passage of large vessels. Some small craft are able to pass by keeping close to the Maryland shore, but it is difficult to do so at the close of the day with supplies for the army, was detained below the batteries, unable to pass them. Unless some means can be found to remove these batteries and open the river, an invasion of southern Maryland by the rebels would seem not improbable. The rebel forces which had retreated into Shenandoah valley, after the approach of the sickly season have again appeared on the Upper Potomac in large numbers. On the 16th, Col. Geary, with a regiment of Pennsylvania troops, crossed the river and attacked a greatly superior rebel force of 2000 men, routing them, and from Richmond to 200 killed and wounded. The Pennsylvania troops lost only four killed and seven wounded. On the 21st inst. a part of Gen Stone's command crossed the Potomac, and advanced to within a short distance of Leesburg, when they were attacked by a superior force of rebels and repulsed with considerable loss. Col. Baker, near Oregon, was killed in the engagement. No change is reported in the positions of the hostile armies near Washington. The opinion seems to be gaining ground that the operations of the Federal army will be restricted to the capture of the capital, and the troops at liberty for service in Kentucky, Missouri and Western Virginia, where the rebel armies are large and aggressive in their movements.

**Kentucky.**—The rebel forces in this State are reported to number at least 45,000, of whom 30,000 are near the Mississippi. In the extreme western part of the State, and the remainder at Bowling Green, Cumberland Gap and other points. The Kentucky Union forces number 20,000 and were rapidly increasing. The northern Federal troops were being reinforced, and there seemed to be no doubt of their ability to hold the State, and to drive the Kentuckians who remained loyal. No collision beyond unimportant skirmishes has yet taken place.

**Missouri.**—At the latest dates, Fremont's army was at Warsaw, on the Osage river. The great rebel army under Price had defeated McCullough's forces, and it was reported, would make a stand against Fremont at Osceola in south-western Missouri. Lexington is again occupied by the Federal forces. The country in various places, is still harassed by predatory irruptions, and in the frequent skirmishes many lives have been sacrificed. In the extreme Southern part of the State, on both sides were killed, and a number wounded. Another at Lynn creek, a large body of rebels was dispersed, a number of them were killed and over 200 taken prisoners. The irregular troops disbanded by the Federal Government, after the capture of Lexington, have formed themselves into bands in various parts of the State, for badge burning and marauding purposes. Big River bridge, on the Iron Mountain rail road, which was in charge of a detachment of Federal troops, has been destroyed by the rebels, and the detachment captured.

**Coloher for Jersey.**—All the castles in the country are now working as hard as they can, but it is alleged they cannot furnish a sufficient quantity of cloth and blankets, nor is there a proper supply of wool for the immediate demand. The statement that the U. S. government has sent large orders for army woolsens to Europe, has caused great dissatisfaction among the domestic manufacturers.

**Emigration to Hayti.**—Three hundred and ninety coloured persons recently sailed from New York for Hayti, under the auspices of the Haytian Bureau of Emigration. These emigrants are said to belong to the better class of coloured people. In the course of next month, another party of about 500, was expected to leave for the same destination. The Government of Hayti, promises to provide food and shelter for the emigrants until they can support themselves.

**FOREIGN.**—Liverpool dates to the 10th inst. It was reported that the Prince Napoleon had sent to the Emperor

of France, an important state paper on affairs in America. It was, however, not intended to be published, and the King, by addressing his constituents upon the American question. He contends that it is the duty of the British Government to endeavour to induce the United States to remove the blockade of the Southern ports, for the cause of humanity. He also strongly urges the expediency of England and France, making their efforts to effect a peaceful separation between the northern and southern states.

The King of Prussia visited the French Emperor at Compiegne on the 6th, and left on the 8th inst. The meeting was friendly and cordial. The King of Holland was expected to visit France on the 12th inst. The high price of bread continued to claim attention in Paris, and the Government had issued an assurance that the price would not be further advanced. The Bank of France was endeavoring to relieve the prevailing financial pressure. It is stated that 30,000 workmen were out of employment at Lyons, but the authorities had got up workshops for them.

The harvests in Europe are understood to be even more deficient than was at first supposed. The London Times says that France will be compelled to spend about \$200,000,000 to make up the deficiency. The importations of grain will also be required by England. This scarcity of food will, it is supposed, aggravate the embarrassments arising from an insufficient supply of cotton.

At a recent Consistory, the Pope is said to have denounced all compromise in the strongest terms, calling on his supporters to be firm, and to have no communication with impious men.

China news, via Russia, report the death of the Emperor of China.

#### RECEIPTS.

Received from Jehu Fawcett, Agt., O., for E. Dean S. Smith and Stacy Cook, \$2 each, vol. 35; for John Crow, \$8.50, do, 8, vol. 35; for Israel Heald, \$4, vol. 35; for Joseph H. Smith, vol. 35; for John H. Smith, from Amos Cowgill, Agt., Io., for John Thomas, \$10 to 52 vol. 34; from S. Upton, Agt., Pough., N. Y., \$2 vol. 35, and for P. Upton, A. M. Underhill, Mary Wing and Esther Griffin, \$2 each, vol. 35; for Phebe Griffin, \$25 to 27, vol. 36; from James Bell, Jr., Pa., \$8, vol. 34; from Wm. N. B., \$2, vol. 34; from Amos Estey, Agt., Io., for Nathl' N. Donald, \$2, vol. 34; from Saml. Chubbourn, N. Y., \$2, vol. 34.

#### WEST-TOWN BOARDING SCHOOL.

The winter session of the school will commence on Second-day the 4th of the Eleventh month next. Pupils who have been regularly entered and who go by the cars from Philadelphia, will be furnished with ticket by the ticket agent at the depot, N. E. corner of 18th and Market streets. Conveyances will be at the Street Road Station on the arrival of the 8, 10, 30 and 2 o'clock trains on Second and Third days. Small packages for the pupils if left at Friends' bookstore, No. 304 Arch st on Sixth days before 12 o'clock, will be forwarded. This stage as heretofore will meet the first train of cars on its arrival at the Street Road Station every day except Fridays.

West-Town, Tenth month, 1861.

#### WEST GROVE BOARDING-SCHOOL FOR GIRLS.

Near West Grove station, on the Philadelphia and Baltimore Central Rail Road. The winter session opens on 2nd day the 4th of next month. For information or circulars apply to,

THOMAS CONARD, Principal.

Tenth mo., 1861. West Grove P. O., Pa.

#### WANTED.

A young man to assist the subscriber in his school at Haddonfield; for particulars address,

RICHARD J. ARLEN,  
Haddonfield, N. J.

DIED, at the residence of her brother-in-law, Thomas Y. Hutton, Waterville, Delaware Co., Pa., on the 27th of last month, after a short illness, which she bore with Christian resignation, KIRBY WEAVER, the member of Chester Monthly Meeting, in the 43rd year of her age.

PYLE & MELROY, PRINTERS,  
Lodge street, opposite the Pennsylvania Bank.

# THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XXXV.

SEVENTH-DAY, ELEVENTH MONTH 2, 1861.

NO. 9.

PUBLISHED WEEKLY.

Price Two Dollars per annum, payable in advance.

Subscriptions and Payments received by

JOHN RICHARDSON,

AT NO. 116 NORTH FOURTH STREET, UP STAIRS,  
PHILADELPHIA.

Postage to any part of Pennsylvania, for three months, if paid in advance, three and a-quarter cents; to any part of the United States, for three months, if paid in advance, six and a-half cents.

Benjamin Ferris.

For "The Friend."

(Continued from page 58.)

Diary continued.—"First month 24th, 1762. First day. In the early part of our afternoon meeting, whilst in silence, I thought I never before had had such a prospect of the excellency of that fellowship and union, which those who are born again, are gathered into. This union being purely spiritual, and requiring no corporeal medium, or external means to increase or continue it, seemed to me plainly to point out that such, though in an unpeevishly greater and more exalted degree of glory and perfection, will be the harmony and union of the righteous in heaven. I want words to express the sense I then had of it; and I found it much more comfortable to feel, than it is easy now to describe or communicate to another, the sense I had of it at that time."

On the 27th of this month he addressed an important letter on negro slavery to a Friend, which has already been published in this paper, and is therefore now omitted, as is also (for the same reason) one of considerable extent describing the Christian Indians.

Diary "Second month 8th. I attended our Quarterly Meeting, as I have done for the most part since I was fifteen years old. This has not been altogether out of curiosity or custom, but rather from a principle of duty, which I knew not that I ever was more sensible than at this time; returned home with the evidence of peace.

"Third month 10th. John Stephenson and William Brown were at our Monthly Meeting, and now I may observe, that my father being afflicted with sore eyes, the meeting desired that I might officiate as clerk for that time, as I had once before. With some reluctance, I yielded to the request. I felt extremely poor and destitute of good, and blamed myself for having consented to serve, for I thought I made such a poor hand of it, that John and William would blame the meeting for proposing, and me for consenting to undertake it. I had been apprehensive that it would be my lot sometime to act in that station, if I continued faithful, but was willing to think the time had not yet come. Having no selfish design in submitting, I secretly breathed for help to the source of all strength, and endeavoured to do the best I could. After meeting I was left in much poverty and weak-

ness, and was ready to wish I had not been there, supposing from my distress that I had done wrong in submitting to the appointment. As I was sitting silent and retired, a way of access unexpectedly opened to me to lay my condition before the Lord, to whom I could appeal as knowing that I had no evil design in giving up to the request of the meeting. Although I had consented with great reluctance, yet it was not from an unwillingness to serve Him or his people, but from a sense of inability to act to the advantage of his cause. The Lord who is rich in mercy, and accepts a man according to what he hath, was pleased to regard my fervent application, and to hold forth to me the sceptre of his love. I thought it a token of his gracious acceptance of my honest although weak endeavours. It laid me under a fresh obligation, and wrought a willingness to follow and serve him in any way he might require of me. As this favourable visitation gradually passed off, a sense of nothingness again prevailed, and seeing the proper qualifications of a clerk to be great, and myself little acquainted therewith, I was low and dejected.

"These thoughts so prevailed, that I was afraid to speak to John Stephenson, although I much desired it, for I felt for him much affection. I therefore stayed at home all that evening and let these distressing thoughts have their course. In the morning, Third month 11th, I concluded that I would go and see him, let the event be what it might, remembering that saying, 'Let the righteous smite me, it shall be a kindness, and let him reprove me, it shall be an excellent oil, which shall not break my head.' So I went to his lodgings, and after I sat down, John spoke very kindly and encouragingly to me, expressing his satisfaction with my acting as clerk, and that it settled and remained with him that I ought to be kept to it. He said for my encouragement that Friends put him into that service when he was very young, and that he could say in reverent thankfulness, it had a very edifying effect upon him, greatly improving him in a careful feeling after the mind of Truth, in the execution of that important charge. This, with some tender advice upon the occasion, made such a deep and humbling impression on my mind, as I hope I shall not soon forget.

"Fourth month 2nd. Robert Proud and Susanna Hatton coming to Wilmington to be at our General Meeting, Susanna lodged at our house; I was glad of her company, she having been made formerly a messenger of good to me.

"Fourth month 3rd. In the evening we had a religious sitting in our family, wherein we that are young, were advised to be true to the trust committed to us.

"4th. This evening a Friend gave me some tender counsel, respecting a faithful improvement of the earnest penny, advising me not to sink under discouragement, which he believed I was very subject to, but faithfully to mind my guide, the Spirit of Truth, which will ever give to the humble followers of the Lamb, the victory.

"23rd. I set out with some other Friends for Duck Creek General Meeting. After attending George's Creek Meeting, some of us lodged at

Isaac Starr's. A Friend from Maryland, discoursing about discipline, advanced some views which were painful to me. I said little to it then, but it stuck with me, and I thought it safest to let him know it. The next morning I signified to him that I had thought of the proposition he had made yesterday, nearly to this effect 'that an order of a Yearly Meeting, was as imperfect a rule for us to square our conduct by, as the scriptures were for a rule of faith; and therefore we ought not to pay such an implicit regard to an order of a Yearly Meeting; nor should it be obligatory upon us, but as it agreed with the dictates of Truth in our own hearts; which was the principal discipline that ought to be regarded, and that for him, or anybody else to comply with the directions of a Yearly Meeting, without being convinced of the justice of it in himself, was no way meritorious, but really hurtful, and that he thought ought not to be enjoined by any Yearly Meeting, which he looked upon to be far from infallible.'

"I then observed that although I did not believe a bare outward conformity to forms or rules of the church, however, well adapted, would entitle us to salvation, yet a conformity was necessary in those who profess themselves members of that church over which Christ is the head and lawgiver. Her institutions are in wisdom and ought to be obligatory upon her members, whether every individual is clearly convinced of the necessity and justice thereof or not. I believed that an implicit compliance for order's sake, with such institutions of the church, would be my indisputable duty, whilst I professed myself a member thereof; and that it would be unwarrantable and unsafe for me to resist and oppose such rules and conclusions, under any pretence of nonconvenience, for that might proceed from my own unfaithfulness, and it would open a direct door for libertinism. As to the view, that because of danger of becoming too formal and like other societies, depending on external means and ceremonies, we ought to regard the discipline of Truth in the heart, rather than any rules or orders of a Yearly Meeting, I answered that as experience had confirmed the proposition, that the nearer people kept to the Spirit of Truth in themselves, the more and better use they made of the scriptures, so also was it with the discipline of the church. That therefore the keeping near to the Spirit of Truth was so far from taking away the use of the scriptures, and the solemn conclusions of the church, that they were rendered more useful thereby. The conclusions of the meetings should be cautiously contradicted, for such contradictions seem to strike at the very foundation of discipline, and tend to introduce the same spirit that opposed the first settling and establishing meetings for that purpose, which alleged that people should be left to the spirit in themselves as the only rule, and there was need of no other. This was the very foundation of anarchy and rantism. I made some other close observations, and a Friend from Chester county being present, also united with me and was very helpful." The Friend from

\* Thomas Lightfoot.

Maryland seemed rather displeased, got up and went away somewhat abruptly, nevertheless I felt the answer of peace herein, which was my only support, for although I engaged in it from a sense of duty, it was in much poverty, fear, and weakness, he being a man of parts, and of some account.

"We were at Duck Creek Monthly Meeting the same day, in managing the business whereof, I thought great weakness appeared, and the want of truly concerned, clean-handed men. Many of the members were defiled by slave sleeping, and several of the preparative meetings deficient in answering the queries. This was remarked to them, though little notice seemed taken.

"After meeting I was so low in my mind, I concluded that I was not worthy to go with the Friends whom I came in company with, and therefore proposed going to another place. When I went to take leave of one of them, a ministering Friend, she asked me what she had done, that I intended to turn her off, and so directly concluded to go where I was going. This may appear a small matter to some, but to poor me, at that time it proved reviving and humbly encouraging. The peaceful quiet of mind, and solid satisfaction I was favoured with this evening, was worthy of grateful remembrance; and notwithstanding the low times that fall to my lot, I am enabled to desire I may still follow the Lord in the way of his own appointment.

"25th, First-day. After meeting I had had a desire for an opportunity with a certain active Friend of that meeting, and two Friends agreed to accompany me. I imparted something that was on my mind to him, and took leave, but was still not quite easy. The Friend though perhaps well meaning, yet I thought he was too full of other things, to let a proper care and concern for the welfare of the church, and the maintenance of the discipline have sufficient place in his mind. I wrote to him on the 26th, and after hinting something that was on my mind to another Friend,\* I parted with my company and came home, attended with poverty and fear; my fervent desires were, that the Lord might not spare, until every thing was done away, which interrupted my union and communion with him. An increase in which blessed experience, is more desirable than riches, honour or length of days.

"Friend, Fenwick Fisher,—Being brought, in some degree, under the love and suffering state of Friends within the compass of your meeting, and that divers branches of Truth's testimony seem likely to fall to the ground for want of faithfulness, and a right concern in those of the foremost rank among you, we feel desirous that an increase of care, and a renewed fervent concern under a feeling of the afflictive condition of things, might rest upon thee. We desire that above every other consideration this might engage thy attention, and that a fervent travail of soul might be thine, to know ability to do the Lord's work and service daily renewed, that so, through his power thou might be enabled according to thy measure to bear up and support the suffering cause of Truth and righteousness, within your borders. We think it loudly calls for the help of all who wish it well, not only by a spiritual exercise for their own growth which will strengthen the church, but also by an earnest endeavour to support the discipline, and to stretch and enforce its rules impartially upon transgressors, as in the wisdom of Truth they may be led, which wisdom we firmly believe, will

never be wanting to the rightly concerned in the work. From thy real friends,

Benjamin Ferris,  
Thos. Lightfoot, Jr.  
Duck Creek, 26th of Fourth mo., 1762.

(To be continued.)

African Ants.

Selected.

We take the following account of these curious creatures from *Delany's Official Report of the recent Niger Valley Exploring Party*—

*Drivers*, as every person already knows, are black ants, whose reputation is as bad for attacking living animals, and even human beings, as the termites for attacking clothing. This creature, like its white cousin, is also an instrument in the hands of Providence as a sanitary means, and to the reverse of the other is carnivorous, feeding upon all flesh, whether fresh or putrified. Like the white, for the purpose of destroying the superabundance of vegetable, certainly these black ants were designed by Providence to destroy the excess of animal life which, in the nature of things, would be brought forth, with little or no destruction without them; and although much is said about their attacking persons, I will venture the opinion that there is not one of these attacks a person to every ten thousand mosquitoes in America, as it is only by chance, and not by search after it, that drivers attack persons.

*How they travel*.—They usually go in search of food in narrow rows, say from half an inch to a hand's breadth, as swiftly as a running stream of water, and may, in their search, enter a house in their course—if nothing attract them around it—when, in such cases, they spread over the floor, walls, and ceiling; and finding no insect or creeping thing to destroy, they gather again on the floor, and leave the premises in the regular order in which they entered. Should they encounter a person when on these excursions, though in bed, do not be lie still and not disturb them, the good-hearted negro insects will even pass over the person without harm or molestation; but if disturbed, they will retaliate by stinging as readily as a bee when the hive is disturbed, though their sting, so far from being either dangerous or severe, is simply like the severe sting of a mosquito. An aged missionary gentleman, of twenty-five years' experience, informed me that an entire myriad (this term is given to a multitude of drivers, as their num can never be less than ten thousand and I am sure that I have seen as many millions together) passed over him one night in bed, without one stinging him. Indeed, both the black and white ants are quite harmless as to personal injury, and very beneficial in a sanitary point.

*How to drive them out of the houses*.—There is much more in the imagination than the reality about these things; and one important fact I must not omit, that, however great the number of drivers, a simple *light set in the middle of the floor* will clear the room of them in ten minutes. In this case they do not form in column, but go out in hasty confusion, each effecting as quick retreat and safe escape for himself as possible, forming their line of march outside of the house, where they meet from all quarters of their point of escape.

*How to destroy them*.—*Chloride of sodium* or common salt (fine), slightly damped, will entirely destroy the termites; and *acetum* or vinegar, or *acetic acid* either, will destroy or chase off the drivers.

*Their pugnacious and martial character*.—I cannot indorse the statement from personal knowledge of the desperate hostility which the drivers manifest towards the termites, as given by Dr.

Livingstone, who, calling them "black rascals," says "they stand deliberately and watch for the whites, which, on coming out of their holes, they instantly seize, putting them in which case they the whites were *killers*, in which case they served the white *rascals* right, nevertheless, true that never seen an encounter, it is, nevertheless, true that the blacks do subdue the whites whenever they meet. In fact they go, as do no other creatures known to natural science, in immense, incalculable numbers—and I do not think that I exaggerate if I say that I have more than once seen more than six hogheads of them travelling together, had they been measured—and along the entire line of march, stationed on each side of the columns, there are warriors or soldiers to guard them, who stand steady, closely packed side by side with their heads towards the column, which passes on as rapidly as a flowing stream of water. I have traced a column for more than a mile, whose greatest breadth was not more than a yard, and the least not less than a foot.

Wanderings over Bible Lands and Seas.

BETHEL, SHILOH, AND THE WELL AT SYCHAR.  
(Continued from page 22.)

It is said that no place in Palestine is more absolutely identified as connected with an event in the history of our Lord than this spot. And this spot at the meeting of the valleys, links together the sacred history of more than three thousand years.

Here is Jacob's well, dug by the prudent patriarch, (whose father, Isaac, had had so many disputes about wells,) in the parcel of ground he bought of Hamor, and, perhaps, at the well of Joseph, then the only son of Rachel. Here the children of Israel laid the body of Joseph, which they had brought embalmed from Egypt. Here one of the most dramatic scenes in Jewish history was enacted, when the whole multitude of victorious Israel, with the strangers among them, the women and the children, and in two great companies, entering these two hills, and probably the valley between and around them, whilst Joshua read the blessings and the curses of the law successively from Ebal and Gerizim, and, from time to time, the deep Amen of the nation, echoed from height to height, and swept through the plain. And here, with all these recollections speaking to him from hill and valley, "being weary with the journey, sat on the well." And to well with the other names of the plain shine through the light of the last.

We turned off a little to the right to see this sacred spot, but a very great disappointment awaited us. Until last January, they told us, the well had been preserved—a relic of three thousand years, and of one hour worth them all! Until last January you could sit on the edge of the well, and look down into the depths too deep for Him to draw from. But this year the Arabs had broken and scattered the stones, and filled the well with rubbish. The Christians and Turks had been at war in Nablous, a Turk had been accidentally killed by a Christian; and they told us the filling up of this well was an act of revenge on the part of the Moslems, knowing how sacred it was to Christians. It made us feel very bitterly, as we stood among the scattered stones and heaps of rubbish where the well had been.

Near this melancholy ruin is the tomb called Joseph's. It is a holy place of the Moslems, plastered and domed like the tombs of Mohammand saints. But there is one interesting feature about it in connection with Jacob's blessing to Joseph, comparing him to the "fruitful bough by a well

\* Thomas Lightfoot, who joined with him in signing the letter.

whose branches run over the wall." A fine old vine springs out of the tomb throwing its green leaves and fruitful branches over the wall.

As we rode to and from this tomb some peasants, working in the fields, warned us away from the place with furious gestures, but whether they thought our own infidel feet would desecrate Joseph's Tomb, or our horses' feet injure their fields, we could not make out. Perhaps they were venting on our innocent heads some of the wrongs inflicted on them by our late companions, the Bashibazouks.

We paused once more before entering the valley of Sychar, by the sacred ruined well. Except that sacred relic itself, all was unchangeable. Down that narrow valley the woman came with her pitcher whilst Jesus was resting on this well. The Saviour and the sinner met alone, and to her at first he was nothing more than a stranger and an alien from her race. Then followed that rapidly varying dialogue with its vivid imagery, taken, as so constantly in our Lord's conversations or sermons, from the things in sight at the time; the imagery so suddenly abandoned to flash the unexpected light on her conscience. Then the answer of the woman, betraying how, in hearts where no human eye would suspect a serious thought, deep theological perplexities may be dimly stirring, and how theological uncertainty and moral laxity accompany each other. Probably not a person in Sychar suspected that Samaritan woman of having a conscience, still less of weighing the merits of various religions, and expecting a Christ who would solve all difficulties. Was there, she seems to have thought, indeed, after all, a true faith to be found? The Jews believed one thing and her people another, and there might, perhaps, be much to be said on both sides; the balance of probabilities was pretty even, but might there, indeed, be One who would tell her absolutely which was right? There certainly was one before her, no empty disputant on her own level, speaking without authority, but "a prophet," who knew all her life, yet did not seem to speak to her. To Him the secret perplexities of the doubting, sin-burdened heart came out.

Words, altogether new to her, came in reply. The controversy was carried to a higher level than her thoughts had reached. It was to be no more Jew or Samaritan; but God and adoring men and women. No more Gerizim, or Sion; but the Father and the human spirit.

One more secret lay in her heart. Through all that life of sin and doubt a dim desire and longing had lived on. The Christ was coming, the expectation of Jew and Samaritan alike. One who could answer all the heart's questions was coming. One who could read all the heart's secrets was before her. In words, at least, she made no inference, but all the secret aspirations of her soul were poured forth.

And she found the answer to which, perhaps, her heart had already almost sprung, "I that speak unto thee am He." Then, also down this valley, unless they had bought bread in that village on the hillside nearer, came back the disciples.

The woman had placed her pitcher by the well. It was not in her hands. She had not drawn any water for herself or for Jesus. But she had understood Him, as so few did. Water-pot, water, all were forgotten. There were men in Sychar who wanted the Christ as she had; there were hearts there who looked for him. She had good news to take. And up that valley, to the city out of sight behind the folding of those hills, sped her eager steps.

The disciples loved their Master, they had fol-

lowed him faithfully; they had gone to buy him food while he rested. But when we turn from the Samaritan woman to them, it is like turning from earnest, intelligent eyes which read our every glance, to a dull prosaic countenance, beaming, indeed, with the best intentions, but understanding neither glance nor illustration, but exactly the literal words we say and no more. Jesus said, "I have meat to eat that ye know not of;" and the disciples, who had walked with him from Jerusalem, and listened for months to his teaching, of which almost every sentence was an illustration, had no idea that he could mean anything by "meat" but something to eat!

Women and the Pharisees often understood our Lord best. The Pharisees, because their understandings were sharpened by dislike and fear, and "they knew bespoke those parables against them;" and women, because their hearts were warm,—they felt what he meant, felt that sinners might bathe his feet with tears; that He must help a mother whose young daughter was possessed, whether Phœnician or Hebrew; that He would welcome the love which broke the alabaster vase, and poured out the precious ointment.

I wonder if the disciples understood the next parable which our Saviour spoke, or perplexed themselves as to what he could mean by there being "four months to harvest," and yet the fields, so obviously green with the young corn, being "white already to harvest?"

Probably the eye of the Master directed them to the explanation, as turning from the broad valley behind him, green with the young corn, He said, "Lift up your eyes and look on the fields white for harvest," and as he said so, glanced up the valley of Sychar, and watched the Samaritans coming to him,—the golden first-fruits of the harvest of the Gentiles.

They came down that deep valley, probably guided by the woman, no doubt conversing in eager groups as they came, and questioning and re-questioning her on account of whose saying they had come. And when they reached the well where the Saviour and the disciples were still lingering, they besought him that he would tarry with them.

It was a new incident in that life spent among bitter enemies, and disciples so slow in understanding and heart. The people of Sychar had seen no miracle, they had heard none of those unequalled discourses. They had only heard that One sat on the well, at the opening of their valley, a stranger who saw with prophetic insight into the inward heart and the past life, a Jew who did not seem to have dealings with Samaritans. They came all that way in the evening from their city, simply because they had some dim hope of finding the Messiah there.

And when they found Him they recognized him. We do not read that he wrought any wonders among them. We might think it was impossible for him to come to any place without being troubled with compassion by its sorrows as well as by its sins, and healing bodies as well as souls. But we are told nothing of the kind. And for eighteen hundred years since then, his heart being the same, and his arm not shortened, he has been content, whilst healing souls, to let bodily sickness fulfil its work of discipline. Perhaps he could trust these Samaritans enough to treat them in the same way. He abode there two days.

Up this valley, which we were entering, He walked with that listening company and the wondering disciples. Beside this stream they went to that white cluster of flat-roofed houses, nestling among the thick trees.

Here, in the bosom of the hills, amongst the figs, pomegranates, and mulberries festooned with vines, on the fresh grass under the shade of the grey olives, and among the delicious sound of many waters, our Lord abode and taught for two days, and the Samaritans understood him as, perhaps, neither Pharisee nor apostle had yet done, to be not only judged the Christ, but "the Saviour of the world."

It was Saturday evening as we rode up that lovely valley. Our tents were pitched under the town under the thick shade of trees, amongst a chorus of streams flowing on every side. And here we were to remain for nearly two days, from Saturday until Monday.

#### The Highest Cataract in the World.

Starr King writes to the *Boston Transcript* from California, the following interesting description of one of the most remarkable of the natural phenomena of that State:—

The Yosemite Cataract is the highest in the world yet known. The portion of the granite wall of the valley which rises opposite the hotel, is more than three thousand feet high. In a superbly arranged nook or bend, in the precipitous rampart, the cataract is framed. Greely, in the account of a very hurried visit to the valley, a year ago, calls it "a tape-line of water dropped from the sky." Perhaps it is so toward the close of the dry season; but as we saw it the blended majesty and beauty of it, apart from the general sublimities of the Yosemite gorge, would repay a journey of a thousand miles. There was no deficiency of water. It was a powerful stream thirty-five feet broad, fresh from the Nevada, that made the plunge from the brow of the awful precipice; and as the valley is only a mile in width, our delightful resting place on the southern bank of the Merced, in the pass, afforded us the most favourable angle for enjoying its exhaustless charms.

Like sheet lightning,

Ever brightening,

With a low melodious thunder,

All day and all night it is ever drawn,

From the brain of the purple mountain,

Which stands in the distance yonder.

The thunder, however, though certainly melodious is by no means low, as our readers may imagine, when the measure of the fall is reported to them. At the first leap it clears 1,497 feet; then it tumbles down a series of steep stairways 402 feet, and then makes a jump to the meadows, 518 feet more. The three pitches are in full view, making a fall of more than 2,400 feet.

But it is the upper and highest cataract that is the most wonderful to the eye, as well as most musical. The cliff is so sheer, that there is no break in the body of the water during the whole of its descent of more than a quarter of a mile. It pours in a curve from the summit, fifteen hundred feet (height of six Park Street spires, remember), to the basin that boards it but a moment for the cascades that follow. And what endless complexities and opulence of beauty in the forms and motions of the cataract! It is comparatively narrow at the top of the precipice, although, as we said, the tide that pours over is thirty-five feet broad. But it widens as it descends, and curves a little on one side as it widens, so that it shapes itself, before it reaches its first bow of granite, into the figure of the comet that glowed on our sky two years ago. More beautiful than the comet, however, we can see the substance of this water loveliness ever renew itself, and ever pour itself away. Our readers have seen the splendid rockets, that burst into serpens of fire. This cataract seems to shoot out a thousand serpentine heads or knots of

water, which wriggle down deliberately through the air, and expend themselves in mist before half the descent is over. Then a new set bursts from the body and sides of the fall, with the same fortune on the remaining distance; and thus the most charming network of watery nodules, each trailing its vapoury chain for a hundred feet or more, is woven all over the cascade, which swings, now and then, thirty-feet each way on the mountain side, as if it were a pendulum of water lace. Once in a while, too, the wind manages to get back of the fall between it and the cliffs, and then it will whirl it round and round for two or three hundred feet, as if it were determined to try the experiment of twisting it to wring it dry. We could lie for hours, never tired of gazing on this cataract, but ever hungry for more of the witcheries of motion and grace that refine and soften its grandeur.

For "The Friend."

#### BIOGRAPHICAL SKETCHES

Of Ministers and Elders and other concerned members of the Yearly Meeting of Philadelphia.

##### ROBERT ROBERTS.

Robert Roberts was born in Merion, in the province of Pennsylvania, Twelfth month 15<sup>th</sup>, 1685. His parents were members of the religious society of Friends, concerned to educate their children in the fear of the Lord. Their labours in regard to this, their son, appear to have been blessed to him. From a memorial issued by the Monthly Meeting of Haverford, it appears that Robert, "by his religious advancement in the Truth, was a true pattern of piety, and in his several stations as an elder, overseer and clerk of this meeting, was very serviceable." "His life and conversation tended to uprightness and true moderation." His walk became firm in sincerity and according "to the Truth he made profession of, he attained a good esteem, not only among Friends but others, verifying that passage of Scripture, "a good name is better than precious ointment, and the day of our death better than the day of our birth."

His death took place Third month 17<sup>th</sup>, 1768, after a tedious illness, which he bore with patience and christian resignation.

##### BENJAMIN TROTTER.

Benjamin Trotter, the son of William Trotter and Rebecca his wife, whose maiden name was Theach, was born in Philadelphia in the Ninth month, 1699. Although he was very early in life visited by the Lord's Holy Spirit, which tendered him, and reproved him for sin, yet he was at times led astray by youthful vanities, and the corrupt conversation of those around him. This conduct of his is recorded to have been "to the grief of his pious mother, who was religiously concerned to restrain him."

As the Lord Jesus continued to visit him in love, with his light and grace, he, whilst still a youth, yielded up his heart in obedience to the Divine requirements, and witnessing the baptism of repentance, the work of regeneration was mercifully effected in him. First he was led to cease from all the evil things to which he had hitherto yielded, and then he was concerned to fulfil every duty, and practice every good thing, which his heavenly Father required at his hands. He soon

came to others, by his plainness, his patient firmness with which he bore the scornful mocking of those companions in folly and sin, and his suffering on this behalf of Jesus

As he continued faithful to the manifestations of Divine Grace, he was more and more instructed in the things appertaining to the kingdom of God, and a gift in the ministry of the Gospel was committed to him in the 20<sup>th</sup> year of his age. His communications in this line being delivered in much plainness and godly sincerity, and his life and conversation adorning the doctrine he preached, his ministry was very acceptable to the church. His humility was great, his faith was fervent and strong, and the divine graces of the spirit were sweetly manifested by him in harmonious union.

On the 4<sup>th</sup> day of the Fourth month, 1734, he was married to Mary Corker. He was a joiner by trade, and although feeble in body, he was very exemplary in business, by diligence and industry striving to earn an honest livelihood, being very desirous of owing no man anything but love. The innocent openness and christian affability which characterized his intercourse with others, led many of other religious denominations to converse with him, and opened the way for him to uphold the truth, to administer counsel and caution when it seemed needed. Indeed, amongst those drawn to him, by his courtesy and kindness, were even evildoers, and evil speakers, to whom he administered rebukes, which he did, we are told, "in the plainness of an upright zeal for the promotion of piety and virtue, tempered with true brotherly kindness and charity." He respected "not the person of the proud, nor [esteemed] the rich man because of his riches, but with christian freedom, declaring the truth to his neighbours, and he was thus in private as well as in public a preacher of righteousness."

In his public ministry he was zealous in denouncing errors in christian principle and departing in christian practice. He was constantly and fervently concerned to press upon his hearers the necessity of obedience to the teachings of Divine Grace, a measure or manifestation of which is given to every man, to profit withal. He knew from experience that this grace of God bringeth salvation to such as obey it. He was frequently enabled in Gospel energy and power to bear testimony to the outward coming of our Lord and Saviour Jesus Christ, to his miraculous birth, to his holy example in life, his Divine doctrine and precepts, to his death and sufferings at Jerusalem, when, through his one offering he opened the way for salvation of all those who believed in them.

He was frequently from home on short journeys to attend neighbouring Yearly Meetings and the general meetings then held once a year in many places, yet he paid no extensive religious visits. His memorial, after mentioning his visits to most of the meetings in Pennsylvania, New Jersey and some in the adjacent provinces, adds, he "was not much from home, being upwards of forty years a diligent attender of our religious meetings in this city, zealously concerned for the maintaining our christian discipline in meekness, and true charity, careful in the exercise of that part of pure religion, visiting the widow and fatherless in their afflictions, and often qualified to administer relief and consolation to their dejected minds.

He accumulated but little of this world's goods, yet in obedience to what he deemed a Divine intimation, he gave up his trade sometime before his decease, devoting himself wholly to what appeared his religious duty. His friends, fearing he might suffer, offered him free access to their superabundance, but he declined, saying his master had promised him that he should have enough. As he drew towards the close he had a conviction that it was near at hand, and at one of the last meetings he attended, he spoke of his belief that his time

would be short, and fervently exhorted his hearers to watchfulness and care, that they might have their lamps trimmed and their lights burning, and be prepared to meet the Bridegroom of souls at his coming, which would be at an hour of which they might not be aware.

Throughout his life, he had many afflictions and those of various kinds, which he had been through supporting grace enabled to bear with exemplary patience and resignation. During his last illness, which was of six weeks duration, his bodily pain was great, and he suffered much from oppression of breathing, being afflicted both with asthma and dropsy. During all his sufferings he was never heard to murmur or complain, but on the contrary he often expressed his thankfulness that he was so mercifully dealt with. His prayers were often fervently put up to the Lord God of mercy and strength that he might be supported in patience to the end. His petitions were graciously granted, and as he lay, drawing towards his close, he was enabled to speak to the edification and comfort of those who visited him. A fervent love of the brethren, which had been one of his most striking characteristics through life, was conspicuously in dominion in the hour of death. His life of dedication being crowned with a close of grace and peace, his sorrow felt a blessed assurance, that to him all friends was ended, and that from the church militant in its mingled conflicts and rejoicing, he had passed to the church triumphant, wherein all is glory and endless rejoicing.

The promise of his God to him was fulfilled; of his small estate, enough remained at his death to pay his funeral expences. His death took place Third month 26<sup>th</sup>, 1768, and his funeral was attended by great numbers of his fellow citizens of various denominations, to whom his christian conduct and exemplary, cheerful disposition, had endeared him.

God's love to Man.—Where shall we go for manifestations of the tenderness, the sympathy, the benignity of God? The philosopher leads us to nature, its benevolent final causes and kind contrivances to increase the sum of animal happiness, and there he stops, with half his demonstration! But the apostle leads us to the gift bestowed by the Father for the recovery of man's intellectual and moral nature, and to the cross endured by the Son on this high behalf. Go to the heavens, which canopy man with grandeur, cheer his steps with successive light, and mark his festivals with their chronology; go to the atmosphere, which invigorates his spirits, and is to him the breath of life; go to the smiling fields, decked with verdure for his eye, and covered with fruits for his sustenance; go to every scene which spreads beauty before his gaze, which is made harmoniously vocal to his ear, which fills and delights the imagination by its glow, or its greatness. We travel with you, we admire, we feel and enjoy with you, we adore with you, but we stay not with you. We hasten onward in search of a demonstration more convincing that "God is love," and we rest not till we press into the strange, the mournful, the joyful scenes of Calvary, and amid the throng of weeping disciples and the mocking multitude, under the arch of the darkened heaven, and with earth trembling beneath our feet, we gaze upon the meek, the resigned, but fainting sufferer, and exclaim, "Hercin is love!"—herein, and nowhere else is it so affectingly, so unequivocally demonstrated—"not that we loved God, but that God loved us, and sent his Son to be the propitiation for our sins."—R. Watson.

It is the narrow, the self-denying path that leads from death to life. There is no better way.

For "The Friend."

## Gold under Philadelphia.

Jacob R. Eckfeldt, the principal assayer of the U. S. Mint at Philadelphia, has lately made some interesting examinations which tend to show that gold is much more widely distributed, than is generally supposed. In a paper published in the proceedings of the American Philosophical Society, he gives the results of these examinations, showing the presence of this metal in various galenas, in metallic lead, copper, silver, antimony, &c. But the most curious result of all is perhaps the following, which seems to show that the clay underlying our city and the very walls of our houses contains an appreciable quantity of this valuable metal.

"Underneath the paved city of Philadelphia, there lies a deposit of clay, whose area, by a probable estimate, would measure over three miles square, enabling us to figure out the convenient sum of ten square miles. The average depth is believed to be not less than fifteen feet. The inquiry was started whether gold was diffused in this earthy bed. From a central locality which might afford a fair assay for the whole, the cellar of a new market house in Market street near Eleventh street, we dug out some of the clay at a depth of fourteen feet, where it could not have been an artificial deposit. The weight of 130 grammes was dried and duly treated, and yielded one-eighth of a milligramme of gold, a very decided quantity, on a fine assay balance. It was afterwards ascertained that the clay in its natural moisture loses about fifteen per cent by drying. So that, as it lies in the ground, the clay contains one part gold in 1,224,000.

"This experiment was repeated upon clay taken from a brick-yard in the suburbs of the city, with nearly the same result.

"In order to calculate with some accuracy the value of this body of wealth, we cut out blocks of the clay, and found that on an average, a cubic foot as it lies in the ground, weighs 120 pounds, as near as may be, making the specific gravity 1.92. The assay gives seven tenths of a grain, say three cents worth of gold to the cubic foot. Assuming the data already given, we get 4180 millions of cubic feet of clay under our streets and houses, in which securely lies 126 millions of dollars. And if, as is pretty certain, the corporate limits of the city would afford eight times this bulk of clay, we have more gold than has yet been brought, according to the statistics, from California and Australia.

"It is also apparent that every time a cart-load of clay is hauled out of a cellar, enough gold goes with it to pay for the carting. And if the bricks which front our houses could have brought to their surface in the form of gold-leaf, the amount of gold which they contain, we should have the glittering show of two square inches on every brick."

It is scarcely necessary to add that the expense of separating the gold from the clay is many times as great as the value of it after it is obtained, and yet, if a person owning one hundred acres of land underlaid with clay as auriferous as that under this city, were told that under his farm and within a few feet of the surface there was to be found a quantity of gold amounting in value to two million of dollars, his first thought would probably be to dig down and obtain it: but upon counting the cost he would find that there would be scarcely enough of the precious metal in any given quantity of the clay to pay for digging it out and hauling it away, to say nothing of the expensive processes it would have to be submitted to in order to separate the gold. This is it often in the affairs of life. We sometimes fancy that we see some great

advantage or enjoyment that is within easy reach and is obtainable at little cost, or perhaps some new plan of operating, that promises rich results, but how often in such cases does the attempt to realize our expectations bring disappointment, and show that to obtain what we aim at involves greater expenditure than it is worth, and frequently, too, the object sought for, when at last obtained, proves to be little else than a glittering show.

Selected.

## THE WAY BY WHICH HE LED THEE.

When we reach a quiet dwelling  
On the strong, eternal hills,  
And our praise to Him is swelling  
Who the vast creation fills;  
When the paths of prayer and duty,  
And affliction, all are trod,  
And we wake and see the beauty  
Of our Saviour and our God:—

While we have the palms of glory  
Through the long eternal years,  
Shall we e'er forget the story  
Of our mortal griefs and fears?  
Shall we e'er forget the sadness  
And the clouds that hung so dim,  
When our hearts are filled with gladness,  
And our tears are dried by Him?

Shall the memory be banished  
Of his kindness and his care,  
When the wails and woes are vanished  
Which he loved to see and share?  
All the way by which he led us,  
All the grievings which he bore;  
All the patient love he taught us,  
Shall we think of them no more?

Yes! we surely shall remember  
How he quickened us from death—  
How he fanned the dying ember  
With his Spirit's glowing breath:  
We shall read the tender meaning  
Of the so rows and alarms,  
As we trod the desert, leaning  
On his everlasting arms.

And His rest will be the dearer  
When we think of weary ways,  
And His light will seem the clearer  
As we muse on cloudy days.  
Oh, 'twill be a glorious morrow  
To a dark and stormy day!  
We shall recollect our sorrow,  
As the dreams that pass away.

## THE BEAUTIFUL.

BY WILLIAM MAJOR, OF TRINITY COLLEGE, DUBLIN.

The flowers that skirt the mountain brow,  
The summer cloud that dims the sky,  
The airy heaven, with brilliant brow,  
Proclaim a tale of mystery:  
It is the Beautiful.

The dew-drops bright that life distil,  
The straggler's voice that sweetly sings,  
The cascade's fall, the murmuring rill,  
The tuneful bird, on airy wings:  
O yes, how Beautiful!

The green leaf's bloom, in Beauty's prime,  
The yellow, too, though not so fair,  
Loved Music's notes in pealing chime,  
The ocean's roar, the storm, the air:  
Declare the Beautiful.

The infant's smile, the laughing eye,  
The sighs that mourn, the tears that flow;  
The fair one's witching ecstasy:  
All, all on man their charms bestow:  
And they are Beautiful.

Who, then, so void of Christian love,  
'Mid scenes sublime, and Beauty's grace,  
As not to praise our God above,  
When all the earth reflects his face—  
And so is Beautiful?

The times may look dark to sense, but faith says it shall be well with the righteous.

## Letter of John Barclay.

I am on the eve of leaving home for Brighton, if able; for I am very poorly, "feeble and sore broken" outwardly; though I trust alive in my spirit as ever and resigned to all that may be in store for me. \*

Though unable to mingle with my Friends in person, when they come together for the sake of this blessed cause to endeavour to strengthen one another's hands in God, and to build up one another in that holy faith once and still delivered to the saints,—my poor mind is as deeply, as strongly concerned as ever, that every part and parcel thereof, with all its genuine accompaniments and fruits in practice may be maintained inviolate; and that nothing may be forborne, or let fall, or slighted through our degeneracy, and dimness of that which our worthy ancestors upheld through suffering. What has our refinement, religious or civil, done for us? and what has our approach or a condescending affinity thereto done for us? Weakness has inevitably followed, and even the strongest and the wisest have been utterly laid waste. Some are not sufficiently warned and humbled by these things; and if they are they should openly acknowledge their error, and forsake the very appearance of this track.

I am cheerfully confident, that if those to whom we somewhat look as watchers, as seers, as standard bearers, as counsellors, are removed (and they are removing) to their rest,—or, if any of these that remain, should not keep their habitations firm and undeviating, but turn aside in any respect from the ancient testimony,—that He who raised up such a people as we were at the first, will never cease to raise up others, and put forth some into the foreground—into the very seats of the unfaithful. I have seen it wonderfully in my short day,—I have read it of those who have gone before: and therefore, let none ever throw away their shield, and weakly compromise the trust devolving on them.

Farwell my beloved friend; may the Lord preserve us purely to his praise.

Fourth mo, 10th, 1838.

An apparent singularity accounted for.—It is generally well known that birds are very active agents in the extension of vegetation, and that fruit and flowers are, to a great extent, rendered prolific by the insects which visit their blossoms. But few people are aware of the means through which fish are formed in lakes and ponds which are not connected with other waters. Here, also, an insect is the principal agent. The large water-beetle, which is in the habit of feeding upon the spawn of fish, occasionally in the evening climbs up the stems of bushes, &c., out of the water, sufficiently high to enable it to take wing. In these circumstances it has been caught, and on being put into the water, has been found to give out the spawn with which it had gorged itself previous to taking flight, both in a digested and undigested state; so that on trial it has been found that it produced fish of various kinds.

No two things differ more than hurry and dispatch. Hurry is the mark of a weak mind, dispatch of a strong one. A weak man in office, like a squirrel in a cage, is labouring to little purpose, and in constant motion without getting a job; hence like a turnstile, he is in every body's way; talks a great deal, but says very little; looks into every thing, but sees into nothing; and has a hundred irons in the fire but very few of them are hot, and with those few that are he only burns his fingers.

For "The Friend."

## Musings and Memories.

## PREACHING BY EXAMPLE.

Many conscientious christians who are not called to the work of vocally upholding and advocating the gospel of Christ Jesus, are yet efficient preachers thereof in life and conversation. Some by their humble, self-denying example, when surrounded by the votaries of pride, of fashion and of self-indulgence;—some by their honest, upright dealings in the walks of trade and business, when most around them seem grasping after all they can gather of the world's goods, without respect to the law of doing to others as they would others should do to them;—some by cheerful content in poverty; some by holy resignation in sickness and sorrow. These all are teaching the great lessons of christian principle,—these all are preachers of righteousness, in a greater or lesser degree to those around them.

I was recently struck with a remark made by a religious man, to one who complained to him of the distance which he lived from the place of worship. The complainer was deemed a pious man, one who was diligent in his attendance at religious meetings, although he lived six miles from the house in which they were held. On this occasion, however, he spoke of the distance he had to travel, whilst some of the members had but a few steps to walk. His religious friend to whom he complained, told him to remember that he had weekly the privilege of *preaching a sermon six miles long*. To all the residents by the road-side,—to all those he met or passed on his way,—he upheld by example the duty of assembling for the worship of Almighty God. These silent sermons may have been blessed to many. We have it on record that a meeting of the Society of Friends in one of the southern states, which had by the moving away to the western states of many members, and the remissness in spiritual zeal of some who remained, had entirely dropt, was re-constituted through the faithfulness of one young woman, who regularly on the old meeting days went and sat in the old house. Her diligence preached with prevailing power. Some who beheld her going, were stirred up thereby, and others who heard of it, led to consider their own responsibility, as dependent creatures, and the duty they owed to their Almighty Caretaker, to offer him worship and praise for the unnumbered blessings received at his hands, were drawn by a heartfelt sense of duty to meet with her.

Of prevailing preaching through pious and exemplary conduct, we have many instances recorded, some of which have been already noted in these Musings and Memories. We have also authentic accounts, in which the actions of the irrational portions of animated nature, have been through the divine blessing, made subservient to the great work of the soul's salvation. Barbara Hoytand, who in after life was a valuable minister of the gospel in our religious society, received an awakening visitation in early life, a visitation, which through the Lord's grace saved her, as she supposed, from utter ruin. She was brought up in the observance of the rites and ceremonies of the Church of England by her parents, and being early in life favoured with the visitations of Divine Grace, she manifested some seriousness, and religious tenderness of spirit. When twelve years of age, she was sent by her parents to a dancing school, through the influence of which, and the young persons she was introduced to there, a very serious change for the worse took place in her character. Her father too late, discovered it, and sought earnestly to break up all her intercourse with those who had there

been her associates. Her father died, and the daughter when about sixteen, was exposed to a temptation, which if yielded to, would have been her ruin. The temptation was no doubt attractive to her in her weak and unregenerate condition, and whilst hesitating and unsettled, the following incident occurred. She was sitting with her mother one evening, when they observed a moth fluttering and playing round the candle, until at last the flame caught it, and burned its wings, so, that it soon expired in apparent agony. Whilst musing on this, her mother said, "How like incautious youth! playing round the flame till drawn within its power, caught and consumed." The incident and the remark of her mother, were effectual, through the accompanying visitations of the Lord's Holy Spirit, for her spiritual awakening. She turned from the seductive attractions, sought comfort and strength in the Lord Jesus, became his faithful follower, and in life and conversation, as well as by the ministry of the gospel, preached powerfully through her day.

Rees Fritchard, a Welsh clergyman, a man of an ancient family and considerable estate, was for many years disgracefully addicted to drunkenness. Over this debasing weakness, he was at last victorious, and attributed his restoration to the example of his pet goat. This animal was extremely attached to him and followed him wherever he went, until on a certain occasion in a tavern, Rees poured a quantity of ale down its throat. The poor creature suffered much from this intoxicating beverage, and never afterwards could its master induce it to enter the inn door. It would follow him in his daily visits of degradation to the very entrance, and wait without, until he was ready to return. This rational action of the goat, awakened the master to reflection. If the beast could thus resist all the entreaties and even commands of its master to enter the place where he had been made to partake of the intoxicating cup, how degraded must the man be, who endowed with reason and with a soul to be saved or lost, willingly day after day suffered himself to enter, though he knew it would be to debase his manhood and stupefy that reason which raised him above the beasts that perish. This reflection awakened him to consider his condition. Reformation in respect to temperance soon followed, and by the grace of God, the work of regeneration seemed to spring from that same incident, and through the baptism of repentance and the renewings of the Holy Ghost, he witnessed the new birth under holiness, the end whereof is everlasting life.

## Dr. Hayes' Exploring Expedition.

OFFICIAL ACCOUNT OF THE VOYAGE.

Henry Grinnell, furnishes the *New York Commercial* with the subjoined letter from Dr. Isaac I. Hayes, giving an account of his Exploring Expedition:

LETTER FROM DR HAYES.

EXPLORING SCHOONER UNITED STATES,  
HARBOR OF HALIFAX, OCT. 1, 1861.

*My Dear Sir*.—I have the pleasure to send you the following account of the proceedings of the expedition to the Arctic seas, under my command; subsequent to the 14th of August, 1860. My letter from Upernivik to the contributors to the Expedition bearing the above date, will have instructed you of my movements up to that time.

We sailed from Upernivik on the 16th of August, 1860; but calms detained us on our way to Tessuissak, and we did not reach the latter place until the 21st. Having there increased the number of our dogs by the addition of the inter-preter's team, making a complement of twenty-five

animals; and having further increased my crew by the addition of two Danes and one Esquimaux hunter, we put to sea on the 22nd, and stood Northward with a fair wind. On the morning of the 23rd, we entered Melville Bay. On the following day at three o'clock P. M., we passed the Sabine Islands; thence we made a direct course for Cape York, which was reached at five o'clock P. M., of the 25th.

Our passage through Melville Bay was remarkable. No field ice was seen until we reached within a few miles of Cape York, when we encountered a narrow stream, which under a full press of sail was bored without difficulty. We were only fifty-five hours in effecting the passage of the bay.

Standing close in under Cape York, I kept a careful watch from aloft for Esquimaux, and soon had the gratification to discover a group of them moving down toward the beach. The schooner being hove to I went ashore, and was met by Hans, Dr. Kane's runaway boy, and other natives. Hans quickly recognized Sountag and myself, and having expressed a wish to go with us, I took him, together with his wife and child, his hunting equipment and two dogs, on board and again stood northward.

At 7 o'clock of the morning of the 26th we were brought up by a heavy ice pack, twenty miles South of Smith's Strait. There being a high sea setting directly upon the ice, and the air being thick with falling snow, we lost no time in flying to windward, and having obtained a good offing, hove to, to await better weather.

The wind soon fell to calm; the clouds broke during the night, and on the morning of the 27th we rounded the ice, in shore, and, under a light N. E. wind, stood out toward the centre of the strait, which we entered at 9 o'clock, P. M. Here we met a heavy pack through which no practicable lead could be distinguished.

Our examination of its margin with the view of finding an opening was cut short by a heavy gale, which broke suddenly upon us from the N. E. The bergs being very thick about us we could not heave to; and we run great risk of losing every exposed sail. The gale lasted, with very little abatement in its volume, during the 28th and 29th. On the morning of the 30th, having carried away the foresail, we were glad to reach a small cove twelve miles South of Cape Alexander, and there dropt anchor in four fathoms water. Here I obtained an excellent view from an elevation of 1200 feet. The pack appeared to be impentrable, and very little water was to be seen along the West shore. I determined, however, to attempt the passage.

I had scarcely returned from my journey to the mountain when the gale again set in from the same quarter, and with a violence which I had scarcely seen equalled. On the morning of the 31st we were driven from our moorings and in the effort to save our anchor we were forced upon a group of ice-bergs which had drifted in with the current, and carried away our jib boom. The wind moderated soon afterward, and we once more entered the strait, but the gale setting in again, the fore gale was broken in wearing, and being now obliged to heave to, we were a third time driven out of the strait, to seek shelter behind Cape Alexander.

Damages having been repaired, we again entered the strait on the evening of September 1st. Discovering no lead through the ice to the westward, we bore up for Littleton Island, with the hope of finding near the more solid ice higher up the strait a more practicable opening. The gale still continuing to blow with great force, and being

under reduced canvas, we made but little headway.

Littleton Island was reached September 2nd. Being unable to penetrate the ice to the westward, I determined to work up the coast to Cape Hatherton, with the hope of there finding the ice more open.

The undertaking was necessarily attended with considerable risk to the vessel, on account of the heavy fields of ice lying off Littleton Island. The schooner frequently came in collision of ice fields from fifteen to twenty feet in thickness. The quarter-inch iron plate on the cutter was torn off, and the false stern was carried away. Soon afterward we encountered a severe "nip," and before the rudder could be shipped, the two lower pivots were broken off.

In this crippled condition it was impossible to make further headway, and, after extricating ourselves from the ice, we ran down into Hartstein bay and anchored. During the 3rd, 4th and 5th of September the wind blew with great force from the same quarter as before. On the 4th, I reached, with much difficulty, Littleton Island in a whale boat, and obtained a view to the Westward from an elevation of some four hundred feet. The ice was very heavy to the West and Southwest—a thick impenetrable pack—but to the Northward, along the land, it was loose, and the prospect of working Westward from Cape Hatherton was encouraging.

On the 6th the wind fell to calm. The boats were got out and we pulled up to Littleton Island; but two days had completely changed the position of the ice. Between Littleton Island and Cape Hatherton there was no open water, nor was there any visible from the top of that island to the Northwest, West, or Southwest. Unable to advance, and fearful of being frozen in, we again extricated the vessel from the ice and ran back into Hartstein bay.

Everything about us now began to wear a wintry aspect. The temperature had fallen to eighteen degrees below freezing. Thick snow had been falling at intervals since August 25th. Our decks were covered with ice, the sails and rigging were so stiff with it that they could barely be worked, the schooner's sides were lined with a thick crust, and large masses of ice had accumulated on the cutter and forward rigging. The navigable season was clearly drawing to a close.

Northeast gales detained us during the 7th and 8th, and the temperature continuing to fall I deemed it imprudent again to enter the ice, and accordingly we went into winter quarters on the 9th, in a light, at the head of Hartstein bay. The schooner was moored by four hawsers, forty yards from shore, in seven fathoms water. The sails were unbeat and the topmasts hoisted, and after giving the crew a holiday, our winter preparations were commenced. The stores were deposited in a house built for the purpose on shore. The hold was converted into a comfortable room for the men, and the upper deck was hoisted over with board. Owing to bad weather, three weeks elapsed before these arrangements were completed.

Our winter harbour, which I named Port Foulke, in honour of Wm. Parker Foulke, of Philadelphia, was well sheltered, except to the Southwest. Observations made by Sontag, at the observatory erected on shore near the vessel, gave its position, latitude 78° 17' 41" N., longitude 72° 30' 57" W., twenty miles further South than Dr. Kane's winter quarters, and distant from it by the coast ninety miles.

I need hardly say that I deeply regret that we could not attain a higher latitude with the vessel,

particularly do I regret that we could not reach the West coast. That coast was wholly unapproachable with a sailing vessel.

The weather continued boisterous throughout the Autumn; and indeed during the greater part of the Winter. In consequence of the repeated gales the water off the harbour was not frozen over until March, so that sledge travelling to the northward was impracticable during the month of October, at which time I had expected to carry out provision depots for use in the Spring. Sontag made an attempt to reach Rensselaer Harbour in November, and although the darkness of the winter had then set in, he was baffled by the open waters.

While the daylight lasted we were profitably employed. A survey of the harbour and adjacent coasts were made by the joint labours of Messrs. Sontag, McCormick, Dodge and Radcliff. In September, Sontag put up in the observatory, the fine pendulum apparatus, constructed expressly for the expedition by Messrs. Bond, of Boston, and a full set of satisfactory experiments were obtained. The magnetic instruments were subsequently placed in the same building, and observations were there made from time to time. A meteorologic observatory was erected on shore, and observations were there recorded three times daily, with several instruments. A bi-hourly record was kept near the vessel, with a single instrument.

I may mention that all the instruments have been well compared. A survey of John's glacier was made by Sontag and myself in October. This glacier which was discovered and named by Dr. Kane, approaches the sea through a deep valley, and its face is two miles from the sea. The angles, not yet reduced, obtained in October were repeated by myself last June, and they show a considerable movement of the glacier. The survey of this glacier was further continued by me late in October, with a party of five persons; I ascended to the *mer de glace*, and travelled eastward fifty miles. Our greatest elevation was 4,500 feet, the temperature at which elevation was 15 deg. lower than at the level of the sea.

The winter was passed in health and comfort. We were fortunate in capturing upward of 200 reindeer, which kept both ourselves and the dogs constantly supplied with fresh food.

The winter brought, however, some serious misfortunes. A disease which had been prevailing in North Greenland during the last few years, broke out among the dogs, and of the five pack which I had taken from the Danish settlement, only eleven animals remained alive on the 20th of December. You are well aware that my plans of explorations were wholly based upon dogs as a means of transport across the ice, and situated as I was—on the east side of the strait and ninety miles further south than I had anticipated, I became seriously apprehensive for the success of the approaching effort.

My party being necessarily small, I could not send into the field more than a boat's crew of abed-odded men, and these I had always considered as merely auxiliary to the dogs, and without the dogs altogether unavailable for the service to be performed.

My anxiety was fully shared by A. Sontag, the astronomer to the expedition, and my able second in command. He early volunteered to go south to endeavour to open communication with the Esquimaux of Northumberland Island, with the hope of obtaining dogs. His former experience when with Dr. Kane, had familiarised him with all the phases of Arctic travel, and no one could have been better fitted for the task. Besides the usefulness of the proposed journey, it

was peculiarly in harmony with his active and enterprising spirit. His offer was accepted, and he left the vessel on the 22d of December, with a sledge and nine dogs, accompanied by the Esquimaux Hans, intending to make the journey and return during the moonlight period then setting in. It is my sad duty to inform you that he died while absent.

It appears that from Hans's report, that the immediate cause of Sontag's death was cold. Hans upon his return stated that they travelled the first day to Sutherland Island, where they encamped in a snow hut, and were there detained two days. Their next camp was at Sorfalk, a deserted Esquimaux station on the coast, fifteen miles below Cape Alexander where they built another snow hut. They set off next day directly for Northumberland Island. The ice, although covered with light snow, appeared to be sufficiently strong. A. Sontag walked in advance of the sledge, and when about five miles from the land he came upon thin ice and broke through. Hans assisted him out of the water, and they immediately put back for Sorfalk. Before that place was reached Sontag was insensible, and he died soon afterward. His remains were subsequently brought to the vessel, and were interred near the observatory.

Hans succeeded in reaching Esquimaux; but by over-driving and injudicious management, five of the dogs were killed, and the remaining four were permanently injured. I had now only six animals. The Esquimaux came to the vessel some weeks later, and from them I obtained by purchase, a sufficient number to make two teams of seven each.

It was not until late in March that the ice formed around Cape Ohlsen, and the land being too mountainous for sledge travelling, I was not, until that time, able to set out northward. At that period I made a preliminary journey to Fog Harbour, and there established a provision depot.

I availed myself of this opportunity to visit Rensselaer Harbour, Dr. Kane's winter quarters. No vestige of the Advance was discovered. She had probably drifted out to sea with the ice. During this journey the coldest temperatures of the cruise were recorded. On one day the thermometer sank to 66½ degrees, and on another to 68 degrees below zero. We camped at night on this, as well as on all subsequent journeys, in the snow hut of the Esquimaux.

Active preparations had been making since January, for the spring campaign, and we were ready for the final start on the 4th of April. The chief equipment consisted of a metallic life-boat, twenty feet in length, mounted upon runners, provisions for a boat's crew of six persons for five months, provisions for seven persons and fourteen dogs for six weeks, together with a careful allowance stock of fuel for the above named period. We started from the vessel on the above mentioned date, with our entire equipment, the boat and its cargo being drawn by the whole available ship's company and fourteen dogs. Radcliff with two men was left in charge of the vessel.

(To be concluded.)

For "The Friend."

*A few considerations for the humble followers of Christ, on the present state of our religious society.*

It hath often appeared to me, when solemnly pondering on the original and present state of our society, that it is with us as it was with Israel formerly. They were delivered out of Egypt by a mighty arm, yet they turned away from the Lord, and desired in their hearts to be assimilated with,

For "The Friend."

Benjamin Ferris.

(Continued from page 66.)

Diary, Fourth month 29th, 1762.—"This has been a distressing day to me; for what cause the affliction was sent, or for what end intended, I know not. Hell seemed to open her mouth, and the old lion roared upon me. In my distress I could scarcely forbear crying aloud for the help which seemed withheld. It is hard to describe,—indeed none but such as have had the same path to tread, can understand the distress and anxiety I felt. I could come at no degree of stillness, such was the roaring of the wicked one, yet he charged me with nothing in particular, save that I was altogether deceived, taking light for darkness, and that which I thought to be peace, was but imaginary, and a delusion. When I thought of the unity of my Friends, he told me they were deceived by my fair shows, pretences and speeches. So I lay, as it were, on the brink of despair until evening, when a blessed evidence of regard from an High being vouchsafed, it silenced the roaring lion, and gave me to see that he was a false accuser, and a liar, as he had been from the beginning. Blessed be the name of the Shepherd of Israel who is still watching over his flock, and is a rock of refuge, and a safe hiding place to all the persecuted and suffering ones. Such, he graciously became to my distressed soul, and I had peace unspeakable in holy silence. An inward fear, however, attended me, lest the devourer was not wholly removed from me, which kept me from undue rejoicing, as though a complete victory over him had been obtained. Notwithstanding this, secret praise and thanksgiving were raised in my heart to Him, who is the Deliverer and Saviour of all those, who through faith, look to him for help, and trust in his merciful regard. He is ever worthy of praise, for his unspeakable loving kindness and tender regard. The sense of this lays me under such obligations, that from duty and gratitude I can do no less than freely offer an evening sacrifice, even the residue of my days to Him, whose mercy endureth forever.

"Fifth month 1st.—I have had an exercising time, but this evening a quietude of mind covered me, and therein access to the Rock of Ages, who gave rest to my weary soul. These painful dispensations are, undoubtedly, necessary for perfecting that righteousness, which is the saints' clothing,

and in which attire only can they see the King in his beauty.

"Fifth month 2nd.—I was at Philadelphia Quarterly Meeting, and was grieved to find so few attending it, particularly of the youth. I was also at the youths' meeting, and that held quarterly for negroes, which were to some satisfaction.

"I may remark, that on this, as well as other visits to the city, I have had but little satisfaction, there being such an evident declension amongst Friends from the simplicity and plainness the Truth led our forefathers into. It has grieved me many times, but never more sensibly than at present, in an apprehension that there are some branches of our testimonies much trampled on. Experience hath proved that weakness and loss of the virtue and power which is the preservation of individuals and the church itself, will follow a leaning to the world, and deviations from the pure, holy, simple requirements of the Truth.

"The following occurrence has often been the subject of my thoughts. There is a portion of land in Wilmington, originally belonging to the Swede's congregation. Part of it they sold, and part they let out on ground rent, of which last, several Friends have taken lots. The rent they pay to trustees is appropriated for the maintenance of their priests, and the repair of the meeting house. This I thought rather weakens our testimony against a hiring ministry. It is alleged (in excuse,) that the reuter has a valuable consideration for what he pays, yet I leave it to be considered whether our testimony is firmly maintained by them against an anti-christian ministry.

"In the Sixth month and the beginning of the Seventh month, I attended the Monthly Meetings of New Garden, Goshen, Bradford and Darby. At some of them I was in heaviness, under a sense of the want of living, faithful elders and workmen in Truth's cause.

"Seventh month 27th. The prospect of things among Friends in this place is distressing. Our elderly friends, are many of them fixed in an earthly mind, and manifest little concern for the honour and prosperity of the Truth; some not even in the important charge of the education of their children. Our middle aged ones give up their time and minds, exceedingly like the Athenians, to hear and tell new things. They spend many precious hours in this manner, to the benumbing of their spiritual senses, if they do not entirely lose them. Even those on whom should rest the oversight of the flock, let their interest and care run in different channels. Is it to be wondered at, if wrong things increase and spread amongst us, and the youth take undue liberties. This is sorrowfully the case at this time, and calls for the help and labour of the watchmen. Alas! when I look towards them for help, I am discouraged. Some of them seem to live where they cannot see the approaches of the enemy, in any shape, except as a roaring lion. When any of the flock are wounded, a disposition prevails for healing the wound slightly, by covering it with a piece of paper. Thus those who have gone out, are brought in again another way than by Christ, who is the only door or

entrance into the true fold. These seem not concerned any further for the health and reputation of the church, though she is really the Lamb's wife, than this, they make a profession of being members, and think it would reflect some dishonour to themselves, if any notorious offence within the pale of the church should go uncondemned by them.

"Many testimonies were given to our predecessors to bear, which they could not consistently with their peace decline to uphold. These have been transmitted to us to support,—and they have been in an abundant manner confirmed in the experience of many, to be the Lord's requiring still. The declining and letting them fall through disobedience and unfaithfulness will assuredly separate us from his favour. In this day of light and knowledge, perfect obedience to the cross of Christ is as necessary, and as strictly required as it ever has been in any age of the world. As this is the case, where any see a manifest declension from material branches of our testimony, with so much indifference and unconcern as to take no notice, if it do not touch their temporal honour or reputation, it is to me a manifestation that their concern extends no further than self-interest."

(To be continued.)

*Railways in India.*—The progress making in the construction of railways in India is interesting, as essentially connected with the efforts of the British Government to derive from that country a supply of cotton. A late report on the subject states that since the first of January last, two hundred and eleven miles of road have been opened, which, added to what had been already laid and in operation, makes a total length of ten hundred and sixty-three miles. Work is to be resumed on certain lines on which it had been entirely suspended for want of funds, and it is expected that out of 2932½ miles of road now in course of construction, there will be an aggregate of 1353½ finished and put in use during the present year, and that the remainder will be completed in 1862. With a view to feeding these lines of railway, the government is said to be engaged in constructing and improving a great number of common roads, of which forty-three, having a total length of ten hundred and eighty-three miles, are already designed, in Madras, to communicate with the rail that crosses the peninsula. The report adds:

"The lines seem wisely planned. The longest, the 'East Indian,' runs north-westerly through the whole breadth of our dominions from Calcutta, connecting it with Lahore, and uniting both with the Indus. The 'Great Indian' runs north-easterly from Bombay into the centre of India, and connects that shipping port with the other line at Jubbulpore, to which a branch from the East Indian runs south-westerly. Running from Bombay and Bawestery to Ahmedabad is the 'Bombay and Bawestery,' which brings a large cotton district into road, and connects it with the 'East Indian' by close connection with English shipping. From Bombay, too, the 'Indian Peninsula' runs south-easterly, and joining the 'Madras' is intended to which runs thither from Madras, is intended to connect these two provincial capitals. Again, from

Madras a line runs southwesterly across the Peninsula, and terminates at Beypore on the Malabar coast. From this last line, also, the 'Great Southern of India' starts, and runs to the coast opposite to Ceylon. Finally the 'Scinde' connects the port of Kurrachee with Hyderabad and the Indus. In time, India will be better supplied with railroads than ever it has been with common roads.

—Lodge.

*Piles of Ecclesiastical Splendor not for this Century.*—The noble sentiment of the following passage from Motley's "Rise of the Dutch Republic," will strike a chord in every heart true to humanity:—"The age for building and decorating great cathedrals is past. Certainly our own age, practical and benevolent, if less poetical, should occupy itself with the present, and project itself into the future. It should render glory to God, rather by causing wealth to fertilize the lowest valleys of humanity, than by rearing gorgeous temples where paupers are to kneel. To clothe the naked, redeem the criminal, feed the hungry, less by alms and homilies than by preventive institutions and beneficent legislation; above all, by the diffusion of national education, to lift a race upon a level of culture hardly attained by a class in earlier times, is as lofty a task as to accumulate piles of ecclesiastical splendor."

#### Dr. Hayes' Exploring Expedition.

OFFICIAL ACCOUNT OF THE VOYAGE.

(Continued from page 71.)

Upon reaching Fog Harbor we made nearly a due North course, intending to reach the West coast and travel thence upon the land and ice. We soon encountered hummocked ice of extraordinary thickness, through which it was often necessary to break a passage with axes and shovels. It finally became evident, from the slowness of our progress, that the entire summer would be consumed in reaching the West land, even if the boat could be transported to it at all. Being well assured that nothing could be accomplished with the boat expedition, I sent the main party back on the 25th of April, and continued Northward with three companions, and two sledges.

The ice grew worse as we advanced, and we were fourteen days in reaching the West coast, a distance in a direct line of only forty miles. From this fact you can form some estimate of the character of the ice over which we travelled. The severity of the labour broke down the dogs, and I was compelled to feed to them a double ration, thus consuming rapidly the provisions, and proportionally shortening my northward journey. Reaching the west coast at Cape Hayes, we travelled along the land through Kennedy Channel until the 15th of May, when our provisions being exhausted, we were compelled to turn our faces southward.

The latitude attained upon that day was 81 deg. 35 min., a degree of Northing which I believe not to have been exceeded or equalled by any explorers except Edward Parry. The land was taken possession of in the name of the United States, with the usual forms, and the flag which was used upon the occasion has covered the most Northern known land upon the globe.

Although thus early in the season, the ice in Kennedy channel was everywhere much decayed and unsafe, and in some places was entirely gone. In one extensive pool a flock of water fowl was discovered. I entertain no doubt that the ice of Kennedy channel was broken up and dissolved at a very early period of the summer. It was in this channel that Dr. Kane discovered an open sea at

a period six weeks later, in the summer of 1854. Before reaching the vessel I lost all but seven of the remaining dogs, and the ice having broken up around Cape Ohlen, further exploration to the Northward was impossible during the present season.

The six weeks subsequent to my return to Port Fouke were occupied in preparing the vessel for sea, in completing some unfinished surveys, in making magnetic and other observations, in collecting specimens of natural history, and in photographing the scenery and objects of interest in the vicinity. The schooner had been much damaged by the ice encounters of the previous summer, and it was found impossible to restore her original strength. Being without a carpenter, a large share of the labour of repairs fell upon Mr. Cornick, the sailing master of the expedition, of whose ready ingenuity and practical skill I cannot too warmly express my acknowledgments. The ice broke up around the vessel on the 10th of July, and we put to sea on the 14th.

After much difficulty and two trials we reached the West coast, twelve miles South of Cape Isabella, and being unable to pass the cape we dropped anchor, and on the 28th I made a journey to the North side of the cape in a whale boat, and from an elevation of six hundred feet obtained a view to the Northward. In that direction, fifteen miles above Cape Isabella, the ice was solid and unbroken as far as the eye could reach.

To the eastward, the pack ice was heavy and impenetrable. To penetrate the strait under these circumstances, with the view of reaching a practicable point for future sledge operations with my reduced force (for I had now only five dogs) was clearly impracticable, and believing that I was not justified in incurring the heavy expense of another year's absence, without a prospect of corresponding results, I reluctantly abandoned the field and turned southward.

Taking Whale Sound on the way, I completed the survey of that remarkable inlet, and obtained there an excellent set of magnetic determinations and some photographs of the natives, the glaciers, and other objects of interest.

After boring through the ice of Melville Bay for 150 miles, we reached the Southern water, and entered the harbor of Upernivik on the 14th of August. There we remained ten days, engaged during that time in various scientific explorations. On the 1st of September we reached Gorham or Lively, and were there similarly occupied. We were ready for sea again on the 6th, but a succession of S. W. gales detained us until the 17th, when we again put to sea, and having a fair wind, we were, on the 22nd, 200 miles to the southward of Cape Farewell. From that time until the 9th of October, we encountered constantly southerly weather, with frequent gales. When off Halifax, we sustained serious damage, and were obliged to put into that port for repairs. We are now again ready for sea and expect to leave this port tomorrow.

I have to regret that we could not accomplish a greater Northing, but situated as we were with Smith's Strait to cross, and with a small force at command, I cannot but regard the summer exploration as fortunate and successful. The field of research, although more limited than I had anticipated, was however new, and my observations in different departments of physical and natural science will, I feel assured, meet the approbation of the patrons of the expedition.

I am well satisfied that they will be found fully to justify the labour and expense which they have cost. The unfortunate accident which occasioned

the untimely death of A. Sonntag, caused a serious loss to the expedition. The system of observations and experiments which we had planned in concert had already accomplished important additions to Arctic science, when death deprived me of his invaluable assistance; and with the duties incident to Arctic exploration in the field pressing constantly upon me, I was not always able to execute the plans which we had devised. My officers, however, on all occasions, contributed their best assistance, and I was by them relieved of many onerous duties.

I am especially indebted to—Radloff, assistant astronomer, for his zealous assistance in the work at the observatory, and for assistance in taking photographic views; and to Messrs. Knorr and Starr I owe obligations for valuable aid in collecting specimens of natural history, and other scientific duty.

I will mention, in conclusion, that I am still of opinion that Smith Strait can be navigated with steam. Under sails alone I am satisfied that it cannot. It is my hope to be able to renew the attempt with a small steamer. With this view I have left some stores at Port Fouke and at Upernivik.

With the hope that this will find you in the enjoyment of health and happiness,

I remain, very sincerely,

Your friend and servant,  
I. I. HAYES.

#### Letter of John Barrels.

Unless we have forfeited our privileges as christians, and are utterly lost to all right feeling of Divine help, is it not natural and likely, and consistent with the provisions of Divine wisdom, that as our day is so should our strength be? and oh! the invincible, the unutterable strength of the true faith, even but a grain; it is calculated to overcome the world and the transient things of it; as embraced and laid hold of, and cleaved unto, it makes us heirs of life, and gives victory over death. Oh! then, what cause, and also what ability may we find, even to "rejoice evermore, and in every thing to give thanks," as John Woolman told his attendant,—for this is indeed the will and purpose of God in Christ Jesus concerning us,—that we should "glorify him in the fires." Our business is to stay ourselves upon the Lord, and fully to realize the truth, that all things will be found to work together, and to have happened for the very best, to those that above all things desire to love and serve him. May we more and more exercise ourselves in these views, that we may in nowise be moved by these or any afflictions; but that the farther we go, the more we may witness of the Lord's wonders in the deeps, and be confirmed in the experience of his mercy, faithfulness and strength; though it should be continually made manifest and made perfect in our abundant weakness. Oh, the times and the seasons are well left in his hand, who ordereth or overruleth all things well. And in the present low and trying state of things, it is not to be wondered at that oppression and obstruction are permitted to be felt, to the bowing down of the very souls of some.

Twelfth month 10th, 1834.

As Dr. Dwight once passed through a region of very poor land, he said to a farmer, "I perceive the land here is not very productive." "No," said the honest farmer; "our land here is just like self-righteousness." "Ah! and how is that?" said the Doctor. "Why," said he, "the more a man has of it, the poorer he is."

For "The Friend."

## BIOGRAPHICAL SKETCHES

Of Ministers and Elders and other connected members of the Yearly Meeting of Philadelphia.

MARY BUNTING.

Mary Woolston, the daughter of John and Hannah Woolston, Friends of good esteem, in the first settlement of Burlington, was born there Sixth mo. 1st, 1685. She was an honest-hearted lover of the Truth as it is in Jesus, and about the year 1713, was married to Samuel Bunting, a valuable minister of the Gospel, of whose life we have already given a sketch. Her memorial says, she "proved an excellent wife to him, not only in his family concerns, but in a religious sense." She occupied the station of elder and overseer for many years, and was very serviceable in both. Her care was to walk worthy of the professions she made in the world, to fulfil her duty to all around her, and to educate her family with Christian care and circumspection.

After the death of her beloved husband, the care of their children devolved upon her, and she performed faithfully her duty towards them. She survived him many years, beloved and respected by all who knew her. Her death took place Fourth month 17th, 1765, she being almost 80 years of age.

EDWARD ROBERTS.

Edward Roberts was born in Merionethshire, Wales, in the Third month, 1657. His parents were honest, sober persons, who endeavoured to perform their duty towards their children, and to give them a proper training in youth. They were not members of the Religious Society of Friends. In the twelfth year of his age he was brought over into Pennsylvania, and whilst still young he was convinced of the truth of the doctrines of the Gospel as held by the Society of Friends, and was received into membership amongst them. By his godly life and conversation, he walked in near union with those who had a saving knowledge of the truth as it is in Christ Jesus, and he was a good example to all, preaching by his conduct, of the blessed restraining, directing, purifying operations of Divine Grace.

He was early appointed on important services in the Church, and in the 25th year of his age he received a gift in the ministry of the Gospel. This gift, his friends say, was "attended with divine sweetness and energy, in which he faithfully laboured to the comfort and edification of the living, whilst health and ability of body continued. He was a lovely example of humility, plainness, temperance, meekness, charity, and of justice and uprightness in his dealings amongst men," which made him be esteemed by people of all denominations, who knew him. He was a tender and affectionate husband and father, earnestly concerned to train up his children and family in the fear of God, and to lead them on in the paths of virtue. He ever manifested a true zeal for the promotion and preservation of peace and good order in our religious society, wherein he was often of singular service.

He was first a member of Gwynned Monthly Meeting, but on the establishment of a Monthly Meeting at Richland, his right of membership was removed there. He lived to a good old age. Towards his close, his bodily strength gradually diminished, so that at last he became as feeble as a little child. So, without much sickness or suffering, he quietly departed this life on the 25th day of the Eleventh month, 1768, in the eighty-second year of his age.

SARAH TYSON.

Of Sarah, the wife of John Tyson, a minister

belonging to Abington Monthly Meeting, who deceased Seventh month 9th, 1768, we have little information.

JACOB HOWELL.

Jacob Howell, an ancient man, and for many years a very valuable and industrious minister of the gospel, deceased Third month 17th, 1768. We have various particulars of his extensive services, but in some expectation of obtaining more, we shall postpone any further notice.

MARY KNIGHT.

Mary Carter the daughter of John and Mary Carter, was born in the limits of what is now the City of Philadelphia, in the year 1682. Her parents had just arrived from England to settle in Pennsylvania, and Mary is noted in her memorial, as being one of the first children of English parentage born in the province. Her parents settled at Pylberry, where she was brought up in the principles of the Society of Friends, her parents being consistent members thereof. Through the visitations of Divine Grace and her submission thereto, she was brought to an experimental knowledge of the Truth, and was enabled to manifest her faith by her works.

When about eighteen years of age she was married to Isaac Knight, of Abington, of which Particular meeting she became a member, and remained such to the close of life.

Being an honest hearted Friend, and zealously concerned for the good of others, her dear Saviour committed a gift of Gospel ministry to her, which was but in a few words. The gift appeared small, yet being exercised in simplicity, innocency and humbleness of heart, and having the divine unction accompanying it, her meeting in the year 1730, acknowledged her as an approved minister. In the exercise of her gift she sometimes travelled abroad, visiting the meetings of Friends in the adjacent provinces, and also those nearer home. Her services were acceptable to those amongst whom she was led to labour, as appears by the returning certificates she frequently brought with her. Faithful in the occupancy of the talent which had been committed to her, her friends found it increase as she grew in years. The zeal which had led her in youth to espouse the Lord's cause, seemed to brighten, even to extreme old age. Often she was led in much tenderness and love to press upon her hearers a faithful and honest improvement of the talents the Lord had in mercy favoured them with. She urged on them the need there was to maintain a daily watch against the enemy of souls, who, she often said, had followed her all her life long, and was yet as busy as ever, to try and drag her off from that waiting state of mind in which there was safety. She frequently was concerned to express the thankfulness she felt to the God and Father of all our mercies, who had supported her through the many temptations which had attended her path, and who had given her a gracious promise, that if she continued faithful, according to the measure of grace bestowed on her, he would be with her, supporting and consoling to the end.

Although weak in body, she was remarkably diligent in the attendance of religious meetings, even until near the close, and often in a few words would, with ardency, exhort all to come, taste and see for themselves, that the Lord was good. He had been indeed good to her soul, and so he would be to them. Her heart seemed filled with love to God, love to her fellow members in religious society, and love to the whole human family, and so her friends could but believe that God was with her in truth. Her testimonies tended to edification and

to the comfort of the well minded. Her friends add, "she carried the mark of a disciple.—Love. Her last days were her best days. A good end crowns all."

She departed this life Third month 4th, 1769, being eighty-seven years old. In the endorsement on the memorial by Philadelphia Quarterly Meeting, she is called "ancient and worthy."

*We never can rub it out.*—One pleasant afternoon a woman was sitting with her little son, a white-haired boy, five years of age. The mother was sick, and the child had left his play to stay with her, and was amusing himself with printing his name with a pencil on paper.

Suddenly his busy fingers stopped. He had made a mistake, and, wetting his finger, he tried again and again to rub out his name, as he had been accustomed to do on his slate.

"My son," said his mother, "God writes down all we do in a book. He writes every naughty word, every disobedient act, every time we indulge in temper and shake our shoulders, or pout our lips; and, my boy, we can never rub it out!"

The little boy's face grew very red, and in a moment tears ran earnestly down his cheeks. His mother's eye was on him tenderly, but she said nothing more. At length he came softly to her side, threw his arms round her neck, and whispered, "Can the blood of Jesus rub it out?"

Dear children, Christ's blood can rub out the evil you have done, and it is the only thing in the universe that can do it. "The blood of Jesus Christ, his Son, cleanseth us from all sin."

*A Ruined Character.*—Not long since, in a certain neighbourhood, a man was wandering in search of employment. He called at a respectable farmer's house, and told his errand.

"What is your name?" asked the man.

"Jonathan Gilman," was the reply.

"Jonathan Gilman, the same that lived near here when a boy?"

"The same, sir."

"I will not employ you, then."

Poor Jonathan, surprised at such a reply, passed on to the next farmer's; but the same reply was given. He soon came in sight of an old school-house.

"Ah!" said he "I understand it now. I was a school-boy there once, but what kind of a school-boy? Lazy and disobedient. Although I am now, in a measure, reformed, they all think me the same kind of a man as I was a boy. Oh! that I had done my duty when at school—then again could I dwell pleasantly in the land of my birth!"

School-boys and school-girls, please remember that your school-mates will be likely to look upon you in manhood or womanhood as they did in youth. Then in your school-days, prepare for noble men and noble women.—*The Gen.*

*Long Afflictions* will much set off the glory of heaven. The longer the storm the sweeter the calm; the longer the winter nights, the sweeter the summer days. The new wine of Christ's kingdom is most sweet to those who have long been drinking gall and vinegar. The higher the mountain, the gladder we shall be when we get to the top of it. The longer our journey is, the sweeter will be our end; and the longer our passage is, the more desirable will the haven be.

Creeds and forms and a literal faith, will do nothing for us. We must give up our own wills entirely, and become like little children: it is the only way we can enter the Kingdom.

Selected.

## GONE AWAY.

I see the farm-house, red and old,  
Above the roof its caples sway;  
The hills behind are blue and cold,  
The wind comes up and dies away.

I gaze into each empty room,  
And as I gaze a gasping pain  
Is at my heart, at thought of those  
Who ne'er will pass the doors again.

And, strolling down the orchard slope,  
(So wide a likeness grief will crave,)  
Each dead leaf seems a wither'd hope,  
Each mossy hillock looks a grave.

They will not hear me if I call;  
They will not see these tears that start;  
'Tis autumn—autumn with it all—  
And worse than autumn in my heart.

Oh leaves, so dry, and dead, and sore!  
I can recall some happier hours.  
When summer's glory linger'd here,  
And summer's beauty touch'd the flowers.

Adown the slope a slender shape  
Danced lightly, with her flying curls,  
And manhood's deeper tones were blent  
With the gay laugh of happy girls.

Oh stolen meetings at the gate!  
Oh fingerings in the open door!  
Oh moonlight rambles long and late!  
My heart can scarce believe them o'er.

And yet the silence strange and still,  
The air of sadness and decay,  
The moss that grows upon the sill—  
Yes, love and hope have gone away!

So like, so like a worn-out way,  
Which the last tenant treads too cold,  
And leaves forevermore, as they  
Have left this homestead, red and old.

Poor empty house! poor lonely heart!  
'Twere well if bravely, side by side,  
You waited, till the hand of time  
Each ruin's mossy wreath supplied.

I lean upon the gate and sigh;  
Some bitter tears will force their way,  
And then I bid the place good-bye,  
For many a long and weary day.

I cross the little ice-bound brook;  
(Is summer 'tis a noisy stream!)  
Turn round, to take a last fond look,  
And all has faded like a dream!

Selected.

## THE GOLDEN SUNSET.

The golden sea its mirror spreads  
Beneath the golden skies,  
And but a narrow strip between,  
Of land and shadow lies.

The cloud-like rock, the rock-like clouds,  
Dissolved in glory, float;  
And midway of the radiant flood  
Hangs silently the boat.

The sea but seems another sky,  
The sky a sea as well;  
And which is earth, and which the heavens,  
The eye can scarcely tell.

So when from us life's evening hour,  
Soft fading shall descend,  
May glory, born of earth and heaven,  
The earth and heaven blend.

Flooded with peace the parting soul,  
With silent raptures glow,  
Till where earth ends, and heaven begins,  
The spirit scarce can know.

Longfellow.

Silence is one of the first and foremost lessons we have to learn, and to cease from our own rightness, and seek that which comes from God only.

## Wanderings over Bible Lands and Seas.

SUCCHAR, SAMARIA, AND THE PLAIN OF JEZREEL.

Our tents were pitched close to Nablous, in a quiet place under the shade of trees, amidst the sound of many streams, fountains, and brooks that sprang out of valleys and hills.

Our slumbers were often broken that night by the dreary cries of the jackals, shrieking as they hunted over the hills, like children in pain.

The delight of remembering when we awoke the next morning that it was Sunday, and that we had nothing to do but to be quiet, and feel ourselves in the city of the woman of Samaria, was great.

The clergyman in our party read the English service. Never did the lessons and the old comprehensive prayers seem more touching and appropriate than on those Sunday halts on our journey through Palestine.

A few peasants and towns-people collected near us, and seated themselves on the ground at some little distance, during the service. We knew the feeling of the mob of Nablous was very excited just then against the Christians, but as we stood or knelt, and listened or responded, they offered us no interruption in any way, but quietly and contemplatively watched our proceedings.

In the afternoon we started for a walk, intending to reach the summit of Mount Gerizim, but our dragoman involved us in an unintentional call on the Keimakan, or governor of the town, which occupied us otherwise.

He led us first through the town of Nablous into the Samaritan quarter, where we saw the Samaritan synagogue. An ancient worn copy of the Pentateuch was taken out of its recess in the wall and shown us, but probably it was not the precious copy which the Samaritans of Nablous so jealously guard. This ancient Samaritan colony is, however a commentary on New and Old Testament history, more interesting to unlearned eyes than any manuscript.

From this we were guided to the Keimakan's house, from the flat roof which we were to have a good view of the valley. There, unfortunately for our walk to the top of Gerizim, the Keimakan's nephew met us, and invited me to pay a visit to the harem. It would have been a discourtesy to decline, and accordingly, I had to leave our party and descend a flight of steps from the roof to the women's apartments.

These steps led to an open court with a reservoir of pure water in the centre. Three ladies were sitting and standing in the court when the Keimakan's nephew took me there. One, who seemed to be the principal, invited me to sit down on some cushions which lay in the corner of the room opening on this court. Then they brought a Persian rug and spread it for me, and offered me a glass of Sherbet. My large brown hat, with its folds of muslin coiled into a turban round it, amused them apparently as much as it would have our friends in England. They took it off, and stroked my hair, as one would a cat one wished to make friends with, and felt my dress. I showed them my eye-glass, which entertained them greatly. Then I took a little child on my knee, which made a means of communication. So, with my few Arabic words we became very friendly. They offered me a chibouque, but I could not pretend to undertake an unmitigated long pipe; and not to offend them by declining their hospitality, I said, "Nargilleh." They then brought me a pipe twisted like a snake round a glass jar full of rose-water, in which the bowl is placed, and I managed to create a few bubbles.

While this was preparing, another lady appeared who seemed the chief, as immediately all the others

retired into the back ground and left me to my new hostess. She was quite caressing and affectionate, showed me into several bedrooms, unfastened the lattices which opened into the garden for me to look out, although she would not approach them herself, and finally placed me beside her on a divan in a room more furnished than any of the others, and had a nargilleh and a cup of coffee brought for me.

The rooms were very scantily furnished. Chairs and tables, of course, you would not expect; but there were no luxuries—no signs of women's work or taste, no flowers, sewing materials, or books, or traces of any kind of occupation or amusement—only four dreary white-washed walls, with a few cushions, and a recess in the walls closed with carved doors, for a wardrobe. The cushions were covered with chintz. Only in the room where I had coffee was a small Turkish table of ebony, inlaid with mother-of-pearl. The dress of the ladies was not rich as I had expected, with the exception of rows of gold coins and pearls strung and festooned round their heads, as also round their children's. The loose veil and mantle which forms the out door costume of the women, and enfolds them into a shapeless bundle of clothes, were, of course, laid aside. The whole visit made me very sad. The position of those women, with their handsome expressive faces, and kindly lively caressing ways, weighed most painfully on my heart. And they were fellow-townswomen of the woman of Samaria! It was difficult to get away from them.

At length, however, I made them understand that I must not keep my party waiting, and succeeded in rejoining them on the roof of the house. There the Keimakan joined us, and was most polite. He was a grand-looking old man with a long white beard. His arrival involved a second edition of sherbet, pipes, and coffee, so that our walk up Gerizim was much abridged.

We climbed some way up, however, after taking leave of the hospitable governor, and were attended by a kawsa, whom he insisted on our having, as a guide and escort. It was a pleasant path beside streams, occasionally crossing them, and always accompanied by their refreshing music, and among the luxuriant gardens and orchards which they water. The opposite hill, Ebal, looked comparatively bare and stony, only sprinkled with a little vegetation of a dull green. They told us the springs all rose on Gerizim, the hill of blessing. If so it is a remarkably vivid type, the bill of curlew, barren, brown, and voiceless,—whilst the hill of blessing is clothed with evergreen herbage, luxuriant trees, and vines nourished by the living waters in its heart.

The remainder of the day we rested in or near our tents, and had time to think what those two days must have been which our Lord once actually spent in this very place, listened to, welcomed, understood.

From this valley had gone up, eighteen hundred years ago, the first recognition of the Son of God, as not only the Jewish Messiah, the Christ, but the Desire of all nations, the Saviour of the world. One could fancy that the powers of life in nature had been unfettered here ever since, in virtue of that acknowledgment; and that the valley of Succhar was ever after to be a fragment and forestate of paradise—a place of streams and rest, full of all manner of trees pleasant to the eyes, and good for food, a little spot of earth visibly subject to the life-giving sceptre of the "second Man" the Lord from heaven. No place to be compared with this in fertility and beauty exists, they say, in Palestine. We had, certainly, seen none.

It was pleasant, too, to think that this town and valley may also have been the one alluded to in the eighth of Acts,—the words translated in John iv., “a city of Samaria,” and in Acts viii., “the city of Samaria,” being the same. If so, this place was the first scene of a Samaritan Church, admitted by Peter and John, on the same level as the Church at Jerusalem. In this city there was then “great joy.” And here again, no doubt (Acts xv.), as in the other Churches of Samaria, the tidings of the conversion of the Gentiles in Asia Minor, “caused great joy to the brethren,” rejoicing that the Saviour of the world had at length been welcomed by the heathen world as once and for the first time in their own Samaritan city.

Thus the valley was full of happy and living associations varied and refreshing as the sound of its own many waters.

On Monday morning some of our party walked again through the town, and saw a pitter sitting at his wheel moulding the red clay into the simple, but picturesque bowls and pithers used by the peasantry.

I longed to be able to speak to a few poor peasant women and children who came and sat by me under the shade of a mulberry-tree after our tents were struck. Fellow-townsmen of the woman in Samaria, surely the void and thirst in her heart existed also in theirs. If they could only have learned about the living water!

At three o'clock in the afternoon (Monday, June 30th.) we set off again, under the guard of two Basili Bazouks sent by the Keimakan. Reluctantly we ascended the hill out of that lovely valley, with its cool dewy atmosphere, its abundant streams, its fig-trees and mulberries, covered with vines, and its holy and happy memories.

After a pleasant ride of three hours over breezy hills we reached the place where our tents were pitched by a spring in a green valley just under the hill of Samaria.

Our route had now broken off, for an interval, from all definite incidents in the narratives of the Gospels, and in the history of the apostles. From Sychar to Nain, on the northern side of the Plain of Esdraelon, we are met by no name which recalls any special deed or word of our Lord. Yet the impress of his footsteps was with us every where. Again and again he had mounted these hills, and descended into these valleys, and crossed these hot and weary plains. There was one association which could never leave us, and on which it was almost a relief at times to fall back, after having our attention fixed intently on some special scene. The mere distances we traversed enabled us to realize in a way I had never done before, what the activity and fatigue of those three years of his ministry must have been.

He had traversed these paths on foot. It is evident that his journeys were not made in silence. The apostles were with him, and as they walked he taught them. Parable and proverb, and immortal sayings, and words of tender warning and sympathy, were always falling from his lips, as they went through vineyard, corn-field, or solitary path among the flickering shadows of copewood, or under the olive groves. And therefore, perhaps, it was only Jesus who was weary when they reached the well at Sychar.

It would be interesting to trace how many of our Lord's parables or instructions were given as they went in the way. “As they went in the way a certain man said unto him, Lord, I will follow thee whithersoever thou goest. And Jesus said unto him, Foxes have holes,” the jackals which hunt among these hills by night have holes to hide

themselves in by day, “and the birds of the air have nests, but the Son of man hath not where to lay his head.”

Again, “Jesus going up to Jerusalem, took the disciples apart in the way, and said unto them, Behold, we go up to Jerusalem, and the Son of man shall be betrayed unto the chief priests and scribes; and they shall condemn him to death.”

Again, “As he went through the corn-fields on the Sabbath-day,” the Pharisees found fault with the disciples for plucking the ears of corn; and he said unto them, “The Sabbath was made for man, and not man for the Sabbath.”

Instances might be multiplied of this wayside teaching. Indeed, the number of the lessons of eternal truth called out by casual words or acts, or by the scenes he was passing through at the time, would probably far exceed our Saviour's more deliberate and formal instructions. It is this which gives the variety and vividness to his teachings. They were conversational, not “discourses.” They were not put together as human words and works are; they grew as divine works do, and they live.

Of two incidents in the gospels we do, however, know that they happened among these Samaritan hills.

To one village in the country through which we were journeying, the Saviour of the world sent forward messengers to secure him a night's lodging. The name of that village is not given, any more than the name of the woman “who was a sinner.” Sectarian bigotry prevailed over the common hospitality of the East. “They would not receive” One who was going up to the rival altar at Jerusalem. They did not know what that passover was to prove, nor who was to be its paschal lamb.

The fervent natures of the sons of thunder flashed into revengeful indignation. There must have been more fire in the eye of the beloved disciple, even in his hastened old age, than the mediæval painters have given him in youth. But the Lord turned and rebuked, not the insupportable villagers, but the disciple whom he loved. He said to the brothers, “Ye know not what manner of spirit ye are of. For the Son of man is not come to destroy men's lives, but to save them.” And quietly, uncomplainingly, without another word of comment, He for whom and by whom all things were created “passed on to another village.”

This is the only incident recorded in the New Testament to the dishonour of the despised Samaritans. Perhaps the simple and touching story which we usually call the parable of the good Samaritan was actually a true narrative of a deed of kindness, marked by Him who observed the widow put her mite into the treasury, and saw Nathanael under the fig-tree. But however that may be, its scene was not in this immediate neighbourhood.

The second incident of gospel narrative which may probably have occurred in Samaria, “as our Lord passed through Samaria and Galilee, on his way to Jerusalem,” is the healing of the ten lepers. If this was so, somewhere on the rocky paths among those Samaritan hills our Lord's heart was gladdened by the sight of one grateful human being; and he, like the grateful woman of Sychar, was a Samaritan. One would like to identify, as much as any spot in Palestine, the place where the healed Samaritan leper, no more constrained, as an unclean person, to keep “far off,” fell down at the feet of Jesus, giving him thanks.

(To be continued.)

In the measure we advance in grace, so shall we sink in our own esteem.

*I Did as the Rest Did.*—This tame yielding spirit—this doing “as the rest did”—has ruined thou-and.

A young man is invited by vicious companions to visit the theatre, or the gambling room, or other haunts of licentiousness. He becomes dissipated, spends his time, loses his credit, squanders his property, and at last sinks into an untimely grave. What ruined him? Simply, “doing as the rest did.”

A father has a family of sons. He is wealthy. Other children in the same situation of life do so and so; are indulged in this thing and that. He indulges his own in the same way. They grow up idlers, triflers and fops. The father wonders why his children do not succeed better. He has spent much money on their education, has given them great advantages; but, alas! they are only a source of vexation and trouble. Poor man, he is just paying the penalty of “doing as the rest did.”

This poor mother is striving hard to bring up her children genteelly. They learn what others learn—to paint, to sing, to play, to dance, and several other useless matters. In time they marry; their husbands are unable to support their extravagance; and they are soon reduced to poverty and wretchedness. The good woman is astonished. “Truly, says she, I did as the rest did.”

The sinner following the example of others, puts off repentance and neglects to prepare for death. He passes along through life, till, unawares, death strikes the fatal blow. He has no time left now to prepare. And he goes down to destruction, because he was so foolish as to “do as the rest did.”

#### Littleness of Great Men.

GUIZOT AND LAMARTINE.

Real greatness consists not alone in extraordinary faculties of mind. Gifts of genius may make a brilliant man, but something more is wanted to make one truly great. Perhaps the chief element of this solid greatness is the mastery of the soul over itself—a self-poised mind, that accepts honours with dignity, and bears reverse with fortitude. It is the absence of this self-possession which betrays the weakness of many celebrated men. Excessive vanity makes them ostentatious when in the possession of wealth or power, and irritable in adversity. Perhaps the world does not contain a more striking example of this than the French poet Lamartine—a man who has been on the highest pinnacle of earthly ambition, and who now, finding himself of less importance than he was before, frets away his noble mind in mourning the loss of his former position. It is a sad spectacle to see him wandering gloomily in the streets of Paris, pining with discontent, and complaining of the world which neglects him. Not even his literary fame consoles him for the loss of political power. Thus he seems to be going down to the grave ill at ease with himself and with mankind.

How different is the conduct of another Frenchman, the former minister of Louis Philippe, Guizot. Here, too, is a man who once was a power in the cabinets of Europe, but who to-day holds no office, and aspires to no political influence. And yet he does not let disappointed ambition at his heart out, but sits down calmly to the glory of great historical works which will be the glory of French literature, and which will, perhaps, secure him a more enduring fame even than his administration of the government. Lately he has been occupied in writing “Memoirs to illustrate the History of his Times;” and in the fourth volume which has just appeared, he speaks honorably but sadly

of his brilliant countryman. It is interesting to see the portrait of one distinguished man thus drawn by another. Says Guizot:

"I cannot encounter the name of M. de Lamartine in my reminiscences, or himself in our streets, without an impression of profound melancholy. No man ever received from God more valuable gifts—gifts of person or position; of intellectual power and social elevation. Neither have favourable circumstances been withheld from him, in addition to those original advantages; every chance, as well as every means of success, have attended his steps. He grappled them with ardour; for a moment he played a lofty part in a lofty drama; he reached the end of the highest ambition, and enjoyed its most consummate glories. Where is he now? I speak not of the reverses of his public career, nor of the trials of his private life. In our days who has not fallen? Who has not experienced the blows of fate, the anguish of the soul, the inflictions of fortune? Labour, disappointment, sacrifice and suffering have held in all times, and will continue to hold, their place and portion in the destiny of man—with the exalted more than with the humble. What surprises and saddens me is, that Lamartine should be astonished or irritated at this. It is not alone the pain of his position, but the state of his feelings, such as he has revealed them to us, which I cannot contemplate without melancholy. How can a spectator, who looks on events from such a height, be so intensely moved by the accidents which affect himself? How can such a sagacious appreciator of other men be possessed of so little self-knowledge? How does he abandon himself to such bitterness, after such extensive enjoyment of the favours of heaven and of the world? In that richly endowed nature there must be great blanks and a want of controlling harmony, to cause his fall into such an internal trouble, and its manifestation with so much vehemence. I have seen too little of M. de Lamartine to know and understand him thoroughly; he seemed to me like a beautiful tree covered with flowers, without fruit that ripens or roots that hold; a brilliant meteor without marked place, and with no assigned course in the general system of the firmament; a great spirit incessantly passing and repassing from the regions of light to those of clouds, and catching at every step a glimpse of truth, without being arrested by it; a noble heart, open to all generous sympathies, but self governed by personal prepossessions."—*Evangelist*.

#### Education.—No. 2.

Though some may judge that the fractional result, at the close of No. 1, which is intended to indicate the portion of time to be spent by teachers of Boarding-schools, in association with the pupils, is a reasonable portion, yet apprehending it may be otherwise judged by many, let us propose  $\frac{1}{2}$  of that result for the beginning of a practical aim to combine moral, intellectual, and physical training in schools where children are separated from the social influence of the parental abode. Could this be fairly tried, i. e. were every teacher in such schools in earnest, for  $\frac{1}{2}$  an hour each day, to throw a home feeling and an aim, and to infuse a right spirit into their several objects, which ought to engage their attention out of school, believe, (from an experience of thirty-years as a teacher,) that the improvement and satisfaction arising therefrom would be so marked, that he would feel bound, not by duty only, but by interest, to increase the proportion of his time thus employed.

Every religiously concerned parent, on placing his children from home for education, would desire that they should be cared for and instructed—and feel themselves cared for and instructed—(so far as practicable) under such influences as prevail in a well-ordered family. And as the golden rule is ever applicable, let the teacher consider himself either in the pupil's or the parent's stead, and see how that rule will work upon him. Let him remember the longings, the yearnings, the shrinking, the discouragements, the aching void, and the gloomy forebodings attending his first introduction, and first week's experience in a boarding school. Let him remember, also, the parents' hopes, the mother's fears, lest the fruits of her watchfulness, her labours, and her prayers for her child, up to that crisis, may by some unsuitable association or attachment, some ill-timed indulgence or repulse, be blighted, and her cherished one come back to her bosom, tainted, changed and alienated from the paths of religion and quiet virtue. These are considerations which parents know how to weigh, and teachers cannot fully acquit themselves unless they sympathize with both children and parents in these respects. He hath made but little progress in the philosophy of life, who hath not learned the application of the leverage of sympathy to the varied machinery of education.

Y. W.

#### Missings and Memories.

##### LITTLE WONTONS.

How often do we meet in our social intercourse, individuals with whom we find great difficulty in getting on harmoniously. They seem constitutionally, or at least, habitually, to act in a manner contrary to the wishes and desires of those they mingle with. Such are very serious obstacles to the comfort of their friends. They seem to see so many causes of fault finding with the actions and remarks of those around them, and are so determinedly bent on having their own way, that it is often quite a relief to a company when such retire from it. This disposition is often met with in children, and a simple narrative I recently read, fully exhibits it, as acting in a little boy.

A little girl, named Jesse, who expected two of her young friends to pay her a visit, had put her baby house in nice order for their entertainment, and had swept the barn floor clean, where a swing had been put up, and in short, had exerted herself to prepare every thing, so that they might have a very pleasant time together. She had a little brother, Henry, whom they usually called Harry, who sometimes was very pleasant, but at other times was hard to manage. The two visitors came at last, and when the kissing and taking off of bonnets and shawls were over, Jesse asked them which they would see first, her baby house or the barn. "The baby house," said the strangers, which was a very natural choice, as they were little girls, but that did not please Harry, who shouted out "barn." His sister told him they must do as the company wished. They went out together, and probably the good natured visitors submitted to Harry. After a time, however, Jesse came dragging Harry in to their mother, and requesting she would keep him, saying they could not have a good time where he was.

The mother, of course, was sorry, but Jesse said she could not help it, and added, "I tried to love him, and coax him, and please him, and we all did, but it is of no use, he does not fall in with us, and he spoils all our comfort." To the mother's enquiry as to the difficulty he made, Jesse said,

"He is so full of *little wonts*. He wont swing, or let us swing. He wont play school. Then we play horse to please him, but he wont let us be three horses, and he wont drive us on the gravel, but into the thorn bushes, and is so all the time. We are pleased with him, but he will not be with any thing we do."

Of course mother had to keep troublesome Harry, with his *little wonts*, by her side, for she could not let him spoil all the pleasure of the visitors. But grown up people, with as crooked, perverse ways as Harry had, cannot always be managed so easily. Many people have *little wonts* about them, who do not know how uncomfortable some disagreeable way of theirs render them to those amongst whom they mingle. In our intercourse with others, christian politeness does not by any means constrain us to unite with all the sentiments expressed, but we should offer our dissent with a mild tone and a courteous manner. Let there be nothing manifest of the disposition which prompts *little wonts*, in what we say in opposition to the sentiments of others.

There are men and women to be met with, in civil, social, nay, I may say in religious society, in whom too much of this contrary disposition is perceptible. Sometimes they manifest it in respect to the opinions and acts of people in general, sometimes their opposition seems confined to a few, or to one. We have known many in our time who could not see any propriety in propositions made, or sentiments exercised by certain individuals, who would have given their immediate approbation, had they been uttered by others. If a person, against whom they feel a prejudice, advocate any measure, however good it may appear to others, they are sure to feel the spirit of the *little wonts* immediately called into exercise, and they strive to defeat it, even when they are too cautious to come out openly in condemnation.

Men and women who feel themselves disposed to act and to speak crossly and contrary to the judgment of those amongst whom they move, if they have not sufficient self-control to enable them to restrain the public exhibition of their *little wonts*, had better retire. The universal fault finders,—the persons determined to have their own way in every thing, have no right to mingle in social society, the comfort and enjoyment of which they seriously disturb, even when they do not wholly destroy it. The disposition they manifest is contrary to christianity, and however loud their profession may be, they are not living in the spirit which inculcates.

Those who only manifest the *little wonts* disposition towards particular individuals, are far from having attained christian perfection. I have known cases where, between two persons, a mutual feeling of this kind existed. Some slight cause of alienation having occurred, it led to public rebukes from either side in respect to matters not in themselves of much consequence, which increased mutual jealousy and dislike, until as respected the sentiments or actions of each other, the disposition of the *little wonts* was very strongly exhibited. Ah! I have seen such a feeling increase until it seemed to spread to the destroying of the christian usefulness of individuals. Some have let it go so far as to cause them to condemn all who felt and expressed a friendly interest in those against whom they have let in this dislike. Some have nourished it until it is to be feared, that their own spiritual condition has been sadly injured, until they could hardly, from the great growth of prejudice, give an impartial judgment in regard to any one. The opinions and actions of every one being weighed, not according to their merits, but according as the

other deemed them more or less favourably inclined towards the object of their suspicion and dislike.

*Scaling his own Fate.*—It is a well known law of the human constitution, that while practical habits grow stronger by repeated acts, passive impressions, by the same process, are weakened. Thus, the sight of suffering is, at first, exceedingly painful, and this sympathetic pain prompts us to exert ourselves in order to relieve the sufferer. Now, to allow these impressions to be repeated, and thus gradually weakened, without acquiring the practical habits which they were meant to produce, is fatal to the character. It is, as another has well expressed it, "to burn up the kindling without tarding the fire." This explains the injurious effects of theatre-going and novel-reading, where passive impressions are repeatedly awakened by imaginary scenes of distress, but no opportunity is afforded to act as these impressions would dictate. In this we have a satisfactory explanation of the phenomenon so puzzling to philanthropists, viz: but delicate and refined men and women will fare unpromptly every day, eating "whatever is good," and recline nightly upon couches of down, while untired by a knowledge of the fact that many pale forms, weary and hungry, are aching almost at their very doors. They have lost the susceptibility of receiving impressions from the sight of suffering, without having acquired the habit of practical benevolence.

The same law prevails with reference to religious impressions. The oftener these are repeated, the oftener the sinner feels moved to act in view either of the love or justice of God, and if he allows these impressions to pass away without acting in accordance with them, the less and less becomes the probability that he will ever do so. On each repetition the impression becomes fainter, and the disposition to act stronger. The glorious gospel of Jesus Christ thus becomes to thousands, in whose hearing it is proclaimed, a savor of death unto death. It is possible to wear out these impressions. Sinners, rouse from this sleep. You have often felt these impressions, and as often have refused to act in obedience to them. You know from experience that they are daily growing weaker—take heed lest they disappear, and leave you confirmed in your sins.

*Religion, the denial of self.*—Religion is a denial of self; yea, of self-religion too. It is a firm tie or bond upon the soul to holiness, whose end is happiness; for by it men come to "see the Lord." "The pure in heart," says Jesus, "see God" but that once comes to bear Christ's yoke, is not carried away by the devil's allurement; he finds exceeding joy in his watchfulness and obedience. If men loved the cross of Christ, his precepts and doctrine, they would cross their own wills, which lead them to break Christ's holy will, and lose their own souls, in doing the devil's. Had Adam admitted that holy light in Paradise more than the serpent's bait, and stayed his mind upon his Creator, the reward of fidelity, he had seen the snare of the enemy, and resisted him. Oh, do not delight in that which is forbidden! look not upon it if thou wouldest not be captivated by it, bring not the guilt of the sins of knowledge upon thy soul. Did Christ submit his will to his Father's, and for the joy that was set before him endure the cross, and despise the shame of a new and untrodden way to glory? Then also must submit thy will to Christ's holy law and lightning thy heart, and for the reward he sets before thee, to wit, eternal life, endure his cross and despise the shame of it. All desire to rejoice with him, but few will suffer

with him, or for him. Many are the companions of his table; not many of his abstinence. The lovers they follow, but the cup of his agony they leave. It is too bitter; they like not to drink thereof. And many will magnify his miracles, who are offended at the ignominy of his cross. But, O man! as he for thy salvation, so thou for the love of him, must humble thyself, and be contented to be of no reputation, that thou mayest follow him; not in a carnal, formal way, of vain man's tradition and prescription, but as the Holy Ghost by the apostle doth express it, "In the new and living way," which Jesus hath consecrated, that brings all who walk in it to the eternal rest of God; wherinto he himself is entered, who is the holy and only blessed Redeemer.—*William Penn's No Cross No Crown.*

*Stubbornness and stiffness in children who are grown up.*—Much of the stubbornness and stiffness in children who are grown up, is owing to fond and indulgent parents, some of whom desire will for their children, and as Eli did, advise and counsel them, but still they have not restrained them according to their power; and this was his sin, and the cause of the destruction of his sons. These suffer them, through their foolish and evil fondness to get ahead, and to grow up in disobedience, and when dealt with by concerned Friends, they will tell them, "we must not be too harsh and severe upon our children; we must bear with them, and draw them by love, lest we drive them out from amongst Friends; we hope they will grow wiser and better in time." These and the like fond arguments, we have met with; but by means of this forbearance, such a strong spirit of rebellion has grown up in them, that at last they have become so unruly and stubborn, as to be above advice, rule, or government.

And here I would warn all such indulgent parents to repent thereof; otherwise, I verily believe the blood of their children will be required at their hands. I have compared a child to a young twig that is easily bent, but when grown to a sturdy tree is past bending. Children when young being prone by nature to evil, are to be kept in subjection; and as soon as anything of pride, wantonness, or other evil appears in them, that is the time for bending and restraining them, so far as it is in the power of parents to do, and which is most certainly their duty, as may be plainly proved from scripture.—*Joseph Pike.*

*Our Mission.*—Our mission is to labour and faint not. Wherever the voice of duty calls, it is ours to attend. Temptations, trials and dangers may beset the way, but if the light of God's reconciled countenance illumines our path, we have nothing to fear. In the darkest hours of our Saviour's sojourn below, when his disciples stood afar off, he never swerved from the fulfilment of the God-assigned mission. No, the great work of love went on! Do we profess to bear the name of Christ? If so, we have pledged ourselves to labour in his cause. The solemn covenant of allegiance is registered on high. Are we faithful to those vows? Let the influence we exert, on those with whom we hold intercourse, answer for us. Each hour, as it winks its way from us, bears with it the consequence of that hour's thoughts and deeds. Nothing is lost! However humble or obscure our position may be, still we are not exempt from this weight of responsibility. How very precious is the thought, that, if we labour faithfully in the Master's name, we shall know the fullness of that blessing, which "maketh rich and addeth no sorrow."

We are all travelling eternity-ward. The pilgrimage will soon be accomplished. Let us try to be faithful to our mission—to our vows—to our God. "He giveth power to the faint; and to them that have no might he increaseth strength. But they that wait upon the Lord shall renew their strength; they shall mount up with wings as eagles; they shall run, and not be weary, and they shall walk, and not faint."—*Sunday-School Times.*

*That Christ's immediate revelation of the nature of his Father is to his babes.*—Not to the wise, not to the zealous, not to the studious, not to the devout, not to the rich in the knowledge of the scriptures without; but to the weak, the foolish, the poor, the lowly in heart. And man receives not these revelations by study, by reading, by willing, by running, but by being formed in the will of life, by being begotten of the will of the Father, and by coming forth in the will, and lying still in the will, and growing up in the will, here the child receives the wisdom which is from above, and daily learns that cross which crucifies the other wisdom, which joins with and pleases the other will, which loves to be feeding on the shadowy and husky part of knowledge, without life. Therefore, if ever thou desire to receive this knowledge from Christ, know that eye in thyself that is to be blinded, which Christ will never reveal the Father to; read at home, know the wise and prudent there, whom Christ excludes from the living knowledge. And if thou canst bear it, that eye that can read the scriptures with the light of its own understanding; that can consider and debate, and take up senses and meanings of it, without the immediate life and power; that is the eye that may gather what it can from the letter, but shall never see into the life, nor taste of the true knowledge; for Christ, who alone opens and gives the knowledge, hides the pearl from that eye.—*Isaac Pennington.*

*Controversy.*—"I like controversy when it is thoroughly honest. I do admire to see two large and generous minds approach a subject from opposite quarters, and then to watch the new lights that flash over it and show it in a thousand relations that were not obvious before. It lifts us out of the ruts of our sects and party, in whose treadmill we had been grinding all our lives, and mistaking it for the universe. But controversy with small minds is the smallest business that is done in this world. It slides inevitably into word-catching, and ends in personalities. The moment I saw a man consciously trying to put my language to a different use from what I had put it myself, I would stop short with him and say: 'I am glad to compare ideas, but I have no time for word-catching.' To say, as Dr. Johnson did, 'I can't furnish meaning and brains too,' is not courteous. The only controversy that ever convinces the controversialists, is a friendly comparison of beliefs, each turning the other's round, and viewing it under all the angles of reflection."—*E. H. Sears.*

*An example worthy of imitation.*—She was born in Philadelphia, about the year 1704. Her parents, Anthony and Elizabeth Morris, being worthy Friends, were concerned to educate her in the fear of the Lord, in the diligent attendance of religious meetings, and in an early acquaintance with the Holy Scriptures; and she often in after life acknowledged the benefit of their pious care in these respects. Through the Lord's blessing on these means, and the preserving power of Divine grace, she was kept from many of the follies to which youth is incident; and her father, when near his end, remarked respecting her, that she had

never disloyal him, but been a comfort to him; an example worthy of imitation.—*Memoir of Sarah Morris.*

**Efficacy of Prayer.**—Prayer renders affliction less sorrowful, and joy more pure. It mingles with the one an unspeakable strength and sweetness, and adds to the other a celestial perfume. In what pursuit of earth can ye be engaged that you have nothing to ask of him who placed you here? You are a traveller seeking an abiding place. Do not walk with the head bowed down; but lift your eyes to make sure of the route. Your country is heaven; and when you look toward it, is not your soul stirred within you? Do you not hasten onward with strong desire? Or has this desire no life?

Sometimes there passes over the fields a wind which paroes the plants, and then their withered stems droop toward the earth, but watered by the dew they regain their freshness, and lift up their languishing heads. So there are always burning winds, which pass over the soul and wither it. Prayer is the dew which refreshes it again.—*From the French of La Menais.*

**Training and preservation of Children.**—We educated them in the Truth, in their younger years, and watched over them in love, till they knew the power of God in themselves, unto which we recommended them, by which they have been preserved to this day, to my great comfort. Many days and years have I, with bended knees, in secret prayed to God, before the throne of his grace, to guard them with his power from the evil of this world, and to direct their steps in the way of righteousness, which in a great measure I have hitherto enjoyed; blessed and praised be the name of the Lord forever. I am not a little comforted therein; the Lord preserve them to the end of their days, in faith and well doing. Amen.—*Ambrose Ruggie.*

**The Golden Elixir.**—In former times, there was a vain search for a substance which should turn into gold all metals to which it should be applied.

The Christian has that which may turn every event into joy. God commands us to rejoice evermore; and furnishes the means of rejoicing. Our plans on which we set our heart may have failed, and we are disposed to mourn over our failure. Rejoice rather that God's will is done instead of ours. Are we not sure that it is better for us to have his will done than our own. Is not he wiser and holier than we?

**We are yet a favoured people.**—It is gratefully to be acknowledged, that notwithstanding many in our society have adopted the customs of the world, and drunk of its beguiling spirit, we are yet a favoured people. In our religious assemblies may be felt a gathering Power, that would help us in our christian pilgrimage, and increase our knowledge in divine truths, settle, establish our christian faith, and sanctify our hearts, with all our affections.—*Mary Capper.*

True religion is not a routine of ceremonies, nor yet the essence of any special creed. The religious sentiment is inherent in every nation of the human race. It gives a beauty of its own to all the external forms of creation, and everything that is true and noble in man's soul, springs from its source.

#### SUMMARY OF EVENTS.

UNITED STATES.—The *Progress of the Struggle*.—In obedience to the order of the President, Gen. McClellan

has assumed the chief command of the armies of the United States, Gen. Scott having voluntarily retired from active service in consequence of his advanced age and infirmities. Affairs along the national lines, in the vicinity of Washington, still continue unchanged, and there is no intimation of any movement in any direction. The rebels make no demonstrations of any kind. The movement of troops towards Washington is a daily occurrence. Eight regiments are ordered from Pennsylvania, thirteen from New York, and from all the Eastern States the troops ready for service are in movement. No further operations on the upper Potomac appear to be in progress. The brigades composing Gen. Bull's division have been withdrawn from Edwards Ferry, and they now occupy their former positions around Darnestown, a sufficient force having been left at the river to prevent any attempt at crossing on the part of the rebels. It is understood that all the approaches to Leesburg have been strongly fortified by the rebels.

The great naval expedition sailed from the Chesapeake on the 29th ult. It was subsequently seen off Hatteras, proceeding southward. It is stated that no written orders were issued to the commanders, who are left to the exercise of their discretion, and that the fleet, which consisted of the eight sloop-of-war, and the twenty-three gunboats ordered by the Navy Department about four months ago are nearly all finished. Four of the sloops have been launched, and two more will be ready for launching in about two weeks. Of the twenty-three gunboats only a few remain to be launched, and will probably be afloat in the course of next week. The Government continues to purchase vessels to be turned into gunboats, or to be used as store and supply ships. The number already purchased cannot be less than one hundred and forty.

The rebels continue to strengthen their batteries on the lower Potomac, but have not yet been able, effectually to close the navigation. Small vessels, in several instances have passed the batteries at night without injury.

Private advices from Kentucky, represent that the Union forces were steadily gaining ground, and the rebels falling back discouraged. Gen. Fremont and staff arrived at Springfield, Missouri, on the 24th ult., and would remain until the various divisions of the army arrived. The rebel army under Gen. Price still occupies the way to Springfield. His forces, reported to have 18,000 men, including 5,000 Indians. It is stated that Gen. Lane, who has advanced further south than Price, has sent to Gen. Fremont for reinforcements, and that a mounted force has gone to his aid. The loss of the Missouri Territory, would give the rebels 127 regts. men.

Advices from Gen. Rosecrank's army, represent that on the 2nd inst, the rebels under Floyd had advanced very near the American lines, and a partial engagement had taken place.

**Edwards Ferry.**—Mortality last week, 391.

**Philadelphia.**—Mortality last week, 227.

**The Coinage,** during the tenth month, at the U. S. Mint, in Philadelphia, consisted of 2,251,000 pieces, of the value of \$3,479,969. The gold deposits at the U. S. Treasury office in New York, for the same period, were \$2,628,000.

**The Rebel Finances.**—The Richmond Advertiser states that the expenses of the "Confederacy" for the current year, are estimated at \$300,000,000. In the editor's opinion, the amount that can be realized from the issue of treasury notes, and the direct tax, will be \$125,000,000, leaving a deficiency of \$175,000,000 to be provided for.

**The Rebel Prisoners,** have been transferred from New York to Fort Warren, Boston. They numbered about 800, and sixty of them were invalids.

**Gold.**—The market on the 24th ult., gave glowing accounts from the mines. Four hundred thousand dollars in gold had reached Victoria within ten days.

**FOREIGN.**—Liverpool dates to the 24th ult. The cotton market was excited, with a continued advance in prices. Middling Orleans is quoted at 12d. Breadstuffs were rather lower, and the markets quiet. Consols, 92½.

There is a great abundance of money in the Bank of England, and on Change, with indications of a continuance. The Manchester advices were favourable, and the cotton trade still advancing.

The Shipping Gazette continues to denounce the blockade of the southern ports of the United States, and the wrongs done to British ships. It says that some action on the part of the British Government is necessary to give effect to the blockade.

The London Times, in an editorial on the efforts of

a class in Lancashire to induce the British Government to interfere in America, and break the blockade, says that England would rather undergo much suffering than break the plain rules of international law. She has recognized the blockade and must abide by it. To break it would disgrace and stain the reputation of England. England will not make any such concession as to have her manufactures ruined. The Times, however, says that the blockade is not everywhere effectual, and it reminds the Washington government that it is only a real blockade that can call for recognition. The article concludes by saying that it would ill become England to be the tool of southern machinations; the leaders in which, by withholding cotton, count on compelling foreign nations to take their side in the quarrel.

A company has been formed for restoring the telegraph to India.

The Bombay mail, of Ninth month 27th, brings Calcutta telegrams to the 25th. The weather was good for the crops. A medium yield of cotton was anticipated in the northwest. The Bombay Gazette, asserts that in another year England need only look to India for cotton. There is no apparent mitigation of the financial crisis at Paris. It is rumored that the French Bank will be closed, and that the Government will increase £1,000,000 since the 1st of return, and an immediate rise in the rate of discount was in contemplation.

It is asserted that the panic relative to the French wheat crop is premature and exaggerated. The *Credit Mobilier* of Paris was in a sound position.

The political ferment in Russia and Poland appeared to be increasing. The university of St. Petersburg has not only been shut, but dissolved. The universities of Moscow and Kazaro have likewise been closed. The agitation in Warsaw was unabated, and the authorities were employing rigorous measures to maintain order.

Approaching re-actionary movements in Italy are reported. Several of the conspirators had been arrested in Naples. The re-actionists have chartered a number of Maltese vessels.

The English papers contain distressing accounts of the damage by the inundation of Egypt, caused by the extraordinary rise of the waters of the Nile. Many villages have been overwhelmed, with great loss of cattle, and even of human life. The greater part of the standing crop of Indian corn is stated to be lost. Grenaries, both government and private, have been opened, and the Government has issued orders to prohibit the further exportation of grain from Alexandria. One account states that the loss of cotton will reach at least one third of the entire amount. It will take months to repair the railroads.

#### RECEIPTS.

Received from Geo. Harrison, Agt., Manchester, Eng., per Chas. Evans, £10 an account of subscriptions; from Israel Steer and James M'Grail, O., per D. G. Lovett, \$2 each, vol. 35; from Jordan Ballard, O., \$2, vol. 34; from Thos. Lee, Pa., per W. L. B., \$2, vol. 35; from Eliz. Perry, R. I., \$6 to 15, vol. 35; from D. Huston, \$2 to 10, vol. 35; from H. Hall, Agt., for N. Smith, \$2, vol. 35; from Phebe Parker, Pa., \$4, vol. 34 and 35; from J. Huestis, Agt., O., for Jesse John, \$2, vol. 34.

**DEED,** at his residence in Washington Co., Pa., the 15th of Seventh mo., 1861, GEORGE SMITH, an elder and member of Westland Particular and Monthly Meeting; in the presence of his wife, and in presence of the undersigned, attached to the ancient doctrines and testimonies of Friends, and was deeply grieved at departures therefrom. He was several years confined, during which time he passed through great bodily affliction, which he was unable to bear, and resigned to his Maker, the Divine will; often saying he did not desire exemption from a single pain that was permitted to attend, in order for his purification. After many expressions of supplication, made at different times though the course of his illness, to be preserved in the faith and patience of the saints, on the day previous to his dissolution amongst the last audible sentences uttered, he supplicated as follows, "Oh, Almighty Father, be pleased to look down on me with pity and enable me to bless thy Holy name."

Witness my hand the 31st of the Tenth mo., CHARLES D. HEYSON, of Urisb and Elizabeth Huet, in the 29th year of his age, a member of the Northern District Monthly Meeting.

FILE & MELROY, PRINTERS,  
Lodge street, opposite the Pennsylvania Bank.

# THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XXXV.

SEVENTH-DAY, ELEVENTH MONTH 16, 1861.

NO. 11

PUBLISHED WEEKLY.

Price Two Dollars per annum, payable in advance.

Subscriptions and Payments received by

JOHN RICHARDSON,

AT NO. 116 NORTH FOURTH STREET, UP STAIRS,  
PHILADELPHIA.

Postage to any part of Pennsylvania, for three months, if paid in advance, three and a-quarter cents; to any part of the United States, for three months, if paid in advance, six and a-half cents.

Benjamin Ferris. For "The Friend."  
(Continued from page 73.)

Diary. Ninth mo. 9th, 1762.—"It has of late been revived in my mind, to make a few remarks respecting the path in which I have been led, in relation to speaking a little in our meetings for discipline. Although it may not be like the experience of any other person, I hope it will do no hurt.

"I have been so tossed in fearfulness and doubt, that I have sought after the footsteps of others in their beginnings [in speaking to the discipline,] but could not come at any satisfaction therein. This often reduced me to deep distress, and made me conclude that I had been deceived in my apprehended duty. Yet at times I was favoured with humble resignation and patience, to bear all my inward conflicts until the day should declare the right,—finding peace at some seasons in my attempt at discharging what lay on my mind, which I am ready to think error is not entitled to.

"When favoured with the Divine presence, I have resigned myself to His allwise disposal, saying, 'Let me be thine, O Lord!' and I will follow thee whithersoever thou leadest me." Notwithstanding this, at times when little private duties were presented to me, such as admonishing a Friend for sleeping in meeting, showing my dislike to some vain fashion, and other things of the like kind, I was afraid, and was ready to wish I had not entered into covenant to be obedient. I found, however, that faithfulness was due in these small matters, and that the discharge of duty afforded peace, and the omission thereof brought trouble of mind. After many seasons of distress and trial, I became at length made willing to yield to the yoke in this respect, and found it grow more easy. Here I desired to rest. At times in meetings for business I was brought under concern that the proceedings might be rightly conducted and every thing be done well and for the promotion of the cause of Truth. This cause was then in a good degree precious to me, and I had at times a sense of what ought to be done, which judgment sometimes in my mind was clothed with words. I then felt no commission to utter them, and yet often some other Friend has spoken the very words, and I could say in secret, amen! This seemed for a time to confirm me, that this quiet and easy way of getting along was to be my portion. Yet this

spot I could not long have peace in. The terms of peace to me, was in obedience to apprehended duty, and that pointed to my uttering in meetings for business, not and then, my sense of things before them. This was to me a very hard dispensation to pass through, and I could not, for a long time, come at resignation and obedience. For relief I frequently mentioned privately to a Friend what was on my mind, and so it was communicated to the meeting, which sometimes seemed to answer my end. I received but little satisfaction in this, yet I thought I did not regard that, if I might be permitted thus hiddenly to perform my duty. I was willing to bear my own poverty, and I thought it was with a good intent that I desired this secret way of living, for if I should miscarry, it would bring less reproach upon the good cause, than if I had more openly advocated it.

"This contrivance of mine, became less and less fruitful of good. My poverty and leanness increased, and an apprehension of duty to give up more faithfully, very closely attended my mind. I strongly reasoned against submission thereto. I was young,—the work was so weighty, and I lacked a sufficiently satisfactory evidence of being in the right way. This I thought essentially necessary to know, before so open an espousal of the cause of Truth. I also excused myself in pleading that I was ignorant and unlearned in the discipline, and knew not how it ought to be managed.

"Notwithstanding the apparent reasonableness of my excuses, I found they but added to my distress and poverty. Great were the struggles and tossings that attended me, and I concluded that I never could give up in obedience, but must die on the spot I was then in. But I have cause of thankfulness to the Lord, who being touched with a feeling of our infirmities, saw and aided me. By his fatherly care he so overcame my spirit at times, that I could but dedicate myself anew to Him, who I knew was worthy of all service and obedience from me in a particular manner. I was thus brought into some degree of willingness to give up to the requiring of duty. Whilst sitting in meetings for business, something appearing necessary to be said, I was willing to obey, but my duty to speak not appearing so clear as I desired, at times whilst I was waiting in fear, some one else hath spoken what was before me. I then saw that the concern was right, but did not feel satisfaction in myself after the meeting. The uneasiness appeared to me the fruit of my disobedience. So it happened time after time. Whilst concluding that if assured that it was the Lord's requiring, I would be obedient, I was exceeding afraid of being deluded, and drawn to say something from some other motive, than the pure motion of life. This last I was sensible was that which only could preserve life, bear me up and carry me through. I was afraid of an unfriendly bringing forth, for the Lord is jealous of his honour, and will not give his glory to another, nor his praise to graven images. Under these considerations my heart was humbled to reverent supplication to him for preservation in his counsel and fear, that I might never dishonour him, nor hurt myself. I think I may safely say, that

were it not from clear and undoubted conviction, that my peace with the Lord depended on my obedience to Him, I had surely never opened my mouth publicly in his cause. I remembered the case of Uzah, who put his hand with a good intention to support the Ark, when it was likely to fall, yet he lost his life. I am of the mind that who-soever presumes to act in the cause of God, without regarding the influence of His spirit, will endanger their spiritual life.

"Under these considerations, I often trembled when I felt any thing required of me to express, yet, blessed forever be the name of the Shepherd of the Flock and the Head of the Church, as I gave up and endeavoured to answer what I believed to be my duty. He mercifully vouchsafed a degree of sweet peace and consolation, which encouraged to more faithfulness. It was not always that a reward immediately followed a discharge of duty. Sometimes I experienced great stripping and leanness. This excited a deep inward search lest there might be something wrong, and increased a circumspect watchfulness and carefulness, to look to the Lord alone. Sometimes, in impatience, seeing little or no good done, I seemed ready to say I would never again open my mouth in his cause. Again, I desired that I might sit in silence for years, that I might be so instructed, as when I did speak, to speak to some purpose. But all my reasonings and conclusions afforded no peace. I did sometimes keep silence, partly wilfully, partly through distressing uncertainty. Yet at length I grew weary with forbearing, and could no longer gainsay, but felt constrained to give up at times to speak a little. It was greatly in the cross, and was the harder in that it was mostly on the conclusion of cases and in the way of judgment. This brought me very low, and my soul was bowed before the Lord in petitions for preservation, and that he might rule and reign in me, subjecting all unqualified zeal, and clothing me with his own spirit, under the influence of which alone, I was fully convinced, there could be right discerning.

(To be continued.)

*Confessing and Forsaking.*—We have had a national fast, but a national fast is not synonymous with national repentance. Repentance supposes not only a confession, but also a forsaking of sin. Whoever has confessed any individual offence or negligence, from which he is not heartily disposed, and earnestly endeavouring to free himself—whoever has acknowledged himself a sinner, by voice, vote, or silence, in any public wrong, for which he does not seek in every just way to rid himself of further responsibility—may, indeed, have felt a transient regret, and, in that low sense of the word, have been sincere; but has truly drawn nigh to God with his lips, while the heart was far from Him. A truly spiritual mind will impart its quality to all the habits and actions of life. Our lives cannot be cut up into compartments, in one of which we may walk after the Spirit, while in another we are walking after the flesh. It would be as reasonable to think that we may work religiously with one hand, and irre-

ligiously with the other. We cannot be in an eminently spiritual frame with respect to our country, while cold and formal with respect to the church and the interests of religion immediately about us.—*N. Y. Examiner.*

#### Wanderings over Bible Lands and Seas.

STICHAH, SAMARIA, AND THE PLAIN OF JEZREEL.

(Continued from page 77.)

The more definite associations of the district around Samaria, interesting as they are, are scarcely sacred at all; and yet the situation of the city of Samaria is beautiful, and its ruins are more extensive than those of any other place in Palestine.

When we reached the stream at the foot of the hill of Samaria, beside which our tents were pitched, it was nearly sunset.

Flocks of sheep and goats were collected around the abundant, clear spring, to be watered from its large, rocky basin; and the women of the village of Samaria (Sebasteiyeh) were filling their large earthen pitchers, to carry them up the winding road to their homes. As we rode up the hill, to see the ruins before the light was gone, we passed other women toiling under the weight of their heavy water jars.

Samaria, like Nablous, and unlike most of the remaining cities in Palestine, retains the Greek name Herod gave it (Sebaste, Sebasteiyeh,) instead of its Hebrew appellation. Its situation is indeed royal and beautiful, on the levelled summit of a rounded, isolated hill, separated by broad, fertile valleys from the higher hills around, through the openings of which it commands a very extensive range of distance. Its aspect must have been most queenly when the temples and palaces of the kings of Israel, and afterwards of Herod, crowned the platform at its summit, rearing their white columns and gilded roofs on the height to which the whole terraced hill must have seemed a magnificent flight of steps, tier above tier of terraces, green with vines, silvery with olives, or golden with corn, leading the eye to the royal city at the summit.

Sixty or seventy columns are standing on the top of the hill, winding round in a double colonnade from near the remains of a massive, ancient gate, flanked with ruined towers. These columns were, we thought, monoliths, and some of them of granite.

On the site of the city is an Arab village and many cultivated fields. The peasants were not very civil; but perhaps they were afraid we might prove tax-gatherers, deservedly their greatest terror next to the Bedouins.

A mosque, formerly a church, rises among these casbns. It is called the Church of John the Baptist; and this tradition (naturally connecting the memory of the murdered prophet and the murderous king) points it out as the scene of John the Baptist's death. Into the wall of this church is built a Corinthian column, probably from Herod's temple.

In the crypt underneath the church, shown to us as the prison and the tomb of John the son of Zachariah, is an ancient stone door, like some of those in the tombs of the kings at Jerusalem.

Before descending the hill we lingered to look at the magnificent panoramic view of mountains, rich plains, and wooded valleys, embracing a range east and west from the Mediterranean to the hills beyond Jordan which were burning that evening with all the glory of sunset. This was the view which was seen from the flat roofs of the palaces of Ahab and Herod. Some of our party saw jackals and a wolf within a hundred yards of them, on the site of Herod's city.

Such was the beauty of the place, and such its

desolation. But what were its memories? They are almost entirely of the things that perish, not only disconnected with what is sacred, but with what is noblest to profane history. Samaria was the metropolis, not of a nation dimly feeling its way to the light, but of one deliberately turning its back on a light not dimly revealed, and therefore the best human as well as all divine elements are absent from its records. Not only has it no David or Daniel or Hannah, but no Leonidas or Socrates.

No deed of true heroism or generous humanity consecrates its site any more than any life of true godliness. Its two conspicuous names are Ahab and Herod, the murderer of the blameless Naboth and the murderer of John the Baptist, the slaves of Jezebel and of Herodias. Its two most remarkable buildings were Ahab's temple of Baal, which Jehu destroyed, and Herod's temple to Augustus, whose columns are probably those among which we rode.

The connection of Elijah and Elisha with Samaria is scarcely an exception. They came to it, not as residents, but as prophetic visitants from the wilderness or the schools of the prophets, and usually with messages of doom. One signal deliverance, indeed, characterizes Samaria—the panic which seized the besieging army of Benhadad, and laid open the richly furnished and provisioned tents of the Syrians to the four famishing lepers. A massive ancient gateway was, as has been said, the only ruin of importance which we remarked besides the colonnade, and we naturally fixed on it as the scene of that adventure, one of the most romantic (if the expression may be used) in the sacred narrative. We could imagine the hungry and so lately hopeless citizens passing through that rocky portal, at first in small groups, with slow and watchful movements, looking around on every side in fear of an ambush, and then as party after party reached the camp, and not an enemy appeared, the sudden rise of confidence and the rush of the famished multitude through the narrow gateway, trampling down in their eager haste the sceptical official who tried to keep order among them. A fast ready spread for the famished, free range over their deserted hills for those who had been so long cooped up in hopeless inaction; yesterday a mother who had murdered her own child for hunger, and came to complain of a tort to the king, not as of a crime, but as of a bargain unfulfilled; all womanly feeling and all moral sense absorbed in the mad craving of hunger; and to-day, rescue, freedom, and plenty of every kind! History presents us with few more sudden and joyous contrasts, and yet we hear of no thank-offering, no song of praise. The godless spirit which displayed itself in scepticism in the nobleman, when Elisha prophesied deliverance, was manifested after the deliverance in the selfish, reckless haste of the people who trod him to death. Hopelessness in danger, selfish thanklessness in deliverance, the whole incident is a striking illustration how the alienation of men from God involves their alienation from one another.

The memories of Samaria are memories of crime, and idolatry, and of a splendor, all of "the earthly," illumined by no true light of divine truth or of human love. We descended the beautiful terraced hill without regret, and were very glad to find shelter in our little encampment in the valley, where a clear, abundant stream gurgled through the brushwood close to our tent-doors, tinkling over its pebbles, and eddying round its little shingly beaches, and giving us an unlimited supply of good water for all domestic purposes.

Through the night at times we heard the jackals

wailing and screaming from the neighbouring hills, and early in the morning the goats from a village near came to drink at the rocky basin which had just formed the bath for some of our party.

On the next morning (Tuesday, June 24th) we started at four o'clock. It was a beautiful ride. In many places the hills were cultivated; in almost all they might be clothed with luxuriant vegetation. We skirted the Valley of Sebasteiyeh, and as we climbed the opposite hills, and were winding through a pass leading into the Plain of Jezreel, we caught a last and most impressive view of the royal hill of Samaria. How often the city must have burst from this point on the sight of the kings of Israel as they were returning from Jezreel!

For beauty few sites can equal it, and we could not help lingering to gaze and imagine how the royal city must have looked through this ravine, on its symmetrical isolated hill, with its crown of temples and palaces, and its queenly robe of terraced vineyards, corn fields, and olive gardens, sweeping majestically into the valley. But its temples were to Baal or to Caesar, and its palaces were scenes of riot and crime. There was nothing to regret.

Soon afterwards we descended on the Plain of Jezreel, the great battle-field of Palestine, the inheritance of Asher. It was beautiful then, although the corn had been reaped. But in spring, after the rainy season, it must be delightful when the fields of young corn, their delicate green—*what* here and there with the tints of countless wildflowers, especially of the scarlet anemones, undulates like a sea as far as the eye can reach on each side, running up among the hills and headlands in long creeks and spreading bays of living verdure.

Unfortunately for the inhabitants, this rich plain has many an outlet through the Jordan valley into the Desert, and the Bedouins, with their camels and black steeds, make forays on it now as easily as their ancestors, the Midianites of old. There are few places on this side of the Jordan so perilous to travellers as Esdraelon. About mid-day we reached Jenin (Engannin, the well of gentleness), a place of springs and gardens still. Our thirsty horses soon soaked the water, and quickened their steps to reach the extensive troughs, where large flocks of pretty, long-eared goats and sheep, with herds of cattle such as we had not seen for a long time, were being watered. From these abundant and well-kept wells, we were directed to a garden, where they would be sent for us, under the shade of a magnificent mulberry-tree, the fruit of which dropped around us. We were regaled on mulberries, figs, cucumbers, and tomatoes. Soon after this an American and a Dutchman came, with mules and horses, and pitched their tent under the same mulberry. Then we discovered that Jezreel, where we had intended spending the night, was not a safe place of encampment, on account of the Bedouins and as no other halting-place was within reach, provided with springs, and uninfested with these desert marauders, we had to find another garden, and encamp for the day and night at Jenin.

Although we regretted at the time the "annexation" of our mulberry by the strangers, we afterwards much preferred our second resting-place, because it was under the shade of a garden to the edge of the plain, and gave us a fine uninterrupted view over the whole broad level, with its occasional islands of hill, and its reaches of fertile land stretching past headland after headland of its mountain coasts.

Mithcr, from the height of Tabor, unseen on the north, Deborah and Barak's patriotic band had swept down on the hosts of Sisera, encamped with

chariots and horsemen on the western reaches of Esdraclon, and routed them in the battle of Megiddo.

Either, from their deserts in the East, the Midianites and the Amalekites, and the children of the East, had come up and pitched in this valley or plain of Jezreel, with their cattle and their tents. This broad level, where now we only saw the waving of thin vegetation springing up after the harvest, was alive with their camels and their cattle, and the movements of their horsemen scouring the plains for plunder, "like the sand by the seaside for multitude." The whole land was astir with them, as the fields at evening with the hum of countless cicadas or "grasshoppers." And through those passes on the east their chieftains and all the scattered host fled after Gideon's victory.

On the "high places" of Gilboa, on the northeast, Saul and Jonathan fell by the hands of the Philistines, and were lamented by David in the pathetic dirge we know so well.

From the range of Carmel on the west, Ahab drove into Jezreel, the girded prophet Elijah running with supernatural swiftness before him. And before they reached the city, the little cloud rising from the Mediterranean not larger than a man's hand, had covered the whole sky with blackness, and was pouring down its torrents of blessing on these mountains and this plain. What a miraculous change the few days after that rain must have made in the scenery around us! Long-buried and forgotten seeds of life, flowers, and corn, and grasses, springing up on hill-side, valley, and level, till all the land was one tide of exuberant life.

We were in the region of chariots. Here the Syrian hosts of Benhadad, with chariots and cavalry, had filled the country, and across this level sweep they had fled before the Israelites, who had been pitched before them "like two little flocks of kids," not because the blaspheming of the Syrians might not pass unanswered, that the God of Israel was a local deity, such as they believed their own to be, "a god of the hills, but not of the plains." Across this plain, not long afterwards, Jehu was seen driving his chariot furiously from the border land of Gilead, to execute vengeance on the doomed house of Ahab.

And from that time to this, the corn fields of Esdraclon have been trampled down by Bedouin tribes and invading armies, "children of the East," and children of the West. The villages and towns which lie (like the villages on the coasts of Genoa) on the sides of the headlands which bound the plain, or crown the little hills which rise here and there like islands from it, have looked down from age to age on scene after scene of war and slaughter. The records of its battles range from the book of Judges to the Revelation; from the rout of the armies of Sisera at Megiddo, the western branch of this plain, to the battle of the great day of God Almighty, when the kings of the earth and the whole world are gathered together into a place "called in the Hebrew tongue Armageddon." Whatever may be the meaning of that last mentioned announcement in the Apocalyptic vision, this final allusion cannot but give a deep and mysterious interest to the great battle-field, beneath whose sod such countless numbers of warriors already lie, and which furnishes the tide for the last great conflict, which we are promised, shall be a victory for the Prince of peace.

E. C.

By coming nearer and nearer to the Saviour ourselves, we will in the most effectual manner extend His kingdom.

Letter of John Barclay.

It is little we can do for one another; yet let us be willing to do that little which offers. I often think how short may be the season, wherein we may be permitted, or may have occasion for, the comfort, aid, and support, one of another. Many opportunities for giving a hand of help or a cup of cold water, we do not embrace; but we suffer them to go by unimproved, or fritter them away in our intercourse one with another, even with those nearest and dearest to us in an outward or inward sense. Everything indeed proves what poor creatures we are; and what a low, mixed, impertinent state the present is;—at times favoured with a few drops of comfort, of strength,—a little grain of faith, of hope, of qualification to struggle on, administered in the hour of need, and in such a way, as utterly to hide pride, and take away all occasion of boasting on the one hand, or repining on the other. Oh! if we did enough cultivate our intercourse with heaven and heavenly ones and heavenly things, and avail ourselves of our privileges, remember our heirship and calling! Why need we tarry here—why should we grovel below: instead of lifting up the soul and resting in the Beloved!

Farewell! onward—onward; the time is short, my brother and my sister; and in due season we shall reap, if we faint not.

Second mo., 1838.

#### The World's Conquest by Faith.

The mightiest of conquerors is faith! The conquests of the great chieftains of history pale into insignificance before its splendid moral triumphs. Alexander conquered the world, and yet the world conquered him! He, whose mighty legions bore him over all opposition to the highest of all human ambition and glory—even the proud Macedonian monarch—fell a conquered victim to his own appetites and lusts. Truly, "he that ruleth his own spirit is greater than he that taketh a city." A noble and more glorious conquest by far was that of Paul the Apostle, who "kept his body under subjection," and who arose from the crucifixion of self, the sublime, spiritual conqueror of the world!

Faith is, indeed, a grand moral power—a vast and mighty force in the spiritual world. "Verily I say unto you, if ye have faith as a grain of mustard-seed, ye shall say unto this mountain, *Remove hence to yonder place; and it shall remove; and nothing shall be impossible unto you.*" Faith conquers the world: for "this is the victory that overcometh the world, even our faith." That which is man's highest natural desire, as well as his strongest spiritual enemy, is "the lust of the flesh, the lust of the eyes and the pride of life." On the altar of this natural desire, and by the power of this spiritual foe, countless hostombs of human beings have been hopelessly sacrificed. Here fell Alexander and Caesar: and here have fallen untold numbers of thousands of the race! The history of humanity is scarcely aught else than the sad record of the splendid moral wrecks, which have ever followed on in the wake of human passion. Men learn but little and pride, appetite and lust. Men learn but little from the history of others, or even from their own follies in life, but madly rush on in the course which leads ever to disappointment and ruin. They have not faith, strong and unwavering faith in God; and since, without it, they cannot conquer the world, the world conquers them.

But faith in the crucified One—faith in Him who says now, as he did to his disciples in the days of his earthly ministry, "Be of good cheer, *I have overcome the world!*"—conquers because it *destroys*

"the lust of the flesh, the lust of the eyes and the pride of life." Faith's holy mission is to bind the heart to Him "who save himself for us, that he might deliver us from the present evil world." It purifies the heart, and we are so delivered: sanctifies and exalts the moral affections, and we thereby enter upon a new and higher spiritual being. Regenerated and redeemed by faith, life has new aims, nobler objects of desire, and inexhaustible sources of happiness.

A life of faith is of necessity a life of happiness. Paul was happy. Why? Let him answer: "Christ liveth in me; and the life which I now live in the flesh, I live by faith of the Son of God, who loved me and gave himself for me."

Faith overcomes the world by investing its subject with a spirit superior to its adversities and misfortunes. Here the philosophy of earth has ever failed! Here that of the skies has ever triumphed! Faith conquers, and faith only, the hardest human lot—brightens and blesses, the darkest hour of adverse life? Where would be its divine power if it did not? Where could be its godman, in the season of temporal distress, look for relief and for ascendancy over trouble, if faith could not uplift the soul to mysterious, glorious communion with divinity? Man would, indeed be wretched if there was no power to rescue him from the fate of external circumstances. He must have a faith, under the divine influence of which, he can realize the impotency of any outward condition to reach the source of his inward blessedness—must realize, in his heartfelt experience, that

"No changes of season or place  
Could make any change in his mind."

Shadrach, Meshach and Abednego in the burning fiery furnace; Daniel in the lion's den; and Paul and Silas in prison and fetters—all, despite the temporal disadvantages by which they were surrounded, were safe and happy! Their faith conquered the world—even the bitterest trials of life were vanquished and overcome by its sublime, moral energy. Well might the apostle, in looking over the vast array of the world's conquerors, and in grasping the mighty principle by which they triumphed, exclaim in reference to them, "Who triumphed, subdued kingdoms, wrought righteousness, obtained promises, stopped the mouths of lions, quenched the violence of fire, escaped the edge of the sword, out of weakness were made strong, waxed valiant in fight, turned to fight the armies of the aliens." It was by the power of the unseen over the seen, of the eternal over the temporal, that they conquered; and it is by this selfsame power of faith that we are to overcome and vanquish the world.

But faith overcomes the world, not only by conquering the difficulties in the way of human happiness, and by triumphing over the natural apprehensions and fears of the human heart in the prospect of life's close. Whatever triumphs merely human energy has accomplished over the misfortunes and trials of life, here, at least, it has signally failed. Human philosophy conquers not, but quails before the repulsive, terrible idea of death. Upon life's last battle-field, on the decision of which hang all the fortunes of eternity, faith alone has majesty and triumph! Here, death, the last enemy, is a conquered dismantled foe! "It is there," says Matthew Henry, "that the eternal blessed world is most clearly revealed and proposed to our affection and pursuit. It is there we are encouraged by a whole army and cloud of holy soldiers, who have in their several ages, posts and stations; overcome the world and won the crown. It is the real christian that is the proper hero, who vanquishes the world and rejoices in a univer-

sal victory. Nor does he (for he is far superior to the Grecian monarch) mourn that there is not another world to be subdued, but lays hold on the eternal world of life, and in a sacred sense takes the kingdom of heaven by violence, too! Who in all the world but the believer in Jesus can thus overcome the world?"

"Faith builds a bridge across the gulf of death, To break the shock blind nature cannot shun, And hands thought smoothly on the other shore. Death's terror is the mountain faith renounces; That mountain—barrier between man and peace. 'Th' faith disarms destruction; and absolves, From every clamorous charge, the guiltless tomb."

Readers you are either to overcome or be overcome in the great moral conflict now going on in the world. Either victory or defeat is before you. You will either conquer the world or it will conquer you. Victory will make you blessed, as defeat will ruin you forever! Such, then, is the nature of the great spiritual conflict in which you are engaged. You are to win or lose everything! See it, then, that you have faith: for "this is the victory that overcometh the world, even our faith." That you have motive enough to bestow your best powers and summon your noblest activities for the contest, recollect it is said, "Him that overcometh will I make a pillar in the temple of my God, and he shall go no more out: and I will write upon him the name of my God, and the name of the city of my God, which is New Jerusalem, which cometh down out of heaven from my God: and I will write upon him my new name."—*Protestant Methodist.*

For "The Friend."

#### BIOGRAPHICAL SKETCHES

Of Ministers and Elders and other concerned members of the Yearly Meeting of Philadelphia.

##### THOMAS WOOD.

Thomas Wood was born in England, in or about the year 1675. His parents, who were not members of the religious Society of Friends, removed when he was a small child into the province of New Jersey, where they educated him in conformity to their own religious tenets. But his mind being early visited by divine Grace, he was led seriously to consider religious subjects, and whilst still quite young, he became convinced of the truth of the doctrines held by Friends. His faithfulness to the convictions of his mind therein, brought on him some personal severity and much displeasure from his father. But as he remained steady to his principles, and prudent and exemplary in his conduct, the father was at last reconciled to him, and treated him with the love and affection of a parent.

He removed to Abington about the year 1705, and in the year 1713 he was there married to Martha Lloyd, daughter of John Lloyd, of Desart, in Radnorshire, an exemplary young woman, who became in after life his fellow labourer in the gospel of Christ. Thomas Wood had received little or no literary instruction, and it appears though not able to read the Holy Scriptures, yet he was very fond of hearing them read, and promoted the frequent reading of them in his family. Having a good memory, he was well acquainted with their contents, and could quote them correctly, when afterwards called into the ministry of the gospel. Although residing some distance from meeting he was a very diligent attendant thereof, and was zealously concerned to be found faithful in the performance of his religious duties. About the year 1723, a dispensation of gospel ministry was committed to him, as it was very soon after to his wife. His ministry, through divine Grace, was to the comfort of the afflicted, for whom he felt true sym-

pathy, and although not in the enticing words of man's wisdom, it was in the demonstration of the Spirit, which made it acceptable to the church.

In fulfilling the ministry committed to him, he was led to travel at times, and his Friends say, "visited most of the distant meetings of his Friends on this continent." He was careful always to have the unity and approbation of his brethren with his travels, and brought home with him certificates giving satisfactory evidence that his labours of love in the ministry of the gospel, had been acceptable to those to whom he had been sent.

He was very much esteemed and respected amongst his neighbours of other religious societies, to whom he often was led to communicate good and wholesome advice. This was well received by them, for his consistent life and conversation amongst them, had stamped him in their eyes as an honest, industrious man, as well as a true lover of christian piety.

Although a diligent attendant of all Meetings for Discipline, he seldom vocally took part in the proceedings. His memorial says, that "a diligent waiter therein. There was a *language intelligible in his silent, solid sitting*, which communicated instruction to his Friends, who were always well pleased with his company."

He lost his beloved wife Martha\* in the year 1735, which was no doubt a great trial to him. He was afterwards married to Ann Hunter.

He was very often engaged by the appointment of the Monthly Meeting in the weighty work of visiting the families of Friends, and the memorial of his meetings referring to this says, "One of his last labours of love amongst us, was of this kind, when, according to human probability, through old age and weakness of his body, it appeared too arduous an undertaking for him to engage in. Discovering a willingness to make trial, he was supported through the assistance of Divine Providence beyond expectation, with inward and outward strength, so that he got through to his own and his Friends' great satisfaction."

After this he was mostly confined to his own residence, and sensibly declined in strength of body and of mind. When his friends visited him they found him in great innocency and a child-like state, retaining his ancient and wonted mark of discipleship,—the love of the brethren. In this he continued until his close, which took place Third month 7th, 1769, being about ninety four years of age.

##### PHEBE MORRIS.

Phebe Guest a daughter of George and Alice Guest, was born about the year 1686 or 1687. She was religiously brought up, and soon became a valuable member of society. In the year 1704 she was married to Anthony Morris, to whom she was a faithful helpmate for nearly sixty-five years. She was for many years an elder "well esteemed" in Philadelphia, and one of the most useful in her day, in Meetings for Discipline. Her decease took place Third month 18th, 1769, she being then 82 years old.

##### ISAAC CHILD.

Isaac Child was born at Buckingham, Bucks County, Pennsylvania, in the year 1734. He was early subjected to the cross of Christ, and through the powerful influences of the Holy Spirit, he was brought into great circumspection in his conduct and conversation, and became well instructed in righteousness. When about twenty-four years of age, a gift of gospel ministry was

committed to him. He had been well instructed in his secret exercises by the Lord's illuminating grace, and when he came forth in the ministry, he was as one richly furnished with matter suitable for the states and conditions of his hearers. He seemed to have passed through the child state before his mouth was opened to preach the Gospel, and it was as a strong man, nay, as a father in the Truth that he first spake.

Not only was he qualified to preach the Gospel with power and authority, he was also eminently useful in meetings for business. Zealous for the prosperity of the Truth, he was earnestly concerned to support in the church, christian discipline in its various branches. Yet, in meetings for business, he was not forward in speaking in matters in which his friends were sitting in judgment. When he did speak on a subject, he was wont to wait and deliberate until he felt a proper qualification given him for judgment, and then his remarks were generally close and very pertinent. He was led to advocate a strict exercise of the discipline, in all its parts, without partiality, and was anxious that true judgment should be placed on the head of all offenders. He saw that it was only through faithfulness in this respect, that the church could be secure from declension, and preserved from reproach. His desire was, that the circumspect walkers might be distinguished from the libertine professors. Although zealous against wrong things, he was often led into tender sympathy with, and a travail and exercise of soul for the restoration of wrong doers, especially for such in whom he felt there was yet remaining a spirit, sensible of the errors into which they had fallen. Then, by private admonition and counsel, all sweetened by a sensible flow of love to their souls, he was often concerned to labour availingly for their good.

He was a man having a large share of natural understanding, and his mental powers being sanctified by Divine Grace, he was highly qualified for usefulness in the church ministry. He was richly gifted in the ministry; his friends say, "he had experienced a growth, from a good beginning to a large advancement, in which he was at times greatly enabled, by Divine aid, to deliver much excellent doctrine, under which, such whose minds were gathered into a true inward worship of God in spirit, were much comforted and satisfied, and such who were negligent worshippers, were closely exhorted to more attention to their duty in the great work of religion, and the soul's salvation. Many times he sounded an alarm to the rebellious and gainsaying, warning them to repent and amend their ways, that their souls might be saved in the day of trouble."

In his communications in the ministry he had a clear delivery, and a ready utterance. His style was familiar, and easily understood by even the simple and illiterate, whilst his matter was well connected, his doctrine sound, well adapted to his auditory, and having through the divine unction attending it, a great and happy effect upon the hearers.

He was frequent in the attendance of burials, saying "it was better to go to the house of mourning than the house of mirth." On such occasions, there were often great gatherings of different professors, and he was frequently led therein very eminently to labour in the Gospel ministry. A clear sight and sense of the condition of those gathered appeared to be given him, and his close and searching doctrine was delivered without affectation, in that love which wisheth well to all men.

During his short period of labour he visited some neighbouring Yearly Meetings, as well as many

\* A memorial of her has been already published.

of the meetings in his own, and his services were very acceptable to Friends. As a man, he was exemplary in life; his deportment was meek and humble, his conversation was innocently cheerful, yet without lightness, his words being pleasant and savoury. In plainness he was also consistent. He was a tender and affectionate husband, a kind father and neighbour. In affliction and disappointment he did not murmur, but cheerfully submitted to the dispensations of providence.

In his last public testimony, he spoke of those who were raised up by the Lord in the ministry, who, when the service was accomplished, and they tripped of the jewels with which he had adorned them for his service, were reduced to a low, humble state of mind, in which they felt themselves to be among the least in the flock.

After an illness of nine days, during which he manifested a very patient, resigned disposition, being favoured with a clear understanding and conscious that death was near, he was enlarged in fervent supplication, and then he quietly departed like a lamb, without sigh or groan. He deceased on the 4th mo. 5th, 1769, being thirty-five years old.

About five years before his death he removed from Buckingham to Abington, where he resided to his close.

For "The Friend."

There is late poetry in the following piece by the late John Pierpont, and though it does not set forth, as fully as we could wish, the christian's ground of hope in death, yet it may perhaps suggest profitable thoughts in some of the readers of "The Friend," if allowed a corner in that journal, as well as gratify a correct taste. X.

"To fall on the battle-field, fighting for my dear country—that would not be hard."—*The Neighbour.*

Oh no, no—let me lie  
Not on a field of a battle, when I die!  
Let not the iron tread  
Of the mad war-horse crush my helmed head;  
Nur let the reeking knife,  
That I have made a grave in my brother's life,  
Be in my hand when death  
Thunders along, and tramples me beneath  
His heavy squadron's heels,  
Or gory fellows of his cannon's wheels.

From such a dying bed,  
Though o'er it float the stripes of white and red,  
And the bald eagle crings  
The clustered stars upon his wide-spread wings,  
To sparkle in my sight,  
Oh, never let my spirit take her flight!

I know that beauty's eye  
Is all the brighter where the gay pennants fly,  
And brazen helmets dance,  
And sunshine flashes on the lifted lance;  
I know that hardi-ears are sung,  
And people about fill the welkin rang  
In honour of the brave  
Who on the battle-field have found a grave:

I know that o'er their bones  
Have grained hands-piled monumental stones.  
Some of those piles I've seen:  
The one at Lexington, upon the green,  
Where the first blood was shed,  
And to my country's independence led;  
And to others, on our shore.  
The "Battle Monument" of Baltimore,  
And that on Bunker's Hill.  
Ay, and abroad, a few more famous still;  
Thy "tonb," Themistocles,  
That looks out yet upon the Grecian seas,  
And which the waters kiss  
That issue from the gulf of Salamis.  
And thine, too, have I seen,  
Thy mound of earth, Patroclus, robed in green,  
That, like a natural knoll,  
Shewn climb and nibble over as they stroll,  
And touched by sunbeams turned boys,  
Upon the margin of the plain of Troy.

Such honours grace the bed,  
I know, whereon the warrior lays his head,  
And bears, as life ebb'd out,  
The conquered flying and the conqueror's shout.  
But, as his eye grows dim,  
And the soft summer-air,  
What is a column or a mound to him?  
What, to the porting soul?  
The mellow note of bugles? What the roll  
Of drums? No! let me die  
Where the blue heaven bends o'er me lovingly,  
And the soft summer-air,  
As it goes by me, stir my thin, white hair,  
And from my forehead dries  
The death damp as it gathers, and the skies  
Seem wanting to receive  
My soul to their clear depths! Or let me leave  
The world, when I am round my bed  
Wife, children, weeping friends are gathered,  
And the calm voice of prayer  
And holy hymning shall my soul prepare,  
To go and be at rest.  
Kind spirits—spirits who have blessed  
The human brotherhood  
By labours, cares, and counsels for their good.

In my dying hour,  
When riches, fame and honour have no power  
To bear the spirit up,  
When my legs to turn aside the cup  
That all must drink at last,  
Oh, let me draw refreshment from the past!  
Then let my soul run back,  
With peace and joy, along my earthly track,  
And see that all the seeds  
That I have scattered there, in virtuous deeds,  
Have sprung up, and have given,  
Already, fruits of which to taste in heaven!

And though no grassy mound  
Or granite pile says 'tis heroic ground  
Where my rest shall repose  
Still will I hope—vain hope perhaps—that those  
Whom I have given to bless,  
The wanderer reclaimed, the fisherless  
May stand around my grave,  
With the poor prisoner, and the poorest slave,  
And breathe an humble prayer,  
That they may die like him whose bones are mouldering there.

From The Saturday Review.

Free Labour in the West Indies.

The experiment, unique of its kind, of stripping our West Indian colonies, first of slavery, then of monopoly, and substituting free labour and free trade, might have been expected still to excite deep interest in England, and to be watched with sedulous care. As men of business, we ought to have seen to the effect of our expenditure of twenty millions. As friends of freedom and of the African race, we ought to have asked whether what we had done was turning out ill or well. But the fact is, that for many years no British traveller—for Trollope is scarcely an exception, considering the shortness of his stay—has thought it worth while to visit those islands, and tell his countrymen, from actual inquiry on the spot, what has come of that great experiment. Meanwhile, however, the Americans have paid this matter some of the attention it so well deserves. Twice have highly intelligent travellers from that country visited the British West Indies for the purpose of thoroughly investigating how things really stand. And it must be satisfactory to us to find that both—Bigelow in 1850, and—Sewell ten years later, after a diligent and candid examination, came to the same conclusion; namely, that the calamities which befell the islands in 1847 and the next few years, were mainly produced by causes independent of emancipation; especially by the lack of capital, by anti-enteism, "which more than aught else has cursed these islands," by the frightful abuses engendered during centuries of slavery and monopoly combined, and by the sudden loss of that monopoly. They both came to the conclusion that,

although labour has been and is deficient, it has not been the deficiency of labour, but those other causes that for a time wrought such ruin. And further, they tell us that the ground having been cleared by those calamities, as in Ireland by the famine, the West Indies are now making astonishing progress in wealth and prosperity, while the negro under freedom is "rising infinitely above his condition when a slave."

Such are the conclusions at which these gentlemen have independently arrived, and for which, we must say, they furnish a large mass of evidence. But although Sewell declares that he "came to the West Indies imbued with the American idea that African freedom had been a curse to every branch of agricultural and commercial industry," we still might doubt whether some anti-slavery bias had not caused him to "leave them overwhelmed with the very opposite conviction," were it not that the official statistics in our Parliamentary Blue-books give irrefragable demonstration that his picture is not over-colored. Those, for example, who imagine that our West Indies are in a state of ruin, inhabited by a horde of half-savage Quashees, "up to the ears in pumpkin," as—Carlyle was pleased to describe them, will be surprised to learn that in the four years ending with 1857, the exports and imports of these small islands were valued at £37,000,000, and have greatly increased since; while in that year their total trade was worth nearly eleven millions, the value of their sugar alone amounting to no less than £5,618,000. This fact might a priori, have seemed incredible considering the powerful competition of Cuba, which enjoys a still better climate, and a boundless supply of slaves, fed by the slave trade, to the amount of between thirty and forty thousand labourers. Nor yet could it have been supposed beforehand that, under that powerful competition, and with slavery and monopoly swept away, the fourteen West Indian Islands—leaving out Jamaica, where exceptional causes have been at work—would actually export more sugar now than in those good old days. Such, however, is the fact. And if we add the two exceptional islands, Jamaica and Mauritius, we find the still more amazing result, that all our sugar islands together, West and East, so far from producing less sugar than in the days of slavery, actually produce upwards of 4,000,000 cwt. now, against but 3,000,000 cwt. in the days of forced labour and differential duties.

No doubt the immigrants from India and elsewhere have helped to bring about this result. In Mauritius, above all, and in Trinidad and Guiana among the West Indies, the immigration has been highly beneficial. In Jamaica it has been so scandalously mismanaged (everything always is and was scandalously mismanaged in Jamaica), that a quarter of a million was laid out, and the island oppressed with taxation, with scarcely any result. But the present production of sugar has been mainly due to the native negroes; and—Sewell demonstrates that, but for the folly of the agents by whom most of the estates have been mis-managed, a far larger supply of such labour would have been at hand. The system pursued has almost universally been that of seeking to force the negro to work below market rate of wages, by threatening to turn him out of his cottage and allotment if he refused. In many thousands of cases these threats were at last executed, with the obvious and inevitable consequence, that the negro, driven from his home on the plantation, to which he generally had an almost catlike affection, settled elsewhere, and, having built his cottage, and brought waste land into tillage, was not only lost

to the estate himself, but acted as a pioneer for others. All writers on the West Indies deplore this insane system, to which the lack of labourers has in a great degree been owing; but the fact is that the planters had some excuse for it in their utter want of capital for the payment of wages in cash. With all this, however, the labour force, at least in Jamaica, is strangely frittered away. Three men will be set to watch one herd of cattle. And the hoe being still in use instead of the horse-plough, fifteen men are wasted where one would suffice with the aid of the latter implement. But, after all, — Sewell states "most unequivocally," that, "after diligent enquiry, I have been unable to discover a single property abandoned from want of labour alone." Where a great difficulty in procuring it has arisen, it has almost invariably been owing to the want of capital for the regular payment of wages. On the roads and in the copper mines, where five men are needed fifteen will apply, and they will work eight hours a day for six days in the week through the year. The question whether labour is deficient or not is vehemently debated even in Jamaica itself; but the clue to the mystery was given in a few words by one of the mining negroes, who was asked by — Sewell why he liked such severe toil underground better than the easy work on the estates. "Massa," was his reply, "*Buckra don't pay.*"

The most interesting part of Sewell's book is that in which, passing from island to island, he describes the state of the negro peasantry. His accounts are fully borne out by the reports of the governors and other authorities; and they are the more striking when we compare them with the parallel picture, drawn with such a master hand by — Olmsted, of the condition of the slaves in the Southern States. Touching first at Barbadoes, — Sewell is struck by the neatness and tidiness of the cottages thickly scattered over the island, and by the orderly and industrious habits of their occupants. On Sundays he found them "as respectably dressed as any people in the world, and thronging their churches—intelligent, God-fearing citizens, loyal to their faith, loyal to themselves, loyal to the Government of England; and their diligence was proved by the almost garden cultivation of every square yard of available land, while, despite its high price, the peasant proprietors have increased in fifteen years from 1100 to 3537. In St. Lucia, more than two thousand negroes had purchased land, while at the same time the export of sugar has doubled since emancipation. Tobago is a mere speck in the ocean, but it contains 2500 negro freeholders paying direct taxes to the Government. Some complaints, however, were made during — Sewell's visit by the newspapers, of the "perverse selfishness" of these negroes. But it turned out that this perverse selfishness consisted in their hiring labour to help them in the tillage of their freeholds "at higher wages than the estates could afford to pay." Passing on to Grenada, we read: "If the houses of the ancient aristocracy have fallen into ruin because capital has left the island, there is some compensation in the fact that the humble dwellings of the peasantry have exceedingly multiplied and improved, and that villages have risen into existence with marvellous rapidity." Nearly 7000 persons are living in villages built since emancipation, of whom over 2000 are owners of land; and in the whole island but sixty paupers are dependent on public charity. In St. Vincent, 8209 persons were living, in 1857, in houses built by themselves since emancipation; and in the last twelve years from ten to twelve thousand acres have been brought into cultivation by small proprietors, who "are

enjoying unexampled prosperity." No paupers are to be found.

— Sewell took pains to trace the labourers of Trinidad, from the time of emancipation, "And the great majority of them can, I think, be followed step by step, not downward in the scale of idleness and poverty, but upwards in the path of civilization to positions of greater independence." In no colony did the planters go to greater lengths in the folly of ejecting labourers who would not work for reduced wages; but these men bought land and built villages, and have made more rapid progress in intelligence and prosperity than their brethren who have remained on the estates. Land in Antigua fetches fifty dollars per acre, yet the negroes contrive to save capital, and become, as elsewhere, thriving and industrious proprietors. Nor does this discourage trade. Since emancipation the export of sugar has increased by six million pounds per annum upon twenty million. The imports are doubled. Instead of an average of three hundred and forty ships, the ports are now entered by nearly seven hundred ships in the year. In fact, taking all the leeward group together, the export of sugar has largely increased; while the imports are nearly doubled. And "in all these colonies the condition of the free peasant rises infinitely above the condition of the slave."

It is from Jamaica that the complaints against the negroes have come which rung through the world. Yet — Sewell confirms the assertion of many other high authorities, that the Creoles display no sloth and no degeneracy when their labour brings them its due return. He found the settlers in the mountains "as independent and well off as one could wish to see any people in the world." In the plain, "all the settlers own a horse and stock of some kind. Their cottages are neat and tidy, and are shrouded with coconas and plantains. Most of the interior ones have but a single room. The pitch-pine floor is carefully polished—a bed stands in one corner—a table, bearing all the crockery of the establishment, occupies another corner; there are no glass windows, but blinds placed cunningly for purposes of ventilation." "These people," he adds, "who live comfortably and independently, own houses and stock, pay taxes, poll votes, and build churches, are the same people whom we have heard represented as idle, worthless fellows, obstinately opposed to work, and ready to live on an orange or banana rather than earn their daily bread; \* \* \* but any unprejudiced resident of Jamaica will endorse the statement here made, that the peasantry are as orderly and industrious a people as may be found in the same latitude throughout the world. The present generation of Jamaica creoles are no more to be likened to their slave ancestors than the intelligent English labourer of the nineteenth century can be likened to the serfs of Athelstan or Atheling." — Sewell again cannot forbear expressing how "charmed" he was with "the happy, contented, and independent inhabitants." "I never lived among a more cheerful or a more civil people. Each man, woman, or child that you meet along the road gives a hearty 'Good-mornin', massa, and a respectful salutation." Finally, he declares that remembering the disadvantages, under which they have laboured, "the position of the Jamaica peasants in 1860 is a standing rebuke to those who encourage the vulgar lie that the African cannot be elevated. \* \* \* I am utterly amazed at the progress they have made."

The applause and honours of a vain world sink into nothing before the honour that comes from God only.

### The Spirit Quickening.

"It is the Spirit that quickeneth; the flesh profiteth nothing."—John vi. 63.

All real religion begins with the quickening of the spirit. When we experience this, we begin to breathe after spiritual things; we open our eyes in a new world; we hunger and thirst after righteousness; and at length taste that the Lord is gracious. We have new thoughts, new desires, new hopes, new fears, new joys and new sorrows. The eye fixes on Christ, the heart goes out to Christ, and the chief desire of the soul is to be like Christ. The spirit not only quickens us at first, so that we pass from death unto life, but all through life we need and are dependent on the spirit's quickening. He quickens us to pray and he quickens us in prayer. His quickening it is that puts life into our graces, energy into our prayers, confidence into our expectations, and enables us to resist Satan, steadfast in the faith. If his quickening power is withheld, we soon grow cold, lifeless and inactive. Every duty becomes a task, every privilege a burden, and every cross appears insupportable. While under the quickening operation of the Spirit, we can do all things; but without his quickening we can do nothing. Often, very often, have we to cry out, from bitter experience, "My soul cleaveth unto the dust: quicken thou me according unto thy word."

"The letter killeth, but the Spirit" quickeneth, or "giveth life."—2 Cor. iii. 6.

## THE FRIEND.

ELEVENTH MONTH 16, 1861.

Within the past week we have received a printed copy of the minutes of Ohio Yearly Meeting, from which we take the following extracts:

*At Ohio Yearly Meeting of Friends, held at Mt. Pleasant by adjournments, from the 7th to the 10th of the 10th mo. inclusive, 1861.*

Reports have been received from all the Quarterly Meetings; by which it appears their representatives are, \* \* \* All of whom were present except three, for the absence of whom satisfactory reasons were given.

A committee was appointed to examine the Treasurers' account, report to a future sitting the state thereof, what sum, if any, may be necessary to raise for the use of this meeting the present year, and the name of a Friend for treasurer.

The representatives are desired to confer together, and if way opens, propose to next sitting, the name of a Friend to serve this meeting as clerk the present year, and one to assist him, and also, the names of two Friends for messengers to the women's meeting.

Then adjourned to eleven o'clock to-morrow. *Third of the week, and eighth of the month.*— The meeting gathered according to the adjournment.

Nathan P. Hall on behalf of the representatives reported they had conferred together, but were unable to agree on any names to offer to the meeting for clerk and assistant, therefore, according to the usual practice of this meeting, the present clerks are continued in their respective stations.

He also reported that they were united in proposing the names of Elisha Hollingsworth and Joseph Wilson, for messengers to the women's meeting, which being satisfactory, they were appointed to that service.

The meeting entered upon the consideration of

the state of society, and progressed therein to the fourth query, the remaining queries are referred to next sitting.

Stillwater Quarterly Meeting informs that Plainfield Monthly Meeting is without a correspondent, by the removal of Samuel Stanley beyond the limits of this meeting; the representatives from Stillwater are desired to confer together and propose to a future sitting the name of a Friend to fill the vacancy.

The meeting is also informed that Westland Monthly Meeting is without a correspondent, the representatives from Redstone are desired to confer together and offer the name of a Friend for that service.

Then adjourned to ten o'clock to-morrow.

*Fourth of the week, and ninth of the month.*—The meeting gathered about the time adjourned to.

The remaining queries were now read with answers thereto from the Quarterly Meetings, a summary thereof being as follows, viz:

*Summary.*—1st. All our meetings for worship and discipline have been attended, and generally by the greater part of Friends, though some are remiss in this important duty; unbecoming behaviour therein generally guarded against, except a few instances of sleeping; the hour of meeting pretty well observed.

2d. Most Friends appear to maintain love towards each other in a good degree as becomes our christian profession. Tale-bearing and detraction are mostly discouraged, and when differences arise endeavours are used to end them.

3d. Many Friends endeavour, by example and precept, to educate their children, and those under their care, in plainness of speech, deportment, and apparel, to guard them against reading pernicious books, and from the corrupt conversation of the world, and they are encouraged to read the Holy Scriptures.

4th. As far as appears, Friends are clear of impositions, vending, distilling, and with few exceptions the unnecessary use of spirituous liquors, of frequenting taverns, but not quite clear of attending places of diversion: some care is extended in the above deficiencies: moderation and temperance in a good degree observed.

5th. The necessities of the poor, and the circumstances of those who appear likely to require aid have been inspected and relieved, they are advised and assisted in such employment as they are capable of, and some care is taken to promote the school education of their children.

6th. We believe Friends bear a faithful testimony against a hiring ministry, oats, military services, clandestine trade, prize goods, and lotteries; except that some of our members sometimes attend meetings where a hiring ministry is supported; and a few in all the Quarters have given some encouragement to military services; in some of which cases of deficiency, some care has been taken.

7th. As far as appears, Friends are careful to live within the bounds of their circumstances, and to avoid involving themselves in business beyond their ability to manage; generally just in their dealings, and mostly punctual in complying with their engagements, and when any give reasonable grounds for fear in these respects, care is extended to them.

8th. Friends bear a testimony against slavery; the people of color under our direction are suitably provided for, and instructed in useful learning.

9th. A good degree of care is taken to deal with offenders seasonably and impartially, and to evince to those who will not be reclaimed, the spirit of

meekness and love before judgment is placed upon them; except some of the Quarters report that those who separated from us in 1851, are not under care.

*Annual Answers.*—1st. No new meeting settled.

2d. Some encouragement has been given to schools for the education of our youth, under the tuition of teachers in membership with us.

3d. The queries addressed to the Quarterly, Monthly, and Preparative Meetings, are read and answered therein, as directed.

George Smith, an elder and member of Westland Particular and Monthly Meeting, departed this life the 15th of 7th mo. last, in the 57th year of his age.

Hannah Vail, an elder and member of Plainfield Particular and Monthly Meeting, departed this life the 25th of 9th mo., 1860, in the 82d year of her age.

Mary Doudna, an elder and member of Ridge Particular and Samerset Monthly Meeting, departed this life the 8th of the 10th mo., 1860, in the 86th year of her age.

Sarah Mott, a minister and member of Southland Particular and Plymouth Monthly Meeting, departed this life the 25th of 2d mo. last, in the 60th year of her age.

By reports received from the Quarterly Meetings, on primary schools, it appears that there are, 1032 children of suitable age to attend school; 27 schools, including five family schools, have been taught, generally for the term of three or six months each, at which, and at our boarding school, 335 children have been receiving education; 509 have been attending District schools; 72 have attended District and Subscription schools; 111 have not been going to school the past year, nearly all of whom are reported to have been receiving instruction at home.

The subject is again referred to the attention of Quarterly and Monthly Meetings, and they are directed to send up to this meeting explicit accounts next year, as heretofore.

Women's meeting forwarded to this, a concern which had been revived and united with by their meeting, that our discipline should be put in practice in reference to treating with all offenders; which claiming the solid consideration of this meeting, was united with and the subject recommended to the notice of Monthly Meetings, and concerned Friends, and they are desired to carry out the provisions of the discipline in the spirit thereof.

The representatives from Stillwater, reported the name of John Vail for correspondent for Plainfield Monthly Meeting, which being satisfactory, he is appointed to that service; address Loydsville, Belmont county, Ohio.

The representatives from Redstone, reported the name of Wm. Hancock for correspondent for Westland Monthly Meeting, which being satisfactory, he is appointed to that service; address East Bethlehem, Washington county, Pa.

The committee to settle the Treasurer's account, produced the following report, which is satisfactory, and the Friend therein named for Treasurer, is appointed to the service.

*Report.*—The committee to settle the Treasurer's account, find a balance in his hands of \$173.10, and think it not necessary to raise any more for the use of the meeting this year; and we are united in proposing that Wm. Hall, Jr., be continued Treasurer.

Signed on behalf of the committee. \* \* \*

Then adjourned to 2 o'clock to-morrow afternoon.

*Fifth day afternoon.*—The meeting again assembled.

The committee having charge of our Boarding School produced the following report; which being considered, the propositions therein made are adopted; and the meeting taking into consideration the indebtedness of the Institution, concluded to recommend the raising of six hundred dollars the present year, by free subscriptions in the several Quarterly Meetings, which are desired to report thereon to this meeting next year.

*Report.*—From the minutes of the acting committee, it appears that the amount charged for board and tuition for session ending 3d month 19th, 1861, for an average of about seventy-four pupils was

Articles sold and entertainment	175 15
Live stock and provisions on hand	457 25

Amounting to	\$3606 95
Expenses	3973 61

Leaving a deficiency for the session of \$366 66

Amount charged for board and tuition for session ending Ninth mo. 12th, 1861, for an average of about nine pupils

Articles sold and entertainment	89 90
Provisions on hand	81 37
Live stock	315 00
Produce of farm	424 00

Amounting to	\$1212 54
Expenses	1323 34

Leaving a deficiency for the session of \$110 80

And a deficiency for the year . . . 477 46

From an examination of the financial condition of the school, it appears there are balances in favour of the Institution considered collectable, to the amount of

Cash on hand	\$1198 36
Provisions on hand	202 51
Live stock	81 37
Produce of farm	315 00
Produce of farm	424 00

Amounting to	\$2221 24
Debts owing by the Institution including interest	3497 13

Leaving a deficiency of \$1275 89

The deficiency reported last year was . . . 241 20

Deficiency the present year . . . 477 46

    Making . . . 721 66

Leaving a further deficiency of \$534 23

Which appears to have accumulated in part as follows:

Loss on stock by accident	\$125 00
Probable loss on debts considered good last year	50 01

Interest on debts owing by the school since last report . . . 150 00

Deduction in the value of stock from former estimate, twenty-five per cent . . . 78 75

Probable loss on accounts charged to last winter session . . . 160 27

Making	\$564 03
--------	----------

Another very considerable source of loss has resulted from the practice of not charging interest on accounts remaining unpaid. The committee have therefore instructed the superintendent to charge interest on all accounts owing the Institu-

tion for board and tuition when the same becomes due, according to the terms of admission.

From a settlement with the Treasurer it appears that there is interest on the Beneficent Fund in his hands unexpended, due to:

Redstone Quarter, . . . . .	\$13 22
Short Creek, " . . . . .	8 09
Salem, " . . . . .	7 13
Sillwater, " . . . . .	26 66
Springfield, " . . . . .	10 86
Pennsville, " . . . . .	27 29

The committee suggested to the Yearly Meeting, that in future, an addition of 3 dollars be charged for the winter, and 2 dollars for the summer session, making the price of board and tuition per year eighty dollars. This addition of 5 dollars per scholar per year, we hope with proper economy in the management of the Institution, will be sufficient to place it in a condition to meet all expenses incurred.

The committee also think best to ask the Yearly Meeting to give the acting committee the liberty of suspending the school in case the number of scholars should be so small that its continuance would be the means of materially increasing its indebtedness.

Signed on behalf of the committee, Tenth mo. 9th, 1861. \* \* \* \* \* Clerk.

The minutes of the Meeting for Suffrages since last year were read, and its proceedings approved. \* \* \* \* \* are appointed to have three hundred copies of the Minutes of this meeting printed, divide them into the Quarters, and call on the Treasurer for the amount of expense.

Having now brought the business to a close, and feeling, we trust, a good degree of thankfulness for the favours received while being thus together, the meeting solemnly concludes, to meet again at the appointed time next year, if so permitted.

GEORGE GILBERT, Clerk.

#### SUMMARY OF EVENTS.

**UNITED STATES.**—*The two Armies.*—The following estimate of the number of men called into the field on both sides is said to be reliable. The rebel force in the department of the Potomac, 150,000, other parts of Virginia, 90,000, Kentucky and Tennessee, 117,000; Missouri, 60,000; on the banks of the Mississippi, 39,000; at Charleston, Savannah, Mobile and Galveston, 40,000; total, 496,000. The aggregate of the Federal forces is stated to be 512,000.

*The Feeling Abroad.*—The news from Europe at the State Department is understood to be satisfactory, there being no longer any apprehension that France or Great Britain will soon recognize or in any way aid the "Southern Confederacy."

*Affairs in Missouri.*—Advices from the Federal army at Springfield, to the 6th inst., the removal of Gen. Fremont from his position as Commander-in-Chief and created great dissatisfaction, especially in the German portion of the army. On being superseded by Gen. Hunter, Fremont immediately returned with 400 men to St. Louis, where he was received by a large portion of the inhabitants with much enthusiasm. Later intelligence denies the previously received statement of dissatisfaction with Fremont's removal. Major Finny who left Springfield with Gen. Fremont, it is stated, carried off the army chest containing \$300,000, having refused to pay the troops. Finny was however, arrested, the money secured and returned to Springfield. Gen. Price's army occupied a strong position on Crain Creek, about forty miles south of Springfield. Gen. McCullough's army was still nearer the Arkansas line. According to information received by Gen. Hunter, it appears probable that Price will not venture to attack the Federal forces, and that he will retreat into Arkansas.

On the 7th inst., a large body of the rebels entrenched at Belmont, Mo., nearly opposite Columbus, Ky., was attacked by an expedition of several thousand U. S. troops from Cairo under Generals Grant and McClelland. A fearful engagement took place, attended with severe losses on both sides. That of the Federal troops killed, wounded and missing, is said to be about 350, men, and that of the rebels still heavier. After the engagement they abandoned Belmont and joined the rebel

army at Columbus. The U. S. troops returned to Cairo with a considerable number of prisoners.

The St. Louis Evening News says: "The slavery is rapidly vanishing from Missouri. Negative slaves are constantly departing for the free states, and secessionists are leaving the State for the south with their slaves, to escape the evils and dangers they themselves have brought upon the community."

*The York Expedition.*—Two transports attending the expedition were wrecked during the gale on the coast of North Carolina, and the crew, 73 in number, were taken prisoners to Raleigh, N. C. At the latest dates, the fleet was bombarding Fort Royal, the entrance to the harbor of Beaufort, South Carolina. The entrance appears to have been strongly fortified and to have made a stubborn resistance. Reports received at Fortress Monroe from Norfolk on the 10th inst., state that the Confederate forts had been taken and Beaufort occupied by the U. S. forces. The Savannah and Charleston rail roads are in the hands of the rebels. The above reports are confirmed by a despatch from Savannah to Memphis, and published there in the papers of the 11th. It is stated that the three forts at Fort Royal, Hilton Head, and Bay Point, had been captured, and Beaufort taken by the Government troops. The "Confederate" fleet is said to be very heavy. Fort Royal lies where the United States fleet is now lying is one of the most capacious and finest harbors along the entire coast.

*The Public Debt and Finances.*—The New York Times, publishes an authorised statement correcting the general impression that the daily increase of the Government debt is at least equal to \$1,000,000 per day. Notwithstanding the heavy expenditures for the army and navy, the figures show that since the 1st of Ninth month, the increase of the public debt has averaged but \$700,000 a day. The daily expenditures it is true average \$1,000,000 a day, but this includes the redemption of maturing treasury notes and other liabilities. The popular subscriptions to the 7.30 per cent loan, had last week reached the sum of \$42,000,000.

The entire debt on the 11th inst. was \$172,082,000. *North Carolina.*—The late Governor, Mr. Cameron, Captain Gordon, master of the slave ship, Erie, has been convicted of participation in the slave trade. This is said to be the first conviction in New York since 1820, although it is notorious that hundreds of slave ships have been fitted out and have sailed from that port.

*Maryland.*—The election last week showed a very large Union majority in the State. Bradford, the Union candidate for Governor, was elected by a majority of about 30,000. Only one secession Senator and six delegates were elected, giving the Unionists the control of the Legislature. A special session of the General Assembly is to be held in the next month to annul the rebel legislation of last spring.

*Western Virginia.*—The attack of Floyd upon Gen. Rosecrans was unsuccessful. The latest despatch from the latter states that his army was in good condition and prepared to repel the rebel forces from any quarter they might approach. The town of Guyandotte, on the Ohio river, has been the scene of occurrences characteristic of civil war. On the night of the 10th inst. about 800 mounted rebels made an attack upon 150 Federal troops stationed there. Out of the 800 men, 600 were captured, and the remainder taken prisoners. The rebels evacuated the town on the next day, and soon after their departure a regiment of U. S. troops arrived, fired the town and laid the principal part of it in ashes. Many of the inhabitants were secessionists and had encouraged the attack of the rebels.

*Fort Hatteras.*—The position of this point has not proved so important to the government as was anticipated at the time of its capture. The location is very disadvantageously and exposed to inundation during violent storms so as to be almost untenable. It is reported that the rebels cannot be driven from Pamlico and Albemarle Sounds, without the employment of a number of armed vessels of light draft. The twentieth Indiana regiment, which has been doing garrison duty at Hatteras, has returned to Fortress Monroe, but it is said its place will be immediately supplied, the inlet being a place of too much importance to be abandoned. The New York regiment at Hatteras has suffered severely from sickness. It was about to be withdrawn.

*San Francisco.*—The French war vessel *Castellia* was wrecked in the late storm. She was bound for N. C. She was a ship of about 2,500 tons, and after vainly endeavouring to ride the gale, got aground upon a shifting sand bar. The crew were compelled to take to the vessel and seek shelter on shore. The ship was subsequently blown up by order of the commanding officer.

*Southern Items.*—Intelligence from Charleston, S. C., represents that the people there were in expectation of an immediate attack from the new expedition which recently sailed from the Chesapeake. All the exposed points of the coast had been put in a state of defence, and several batteries erected. It is believed that Gen. Beauregard has left the army in Virginia for the purpose of superintending the defence of Charleston.

The rebel steamer *Theodora* has arrived safely at Savannah, with a cargo of coffee, sulphur, saltpetre, ammunition and arms; and among her passengers are Meade, ex U. S. Minister to Brazil, and Capt. S. J. Short, of the British Navy, who has offered his services to the rebels.

Ex-Senator Benjamin has been appointed Secretary of War at Richmond.

Richmond papers say that 516 vessels have run the blockade since the 15th of Fifth month last.

An armed Confederate steamer had brought into Gloucester the brig *Anna Wells* of Maine, and eight other vessels as prizes.

The privateer *Sunder* is said to have been captured near Barbadoes.

The Vicksburg Whig exports the planters of the south to prepare for the coming year by raising pork, beef, mutton, &c., such things as will sell, and endeavor to pay taxes. It says it can see no prospect that the blockade will be opened, and thinks there will be no peace until the south shall invade the north, which must be done next year.

The Richmond Enquirer complains that the banking and other stock institutions of that region do not make known the amounts of stock owned by Union men in those institutions, and calls for a rigid investigation, in order that all northern investments there may be promptly confiscated.

The *North Star* Day Book is printed on brown wrapping paper. It is the only paper published in Norfolk, and says, as bad as the paper is, it has not enough of it to print more than one-fourth of its edition on. It has hopes, however, of being able to get a supply of white paper from New Orleans.

The Richmond papers also complain of the great scarcity of printing paper.

A letter to the New Orleans Crescent from Columbus, Kentucky, states that the place was being strongly fortified, with a view to its being permanently held for the South.

Dates from St. Thomas, W. I., to the 25th ult., say that six rebel commissioners for Europe from Cuba had passed through there. Four U. S. steamers are cruising in the Caribbean Sea.

It is asserted that agents of English houses are now in the South buying up all the cotton that can be obtained in the various cities, and paying for the same either in gold or Bank of England notes. On account of the blockade the cotton is sold at very low rates.

The U. S. Steamer, *South Carolina*, has captured five schooners of New Orleans, two of which were freighted with munitions of war, including a large quantity of powder and 10,000 stand of arms.

*Illinois Cotton.*—A Toledo (Ohio) paper acknowledges the receipt of a pod of cotton, grown on the prairie, near Pana, Illinois, a station of the Illinois Central road. It is asserted that the cotton was raised by a Louisiana man, whose crop is said to have been very good. It is understood that some ten thousand acres will be grown in that State by Southern men next season.

#### AGENTS.

Joseph Arfield, No. 1, South Place, Finsbury Pavement, London, and John G. Sargent, Cockermouth, Cumberland, England, have been appointed Agents for "The Friend."

#### RECEIPTS.

Received from S. Dirkin, Eng., per J. S., 20 shillings, for T. W. and L. O.; from John G. Sargent, Agent, £3, 12s, for sundry subscriptions for vol. 25; from Jos. S. Sargent, do, do, \$5, to 28, vol. 25; from John Tyler, N. J., \$2, vol. 24; from Thomas Twining, N. J., \$5, to 26, vol. 25; from W. Wright, C. W., \$5, vol. 24 and \$5 and 3d postage.

DIED, on the 6th of Ninth mo., 1860, ZENEBE HAINES, in the 11th year of his age, a worthy member and overseer of Upper Evesham Monthly Meeting.

WILEY & McLEROY, PRINTERS,  
Lodge street, opposite the Pennsylvania Bank.

PHILADELPHIA.

Postage to any part of Pennsylvania, for three months, if paid in advance, three and a quarter cents; to any part of the United States, for three months, if paid in advance, six and a-half cents.

Benjamin Ferris.  
For "The Friend."

(Continued from page 81.)

Diary. "On Ninth month 26th, 1762, I went to our Yearly Meeting in Philadelphia, and attended several meetings for worship and discipline. I felt very poor and distressed, but was relieved, when on the 1st of the Tenth month three women Friends\* from Europe, in attendance at the Yearly Meeting paid us a visit in the men's meeting. They expressed a concern that, if possible, a stop might be put to mixed and elandestine marriages. They expressed their belief, that if no papers of acknowledgment were received from any such who had so transgressed, unless a godly sorrow was manifest, which worketh true repentance, it would be for the health of our Society. They also thought that a speedy dis-ownment of such as ran out in that manner, might deter young people from it. The concern was attended with weight, and the meeting minuted the substance of it, and sent it down to the Monthly Meetings as advice. The matter being thus resolved, gave me much satisfaction, and seemed to be a sufficient reward for all my previous sufferings."

The minute of the Yearly Meeting says that a concern had attended the meeting on account of the frequent transgressions of the rule of our discipline in respect to marriage. It states that a simple concern was expressed by our Friends from Europe now engaged in a religious visit to the provinces, who had observed in the course of their travels the difficulties to which meetings were subjected by such marriages. They also had seen that the too ready acceptance of papers of acknowledgment from such who had married thus disorderly, had been matter of trouble to Friends and "introducere of many inconveniences, tending to promote libertinism and a manifest deviation from the purity of our profession." The minute concludes thus, "It is therefore now earnestly recommended to Friends in their respective Monthly Meetings, that they be careful speedily to proceed to put the rules of our discipline in practice against such transgressors, without waiting upon or soliciting for papers of acknowledgment from them; and that when such papers are offered for this

breach of our discipline, they be well assured that they proceed from a true ground of conviction in the transgressors, accompanied by due circumspection of conduct and conversation."

Diary. Tenth month 12th.—"I have had former weeks past a secret desire to attend Third Haven and Little Creek Yearly Meetings, but knew not of any company. Whilst I was anxiously thoughtful about it, Hannah Harris and Elizabeth Wilkinson, came to Wilmington, desiring company to those very places. At the sight of them I was filled with joy and fear. Joy that there was an opportunity of such companions thither, and fear [that I was not worthy to go with them.] I was afraid to let them know I had thought of taking the journey, but others proposed that I should go, and though it was a humbling to me, I was willing.

"We had a meeting at Queen Ann's, in Maryland, and then went forward to the Yearly Meeting at Third Haven, attending all their meetings for worship and discipline. I was mostly very low in spirit, being burthened under a sense of that Egyptian darkness and hardness of heart, which covers people where the unrighteous practice of slave keeping so much prevails as it did amongst those there assembled. I had little comfort, and at times seemed as if I could hardly breathe. In this I believe we, [himself and companions,] were all in a degree fellow sufferers. The Yearly Meeting came to a conclusion to disown such persons as go out in marriage.

"21st. From Third Haven we went to Little Creek, and during the most of the time of the sittings of the General Meeting there, I was low and distressed, yet at seasons some light appeared. On the 26th we were at Motherkill Meeting, on the 27th at Duck Creek, on the 29th at Chester River, on the 30th at Cecil, and from thence to Sassafras Meeting on the 31st. On that morning in bed, I was favoured to feel something of the renewsings of Heavenly love overspreading my mind with inexpressible sweetness, increasing and strengthening my attachment in love to the Lord, and raising desires that I might ever live to praise and glorify him, who for his abundant mercy is worthy forevermore.

"First month 1st.—We came to George's Creek Meeting, and on the next day returned to Wilmington. I rode along in much emptiness, yet came home in a good degree of quiet resignation and stillness of mind."

Benjamin Ferris felt his mind much drawn to his late companions, particularly to one of them, who was at that time much exercised with inward conflicts. To her he addressed the following letter.

"3rd of Eleventh month, 1762.

"My Dear Friend.—As our life and progress in the Truth consist in a reverent care, daily to look to, and experience access in heart to the Lord, so I am easy just to say that I seem so much interested in thy preservation and advancement, that I cannot help desiring the continuance of thy deep inward seeking to Him, and perseverance in the pure path of his holy requirems. I do believe he is the author of, and will be with thee to enable thee

to carry on the work thou art engaged in, to the perfecting thy holiness and His praise."

Again he wrote to her thus. "The few lines I received this day by my cousin were very acceptable, and engage my mind in sympathy with thee in thy low situation. Such is often my allotment, and I believe it requires patient resignation, to make such a state profitable to us.

"For some hours before parting with you, being apprehensive how it would fare with me when separated from you, I endeavoured to get my mind stayed upon something that would endure, when every thing visible should fail, notwithstanding this, when you were gone, I felt exceedingly poor and destitute. I could not easily become reconciled to it, but at length reached a degree of submission. I was, however, and still am in a barren frame of mind. Having nothing of mine own, I dare not steal anything to entertain my poor friend, however willing I might be to administer relief to her. I have sent the few things thou mentioned, which with my love, desire thou wilt accept. Farewell, from thy poor, yet I hope true friend,

BENJAMIN FERRIS."

These letters were sent to the Friend at Concord, where she and companions were waiting for the Quarterly Meeting there. On the 8th, Benjamin was with them there at that meeting, and from whence he accompanied them to a meeting at Chester, before returning to Wilmington.

(To be continued.)

*Hatching Young Ostriches.*—Since the French occupation of Algeria, ostriches have been conveyed thence to France in great numbers; but, until the instance now to be recorded, a brood had never been produced in France. It is very difficult under the necessary restraint of a zoological garden, to supply the necessary conditions for bringing about this result. The attempt had been frequently made to do so in the Zoological Gardens of Marseilles, but as frequently failed. Even last year, notwithstanding the care devoted to the ostriches in that establishment, and though eggs were laid in plenty, no young ostriches could be hatched. The director, M. Suquet, however, was not to be foiled. Failing to accomplish what he desired in the gardens, he bethought himself of trying what could be done out of them. In the territory of Montredon he selected a sandy plain, situated between the sea and the mountains which form the south-east of the Gulf of Marseilles. The spot belongs to M. Pastre, who kindly gave the necessary co-operation. There a large secluded valley was fixed upon, sufficiently wooded to afford shelter without intercepting the sunshine necessary for quickening the eggs. After having enclosed a space six hundred metres long by five hundred wide, the birds were conveyed to their hatching-ground on March 23 of this year. For a few days the birds seemed to regard their new quarters with suspicion, and ran anxiously about. Soon, however, they settled themselves and began laying. Their nest was at first a simple excavation in the sand, in the form of a truncated cone. Gradually the borders of this hole were heightened by ac-

\* Susanna Hatten, Hannah Harris and Elizabeth Wilkinson.

accumulations of more sand. At this labour the male and female bird worked alternately. A few hours after the completion of the nest, laying began, and was continued every alternate day, until by the 20th of April fifteen eggs had been deposited. Up to this time the hen guarded the nest a few hours before and after incubation sometimes for a whole day. After April 20th, however, the male bird commenced taking his spell of watching, the lady only seeing to the household during periods when her lord and master was temporarily absent from home. All seemed to go on satisfactorily. According to observations made by M. Hardy, at Algiers, the time of incubation should be from fifty-six to sixty days. Knowing this, M. Suquet was surprised when, on June 3d, intelligence came that the first young ostrich had opened its eyes to sunshine on French soil. By the evening eleven had been hatched. On the day following the young birds left the nest and began to wander over their enclosure, guided alternately by papa and mamma, who spared no trouble in their first walking lesson. During these excursions one bird always lingered a little behind. It was weak, and soon died, thus reducing the number of the young family to ten. They went on growing rapidly, so that by the 8th of last month (August) they were as big as young turkeys, giving every promise of arriving in due time at years of discretion, and contributing for many a season to the *grande tenue* of many a fair Parisienne. — *London Review*.

For "The Friend."

#### Husings and Memorials.

IT COSTS TOO MUCH.

Our blessed Saviour has said, "What shall it profit a man if he gain the whole world and lose his own soul?" This whole world, with all its riches, its honours, its comforts, its enjoyments, would be a bad bargain to him who should give his immortal soul in exchange for it. Yet all around us we see instances in which this soul, in comparison with which in real value all earthly possessions are as nothing, bartered away for a mere trifle.

"What is the value of this estate," said a man to a friend of his as they passed by a fertile plantation with its noble mansion house. The reply was, "I do not know what it is valued at, but I know what it cost its late possessor." To the question of "how much," the brief answer was, "his soul!"

An awful price, the very enunciation of which is calculated to awaken solemn thoughts. For a plantation, out of which he could only derive comfort for a brief period of an earthly existence, whilst subject to the cares, afflictions and sufferings to which mortality is ever incident, to part with eternal happiness, with peace and joy which knows no diminution. The individual who had paid such a ruinous price for this estate, had been piously educated and brought up to industrious habits. Whilst in a humble condition in a mercantile establishment into which he was introduced after his maturity, he was a professor of religion, and his reputation was good. In time his faithful attention to business occasioned him to be taken as a partner into the firm. After this his mind was taken up more entirely with his worldly concerns, whilst religion, even in the outward form of it, had less and less time and attention given to it. Whilst yet in the meridian of his days he became very wealthy, and with his increasing store, his love of riches increased. He grew covetous, miserly, and from his conduct and conversation, no one would have dreamed that he had ever been even a pro-

fessor of religion. The dew of his youth was dried up, the religious principles received from education were dissipated, the tendering visitations of the love of God once known, were no longer experienced. He then purchased that large estate, reared that costly edifice upon it, and had settled himself down to enjoy himself, as far as one in his situation could know enjoyment, and then came the summons of death. Now, in the prospect of an opening eternity, the folly of his career in life pressed upon him. No doubt the days of his innocent childhood came before him, when with poverty, some portion of religious peace was his portion. The sad change which had taken place since in his feelings and in his hopes, wrought from him the exclamation, just before his death, "my prosperity has been my ruin."

His wealth cost too much. His grandhouse, and immense riches, all remained this side of the grave, and without spiritual hope or inheritance, he entered into the everlasting state. Thousands in our country have bartered away their souls, for still meaner things than an earthly estate; for the intoxicating cup, which reduced them even on earth to the condition of beasts, for the gratification of sensual indulgence, tending to the same state; for pride, vanity, the love of glory, the applause of men, and the fear of their reproach, countless multitudes have given away their souls with all well grounded hope of an heavenly inheritance in unfeeling, unending blessedness.

#### THE PLANK BEARS.

Many years ago a vessel was wrecked on the coast of Cornwall, the crew of which, after much suffering and distress were all, through the good providence of God, safely brought on shore. On the next First-day of the week most of the sailors attended the nearest public place of worship, and the minister alluded to the circumstance of the wreck, and thanksgiving was offered on their behalf. At the close of his service, the minister feeling his mind unusually moved, spoke of the sinners' danger, comparing them to shipwrecked mariners. He said "imagine the situation of a drowning man, who feels that all his own efforts are unavailing, and that he is fast sinking beneath the overwhelming waters. Imagine what would be his feelings, if suddenly a plank floated within his reach, and if, taking hold of it, he found it would bear his weight. Fellow-sinners, this is your case and mine! We are like the drowning mariner. Christ is the plank of safety. This plank will bear; yes, *this plank will bear!*"

The minister felt such a flow of christian love, and such animation in this sudden address, that he looked for the result, but none appeared to him for fifteen years. At the close of that period he was sent for to the bed-side of a dying man. The power of speech was almost gone, and although conscious, he for a time said nothing. At last being asked if he had hope in Christ to give some sign, he spoke out with his last energies "The plank bears!" Ah! that is a plank which will bear all who lean on it for salvation. "He that cometh to me, I will in no wise cast out."

The true christian always depends upon his Saviour, and in that dependence finds strength to enable him to bear every trial, every calamity, which may be appointed him in his earthly pilgrimage. Yet he sometimes finds it hard to realize the presence of his Divine Master,—to feel the plank which is to support him in safety over the threatening billows. It is narrated of one of the protestant martyrs that whilst being led to the stake, drawing the sensible presence of his Saviour with him from him, he exclaimed in anguish, "I can-

not burn! I cannot burn!" Some of the priests standing by, deeming that through terror he was willing to recant, approached him to witness his confession. They mistook their man. His confidence in the truth of the principles he was to suffer for, was unchanged, but he wished to feel the consoling presence of his dear Saviour with him to enable him to witness a good confession to his glory, in the flames. In great earnestness of spirit he sought the Lord, and being favoured to feel the manifestation of the love of God sweetly strengthening his soul, he clapped his hands and with a loud voice he exclaimed, "Now I can burn! now I can burn!"

He felt by faith his hold firm on that plank which would bear, and he little heeded the fiery waves of bodily suffering he had to pass through, before entering the haven of eternal rest and glory.

#### Agriculture.

EUROPEAN SHEPHERDS.

In Spain where the celebrated Merino flocks are bred, there are ten millions of sheep to be led twice in the year to a great distance in search of pasture, or of a warmer climate. Forty or fifty thousand shepherds guide these sheep in their wanderings, and travel with them many hundred miles. These shepherds have a very hard life; but they are so much attached to their flocks that they would not leave them, even if they could get better pay and less work elsewhere. As many as thirty thousand dogs accompany the flocks in their wanderings, and put up with hard fare like their masters. The Spanish shepherds live chiefly on bread seasoned with oil or grease; and though they sometimes procure mutton from their old or diseased sheep, it is not their favourite food. Their dress is a jacket and breeches of black sheep-skin, a red silk sash tied round the waist, long leather gaiters, a slouched hat, a staff with an iron point and a *manta* or brown blanket slung over the left shoulder. When they have reached their journey's end, they build themselves rude huts, living generally a single life. Large flocks are managed by several shepherds, and that everything may be done with regularity, one of the most experienced is set over the rest. The times of their wanderings are in May and September, and the whole journey is the same which has been taken for ages. The sheep know the way as well as their masters; and a free passage is granted to them through pastures, villages, etc., where the inhabitants are obliged to leave an opening for them, at least ninety paces wide. The shepherds on their part have to lead them as quickly as possible, that they may reach certain resting-places where they find an open space and good pasture.

In some parts of France the shepherds live a similar life. More than a hundred thousand sheep graze on the plains of Arles in winter; but as the spring approaches they show the greatest eagerness to set off toward the mountains bordering on Italy; and if not watched, they will escape and be lost. The shepherds set out in May for these mountains, driving their sheep in troops of from two to forty thousand. To every thousand sheep three shepherds are allowed; each of which has his dog, and in the middle of the flock a troop of asses carrying baggage. A chief shepherd is chosen, by the general consent of his companions, to direct the march, to deal out the daily share of provisions, and to listen to the complaints of farmers, when damage is done upon the road. The shepherd's dogs are assisted in a remarkable way in keeping these large flocks in order. The goats are especially trained for the purpose, and have

bells around their necks. They are kept in perfect discipline by the shepherds, and show great intelligence in the performance of their task. They halt or proceed at the word of command, and at the close of each day's march, they come to the centre of the flock, and wait there until the morning, when having received their proper orders, they return to their station at the head of the flock with the greatest regularity. On coming to a stream they halt until the word of command is given, when they plunge into the water, and are followed by the rest of the flock. When the flocks reach the mountains, each shepherd has his proper boundary marked out, and the proprietors of the land are paid about twenty pence per sheep for their feed during the summer. The shepherds sleep with their flocks in the open air, and live almost entirely on bread and goats' milk.

In the south-west of France, on those wide plains called *Les Landes*, the shepherds lead a very singular life. The country consists of large tracts of deep sand, or of marshy ground, with scanty herbage and prickly shrubs. That they may cross these sands without difficulty, the shepherds fasten stiltts or wooden poles five feet long, to their legs, putting them on and off as regularly as any other part of their dress. When their flocks are grazing, they do not take off these stiltts, but remain elevated upon them that they may the better watch their sheep. The top of the long staff which they use in walking, is made broad and round, so that they can sit upon it. Thus seated they knit stockings all day, and clad in their rough sheep-skin coats and caps, they have a most singular appearance, looking like so many little watch-towers scattered over the country. The rate at which they can travel on these tall stiltts is said to equal that of a trotting-horse.

Some of the sheep owners in Australia possess fifteen or twenty thousand sheep, and these are led out to graze before sunrise, and folded or brought back to the sheep-yard at night. The wild dogs of that country are great enemies to the sheep, and will sometimes fall upon them in open day. The shepherd is, therefore, always on the watch; and in setting up his fold, he uses hurdles made of slender rods of iron or oak, seven feet long, and so close together that the lambs cannot escape, nor dogs enter. By the side of this fold he places a movable, weather-tight hut, in which with his dogs he passes the night, keeping a fire burning near the hut to scare away the wild dogs. He has also to watch against a more crafty foe in the escaped country, whose retreat in the interior of the country is said to be usually well stored with mutton, stolen from the different folds.

#### Letter of John Barclay.

May the blessing of heaven above and of the earth beneath attend you and yours,—the blessing which makes most truly rich, and adds thereto no sting of sorrow! This has been my secret petition in some of my best moments, when thinking of you, and surely I shall be excused for telling you so. There is *that*, which crowns all other blessings, as you well know;—there is *that*, (let the thoughtless, the unfeeling hearts say what it may,) without which, our very blessings are of no benefit to us, and every gift of Divine providence and grace is liable to be perverted and abused; instead of being faithfully held in trust, and duly appreciated and applied to the enduring good of ourselves and of all with whom we have to do. This is nothing less than a sense of the presence, countenance and aid of Him who giveth us all things richly to enjoy, and will graciously condescend to show us how we may use these things as not abusing them,—how we may no longer

live to ourselves, but whether we eat or drink, or whatever we do, may do all to His glory. May this, my dear friend, be the first object in our eye, the very business of our lives, in all we undertake, in all we have to pass through. Then shall we not fall of that inheritance, which our dear Lord and Saviour purchased for us by his coming and by his death; then shall we be christians indeed, and when our little moment of probation is over, then the eternal weight of unmingled joy and glory shall follow.

Second month 8th, 1835.

For "The Friend."

#### BIOGRAPHICAL SKETCHES

Of Ministers and Elders and other concerned members of the Yearly Meeting of Philadelphia.

#### JOHN SCARBOROUGH.

John Scarborough was born within the limits of Buckingham Monthly Meeting in Bucks county, Pennsylvania, in 1708 or 1704. His parents were honest hearted Friends who educated him as a member of the religious society, endeavouring to bring him up in the nurture and admonition of the Lord. In his youth, vanities of this world were attractive in his eyes, and he gave way to levity and folly, yet the Lord by the influences of his grace and good spirit following him from year to year, he at length gave up in obedience thereto, took up the cross of Christ and became an obedient follower of his blessed Saviour.

As he continued faithful to the unfoldings of Truth, a gift in the ministry was about the year 1740 committed unto him. In this his memorial says "he soon grew very eminent." He visited at different times, most of the meetings of Friends in the northern colonies, in which he had the unity of his friends at home, and the unity of the living in Christ, attended him wherever he was led to labour. His friends testify their belief that the remembrance of this unity "yet lives in the minds of numbers and exceeds all other memorials."

When not abroad on religious service "he constantly attended our meetings, in which he generally bore large testimonies, earnestly labouring for the salvation and good of all. Although not learned, he spoke with great propriety, his doctrine being sound, lively and edifying, familiar and easy to be understood. A spirit of universal charity appeared throughout, and his ministry being adorned by a pious life and innocent conversation, was justly admired by people of all denominations. His steady concern to promote good order and discipline, and therein to act uprightly for the ease of Truth, without partiality or party spirit, was truly remarkable, and with great cheerfulness he gave up much of his time, and bestowed much labour for the restoration of those who had missed their way. Although he used great plainness in admonishing offenders, he seldom gave offence, being endued with much mildness, and a remarkable degree of self-denial. These made him greatly serviceable in the management of the affairs of the church in general and tended to support its real authority.

As he grew in years, bodily weakness attended him, yet his interest in the affairs of the church continued unabated, and his zeal for her prosperity seemed to know no ebb. The life and power attending his ministry as he drew near the confines of eternity seemed to increase. In the last public testimony he delivered, he was highly favoured, the power of Truth rising greatly into dominion. Many of his hearers were thereby tendered and edified. With much good counsel and fatherly advice he seemed to take a final farewell of his brethren, praying fervently for their preservation.

As the time of his departure drew near, he fre-

quently expressed his willingness to leave this world, saying, "he did not know any thing remaining undone to complete his days' work. No cloud appeared in the way." His decease took place Fifth month 5th, 1769, he being in the 66th year of his age.

MARY EVANS.

Mary Nicholls, the daughter of Samuel and Margaret Nicholls [or Nicholas,] was born in the city of Philadelphia in or about the year 1695. Her father deceased whilst she was still young, but with the blessing of the Most High on the pious labours of her religiously-minded mother, she was educated in the principles of Truth, and restrained from participating in the many evils which abound in the world. Submitting to the cross of Christ in early life, she manifested much sobriety and steadiness in her conduct, which bore testimony to all around her, that the grace and good spirit of the Lord Jesus had the rule and government within her.

As she grew in religious experience, a gift in the ministry of the gospel was committed to her, which she exercised much to the comfort and satisfaction of her friends. She often spoke in after life of the close trials and deep conflicts of mind she experienced whilst preparing for this work, and the merciful extension of Divine help which supported her through all the fiery baptisms. Her coming forth in the ministry was about the 30th year of her age. She was one well qualified for usefulness in the church, and her labours in meetings both for worship and discipline were much esteemed in Philadelphia, whilst she continued to reside in that city. She also through her travels in the work of the ministry was well known in the neighbouring parts, and wherever she was called, her gift made way for her; and she was acknowledged a sister beloved in the Truth.

On the ——— 1736, she was married to Owen Evans, a valuable member of Gwynedd Monthly Meeting, of whose life and labours in the church we have already given a sketch. She was now placed in a new position, and as a wife was affectionate and loving, as a mother, tender yet judicious, as a neighbour kind and helpful. Her appearances in the ministry at Gwynedd when she now resided, were not frequent, yet when she did speak "her testimony was fervent, sound and edifying." She was several times in the love of the Gospel drawn forth to visit Friends in the different provinces of this continent, and once those on the Island of Tortola. Her visits abroad were all entered into with the full unity of her Friends at home, and proved very acceptable to those visited. "She was a lover of, and a promoter of peace and good order in the church, and amongst her neighbours, and was frequently engaged in that weighty service of visiting Friend's families to good satisfaction."

In the year 1757, her beloved husband was removed from her by death, which proved a close trial to her. She however bore her great loss with christian resignation. In 1760 she removed to reside with her daughter who was married and settled in Philadelphia. Although it was returning to the meeting of her youth, where there were many dearly beloved ones in the truth, and although her labours were well accepted there, yet her mind was drawn to return to Gwynedd, and spend the remnant of her days there. So in the year 1767, she removed thither, and during the remainder of the time allotted her on earth, laboured there faithfully, being assured that her time was short. Her last illness she bore with cheerful resignation, and a few days before her death, was drawn forth

in fervent labour to some gathered in her chamber. She departed this life, Fifth month 20th, 1767.

"The Voice in Prayer.—Stephen on his knees "cried with a loud voice." That is, he prayed with a loud voice. There is no more importance to be attached to the loudness of the voice than there is to the attitude of the body; for our God is not deaf. It is the voice of the heart he hears, whether it is uttered with a loud voice, or is inaudible to human ears. When Hannah so prayed that Eli could only perceive the moving of her lips, God as really heard her as he did Stephen, when he cried with a loud voice. It can never be said of our God, as Elijah said of Baal to his prophet: "Cry aloud; for he is a god; either he is talking or he is pursuing, or he is on a journey, or peradventure he sleepeth, and must be awakened." Yet I confess that I have heard prayers which reminded me of Baal's prophets. The faintest utterance of the heart will be heard by God, while the loudest of the mere lips will be unheard.

The loudness of our voices in prayer should depend altogether upon the time, place, and circumstances. There are times when, like Stephen, we should pray with a loud voice. Indeed, there may be times when it may be proper to pray with a very loud voice. There are also times when we should pray in a very low and subdued tone of voice. And there are times when the heart should whisper its wants into the ears of Jehovah. A very large proportion of our prayers should be of the silent kind, or what is called ejaculatory prayers; that is, the heart holding converse with its God. Very frequent ejaculatory prayer is essential to our growth in grace, and to our walking with God as Enoch walked with him. It is thus that the heart holds almost all its communion with its God. It is thus the heart prays without ceasing. It is thus that we may, through faith, obtain the "testimony that we please God." It is thus while hanging on Jesus, that we continually overcome.

Amid that enraged, boisterous and noisy mob, there was a peculiar appropriateness in Stephen's praying with a loud voice. Had he not prayed with a loud voice, they would not have heard him; and it was proper that even in his death he should make a public acknowledgment of the divinity of Jesus—that he really regarded Jesus as the God who hears and answers prayer. It was also proper that they should know that he freely and heartily forgave them.

What an example of forgiveness he gave them in that prayer with a loud voice!—"Lord, lay not this sin to their charge."—*Christian Observer.*

*A Patent Potato Digger.*—The *Sacramento News* gives the following description of a patent potato digger, intended for digging potatoes in dry, sandy ground, and invented by Thomas Lake, of Sacramento: "The working machine will be twelve feet in length. In form it is similar to a truck wagon, has a seat in front for the driver, within reach of whom is a crank by which he can readily raise or lower the plow at pleasure, according to the nature of the surface or soil. The plow, which is scoop-shaped, introduces the earth and potatoes to an elevating wheel furnished with a series of perforated buckets, the inner rim of the wheel also being perforated for sifting the dirt. From the wheel the residue is conducted to a shaking sieve, and thence into the sacking apparatus at the back part of the machine, below which is a platform on which a man can stand and sack. In the sacking

apparatus are two valves, so adjusted that they can be opened or shut by the sacker at pleasure, and above it a rack for empty sacks within his reach. The machine can fill two sacks at the same time, and enable the sacker to sew them and throw them off while the succeeding sacks are filling. It is claimed that this machine will dig and sack from 1500 to 2000 bushels of potatoes, and from 3000 to 4000 bushels of onions, without cutting or bruising.

#### Education.—No. 3.

For "The Friend."

"Man in society is like a flower  
Blown in its native bed: 'tis there alone,  
His faculties, expanded in full bloom,  
Shine out; there only, reach their proper use."

The reply of Albert Barnes to James Robert Boyd, in regard to the claim of the "Task" for illustrations, similar to those in Boyd's edition of *Paradise Lost*, &c. is worthy the notice of teachers and others desirous of infusing a correct literary taste; viz. "A man who spreads that" (The Task) "over the world is always doing good." I will add that the common parlor or sitting room is unfurnished without the Bible and The Task. A little self-denial in other furniture or in superfluities of the table would bring in the reach of all heads of families not only those two books in good type, but Boyd's edition of the latter, and standard works of good old English authors, instead of piles of newspapers, and various mushroom literature, which must wilt into merited obscurity under the sunlight of prevailing truth.

The sentiments quoted at the head of this article are as true to experience as they are beautiful in expression. Who has not observed the contortions and sickness, of a potato-vine in the cellar? As a plant seeks light and air, so does youth seek companionship and sympathy. And without them the growing frame and the growing character will be deformed; the faculties will not "reach their proper use," but sink prematurely into disease, decay, and death.

"Solitude, seeming a sanctuary, proves a grave"—

"A sepulchre—in which the living lie,  
And all good qualities grow sick and die."

Our poet praises the remark of Bruyere—"how sweet, how passing sweet is solitude;—yet he follows it with this of his own—

"But grant me still, a friend in my retreat,  
(to) Whom I may whisper 'solitude is sweet.'"

This healthy craving for companionship is founded not on equality of talents, or attainments, but on congeniality, and reciprocal benevolence. Neither is it dependent on equality in age, or similarity of taste; for the sage of three score and ten may share it with childhood, and the poet with the peasant. The teacher will share it with his pupil: when he seeks for virtue in the child, and finds it, he will feel an animating impulse to closer communion, as his heart responds in a consciousness that it is congenial with his own: he will share it when he looks for good-will or benevolence, in the child, and finding it, reciprocates benevolence of his own. If he find neither, it will be because he seeks not aright. It is the province of the teacher to arouse this desire of mutual-good will. He can do it, by unheeding, so as to lose none of his authority and none of his strength. The bow of good material is not impaired by being unstrung. And it is not out of the school room, only, that advantage is gained, by a good understanding between pupils and teachers: because it is the motive that makes people work; efficiency in action is

proportioned to the intensity of the motive. A horse always travels best towards home; two horses mated, will accomplish more than twice as much, as each singly; and for the common-sense reason, that under such circumstances they are in *better spirits*. This solution is also sufficiently philosophical for the application of sympathy, in the school room. Most persons can call to mind some instances of surprising exertion, of which they were made capable by the intensity of the motive prompting thereto. Some are recorded, which would be incredible, had there not been reliable witnesses. Particularly of females whose courage united with bravery under the stimulating motive of strong affection, has been the means of rescuing beloved objects from impending death. Great obstacles have been overcome by this silent, but potent influence. I remember well and most affectionately the teacher whose aptitude in touching the right chords\* first awakened me out of the doleful dreamy listlessness of the mere go in and go out of school, with very little more progress than the door makes by being opened and shut. He was a man of as much talent, but of more benevolence, than my former masters. One day, by two common-place questions I was suddenly made conscious that there was really something secretly attractive in the school-master. He asked me if I had read a certain book—he asked me again if I was fond of a certain pursuit—and followed these questions by some elucidations, and concluded with a kind invitation to tarry with him, to spend a little time after the close of school one long summer afternoon. I gladly embraced such an opportunity, by which I saw that there was something in common between us. These opportunities were again and again repeated; and often I walked all the way home with him, to prolong them. Sometimes we were joined by others of the scholars or by all. A new era dawned on my school life; and thenceforward it was as cheering as it had been hopeless. I soon saw, through the medium of the interested motives now thrown around me, that there was the attractiveness of vast treasure lying behind the relation of *cause and effect*. The new glasses made things look so clear and bright that the horrors of figures quite vanished; and soon I could go home to my father, and not only be glad to hear him ask me questions as he was wont to test my acquirements, but I could answer them with a feeling of conquest. Such a question as, how much cost 18½ pecks of beans at 18½ cents a peck was no longer alarming. For this change, something was due to age, but more to kindness and a commingling of social with intellectual exercise. Yet no teacher of mine was more uniform in maintaining good order, which he would have; for he thought it better to lose scholars, than authority; but he lost neither, which is always the best. Whilst expulsion is excellent as a *last resort*, it should not be looked upon as one, *readily at hand*; lest we become slack in the use of that availing remedy, faithful and frequent private labor. But let it not be forgotten by parents, that the success of the teacher depends greatly—it is not too much to say mainly—on the

\* Another incident is in point. Whilst taking exercise with the axe, one morning before taking charge of my school, the "clunk" was knotty, and often received an ineffectual stroke on the side. A friend who had seen many summers, and much of human nature, came by, and quietly taking the axe, set the chunk on end, and by a gentle tap in the right place, split it down. On handling me the tool, he said, see, see, "there is something in knowing how to take 'em." The hint was very timely and appropriate, for I had some knotty ones to deal with that time; and I have since endeavored to take special care "to know how to take 'em."

faithful discharge of their duties; which perhaps may form the subject of another article. Y. W.

Eleventh mo. 9th, 1861.

*The African Ant.*—It is their habit to march through the forests in a long and regular line, about two inches broad and often ten miles in length. All along this line are larger ants, who act as officers, stand outside the ranks, and keep this singular army in order. If they come to a place where there are no trees to shelter them from the sun, whose heat they cannot bear, they immediately build underground tunnels, through which the whole army passes in columns to the forest beyond. Those tunnels are four or five feet under ground, and are used only in the heat of the day or during a storm.

When they get hungry, the long file spreads itself through the forest in a front line, and devours all it comes to with a fury which is quite irresistible. The elephant and gorilla fly before every attack. The black men run for their lives. Every animal that lives in their line of march is classed. They seem to understand and act upon the tactics of Napoleon, and concentrate with great speed their heaviest forces upon the point of attack. In an incredibly short space of time the mouse, or dog, or leopard, or deer is overwhelmed, killed, eaten, and the bare skeleton only remains.

They seem to travel night and day. Many a time have I been awakened out of a sleep, and obliged to rush from the hut and into the water to save my life, and after all suffered intolerable agony from the bites of the advance-guard, who had got into my clothes. When they enter a house they clear it of all living things. Roaches are devoured in an instant. Rats and mice spring round the room in vain. An overwhelming force of ants kills a strong rat in less than a minute, in spite of the most frantic struggles, and in less than another minute its bones are stripped. Every living thing in the house is devoured. They will not touch vegetable matter. Thus they are in reality very useful (as well as dangerous) to the negroes, who have their huts cleaned of all the abounding vermin, such as immense roaches and centipedes, at least several times a year.

When on their march, the insect world flies before them, and I have often had the approach of a bashikouay army heralded to me by this means. Wherever they go they make a clean sweep, even ascending to the tops of the highest trees in pursuit of their prey. Their manner of attack is an impetuous leap. Instantly the strong pincers are fastened, and they only let go when the piece gives way. At such times this little animal seems animated by a kind of fury, which causes it to disregard entirely its own safety, and to seek only the conquest of its prey. The bite is very painful.

The negroes relate that criminals were in former times exposed in the path of the bashikouay ants, as the most cruel manner of putting to death.

Two very remarkable practices of theirs remain to be related. When, on their line of march, they must cross a stream, they throw themselves across and form a tunnel—a living tunnel—connecting two trees or high bushes on opposite sides of the little stream. This is done with great speed, and is effected by a great number of ants, each of which elings with its fore-claws to its next neighbour's body or hind-claws. Thus they form a high, safe tabular bridge, though with the whole vast regiment marches in regular order. If disturbed, if the arch is broken by the violence of some animal, they instantly attack the offender with the greatest animosity.—*Du Chaillu.*

selected.

#### THE STORM.

The gathering clouds obscure the sky,  
The trembling birds to covery fly,  
The awe-struck herds forbear to rove,  
And stillness reigns throughout the grove.

The mower drops his scythe, to flee  
To friendly cot, or sheltering tree;  
While nature, in each varied form,  
In silent dread awaits the storm.

Now flash to flash, with lurid glare,  
Successes, and lights the murky air,  
And hark! above, from pole to pole,  
The loud terrific thunders roll.

Why shrink my friend? Why pale with fear?  
Say, dost thou feel that God is near?  
And thinkst thou not, when warblers fill  
Thy tower, that He's nigh thee still?

In every flower that round thee blows—  
In every blade of grass which grows—  
In every glade which cheers thine eye—  
In every stream which ripples by—

On every mount—in every dale—  
In every wave—in every gale  
A thousand tongues, through nature's frame,  
A God, a present God, proclaim!

And Oh, if terror dim thine eye,  
When summer storms pronounce Him nigh,  
How wilt thou meet that dreadful day  
When heaven and earth shall melt away?

Go to that blood whose cleansing flow  
Shall make thy bosom pure as snow!  
That blood to him its aid who seeks,  
Far better than than Abel's speaks.

Then, then, thy soul, redeemed, forgiven,  
Released from sin, at peace with heaven,  
Shall mark, unmoved, 'e'en that dread fire,  
In which ten thousand orbits expire.

#### THE INNER CALM.

BY HORATIUS BONAR.

Calm me, my God, and keep me calm;  
While these hot breezes blow;  
Be like the night dew's cooling balm  
Upon earth's fevered brow.

Calm me, my God, and keep me calm,  
Soft resting on thy breast;  
Soothe me with holy hymn and psalm,  
And bid my spirit rest.

Calm me, my God, and keep me calm;  
Let thine outstretching wing  
Be like the shade of Elim's palm,  
Beside her desert spring.

Yes, keep me calm, though loud and rude  
The sounds my ear that greet—  
Calm in the closest solitude,  
Calm in the bustling street;

Calm in the hour of buoyant health,  
Calm in my hour of pain,  
Calm in my poverty or wealth,  
Calm in my loss or gain;

Calm in the sufferance of wrong,  
Like Him who bore my shame;  
Calm 'mid the threatening, launting throng,  
Who hate thy holy name;

Calm when the great world's news with power  
My listening spirit stir;  
Let not the tidings of the hour  
E'er find too fond an ear.

Calm as the ray of sun or star,  
Which storms assail in vain,  
Moving unruled through earth's war,  
The eternal calm to gain.

The tendency of all communications from God, is to make the soul die to self; but the illuminations from the angels of darkness, are often more pleasing, more entertaining, than those that come from God.

#### Do we Suffer Well?

The sufferers in this world are of various classes and characters, and have each their own cup, the bitterness of which the heart knoweth right well. In places where the exterior is all pleasant and joyful, and where the eye of the observer can detect no trace of sorrow, as well as in the abodes where it greets us at once, there is to be found constant, wearisome, at times, keen and uncontrollable suffering. Men and women go about the streets, or perform their daily tasks, or lie in lonely chambers, with pains in their bodies, or burdens on their hearts, from which they cry in vain for deliverance.

A wide difference, however, is perceptible in the manner in which these sufferings are borne by the various individuals upon whom they are imposed. "I am a poor sufferer," said a dying servant of God, to one who stood by his bedside; "I mean that I little know what it is to suffer well." The good man may have depreciated himself in this saying, but it will serve to open to us a distinction to be observed everywhere in the great class of sufferers. It must be that they will suffer ill or well. Just as truly as the man of action must act well or ill, so those unto whom "it is given to suffer," must show a spirit indignant to that which does evil, or does good. And influences for good or ill, proceed as distinctly from the manner in which our sufferings are endured, as from the most energetic and conspicuous of our actions.

Let us, therefore, put the question, with the utmost directness, to the children of sorrow—"Do you suffer well?" And if not, ought you not for the sake of the Master, who was so much a man of sorrows, and bore them all so meekly, to strive to reach unto this grace? Let it be remembered that it requires an effort to attain it—that it is not to be gained at a bound—that days and years may be well expended in assiduous cultivation, if at last we reap the ripe fruit of sufferings well and quietly borne. And if, in our admiration of some great and worthy deed of Christian zeal, we are moved to repine that God has not permitted us to display such zeal and earnestness, let us check the murmure, by the thought that God appoints unto all the place and the means by which they shall glorify him, and that if at last we shall be found to have suffered "well," it will be fully acknowledged, and graciously rewarded.

What is it to suffer well? The answer to this question would lead us out into a treatise upon all the uses and benefits of affliction. But we may briefly say that it consists not in indifference to pain, or in that stoicism which is the frigid effect of an unchristian philosophy. It is not perceptible in those weak complainings, with which some weary the ears of friends and neighbours, or in the petulant utterances, or peevish scoldings of the confirmed valetudinarian. Least of all is it visible in the defiant questionings of the goodness, or the justice of God, which his judgments force from unsoftened and unholly hearts. What is meant by suffering well, is precisely that which is meant by the apostle James when he speaks of suffering as "a Christian's joy." It is to suffer with Christian meekness, quietness and patience. It is to receive the rod as from the hand of our Heavenly Father, and to show submission thereunto. It is to watch the heart, lest murmurings arise, and watch the tongue, lest they be expressed. It is to wait until the Lord is pleased to remove the pain, and ever to seek for grace to bear it while it is present. And it is to cultivate the unquestioning spirit of a child, confident that all is right, and that in kindness the Father in heaven has sent the affliction, or removed the idol. Above all, it is habitually to remember that we may "glorify God

in the fires," and to nourish the desire, that by no word or act we may hinder that glory from being made manifest to those who look upon our sufferings, and who might see in us how mighty is the grace which upholds and comforts the people of God.

To "suffer well," is a great attainment. It is given of God to those who seek it earnestly and constantly; and such may comfort their hearts with the assurance, that if they receive this gift, they have received a blessing from God, of which they cannot reckon the value, and by which they will be able abundantly to illustrate the grace of God, and minister to his most excellent glory.

#### A Letter Suitable to the Times.

Near Smithfield, Twelfth mo. 22nd, 1837.

*Beloved Friend,*—I received thy two letters sent by —, they were acceptable to myself, and such as have had the opportunity of seeing them. Many of us hereaway can feelingly respond to the discouraging prospects which seem at seasons to attend thy mind, in regard to our once highly favoured society. Never I believe has there been so great an apostasy, since we have been a people. And never was the adversary permitted to make a more bold, and I fear a more successful attempt to bring the society, and the worthy founders of it, into discredit, than is now making, and of late has been made, by poor E. Bates. Thou perhaps hast seen, or will see his late book of between three or four hundred pages, entitled, "Bates' Examination of Quakerism." In this work the author has put forth his strength, and written to render George Fox and other early Friends odious in the eyes of other religious societies, labouring hard to fix upon them, particularly dear George Fox, the character of a blasphemer, an idolater, a heretic, &c., &c. And worse than all, contending and declaring that blessed and divine principle of light and life in the soul, by which *early*, and indeed all *genuine* Friends profess to be guided. In this particular, how awfully is verified that scripture declaration, "If therefore the light that is in thee be darkness, how great is that darkness." Poor Elisha! I never see him but I mourn at his awful downfall. He must have been once highly enlightened, but leaning to his own understanding, the root of Divine life was dried up. For the High and Holy One will not give his glory to another, nor his praise to graven images.

I have from my youth firmly believed in the sufficiency and certainty of the guidance of the Holy Spirit to those who in singleness wait for and upon the influence and leadings thereof. In this faith I hope to end my pilgrimage, however small a measure of this blessed principle may be vouchsafed to me.

I think I have seen with indubitable clearness, and have been confirmed more and more of late in the sentiment, that in proportion as the Lord's messengers minister in the ability which he alone gives, the Truth rises into dominion, and the people partake of the baptizing power. Whilst that teaching or preaching which is in the words of man's wisdom, brings death to the living. My spirit is often of late clothed with mourning under an apprehension that too many under our name, in various parts of the world, are seeking to accommodate our doctrines and practices to those of other religious denominations, rather than maintain with integrity the principles and testimonies into which our worthy predecessors were led by the insinuations and unfoldings of the light of the glorious gospel of our Lord and Saviour Jesus Christ. These principles being too pure for the acceptance of the high professors, were to them, like the gospel of

old was to the wise Greeks, foolishness. But amid all these discouragements, I trust there will be those preserved, who, while they weep as between the porch and the altar, will be concerned to put up their petition, "Spare thy people, O Lord, and give not thine heritage to reproach." And I trust that the grand adversary with all his devices and all his agents, will never be permitted utterly to lay us waste as a Christian Society.

I conclude with feelings of christian sympathy.

Thy attached friend, B. W. L.

*The tools great men work with.*—It is not tools that make the workman, but the trained skill and perseverance of the man himself. Indeed it is proverbial that the bad workman never yet had a good tool. Some one asked Opie by what wonderful process he mixed his colors. "I mix them with my brains," was his reply. It is the same with every workman who would excel. Ferguson made marvellous things—such as his wooden clock, that accurately measured the hours—by means of a common penknife, a tool in everybody's hand, but then everybody is not a Ferguson. A pan of water and two thermometers were the tools by which Dr. Black discovered latent heat; and a prism, a lens, and a sheet of pasteboard, enabled Newton to unfold the composition of light and the origin of color. An eminent foreign *savant* once called upon Dr. Wallaston and requested to be shown over his laboratories, in which science had been enriched by so many important discoveries, when the doctor took him into a study, and pointing to an old tea-tray on the table, containing a few watch glasses, test-papers, a small balance, and a blow-pipe, said: "There is all the laboratory I have!" Stothart learnt the art of combining colors by closely studying butterflies' wings; he would often say that no one knew what he owed to these tiny insects. A burnt stick and a barn-door served Wilkie in lieu of pencil and canvas. Bewick first practised drawing on the cottage-walls of his native village, which he covered with his sketches in chalk; and Benjamin West made his first brushes out of the cat's tail. Ferguson laid himself down in the fields at night in a blanket and made a map of the heavenly bodies, by means of a thread with small beads on it, stretched between his eye and the stars. Franklin first robbed the thunder-cloud of its lightning by means of a kite made with two cross-sticks and a silk handkerchief. Watt made his first model of the condensing steam engine out of an old anatomist's syringe, used to inject the arteries previous to dissection. Gifford worked his first problem in mathematics, when a cobbler's apprentice, upon small scraps of leather, which he beat smooth for the purpose, while Rittenhouse, the astronomer, first calculated eclipses on his plough-handle.—*Smiles' Self-Help.*

*What is thy Portion?*—What is thy wealth, reader? Is it money, or houses, or lands? Hast thou gold, and bills, and bonds? Dost thou heap up riches in the cofler, or dost thou make the bank thy treasury? Surely thou hast heard that riches have wings, and that many who are rich for this world are poor indeed for that which is to come. Ask, then, of God, that he may show thee the riches of his grace, and make thee a partaker of the riches of his glory.

What is thy strength? If it be that of a vigorous frame, a broad chest, and a stoney arm, the ague may shake thee, the fever burn thee, and consumption may waste thee till thou art weaker than other men. Dost thou ever think of this? Art thou ready for the throes of pain and the languor of sickness? Be assured thou wilt have them. Go

to the strong for strength, and to the wise for wisdom, and then as thy day is, thy strength shall be.

What is thy choice? Is it the applause of the world? pomp? ambition? fame? Why, these are playthings which are soon broken; glittering bubbles that soon burst. Is it wise to choose food that will not keep, garments that will not wear, and possessions which are here to-day and gone to-morrow? Choose something better. Make a better choice, for thou canst hardly make a worse. Choose the one thing needful! the pearl of great price, the hope of eternal glory.

What is thy zeal? Is it for trifles, or for things of value? for thine own weal or for others' good? for time or eternity? for earth or heaven? Is thy zeal foolish, or according to knowledge? Does it bind thee to the world, or wean thee from it? Is it hot, hasty, and fitful, or calm, enduring, and persevering? Saul had a zeal, but he was a persecutor. Peter had a zeal, but for all that he denounced his master. Be zealous in love; be zealous in faith; be zealous in good works; and be zealous in promoting the kingdom of the Redeemer.

Who are thy friends? Are they rich, powerful, and devoted to thee? Have they indulged in large professions and made large promises? Still have a care. Hast thou tried them in trouble? Hast thou sought favour of them in the day of calamity? "Confidence in an unfaithful man in time of trouble is like a broken tooth, and a foot out of joint." Prov. xxv. 19. Choose for thine earthly friends lovers of peace, and remember there is a heavenly friend "that sticketh closer than a brother."

What is thy heritage? Is it an estate? the cast-off property of those who have gone before thee? A mere life interest that may be but for an hour? Oh, there are better things than these! Give up the chaff for good grain; thy husks for the fatted calf; thy passing shadow for a permanent reality. Look higher than earth, and trust in thy Redeemer, so shalt thou have a heritage of peace and joy, and be an inheritor of the kingdom of heaven.

Oh seek from God, with all thine heart,

Riches which ne'er decay;  
And be thy choice the better part  
Which none can take away;  
Thy zeal for Christ a quenchless fire,  
Thy friends the men of peace;  
Thy heritage an angel's life  
When earthly changes cease.

*The Adulteration of Tea.*—In the London *Lancet* we find the result of a microscopic and chemical analysis of forty-eight samples of tea.

Of the twenty-four specimens of black tea analyzed every one was found to be genuine. Of a like number of green teas all were adulterated. The adulterations are mainly a coloring matter with which the tea-leaf is faced, painted or glazed. Ferro-cyanid of iron or Prussian blue is the article most commonly used for this purpose. Sometimes, however, indigo, kaolin or china clay, and turmeric powder were found in addition. That species of tea which is denominated gunpowder is adulterated in other ways by admixture with leaves not those of tea, with paddy husk, and particularly with "lie tea," so called, a leaf which resembles the tea-leaf closely, and is sent to this country from China in vast quantities, to be employed in adulterations here. The coloring of the tea is almost entirely done in China, and probably because it improves its appearance, and perhaps renders its sale more sure and rapid.

Such is the result of a thorough analysis of this article by eminent scientific men in England, and it is certainly not very flattering to the taste of those who drink green tea for the love of it.

There is no such article as an unadulterated green tea. Let the lovers of the herb remember that fact, and as they sip the delicious beverage, and fancy they find in it a solvent for their aches and pains, let them also remember that they are sipping with it a solution of Prussian blue and indigo, as well as sundry other little peccadilloes, that neither add to its exhilarating properties nor yet are entirely harmless to the system. On the other hand the black teas are not adulterated, and are the only ones used by the Chinese. Knowing the impurities that are in the best green teas, they send for foreign ports to tinkle the delicate palates of the English, the French and the American, who in their view fancy the bright lively appearance imparted by the coloring compositions they use.

#### Scantlebury's Ancient Testimony.

*Testimonies of Ancient Friends revised, respecting the changeable modes of the world, address'd to those in the station of parents.*

The apprehension of an increasing departure from simplicity in apparel into an imitation of the world's unstable fashions, particularly amongst the Youth, and even amongst many of those whose parents retain a consistent appearance, has given rise to the following brief selection of Testimonies of Ancient Friends, with some additional remarks tending to excite a serious examination into the ground and effects of such departure from the self-denying way of our predecessors.

The advices of the Yearly Meeting on this subject have been large, and often repeated both in the printed epistles and written minutes, and as these are easily referred to, a few short extracts may be sufficient here, viz.

Yearly Meeting, 1688.

"Parents are advised to educate their children and servants in modesty, sobriety, and the fear of God—they are accountable for that power committed to them, and are exhorted to discharge their trust when they see a libertine spirit in their children or servants, that lusteth after the vain customs and fashions of the world."

Yearly Meeting, 1690.

"Friends are advised not to suffer their substance to be bestowed on children, to furnish them with such things as tend to pride and vanity, or affect them with the vain fashions of the world."

1692.

"That all parents amongst Friends take all godly and Christian care in the education of their children, and be good examples to them, and not allow them in any thing that may gratify a vain mind in immodest apparel, but train them up in sobriety, modesty, and plainness."

1631.

"We are sensible that the miscarriages of youth have very much proceeded from their being imprudently indulged."

Yearly Meeting, 1760.

"Parents are advised to restrain and example those under them for their help—for (whom an account must be rendered) bringing them up in the fear of the Lord, and in that sobriety, moderation, and plainness, of speech, apparel, and deportment, which becomes a people professing to be followers of our Lord Jesus Christ, the perfect pattern of humility and self-denial."

York Quarterly Meeting, 1690.

"That Friends be watchful that the enemy darken not their minds, and bring them back into vanity and folly, and turn again into the practice of those

things which they were sensible the Lord, by his Spirit, testified against. And it is possible they may indulge such things amongst their children and families, which in the time of their first-conviction they durst not allow, or are they to be allowed in our Christian Society.—Train up children in the fear of God, restraining them from folly and vanity—that none go into the vain and gaudy habits, dress, nor foolish modes and fashions," &c.

Epistle of Ann Galloway.

"Dear Sisters,—It lies upon me to entreat you, to whom God has given children, that you bring them up as becomes Truth, and do not dress them or yourselves to imitate the world's fashions though it be in plainness, for if you do, it is with me in the love of God to forewarn you of it:—and if you do look back again and take liberties, we shall suffer loss which one day will be greater than if we were stripped of all that can be enjoyed in this life."

James Parnel, by whose effectual ministry, it is recorded, thousands were convinced of the Truth, noticeth the new fashions as one of the fruits of the corrupt tree—inventions of the world, to make the creature seem something in its own eyes, and in the eyes of others; are not these, says he, "the outward signs of pride which lodges in the heart; has not the Lord pronounced a woe against the crown of pride, and shall any professing as we do, by any act of ours, spare, nourish, and keep it alive, in any one?"

Charles Marshall, in his account of the first gathering of Friends in the city of Bristol says, "We received the gospel with a ready mind, with broken hearts and affected spirits, and gave up to follow the Lord fully, casting off the weights and burdens, and the sin that easily besets, and from the evil ways and vanities of the world, departed. Oh! the strippings of all needless apparel, and the forsaking superfluities in meats and drinks—and in the plain self-denying path we walked, our apparel and houses plain."

George Fox.

"The enemy of mankind goeth about seeking whom he may devour and entangle again with the glory and beauty of this world, setting before men and women the comeliness and decency of the several fashions of this world; by which we many are ensnared. That in all men's and women's meetings, faithful men and women be chosen, that have not entered into any of these things; or such as now with a ready mind, in the dread and fear of the Lord God Almighty, will come out of them all, to the intent that they without delay, and in much tenderness may visit all those that have entered into or keep in the world's fashions, in their apparel, household stuff, or otherwise."

"And as every one hath received Christ, walk in him who is not of the world, so that you may be preserved out of the vain fashions and customs of the world, which satisfy the lust of the eye, &c., which is not of the Father. And who joins with that which is not of the Father, or encourages it, draws the mind from God."

1685.

"Friends that see the world so often, alter fashions and follow them, they cannot judge the world, but the world will judge them. Keep all in plainness and simplicity."

"To all that profess the Truth my desires are, that you may walk in humility, for when the Lord first called me forth, he let me see that young peo-

ple grew up together in vanity and the fashions of the world, and old people went downwards into the earth raking it together, and to both these I was to be a stranger. And now, friends, I do see too many young people that profess the Truth, grow up into the fashions of the world, and too many parents indulge them, and among the elder some are growing downwards and raking after the earth. If you have not power over the earthly spirit, and that which leadeth into a vain mind and the fashions of the world, though you have often had the rain fall upon your fields, you will but bring forth briars and thorns, which are for the fire."—*G. Fox's Journal*, page 602.

(To be continued.)

*A Just Retort.*—"Well, you have made quite an array of science against the truth of revelation. You say it is opposed to astronomy, geologic, and metaphysical science, and express your wonder at my credulity in receiving it. It is true, my faith is a very simple one, and really is independent of material science; and especially a science founded on an imperfect knowledge of the structure of the earth, the visible heavens, or the human mind. Had not man fallen from his primitive nobility, and limited the exercise of his faculties, he might perhaps have attained to a true and exalted science, far different from the smattering of modern theorists, who pretend to construct worlds without God, and account for every thing without a recognition of his government. The irreverence of such a course is the more striking, when it is remembered that God alone thoroughly comprehends geology, astronomy, mathematics, and metaphysics, while man can only understand them in the most superficial manner. Scraping the outer crust of the earth, piercing a very small distance into the visible heavens with his telescope, and tracing confusedly some of the phenomena of mind, philosophers, so called, presume to pronounce with dogmatism on the secret laws of mind and matter; and not only so, but exclusively of the maker of both mind and matter. Revelation satisfies my mind, for it conveys to me the worthiest ideas of God, and just in proportion to the strength of my belief in him thus revealed, I am conscious of an exaltation of my own nature. With a conviction that God is harmonious with himself, and there can be no contradiction between his revelations, I distrust all pretended discordances between them, especially when the discovery is founded on the most limited knowledge, both of God and his works. God is all science, and his science is perfect; and if any thing under this name leads one to view him as a cold abstraction or nonentity, there is *prima facie* evidence that it is nothing more than developed ignorance. It is a strange hallucination which induces any one to make science and religion antagonistic. The more verity in our knowledge, the nearer our approach to God, and the more profound our veneration; hypocrisy in regard to the latter, is a sure sign of shallowness in regard to the other."

*Interesting Circumstance.*—Among the Sikh nobles who, at the outset of the mutiny, staked their heads on the British side, was the Rajah of Kupoorthulla. He was not a very great man, but he had influence, and no Englishman could have risked his status, purse, and person, with more hearty and unquestioning loyalty. He helped to guard the Northern Delhi Road, then the key of our position; and when order had been restored, the Governor-General, casting aside the old policy of meagre rewards, raised him, by a single gift of land, to the wealth of a great English noble.

The Rajah married an East Indian girl, became under her influence, a Christian, and established a mission on his own estates. Sweeping away at a stroke the prejudices of a thousand years, he introduced his wife into society, and allowed her to appear in public, and on occasions, for once heartily cordial to a native, threw aside prejudices as rooted as his own, and recommended that the Rajah should receive, socially, precedence in Oude. The Governor-General consented; and at the apex of the new social system of Oude stands a native christian noble; and the only woman in India for whom the guards turn out in the British provinces is the Christian "Lady Kupoorthulla."—*London Spectator*.

**Religion and morality.**—We sometimes hear persons speak disparagingly of morality as though it were of little value. They exalt religion at the expense of morality. Morality cannot be separated from religion. No one who is faithful in the performance of his duties toward God, will neglect his duties towards his fellow men. Whenever one is awakened to a sense of religious obligation, you will find him careful in regard to the duties of morality.

The man who makes great professions in regard to religion, and is not strict in his morality, is a self-deceiver or a hypocrite.

#### SUMMARY OF EVENTS.

**UNITED STATES.—Funds for the War.**—The Secretary of the Treasury has negotiated another loan of \$50,000,000, with the associated banks of Boston, New York, and Philadelphia. It is understood that \$50,000,000 will be at once placed to the credit of the United States Treasury for the purpose of making, in twenty years, at a rate equal to seven per cent. at par. This rate is about 90¢ for the hundred dollars. The ability of the Government to put down the rebellion, is, it is stated now, not doubted by capitalists.

**Maryland.**—Governor Hicks has issued a proclamation, calling a special session of the Legislature at Annapolis on the 27th inst., the object being to re-establish Maryland in her old position in the Union, and to annul the traitorous legislation of the last session.

**The Expedition to South Carolina.**—The fleet encountered violent storms, which lashed and scattered a number of the transport vessels, and caused the total loss of the steamers Union and Osceola. The crews were all saved except a very few persons. The fleet arrived at Fort Royal on the 4th, and on the 7th inst. landed in an impregnable position, where they will remain landed four hours, at the end of which time the rebels were compelled to retreat and abandon the works. After the capture of the Forts, the whole army, about 15,000 in number, were safely landed. Beaufort was abandoned by the rebels, and the negroes. The forts were found to be, but little injured, they contained forty-three pieces of cannon, most of them of heavy calibre and of the most improved description. None of the U. S. vessels were seriously injured, eight of their men were killed and twenty-three wounded. No rebels were taken prisoners, the number of their killed and wounded is uncertain, but it probably exceeded 100. A large supply of ammunition was found in the forts. There was but a small supply of cotton at Beaufort. Gen. Sherman has decided to entrench his forces on Hilton Head in an impregnable position, where they will await the expected reinforcements. The planters in the vicinity have fled, some having previously fired all the buildings on their premises, and destroyed their crops, leaving only a mass of ruins behind them.

**Southern News.**—A large English steamer, laden with

war munitions for the southern rebels has been captured by a U. S. frigate and taken into Key West.

The reported capture of the privateer Sumter proves to have been incorrect. When last heard from she was at Barbadoes.

The following letter from the rebel commissioner, W. L. Yancy, now in England, speaks discouragingly of the prospect of a recognition of the Southern Confederacy by the European powers.

The Norfolk Day Book says that the ship Fingal has arrived at Savannah with a cargo of war munitions, &c. The same paper explains that the men were also seeking safety in flight, and insists that every able-bodied man under sixty years of age should be compelled to remain and aid in the defence of the city.

The Virginia papers make heavy complaints of the iron blockade. Every day a message is received, denouncing several bridges upon the Virginia and Tennessee rail road, thus cutting off at a most critical moment, the means of despatching troops rapidly to New Orleans, which it is feared is in danger of attack.

Knoxville, Tennessee, has been placed under martial law. The Union men were taking up arms, and threaten to take possession of the rail road.

The Memphis, (Tenn.) Argus of the 16th, has a Charleston, S. C., despatch of the 14th, which says "The Federal forces have possession of Pinckney Island, and the highest point of the harbor, and the rebels, at the time and taken them aboard the fleet. They prevent the others from fleeing by use of force. They have made no attempt yet to effect a lodgment on the main land."

The Memphis papers express great alarm at the Federal preparations for an expedition down the Mississippi. **Virginia.**—The rebel forces under Floyd, which lately advanced upon Gen. Rosecrans's command in the Kanawha valley, appear to have retreated into their mountain fastnesses. The portion of the State on the eastern side of the Alleghenies has recently been occupied by 4,000 U. S. troops. Many of the inhabitants are believed to be loyal to the Union. Gen. Dix has issued a proclamation to the people of Accomac and Northampton counties, assuring them that the military forces of the United States would come among them as friends, and with no purpose of invading their rights. A considerable number of rebels were under arms in Northampton county.

**Kentucky.**—The rebel General Zollicoffer has fallen back to Cumberland Gap, and sent to Knoxville for reinforcements. In an engagement at Picketown, in the northern part of the State, a rebel force of 1000 men was routed and dispersed by Gen. Nelson. No other hostile collisions are reported. The rebels seem to be losing ground.

**Missouri.**—Gen. McKinstry, late quartermaster-general of the army, has been arrested and placed in confinement in St. Louis. His casibier has also been arrested. The government has agreed to arm, pay, clothe, transport and subsidize the Missouri volunteers for service in the State during the war. The rebel armies under Generals Price and Murrell have retreated to the west. It is understood that they have gone to Fort Smith, where supplies for the winter have been collected. Before leaving Missouri they ravaged the country in their vicinity, burning all the hay stacks, corn cribs, &c., to prevent the U. S. forces from obtaining forage. They have also destroyed the rail road between St. Louis and St. Springfield for the North. The chief command has been devolved upon Gen. Halleck. Gen. Hunter has been ordered to take charge of the army in Kansas. The rebel outrages appear to have ceased in great measure, and in nearly all parts of Missouri the military battle at Belmont, the rebel loss was 200 men, killed, 427 wounded, and 278 missing. It is stated that the main portion of the Federal forces will be concentrated at St. Louis, in readiness for movements in Kentucky, or southeast Missouri.

The rebels seem to be no doubt that many rebel necessaries are scattered over the free States. Already no fewer than seventeen woolen factories engaged in filling contracts with the government have been destroyed by fire.

**The Blockade of the Potomac** is complete so far as the passage of large vessels is concerned. Smaller craft occasionally pass unharmed at night.

**Arrest of Senator Gwyn.**—Senator Gwyn, of California, has been arrested on his passage to New York, via Panama. It is alleged that he was in treasonable correspondence with the rebels. He was subsequently released on parole.

**The Grain Crop of Ohio.**—The State Auditor of Ohio has made up the statistics of the grain crop of the State for 1859, and for 1850, and the following totals are presented:

	Bushels
Total wheat crop in 1860, . . . . .	23,640,35
Total wheat crop in 1859, . . . . .	13,345,84
Increase in 1860, . . . . .	10,294,512
Total corn crop in 1860, . . . . .	91,588,70
Total corn crop in 1859, . . . . .	69,372,343

Increase in 1860, . . . . . 22,216,361  
Eighteen counties in 1860 produced over 1,500,000 bushels of corn each, the highest being a crop of 3,310,717 bushels in Ross county. Eleven counties each produced over half a million bushels of wheat, the largest amount being 690,768 bushels in Stark county.

**New York.**—Mortality last week, 392.

**Philadelphia.**—Mortality last week, 374.

**Fouquier.**—Liverpool does to the 8th inst. Many of the Lancashire cotton mills had reduced their time to three days a week, and in some an entire suspension had taken place. The stock of cotton at Liverpool was falling to the north towards England, and its groundness, it says "We shall nevertheless continue to express our conviction that secession has destroyed the Federal Union, and that to whichever side victory inclines, its reconstruction on the old basis is impossible."

The London Times treats, in an editorial, on the ill feeling of the north towards England, and its groundness, it says "We shall nevertheless continue to express our conviction that secession has destroyed the Federal Union, and that to whichever side victory inclines, its reconstruction on the old basis is impossible."

Several heavy commercial failures had occurred in Paris.

The bank of France has succeeded in obtaining six million of francs from the Bank of Prussia.

It was reiterated that France has opened negotiations with the Emperor of Austria, and that the Emperor is

It is reported that the Duke of Magenta had been entrusted with the mission to Vienna on the same subject.

The French troops had occupied the valley of the Dappen, and the Swiss Government had sent commissioners to the spot and had resolved to protect and demand satisfaction for the violation of Swiss territory.

Revolutionary movements are taking place among the students throughout Russia. The disturbances at Moscow were quelled by a military force, and a petition is being signed for a constitution. Monster meetings of the people were expected on the return of the Emperor at Moscow.

**The Prussische Zeitung** publishes news from Moscow, without a date, announcing that the students in that city had created violent disturbances, which had been quelled by the military force. A petition requesting the release of the students lately arrested, and that a constitution should be granted to Russia, had been signed by 17,000 persons.

The Emperor of Austria has addressed an autograph letter to the Chancellor of Hungary, declaring that the fidelity of the Hungarian Principals was unances public order in such a dangerous manner, that duty required the raising of strong barriers against such excesses; that, as the convocation of the Hungarian Diet in a constitutional manner appears to be impracticable until order is re-established, all of the existing authorities in the district and Congress are abolished, and the Chancellor is ordered to elect persons to replace them and to take care that the administrator of public affairs suffers no interruption. All persons charged with crimes against the public safety shall be tried by military tribunals.

#### RECEIPTS.

Received from C. E. Woodward, par. 45, vols. 33 and 34 from Solomon Hill, do. \$3. 52 par. 54, from Sarah Minard, par. \$2, vol. 35; from Israel Hall, Ind., \$2, to 20, vol. 35; for Henry Cope, Jr., 50 cts., to 13, vol. 35.

FILE & M'ELROY, PRINTERS,  
Lodge street, opposite the Pennsylvania Bank.

# THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XXXV.

SEVENTH-DAY, ELEVENTH MONTH 30, 1861.

NO. 13.

PUBLISHED WEEKLY.

Price Two Dollars per annum, payable in advance.

Subscriptions and Payments received by

JOHN RICHARDSON,

AT NO. 116 NORTH FOURTH STREET, UP STAIRS,  
PHILADELPHIA.

Postage to any part of Pennsylvania, for three months, if paid in advance, three and a-quarter cents; to any part of the United States, for three months, if paid in advance, six and a-half cents.

Benjamin Ferris.  
(Continued from page 89.)

During the Eleventh month, 1762, Benjamin Ferris addressed an epistle of affectionate counsel to two of the children of Elizabeth Wilkinson, which he forwarded open to the mother for her inspection. In the beginning of the Twelfth month, the Friends he had lately travelled with so harmoniously, desired his company to Exeter and some other places, but information did not reach him in time to enable him to join them, until after their return from that place.

Diary. Twelfth mo. 12, 1762.—“I went to Newtown meeting in order to meet the same Friends again, and kept them company for the most part until the 30th of the same month. We were at Middletown, Birmingham, Springfield, Haverford, Merion, Radnor, The Valley, New Providence, Plymouth, and other meetings. I was mostly exceedingly poor, which is frequently my portion. None can tell the barrenness I feel, which may be owing to causes in myself. However, if I had any sense of the state of things in these meetings, religion is at a very low ebb among their members, and a supine, careless disposition, with the love of and pursuit after the riches of this world, have taken place of better concerns. On account of these things, at times, my heart was heavy.

“On the 30th, I parted with my dear friends, Hannah and Elizabeth, in much nearness and unity, and from Plymouth came to Darby Monthly Meeting. From thence I went to Philadelphia, was at their Monthly Meeting, and then went home.

“1763. The first month of this year I spent in writing in my chamber, having to transcribe for our Monthly Meeting a copy of the Discipline and advices of our Yearly Meeting. This afforded me much solitude and retirement, and I humbly hope the opportunity was not wholly unimproved, but tended to some advantage in the best sense. Though I had not to boast of any extraordinary visitations, which I believe are less my experience than some others, yet a degree of thankfulness possessed my mind, in that I was favoured, I hope, with daily bread, as sensibly as at any time of my life. Although it was administered in a seemingly scarce measure, yet it was, I doubt not, wisely proportioned to my need, and often sweetly refreshed

me, in an increase of love to the Truth, which I desired I might ever be preserved near to.

“Second month 8th. I went to our Quarterly Meeting at Concord, which was large, and I hope to some profit. We had the assistance of a part of the committee from our Yearly Meeting, appointed to visit the Quarterly and Monthly Meeting, who had good service. They were, the next Fourth day, at our Monthly Meeting at Wilmington, and it was a satisfactory time. The prevalence of the power and virtue of Truth chained down the contrary spirit.

“Second month 11th. I went with divers Friends to the Monthly Meeting held at Center, and lodging at the house of a Friend, I had some conversation with him, relative to Negroes, and furnishing wagons for the king, which rather made my return home easy.

“19th. I went to the Western Quarterly Meeting, where were my dear Friends Hannah Harris and Elizabeth Wilkinson, who had each of them acceptable service. I thought it was a good time, and the savour of it continued through the meeting for business. I was glad I was there.

“After this I had many distressing thoughts, and was afraid I should some way or other, bring dishonour upon the holy name and cause of Truth. I could take no comfort in any thing; the heavens were like brass; yea, all hope of help from thence seemed cut off, and earth appeared like iron; nothing pleasant therein.

“Third month 14th. I received a letter of counsel and encouragement from a nearly sympathizing Friend, on the very subject of my then exercise, which, together with some secret stirrings of hope that I was not forsaken, brought my mind into a good degree of stillness and submission to the ordering of Divine wisdom in everything respecting me. In that which had been the cause of so much thoughtfulness and concern to me, [the prospect of being appointed clerk.] there seemed no will left to gainsay it. This dispensation, however, passed off, and on the day of our Monthly Meeting my former anxiety returned.”

He had a sore struggle of mind, concluding he could not yet go to meeting, but was not easy to stay away. He thought if he could feel in himself a sense of duty in it, he would bear the cross and accept the appointment, but concluded, that when named, if he could not feel it right, he would object. So in fear and trembling he went into the meeting, and was appointed clerk, feeling no strength to oppose the report of the committee. He says, “I passively submitted to the appointment in as much weakness and poverty I think, as I ever was sensible of. But I endeavoured to breathe for ability so to conduct as that the cause might not suffer or the faithful be grieved.

“The next day in moving some boards I gave my back a wrench, which so hurt me that I could scarcely walk or breathe, without pain. It then came into my mind how I had wished for some accident to prevent my attending the meeting the day before. I was disappointed then, but now I had met with that which prevented my attendance of our week day meeting. It seemed like a gentle, yet

awful memento to me, which I believe I shall not suddenly forget.

“Third month 24th. I went to Philadelphia to the Spring Meeting, and was at the several meetings to some comfort and satisfaction.”

(To be continued.)

The Arabs of the Desert.

The following letter, from Her Britannic Majesty's Consul at Aleppo, appears in the *Westonian Methodist Magazine*. It will doubtless be of interest to our readers.

I accept with great pleasure the proposal contained in your letter of the 29th ult. It is the first ray of real encouragement which has reached me, and I hail it accordingly with thankfulness. In order that you may be able to form your own judgment of my plans in favour of the Bedouin Arabs, I shall state exactly how the matter stands.

My attention was called to the subject on my arrival at Aleppo, as British consul, about four years ago. I had served during the Crimean war as civil commissioner with the Turkish contingent in English pay; and nearly fifteen hundred men having been raised for the irregular cavalry of that force from among the Syrian Bedouins, I was received by them here as an old friend. The good pay and rations, the justice, and even generosity with which they had been treated by our government, had established a great degree of confidence in the British name, and laid a foundation for the intercourse which it became my duty to cultivate, in the hope of being able to extend our trade.

I therefore made frequent visits to the Arab tribes. This nomadic population of the desert possesses no small amount of wealth, produced by their countless herds of camels and flocks of sheep. The cotton stuffs, hardware, and colonial produce which they require in considerable quantities, and purchase with the proceeds of the sale of their young stock, wool, and butter, had hitherto reached them through many hands, with a consequent increase of price, while the importers from England received only a small portion of the profit. The competition, moreover, between our merchants and the dealers in Swiss cloths and sugar, from Marseilles, is so keen, that the wants of the Arabs have been in some degree supplied by the latter, who undersold us in that market. By encouraging the Bedouins, however, to come to the towns and make their purchases directly from our traders, by enabling the latter to forward merchandise to the desert for sale, without incurring the risks which had previously deterred them from doing so, and by inducing speculators to dye English cotton cloths with the indigo received here from Bombay; to replace the more expensive and less durable blue cloths of native manufacture which are worn by the Arab women; I hoped that great advantages would accrue to our trade; and my most sanguine expectations have been surpassed by the results.

The policy adopted by the Turkish authorities toward the Bedouins had always been fickle in the extreme. One year they were attacked, and the next subsidized. Bribes were given by governors

to keep them quiet, and taken by subordinates to conceal their misdeeds. Attempts were made to check their incursions by military expeditions; peace was concluded after a few fruitless marches and manoeuvres; then tribute was handed to them, under the form of pay for irregulars. When beaten, the Arabs devastated villages, and retired to the heart of the desert; when unmolested, they turned their animals into the crops of the peasantry, levied black mail from them, and drove off the flocks and herds. Caravans were, under all circumstances, a fair prey to the Bedouins. The agricultural population thus suffered without redress, and receded before the roving and pastoral tribes. I have seen twenty-five villages plundered and deserted, and I have often passed through a very fertile district which possessed a hundred prosperous villages twenty years ago, now occupied by only a few lingering peasants, about to follow their kindred to the mountains on the sea-board.

The most greedy of rapine among the Bedouins are the Anezi, who first appeared in the Syrian desert some seventy years since, having migrated from Central Arabia during a famine and failure of pasture. They are divided into many tribes, the most warlike of which are the Fedaan and Ajajara, the most numerous and wealthy are the Seboa and Jelas, and the least esteemed are the Weled Ali and Beni Sochor. These wandering hordes have driven the original Syrian tribes, the Shammar and Mowali, northward and westward, into Mesopotamia, and to the foot of the range of hills running parallel to the coast; and they continue thus to radiate from the Nejd, their last reinforcement, consisting of five hundred tents of the tribe of Amarat, having joined them in 1858. The enormous number of animals following each camp, obliges them to rove in detachments of from fifty to two hundred families, and to describe a vast circle every year from the neighbourhood of Aleppo along the right bank of the Euphrates, where they lay in their stock of dates; thence to the southern region of the desert, to pass the winter with their young camels in its warm and dry pastures; and northward again in spring, to sell their produce near the towns of Syria, purchase grain and manufactures, plunder what they can, and have their annual fight with the Mowali and Shanauar successively. The rapid increase of their flocks and herds induces them to impede cultivation, in every possible way, with the view of securing pasture. The desert thus overlaps the tillage of Syria, and its advance has been pushed this year as far west as the banks of the Orontes.

The best remedy for the evil secured to me to be the formation of a cordon of located tribes, a sort of military colony, to which every possible assistance should be given by the Turkish government to enable them to defend themselves and act as a bulwark to others, against the more unruly tribes. Troops alone are ineffectual, without great superiority in numbers, coping with Bedouins, who are so much better mounted; but, by pitting Arabs against Arabs, and adding the advantage of firearms, it appeared to me that a successful stand might be made, while the increased prosperity of the settlers would offer a salutary example for the roving tribes to follow, and the belt of cultivation might thus be progressively widened. This was the only expedient I could recommend as offering a prospect of success. It was approved, and I availed myself of a rise in the price of grain, and a simultaneous fall in that of live stock, to impress on the minds of the Bedouin Sheikhs the greater benefits which they would derive from agricultural than from pastoral pursuits. The invariable reply I received was that they placed no reliance on the

Turkish authorities, and were adverse to falling into their power. One Sheikh came to me afterward, however, and said that if I would promise to use my influence in his favour he would trust to my word, and at once locate his tribe.

I obtained the desired conditions from the Governor-General of Aleppo: the tribe soon sold their camels and sheep; bought oxen, plows, and seed; frequenting for the first time the bazaars of this city to effect their sales and purchases; and cultivation commenced. They always came to the English consulate to announce their arrival, and were then sure of not being molested at Aleppo. So novel a feeling of security spread to other tribes, and an unusual activity in the sale of British goods ensued, bringing, in addition to the mercantile houses already trading with Manchester, three new establishments to share the advantages of importation from the United Kingdom. Another tribe applied to me for similar protection, which I gave them, within due limits, and they also settled. Two more are now treating with me on the same terms, which I hope soon to conclude with them.

I cannot better reply to your question on the nature of the influence which I have been able to acquire over the Bedouins, than by relating, besides the manner in which several tribes of them have been induced to settle, one or two little incidents, personal though they be, trusting that you will not attribute any motive to my thus talking of myself but the real one; namely, to give you data for the formation of a just estimate of the facts connected with this movement in the desert. On one occasion when I was in the tent of Ahmed Bey, the notorious robber Sheikh of the Mowali, some of his horsemen arrived with thirty laden camels, which they had taken from a caravan. I refused to stay another moment in his camp unless they were restored to their owners; and seeing that I was in earnest, he gave them up to me, and I sent them to the governor of the nearest town. On my way back to Aleppo I came upon some of the Mowali who had just robbed the government post from Damascus; and they at once delivered to me the letters, which I brought to Aleppo, and the specie, which was remitted to the authorities of Hama. On another occasion Jedaan, the much-dreaded Anezi chief, plundered a caravan coming from Diarbekir. I followed him for several days in the desert; and, although he avoided me, he sent back the caravan, which was assigned to the government officers. These are not things to boast of, as the respect of marauders is not always creditable; but I mention them as tending to show the possibility of their moral improvement. There is something achieved when crime becomes known to be crime, which was not heretofore the case in the desert. A feeling of shame when detected is another point gained; it now exists, as I saw lately, when I suddenly overtook some Bedouins stripping a peasant. They made off without their booty on my approach, hiding their faces and keeping silence that I might not recognize them.

I have remarked a singular facility of transition in the Bedouin, from long-indulged habits of thought to others which are new to them. Thus, robbery bore no stigma in the desert a few years ago; and now the located tribes have not only given up the practice of it entirely, but also talk of it in other tribes with reprobation. I do not go so far as to imagine that this is owing to the birth of better principles; but I believe that they find comparative honesty to be accompanied by protection from Turkish misrule. They follow the policy which is most profitable to them. This is but a low standard of morality; it is, however, a step in the right direction to improve its practice; and its

principles may be raised afterward more easily. It will, I fear, be a work of time to bring this wild people to a better moral state; but I feel convinced that it will be accomplished under God's providence. The present opening for an attempt to christianize the desert is, beyond a doubt, favourable; and though I am not prepared to say that any speedy results of the kind will appear, still I conceive that a great change is actually taking place in the habits of life and thought of its nomadic population, which may thus be led to the truth and purity of religion also. I should not augur well of an abrupt commencement of preaching the Gospel to them; but many among them have expressed to me an earnest wish to have the means of teaching their children to read; and this, I think, should be the first object aimed at.

I am not of opinion that foreign artisans would do so well at first as native teachers. I inclose a list of persons at Aleppo, whom I should consider capable of acting in that capacity. Their services might be obtained at from £25 to £50 per annum, according to their circumstances and respective efficiency. One cannot expect much from them in the way of conversion; but their efforts will tend to humanize those half-savages, while they will also keep the field free for the reception of a higher class of influence, more gradually brought to bear on it. In two tribes which had asked me for teachers, I found, to my great grief and shame, that, having despaired of obtaining them from me, they had engaged young Imams from the town; and that the children, and even adults of the tribes, while learning to read and write, were imbibing a false religion, almost as much unknown in the Syrian desert as the true faith. In the days of Mohammed and his immediate successors, the Bedouin was a fanatical Mussulman; which is far from being the case now in this country, where no practical worship or distinct creed exists among the nomads. I do not apprehend that these Imams can have done much harm as yet; for the Bedouin has such a hatred for the Turk, and contempt for the Arab townsman, that no religious sympathy can be established. It will not be difficult for me, moreover, to have Protestant teachers substituted for them.

#### *The Seven Old Wonders and the Seven New.*

—The seven wonders of the world were: 1st, the Egyptian Pyramids. The largest of these is 693 feet square and 469 feet high, and its base covers 112 acres of ground; 2d, the Mausoleum, erected to Mausolus, a king of Caria, by his widow, Artemisia. It was 63 feet long and 35 feet high; 3d, the Temple of Diana at Ephesus. This was 425 feet in length and 220 feet in breadth; 4th, the Walls and Hanging Gardens of Babylon. These walls are stated by Herodotus, to have been 87 feet thick, 350 feet high, and 60 miles in length; and the statement is deemed credible by modern antiquarians; 5th, the Colossus of Rhodes. This was a brazen statue of Apollo, 105 feet in height, standing at the mouth of the harbor of Rhodes; 6th, the statue of Jupiter Olympus, at Athens, which was made of ivory and gold, and was wonderful for its beauty rather than for its size; 7th, the Pharos of Ptolemy Philadelphus. This was a lighthouse 500 feet high, on the island of Pharos at Alexandria, in Egypt. A fire of wood was kept burning on its summit during the night, to guide ships to the harbor.

The seven wonders of the world are: the Art of Printing; Optical Instruments, such as the Telescope and Microscope; Gunpowder; the Steam-Engine; Labour-saving Machinery; the Electric Telegraph; and the Photograph.

*Habits of the Beaver.*—The law of industry among the working beavers is well attested by hunters. Their dams or houses are built anew or remodelled every fall, and in a way to suit the height of the water during the succeeding winter or spring. The object of the dam seems to be to regulate the height of the water at their houses, where they have two or three berths at different heights, where they sleep dry, but with their tails in the water, thus being warned of any change in the rise or fall of the water. Some houses stand six feet at least above the surface of the meadow, covered with mud, and in the form of a round pool-pit, but so intersected with sticks of wood as to be strong, and the weight of three or four men makes no impression upon it.

A "full family," as hunters call them, consists of the parental pair and the males of the next generation, with their mates. When the tribe gets large they colonize. Some time in the fall, all the single ones of both sexes congregate from considerable distances, at the deepest lake in the vicinity, where they choose their mates; then they all go home, the female following her mate, and all go to work, first putting the house and dam in order or winter, then laying in their stock of wood, the bark of which is their winter food. They go up the streams for their wood, and float it down to their houses, and then in some mysterious way make it lie in a pile at the bottom of the pond, outside of the house, where they may take it at any time in the winter for use.

The fall of the year is a busy time with them, and it is interesting to see their new dams in process of building, as we sometimes find them across large bosting streams; and not unfrequently boatmen and river-drivers tear away their dams and get a good head of water for their own use. They usually build at the outlet of natural ponds, and sometimes they flow large lakes and long pieces of dead water, but are always moving and reconstructing. How they keep their teeth in order for so much eating, when the best steel would wear out, is a mystery. They cut logs sometimes a foot through, and every stroke of the tooth tells toward the job, and never does a tooth get dull, as we can see.

Two winters ago, some lumbermen encamped near one of their ponds. One afternoon they felled a tree across a lumber road, and before morning it was cut up by the beavers, and handsomely piled out of the road.—*Arroastok Pioneer.*

*Unsoundness.*—Some men and women cannot get slip an opportunity of saying disagreeable things. There is something unsound about the man whom we have never heard say a good word or any mortal, but whom we have heard say a great many bad words of many. There is unsoundness verging on insanity, in the man who is always fancying that those about him are constantly plotting to thwart his plans and damage his character. There is unsoundness in the man who is constantly getting into altercations with his fellow passengers in steamers and railways, or getting into angry and lengthy correspondence with anybody in the newspapers or otherwise. There is unsoundness in the mortal whose memory is full to repletion of contemptible little stories, upon to prove that his neighbours are rogues or fools. There is unsoundness in the mental organization of the sneaky person who stays a few weeks in a family, and sets each member of it against the rest by secretly repeating to each exaggerated and malicious accounts of what has been said of him or her by the others. There is unsoundness in the perverse person who resolutely does the op-

posite of what we wish and expect; who won't go to the excursion we have arranged on his account, or partake of the dish which has been cooked for his special eating. There is unsoundness in the deluded and unamiable person who, by a grim, repellent, Pharisaic demeanor and address, excites in the minds of young persons gloomy and repulsive ideas of religion, which wiser and better folks find it very hard to rub away. "Will my father be there?" said a little Scotch boy to some one who had been telling him of heaven and recounting its joys. "Yes," was the reply. Said the little man with precision, "Then I'll no gang." He must have been a wretched servant of a christian who left that impression on his young child's heart. There is unsoundness in the man who cannot listen to the praises of another man's merit without feeling as though some thing were taken from himself.

#### Scutellbury's Ancient Testimony.

*Testimonies of Ancient Friends revived, respecting the changeable modes of the world, addressed to those in the station of parents.*

(Continued from page 95.)

*William Edmundson*, in the last meeting he attended, exhorted the youth to beware of pride and height; and in his last illness expressed to Friends who visited him, his concern and trouble of mind, because of the height that young people were gone into, far and wide from the humility and plainness that Truth led Friends into in the beginning, and said, "one example another therein."—*Journal*, page 305 and 307.

#### A. Rigge's Life, page 348.

"Let young women be careful how they look out at the glory of the world, where the lust of the eye and the pride of life is; and fathers and mothers to be examples of gravity and modesty, and to be watchful over their children, and beware of letting them alone."

#### Christian Barclay's Epistle.

"There was no less called for at our hands in our first visitation of God's love and light, than to come out of all superfluity, so in the same pure way we must hold on, and have weighty care to train up our youth therein. I charge you in the sight of that Power that searches the depths of our hearts, that you neither teach, allow, nor suffer for the superfluous or vain thing amongst you."

*Joseph Featherston*, on his death-bed, desired his wife "to bring up his children in the fear of the Lord and in plainness, and to avoid superfluity; for that, said he, will bring dishonour to the blessed Truth, burden the single hearted, and draw the minds of youth after vanity."

#### William Penn.

"The minds of youth are allured to visible things that perish, and instead of remembering their Creator, are taken up with toys and trappings." To his wife, he says, "I had rather have my children homely than finely bred; be plain in clothes, furniture, and food; be clean, and then the coarser the better; the rest is but folly and a snare."

#### William Cato's Abridgment of the Lives of Primitive Christians.

"Nothing about them was pompous, either in clothes, diet, habitation, or household stuff; such as were noble or learned, or of genteel extraction, laid aside all their pride and all their swelling titles. They were jealous of their serious frame of spirit, and therefore all such dresses as served to inflame vanity into their minds, or damp their zeal for religion, they shunned, as they did houses in-

fect by the plague; they minded no such things as modes and fashions, nor did any new habit that came up excite them to imitation. Decency was their rule, and modesty the standard of their habit and conversation."

*Sophia Home*, from whose collection most of the foregoing extracts are taken, concludes with two striking instances, viz. A young woman and a young man on their death-beds; each expressing a grateful sense of having had a faithful parent who had restrained her from youthful vanities; the other lamenting the neglect of his parents in that respect.

The Testimonies following are taken from the Collection of *Dying Sayings*.

*Priscilla Cotton*, of Plymouth.—"That which pleaseth self is above the cross; and that which pleaseth men is above the cross; and that which shuns the cross, yields to the carnal part. Though the cross seems foolishness, stand in it." And when her departure was nigh, she desired several Friends to be called, and among other exhortations, advised them to keep out of the fashions and customs of the world, both in words and apparel.

*Suzanna Garton*, of Sussex was a pattern of great plainness, and grieved to see and hear of superfluity among the professors of Truth, saying, "It was not so in the beginning." Speaking to her grand-children, she said, "I was once young, and delighted in the vanities and pleasures of this world; but the Lord in his love and mercy met with me, yea he laid the axe to the very root of the tree, and made me willing to part with all my lovers, my pride and vanities, and become a fool and a gazing stock to the world; but all as was nothing in comparison of the love and favour of God to my poor soul; and I did not look out or take example by those that were for most liberty;" and then added, "Oh! it was a good day, a blessed day, a day never to be forgotten."

*William Deane*, of Swansea, advised his children and grand-children against the fashions of the world, saying, "Fashion not yourselves after this world, but transform yourselves to the image of the dear Son of God."

The foregoing ample testimonies (though but a small part of that might be given on the same subject) sufficiently show the concern of those who were most eminent instruments in gathering the people whose name we bear, and whose principles we profess; and by an impartial view of the present state of the society, in regard to the subject under consideration, it must be admitted, that a relapse from primitive simplicity is very general. And now, dear Friends, let us who have children entrusted to our care, be willing to consider seriously how it is that such an alteration has taken place in many families. Can the Truth allow a larger latitude now than formerly? Is not the cross the same, and the narrow way the same; and is not the world's spirit the same; and doth not its liberties gender bondage?

If then some of us have had parents who, from a sense of religious duty, were careful to bring up their children in plain and modest apparel, and to support a testimony in their families against that changeable spirit with which the world is carried to and fro, how do we manifest a regard to their memory, and to that cause which was precious to them, if we any way contribute to the laying waste in our own children, what our parents endeavoured to build up in us; or on the other hand, "If we build again those things which we profess to have destroyed, shall we not make ourselves transgressors?" Yet it is not uncommon to hear it

pleaded for children when gone half way to meet the world's modes, "that they are in moderation, that a little allowance must be made for young people, and that religion is a work of the heart." But will not the lamentable departure of many from our society, through this common road to the world, sufficiently refute this pleading? How great is the proportion of those who have contracted hurtful acquaintance, and been entangled in unsuitable connections, or been robbed and spoiled divers ways, whose first outings may be traced to some small conformity to the world in habit or manners. Our predecessors were not ignorant that religion (in their time as well as now) was a work of the heart; they also knew that "that which cometh out of the man defileth the man."

When the eye, not being kept single, looks out at the world, then the heart desires to follow it; first a little, and then a little more, and thus proceedeth out of the heart, and thus possesseth the will and affections, the lust of the eye and the pride of life, with other propensities, "which are not of the Father, but of this world;" and consequently, the mind thus drawn out, becomes leavened more and more into the world's spirit.

(To be continued.)

#### Letter of John Barclay.

I may truly and sincerely say, that we participated in a sense of the loss, which many (doubtless) even among the more distant connections and friends of the deceased, feel they have sustained. Do I say lost, do I speak of deprivation, when those who have humbly endeavoured to love and follow their dear Redeemer on earth, are taken from suffering and probation, as we trust, to their resting place in glory. Ah! we have them still, if the apostle's language applies to us, if we are indeed come to Mount Zion, the heavenly Jerusalem, to the innumerable company, to the spirits of the just made perfect, to Jesus our mediator. May we then not sorrow as those, who have no such substantial enjoyment of things hoped for, and evidence of things not seen. May we be quickened on our way, and animated by the cloud of witnesses with which we are encompassed, still to persevere and run with patience; looking unto Jesus, learning of him, leaning on him in pure dependence and child-like simplicity,—loving no one or any one thing better than him. Being thus made willing to lose all, and in for him, we may be assured of the fulfilment of his gracious promise of the hundred fold even in this life, besides the heavenly inheritance.

Eleventh month 29th, 1837.

#### BIOGRAPHICAL SKETCHES

For "The Friend."

Of Ministers and Elders and other concerned members of the Yearly Meeting of Philadelphia.

##### MARY MARSHALL.

For an account of Mary Hunt, afterwards Marshall, a minister of Bradford Monthly Meeting, who deceased Third month 1769, aged 87 years, see the sketch already given of her husband Abraham Marshall.

##### GRACE CROSDALE.

Grace Heaton, a daughter of Robert and Grace Heaton, was born within the limits of Middletown Meeting, Bucks county, Eighth month 6th, 1703. Her parents were reputable members of the religious Society of Friends, who brought her up in habits of industry and sobriety, and in plainness of speech, dress, and deportment. Their labour for her spiritual good was blessed, and through her submission to the visitations and heart-cleans-

ing baptism of Divine grace, she became a child of the kingdom, prepared to exemplify the doctrines of the gospel in life and conversation.

On the 6th day of the Eighth month, 1720, when not quite seventeen years of age, she was married to Jeremiah Crosdale, a member of Middletown Meeting. Her memorial says of her, "she early entered into the cares and cumber of a family, and being religiously inclined, and of a cheerful, active disposition, approved herself well qualified for such a charge. She instructed her children and family both by precept and example in piety and plainness." She brought them up, also, in habits of industry, prepared to fill their respective places in society.

As she advanced in years, she grew in religious experience, and became qualified for extensive usefulness in the church, in which she had abundant service in various respects. About the year 1745, a gift in the ministry of the Gospel was committed to her, in which she laboured with the unity of her Friends, and to the edification of many. Her concern was to exert all to seek for a qualification to love and fear God, and to give close attention and humble obedience to the principle of Divine grace and Truth, the spirit of the Lord Jesus Christ in its manifestations in their hearts. Her life and conversation adorned the doctrine she preached to others, and her zeal for the cause of Truth continued to increase with age. She laboured more abundantly at home and abroad as her necessary domestic cares were lightened by the increasing age of her children. Beside visiting the meetings of her own Yearly Meetings, she several times, visited those in some of the neighbouring provinces.

She was a peaceable and kind neighbour, visiting and sympathizing with the sick and afflicted, whether their sufferings were of the body or mind. She was eminently qualified for the important service of family visiting, and was often employed therein, at home and abroad. She lived in much love and unity with her fellow-labourers in the church militant throughout her life, and the remembrance of this on her dying bed was a source of satisfaction to her mind. She was mercifully favoured during her last illness with the sweetness of divine love and heavenly consolation, so that in the abounding thereof she was frequently drawn forth in thanksgiving and praise to the Lord, her comforter and Saviour. Her decease took place Tenth month 23rd, 1769.

##### ANN WEBSTER.

Ann Smith, daughter of John and Dorothy Smith, was born in East Marlborough, Chester county, in the year 1730. Under the watchful care of her godly parents, she was educated with great circumspection, and through the visitations of Divine grace, was brought into a religious exercise and concern on her own account, which continued to press on her mind until a good degree of conformity to the Divine will was wrought in her. Being married to William Webster, they settled at Sadsbury, Lancaster county, where her exemplary conduct, and spiritual gifts caused her to be chosen an Elder. She was a very servicable member of religious society, bringing forth the fruits of a meek and quiet spirit. In the year 1757, she first appeared in the ministry. Her communications in this line were well received by her friends, tending to raise life in meetings, and showing that a gift had been entrusted to her by the great Head of the Church. She was not frequent in her public appearances, nor very extensive in words, when she did speak. She was often an example in weighty, awful, silent sittings in meet-

ing, being very cautious lest she should utter words without proper authority.

She was a careful, judicious mother, much concerned for the proper education of her children. In the year 1762, with her husband and family, she removed to Little Britain, of the meeting in which place she became a very useful member.

During her last illness she was cheerful and resigned, and near her close expressed in a lively manner her firm belief of eternal happiness through the Lord's mercy. Her decease took place Eleventh month 20th, 1769, being in the fortieth year of her age.

*Take Hold of my Hand.*—"Take hold of my hand," says the little one, when she reaches a slippery place, or when something frightens her. With the fingers clasped tightly around the parent's hand, she steps cheerfully and bravely along, clinging a little closer when the way is crowded or difficult, and happy in the beautiful strength of childish faith.

"Take hold of my hand," says the young convert, trembling with the eagerness of his love. Full well he knows that, if he rely on any strength of his own, he will stumble and fall; but, if the Master reach forth his hand, he may walk with unfeared foot, even on the crested wave. The waters of strife or of sorrow shall not overwhelm him, if he but keep fast hold of the Saviour.

"Take hold of my hand," falters the mother, feeling that she is all too weak for the great responsibilities that throng in her path. Where shall she learn the greatness of the mission—the importance of the field that has been assigned to her? And learning it, how shall she fulfil it, if she have not the sustaining, constant presence of One who loves his people.

"Take hold of my hand," whi pers the aged one tottering on through the shadows and agones of many years. As the lights of earth grow dimmer in the distance, and the darkening eye looks forward to see if it can discern the first glimmer of the heavenly home, the weary pilgrim cries out, even as the child beside its mother, for the Saviour's hand.

"O Jesus! Friend and elder Brother, when the night comes, when the feet are weary, when the eyes are dim, "take hold of our hand."—*Christian Treasury.*

#### Autumn.

"The melancholy days are come, the saddest of the year,  
Of naked woods and wailing winds, and meadows  
brown and bare."

A dear christian friend, who has for some time been kept from active duties, writes very sweetly on this theme.

"The melancholy days indeed! Why I woke this morning in the softest air and sweetest light, that ever blest an autumn day, and I have now seen its sun go down in mellow beauty. How the katydid and crickets have revelled in the few green tinges left by the early frosts! Has not each day, despite its great or little cares and quietudes, a poetry and beauty of its own, and a deep meaning to the attentive soul? Some writer speaks of a summer day that was 'a poem,' to him. The poetry of each day whether of cloud or sunshine, is in the soul of one who is in harmony with nature. It seems to me that the poet's melancholy days will have but little sorrow, for a healthful, happy being, who is doing the day's duties, nobly and well—that such an one will not find time to mourn with the wailing winds, or shiver with a sudden chill, because the summer woods are bare, and the meadows brown."

She closes this train of thought with the prayer of the Psalmist, "Lord, so teach us to number our days, that we may apply our hearts unto wisdom."  
—*Sunday-School Times.*

## COME UNTO ME.

Selected.

"Come unto me ye that are weary and heavy laden, and I will give you rest."

Come, said Jesus' sacred voice—  
Come and make my path your choice!  
I will guide you to your home—  
Weary pilgrim, hither come!

Thou who, homeless, sole, forlorn,  
Long hast borne the road world's scorn,  
Long hast haunted the barren waste,  
Weary pilgrim, hither haste!

Ye who, tossed on led's of pain,  
Seek for ease, but sleep in vain—  
Ye whose swollen, useless eyes  
Watch to see the morning rise—

Ye, by fiercer anguish torn,  
In strong remorse for guilt you mourn,  
Here repose your heavy care—  
A wounded spirit who can bear!

Sinner, come! for here is found  
Peace that flows for every wound—  
Balm that e'er shall endure—  
Rest eternal, sacred, sure.

Barbould.

## GUY, THE KING.

AT ASKE, WARRICK.

Hail, the King! Let all the loyal  
Worshippers of greatness bow  
Unto him who wears the royal  
Crown of goodness on his brow!  
Not in earthly song or story  
Is he famed, but angels sing,  
While they count his deeds of glory,  
"Guy, the King!"

Mighty in the power of schooling  
The strong passions of his breast,  
Powerful in the might of ruling  
Every action for the best,  
Kingly state he doth inherit,  
Princely honours round him cling,  
For he ruleth his own spirit,  
Guy, the King!

He opposeth Truth to Error,  
And the dastard fees of Right  
Flee in haste, white-lipped terror  
From his stern, rebuking sight.  
He would scorn to wrong another;  
Not for empires would he bring  
Vantage from his weaker brother,  
Guy, the King!

Wealth and fame he hath not any,  
Worldly honours he hath few,  
For on earth, alas! is many  
Scorners of the good and true;  
But he goeth on unfeared  
Slander's bile and envy's sting,  
Smiling at the world's cold sneering,  
Guy, the King!

He is patient in affliction,  
He is calm when storms arise,  
For he knows Heaven's benediction  
Falleth often in disguise.  
He is happy in the station  
Fate or fortune please to bring,  
If he hath God's approbation,  
Guy, the King!

Sceptered power is fearful ever,  
Thrones and empires topple down,  
But unshaking hands can never  
Snatch away this sovereign's crown!  
Loyal hearts' oh, rally round him,  
Let his praises bravely ring,  
For the God of Glory crowned him  
Guy, the King!

The gem cannot be polished without friction,  
nor man perfected without adversity.

## The Standard Bearer.

For "The Friend."

One by one the labourers are called home. It appertains to those who remain, to "dwell in that which gives ability to labour successfully in the church of Christ." That which gives ability to labour in the church of Christ is "the anointing which we have received of Him;" This "abideth in" us, "and is truth and no lie." And as it "teacheth of all things," let us abide in Him, "even as it hath taught" us. "Abide in me, and I in you. As the branch cannot bear fruit of itself, except it abide in the vine, no more can ye, except ye abide in me. I am the vine, ye are the branches: He that abideth in me, and I in him, the same bringeth forth much fruit; for without me ye can do nothing." Again, said our Holy Redeemer on a memorable occasion, when "among the chief rulers many believed on him;" "but did not confess Him lest they should be put out of the synagogue;" "for they loved the praise of men more than the praise of God;" "I am come a light into the world, that whosoever believeth on me should not abide in darkness." Adding also as his testimony of the Father—"And I know that his commandment is life everlasting." "Now the end of the commandment is charity, out of a pure heart, and of a good conscience, and of faith unfeigned; from which some having swerved, have turned aside unto vain jangling;" "Desiring to be teachers of the law; understanding neither what they say, nor whereof they affirm." These things were written for our learning; they are both old and new. The whole of 1 Tim. I, is preciously and deeply instructive. If we know these things from Him whose life is the light of men, happy are we if we do them. "Not every one that saith unto me Lord, Lord, but he that doeth the will of my father," &c. Not every one that saith he has faith, but he that hath the true charity, which is the end of the commandment, and which cometh out of unfeigned faith, he shall live by his faith. Live like the apostle, "I am crucified with Christ, nevertheless I live, yet not I but Christ liveth in me." And seeing now that it hath pleased the Head of the church to remove many of his faithful standard-bearers—to take them out of great tribulation, leaving us in the same, may we remember the rapturous vision which John saw when he heard the answer, "These are they which came out of great tribulation, and have washed their robes and made them white in the blood of the Lamb. Therefore are they before the throne of God, and serve him day and night in his temple; and He that sitteth on the throne shall dwell among them. They shall hunger no more, neither thirst any more; neither shall the sun light on them, nor any heat. For the Lamb which is in the midst of the throne shall feed them and shall lead them unto living fountains of waters; and God shall wipe away all tears from their eyes."

Y. W.

Eleventh mo. 19th, 1861.

*Annual Report of "The Female Society of Philadelphia, for the Relief and Employment of the Poor."*

As the usual period returns for calling the attention of our subscribers to the results of our labours during the past winter, we feel it cause for thankfulness, that although our efforts have necessarily been instrumental in relieving only a very small number of our suffering fellow-citizens, yet by affording employment and shelter to them and their children, many poor women have been enabled to maintain themselves, who otherwise, owing

to the difficulty of obtaining employment in the present unsettled state of our country, might have been reduced to great destitution.

The House of Industry was open from the 17th of Twelfth month, 1860, to the 25th of the Third month, 1861. Employment was given to 136 women, many of whom it was evident from their neat and respectable appearance, belonged to a class rather above those who usually apply for our assistance. 47 children were admitted; those under six years of age remaining all day in the nursery under the care of our kind and efficient nurses—the older ones attend schools, returning at noon to dinner.

The daily reading of the Holy Scriptures and of instructive tracts has been continued, and we trust by the interest manifested by many of the women, the opportunity of hearing those truths has not been altogether unimproved.

The visits of the standing committee have been continued, and we believe that the care extended by them over the women is very beneficial, inducing more attention to cleanliness and order at their homes. They are also enabled to judge more correctly of their wants, and where cases of sickness have occurred, by their timely assistance in providing groceries and other comforts, have alleviated the condition of many a poor person, whose lot, always hard, is aggravated by being for the time rendered helpless. Shoes were distributed by them to 195 women and 50 children—groceries to 17—also a number of warm garments.

The Sewing society met during the winter, and though the demand for fancy articles has been less than usual, yet some profit has been received from their labours, besides which, the effect of bringing our members together in this social manner is beneficial, by increasing their interest in the Institution.

We gratefully acknowledge the following acceptable donations—2 pieces of canton-flannel to be distributed among the women—20 Testaments from the "Philadelphia Auxiliary Bible Association," a fire screen made and presented for use in the work-room, by J. Evans and B. Hacker—10 rag-dolls from interested friends, for the children in the nursery. Some wolen articles for children, from F. Paxson. 2 pieces of canton-flannel, 2 of calico, 1 of wolen plaid, and 1 of gingham, anonymously.

In assembling to prepare for opening the House of Industry for the coming season, we find our funds totally inadequate for our necessities; being barely sufficient to meet the debts already contracted. As our yearly income is always very trifling, we rely mainly on our sales and donations. The former being much diminished the past year, and the donations not more than half the usual amount, we are now under the necessity of asking immediate and generous aid from our friends, to enable us to give employment to half our accustomed number. Donations of provisions from our friends in the country, or orders for work, will be thankfully received, at No. 112 N. Seventh St.

JULIANA RANDOLPH, Clerk,  
No. 1734 Chesnut St.  
MARY ANN BACON, Jr., Treasurer,  
No. 923 Green St.

Every spring God works countless wonders. Out of a little bud he brings a branch with leaves and flowers and fruits. From a tiny seed he develops a whole plant, with its system of roots and branches. And more wonderful still, we see springing into life a new generation of insects and birds and beasts. "In wisdom Thou hast made them all."

For "The Friend."

## Musings and Memories.

## THE MYSTERIES OF PROVIDENCE.

God in his attributes, in his creating power in nature, in the sanctifying and justifying operations of his grace, can never be understood and comprehended by the weak, circumscribed faculties of man. His dealings with the children of grace, the peculiar tribulations meted out to some, the comparatively sunny paths through which he leads others, are, doubtless in true wisdom, and tend to the perfecting his glorious purposes. We may not be able to perceive any fitness in the dispensations of his providence, through which we or our friends are, through his assistance, slowly working our way to the kingdom of purity and peace, whether he calls us;—yet through faith in Him, and in his unbounded wisdom and mercy, we know, that for the good purposes of his grace, for the furtherance of our own soul's salvation, and for the eternal good of others, the path in which He leads all his spiritual children, is the very path most conducive to individual holiness and the good of the church militant.

It is useless to perplex ourselves by an attempt to sound unfathomable depths with the short line of our limited understanding. A fable in point is told relative to Augustine, that goodly old father, whose canonization by the church of Rome, has not extinguished his claim to the character of a convicted and converted sinner, a ransomed and perfected saint. Augustine, so says the story, had been perplexing himself respecting the nature of the Deity, the mysteries of the God-head. The more he mused, the more difficult did the subject appear to him. With his mind agitated by the failure of his intellect to grasp the subject, he walked out on the sea shore, that at least his body might be invigorated by the cool, bracing wind. As he paced along, still straining his intellect to compass things beyond human comprehension, he perceived, as he thought, a child, busily engaged bringing water from the sea in the hollow of his hands and pouring it into a small hole he had scraped in the sand. Augustine felt an interest in the little labourer, and ceasing from the vain and fruitless exertion of thought he had been engaged in, he paused to consider and question. "My child, what art thou doing?" "Mine is an easy task," said the boy, "it is only to sweep the wide ocean into this narrow hole." "Foolish boy to expect those vast waters could be held in that small pit," said the learned priest, astonished, no doubt, that even a child should have been so unreasonable as to deem it a possibility. As he spoke, the little child appeared to change into the form of an angel of light, and with answering reproof thus addressed him, "Child of dust, thy object is still more hopeless. Dost thou conceive that thou art able to comprehend the nature of the most High, within the compass of thy own shallow understanding? Far sooner, Augustine, far sooner could I accendish this work, than any finite mind understand his nature who is infinite."

Whether Augustine narrated this as a vision, or as a parable, we know not, neither is it material. In either case the moral is so plain that we may profit by it.

We cannot comprehend God, neither can we always see the reasonableness or design of the operations of his providence. Yet it often happens that in this latter respect apparent mysteries are made plain to us, even on this earth. If he leads some of his children through bloody or fiery martyrdoms, into his kingdom of glory, it has often been his good pleasure thereby to awaken hardened spectators to turn to, and embrace the truth,

and to quicken lukewarm believers to seek for a greater portion of that grace which had enabled the brother or sister to thank God whilst exulting in the fires, or to rejoice in the fangs of wild beasts, or whilst yielding their lives under the gallows. Some children of grace have had lifelong conflicts with pain, and afflictions of various kinds, and although very mysterious the workings of providence may at times appear to them, yet we have evidence that from the holy, heavenly example of meek, unrequiring patience manifested by these, there have at seasons been merciful extendings of saving visitations to others. Yes, others seeing their good works of cheerful submission, have through Divine grace bringing the lesson home to them, been enabled to glorify God in this, their day of visitation.

The removal of valuable labourers from the church militant in the maturity and vigor of their days, before the spiritual eye has become dim, or the strength and alacrity of spirit for doing the Lord's work has abated, is often a mystery, as well as an affliction to the flock and family. Yet there may be, at times, perceived a benefit to others springing out of such afflictive dispensations. Some twenty years since, I met within the limits of a neighbouring Yearly Meeting a minister of the gospel of Christ from within our own borders, one who has since been called suddenly from her work on earth to her everlasting reward, and for whose unlooked for removal, the church militant has not yet recovered the shock. A circumstance similar to that of her own removal from us now, had then recently taken place within the limits of the meeting where we were. A mother in Israel had been removed, the church was in mourning,—the faithful ones could not see who was to fill the station which the gathered one had occupied. Some remaining might have as good gifts in the ministry, but lacked as good a spirit of discernment,—some had good discernment, but were not naturally nor spiritually endowed with as much energy, promptness and willingness to withstand error openly in high places. Well, it was in such a time of mourning amongst those who really could feel at that place, that we attended a large Quarterly Meeting there. The Friend was largely engaged in the ministry, wherein she was led to comfort those who were mourning for the loss of their departed mother in the Truth. She showed them that the blessed Head of the church was watching over it for good, in this day as much as he ever had been, and was as ready to bless all the faithful who looked unto him for strength. She told them there were those who had lived under the shadow of this faithful one removed,—depending on her for leading in religious concerns and in labours for the church, who would have now, if honest to their Divine Master, to come out and take a more active part, and it would be for their growth. She then said she had noticed that when large full grown trees, which cast a goodly shadow, had been removed, it often happened that plants which had been sheltered by it, but shaded also, and thereby stunted in growth, became more thrifty and vigorous. The spiritual application was beautifully made. May it be realized in the experience of some in the present removal, that in the various stations of usefulness she occupied, a renewed growth in the younger sisters may be apparent, so that the work of the Lord may not be hindered amongst them, but that whilst true charity and love are manifested as becometh saints, the testimony of Truth against wrong actions, unsound doctrines, spurious charity, and harsh denunciations, may be undeniably given forth.

All that is true comes from God; what is not true, from the creature.

For "The Friend."

We have recently perused a little tract, published at Boston, entitled "A plea for the Horse, in a few remarks on his treatment and management," and were pleased with the humane and common sense views inculcated in it. We do not suppose that many of the readers of "The Friend" are unkind of the kindness they owe to so useful an animal as the horse, but it can do them no harm to throw before them the sentiments contained in the following extracts.

X.

Eleventh month, 1861.

"The inflamed tempers of men, called forth in the government of this best of creatures, have been the cause of much of their unruly obstinacy; the smallest deviation from the course they may be desired to take being generally sure to incur their anger, and too often their abuse. A more gentle means of kindness, like persuasion with their own species, is much more sure and effective in subduing their wayward spirits—too often caused by reckless force and violence. It was not intended that they who were created in the image of their Maker, and clothed with dominion over every living thing that moveth upon the earth, should act as cruel tyrants in subjecting the animal species to their wills, and 'if there be any one,' as an eminent author has said, 'who hardens himself in oppression, and justifies the wrong because he has done it, his insensibility can make small part of his praise or his happiness.' Had man been made the creature of instinct instead of the being so 'noble in reason,' as he is, we fear he would bear but a sad comparison with the poor beast who now bleeds and suffers from his iron rule. 'There are some brutes,' says Locke, 'that seem to have as much knowledge and reason as some that are called men.' It is true, that a great regard for animals is very often expressed, but it too seldom extends beyond the tongue. Our sympathy should urge us to a more practical performance of our duty, if it does not incite us to acts of generosity. The being who is deficient in benevolence for the helpless and dependent brute, has not much claim to be considered above him. It would seem, that the beneficent ordinance of one day in a week as a day of rest for the ever-toiling beast, would lead and teach men to imitate the watchful care of their own benignant Master."

"Almost every one has probably often seen exhibitions of the remarkable docility and playfulness of the horse, when under the gentle discipline of those who have a proper regard for him; and we think, by a continually kind usage, there would be seldom any difficulty in his easy and perfect management, his stubborn and fractious disposition arising principally from the ill-treatment of those who misgovern him. Horses, comparatively, are less irritable than men, but are ever more timid, from the constant fear of a kick or a blow from those who have the charge of them. The love of the horse is truly an ennobling trait in the character of any one; and we believe we are not often mistaken in estimating the general dispositions of such persons, as composed of the kindest humanity. It may be supposed that we entertain an opposite opinion where the reverse of such a feeling is manifested towards him."

"It is a common usage for most persons entrusted with the driving of teams, to be supplied with a whip, the handle of which being large and heavy, some of them of a sufficient size and weight to destroy a horse at a single blow. There are few persons who have not been the frequent and indignant witnesses to the exercise of this bludgeon over many a horse's head, too often for the most trivial cause;—Drivers are likewise frequently

seen beating the knees of their horses with the same torturing instrument, and often using it upon their backs in driving, in like base manner. Its use should not be tolerated in a Christian community; and the owners of vehicles who allow this villainous weapon to remain in the hands of their men, who are too apt to use it if they have it, should receive no employ from any humane citizen.

"Numberless horses are ruined yearly by the unbridled tempers of men."

"The whipping and other abuse of horses have become very frequent and disagreeable occurrences in our streets, especially in thoroughfares leading to the various depots. Very often, and we may say, generally overloaded, more particularly when our streets are in bad condition, they are frequently maimed and goaded to an unfeeling extent, as residents and others can testify. In the transportation of stone, lumber, &c., it often happens that too few horses are employed for the excessive weight borne upon the teams which convey it; and we are continually called to see them urged and forced to a shameful violation of their strength, sometimes to an extent which seems almost sufficient to separate their limbs from their bodies; and this too, in the presence of persons bearing the external appearance of men, who generally look carelessly on with a most disinterested indifference. These things should not exist, and we want to see a spirit enlisted in the community which decrees that they shall not exist. Let us be what we claim to be, HUMANITY; or no longer assume to ourselves a superiority over an instinctive race in many respects transcending our own."

"Horses are likewise too often subjected to another species of cruelty. During the most intense cold nights, they are permitted and compelled to stand mercilessly exposed, and without the least protection, in our public streets, hour after hour, chilled, and lingering in the most extreme cases, for the thoughtless votaries of pleasure and amusement. Fast driving is too often permitted; and the practice of leaving horses, attached to vehicles, unattended by any one in our most thronged streets, where they are continually liable to be frightened by various causes, frequently running away, and endangering the lives of many persons, is a violation of an ordinance of the city, and should be discontinued. A criminal neglect too often probably exists, after they have been worn down by severe daily labour; but a common humanity should not permit them to suffer from a want of necessary food or care, though, it is feared, that many are sparingly supplied and negligently attended to. Though required to work while the day lasts, men would greatly subserve their own interests, should they, unfortunately, have no other inducement to extend their lenity or pity towards their horses, if, instead of employing them almost every hour from sunrise to sunset, in extreme heat, they would allow them to remain in their stables for a few hours in the middle of the day; the incessant and immoderate labour imposed upon them during the late excessively hot weather, being a melancholy expression of the inhumanity of some of their owners."

"The preceding remarks are not intended to apply to persons indiscriminately, having the management of horses, who, as a class, are among the most useful and deserving in our city, not a few of whom, as we often have occasion to observe, furnish frequent evidence of their good tempers, in the very commendable kindness they manifest in regard to them; but to those who are continually and grossly violating the common feelings of humanity. There is nothing which more excites our

admiration than the exhibition of a kind regard and a charitable sympathy towards the animal creation; and we are actuated only by a common desire to induce men to become more considerate and temperate in their feelings, that we may be the less frequent witnesses of their anger, and perhaps make them truly sensible of the great obligation they have to exercise a more christian forbearance towards so necessary and so noble an animal as the Horse."

*A Comet and a Panic.*—In the year 1712, Whiston predicted that the comet would appear on Wednesday, the 14th of October, at five minutes after five in the morning, and that the world would be destroyed by fire on the Friday following. His reputation was high, and the comet appeared. A number of persons got into boats and barges on the Thames, thinking the water the safest place. South Sea and India stock fell. A captain of a Dutch ship threw all his powder into the river, that the ship might not be endangered. At noon after the comet had appeared, it is said that more than one hundred clergymen were ferried over to Lambeth, to request that proper prayers might be prepared, there being none in the church service. People believed that the day of judgment was at hand, and some acted on this belief, more as if some temporal evil was to be expected. There was a prodigious run on the bank, and Gilbert Heathcote, at that time the head director, issued orders to all the fire officers in London, requiring them to keep a good look-out, and have a particular eye upon the Bank of England. Such is the effect of a panic.

## THE FRIEND.

ELEVENTH MONTH 30, 1861.

Home, with the affections and duties that cluster around it, is especially the place where are conjoined our severest trials and our sweetest, most satisfying pleasures: there the heart may learn its most humbling lessons, and practise the most ennobling virtues, while it draws from its congenial fellows, to which it is joined by the tenderest ties of affinity, a flow of mutual enjoyment and unaffected love which combine to fill it with the oil of gladness. If it is within the circle of home that the most efficient portion of education is begun and carried on, so also it is there, that we are most commonly called upon to set an example of, and prove our aptitude for "whatsoever things are honest, whatsoever things are just, whatsoever things are pure, whatsoever things are lovely, whatsoever things are of good report;" and that our example produces its sure effects for good or evil.

But the duties of life are not always confined within this narrow circle, and the Allwise Author of our being, has so constituted the common nature of man, that he demands a wider sphere for observation and action, and feels his interests to be allied with those of the community of which he is a member, or his affections to expand so as to embrace the whole human family. It is not therefore obligatory to be always engaged in business or housewifery. The counting-house, professional engagements and domestic cares, may sometimes be laid aside with advantage, and a wider field of observation and action profitably substituted, provided, however situated, a watch is maintained so to enjoy and estimate men and things, as that they may contribute in leading us to apply our hearts unto wisdom.

When in a foreign land, we soon learn that without losing the ordinary signification of the word, the term home becomes so enlarged and extended in its sense, as to embrace our country; and that almost instinctively we invest each fact and sentiment that bears upon the character or the welfare of our native land, with a personal interest that may claim no slight affinity to those feelings which are usually associated with the spot that comes within the peculiar sense of the term. This does not always arise from indulging in the pride and selfishness that would exclude from regard, all but that portion of the human race to which we belong, engendering a narrow and unchristian feeling towards other nations, or exciting jealousy of their progress, and leading to national enmity; but it is an offshoot of the same virtuous motive which prompts to the special care for "those of our own house," and causes us to blush for the errors, or to take delight in the good deeds of all who are nearly connected with us. But while justified in giving due scope to this feeling of love for our country, true ingenuousness will prevent us from allowing the ties which bind us by a common interest to a particular social circle or to our own nation, to deter from recognizing and fully estimating, whatever superiority we observe in the attainments, the institutions and the manners of the people among whom we are moving. It is only by this means that we can derive benefit from what we see and hear, or contribute to the improvement of others where our influence may extend; and if we are properly alive to this, there is little danger of our being betrayed by a false shame into subservience to the opinions or supposed wishes of others, though contrary to our own convictions of what is right.

There is certainly a new impulse given to the mind by visiting foreign countries, observing their physical and social peculiarities, and noting the new ideas called forth by the varied aspects of nature and the different phases of civilization presented in different communities. The habitual currents of thought are thus broken and changed, and the mind stimulated to higher or more expanded appreciation of the principles which impress or govern man and society. But in whatever part of the world, or under whatever government we may be, we will find that man is essentially the same, subject to the same passions and stimulated by the same self-interest. Social and moral developments vary and present themselves in higher and lower grades, and the manners and customs of different nations have peculiarities which distinguish one from another, but there is nevertheless a great community of feeling in the world at large, and the same elements are at work in the various races and classes of men, developing more or less rapidly the advancing stages of civilization, and the more perfected christianity is the perfect type, or rather the perfected reality. Governments differ in theory, and are executed by dissimilar agencies, but under them all, it is evident that the multitudes have risen from the dust into which, for ages, they have been pressed by the heel of a privileged class, and are demanding their inalienable rights at the expense of the assumed prerogative of crowned heads, and a titled aristocracy. Light has gained some access into the dark places of the earth, the habitations of cruelty, and there is an almost universal, though faint consciousness in the general mind of professing christendom, of the rank which man was intended by his Creator to hold in the scale of existence, his consequent worth as an intellectual being, and that the main and original design of government is to repress evil, to afford the means of culture and the pursuit of happiness to

every one, while it spreads its shield equally over the rights of all. Closer observation by means of personal intercourse and the commingling of natives of different countries, can hardly fail to remove many unfounded prejudices, and to seal the conviction that no nation can or ought to stand isolated and alone; whatever its situation or peculiar advantages, its interests must suffer by an exclusive selfishness. It is the duty, as well as the true good of each country, to contribute its fair proportion towards the prosperity of others, and to exercise whatever influence it may possess to establish the good government and safety of all, and thus secure the peace and progress of the world.

The American abroad at the present time, finds that his country, and the calamity under which it is now suffering, are topics of general concern and enquiry, and while it sometimes must excite his surprise to notice, even within cultivated and intelligent circles, the lack of correct knowledge respecting the geography, the government, and the social and material progress of his native land, he will be gratified with the evidence of a deep feeling in the final result of its free institutions, and the recognized power it exerts on the aspirations of the people of Europe, and the policy of their rulers. It is greatly to be regretted that there appears to be a disposition among some of those here who influence public opinion, to create or foment a feeling of enmity towards other nations,—especially towards Great Britain,—under a supposed intention or desire on their part to give countenance and aid to the so-called "Southern Confederacy;" and it behoves all who value peace on earth and goodwill to man, to be upon their guard, not to be drawn into a participation in it. It is wrong to suspect evil designs or motives, where there is not positive evidence of their existence, and we think whatever may be the supposed dictates of party policy among those nations, in regard to the course to be pursued towards the parties arrayed against each other in our deplorable strife, there is unmistakably a sincere sympathy in the heart of the people themselves, with the success of the efforts to maintain an undivided government, and the removal of the stain of slavery from its future existence and conduct.

#### SUMMARY OF EVENTS.

**UNITED STATES.**—*The Progress of the War.*—No events of marked importance have been reported during the past week. According to last accounts from Kentucky, that State is nearly clear of the rebels. Zollicoffer has been driven back to Cumberland Gap, and Ducker, with about 20,000 men, is still at Bowling Green. Columbus and Hickman, on the Mississippi, are the only two other places held by the rebels. There are five distinct columns of Government troops now operating in that State. Gen. Peell, west of the Tennessee river; Gen. Nelson, on the Big Sandy; Gen. Thomas, at Camp Dick Robinson and beyond; Gen. McCook, at Nolin; and Gen. Crittenden in the Lower Green River Valley. Bowling Green is the only place where there is a prospect of any serious action.

The expedition to the eastern shore of Virginia met with no resistance. There were about 1800 armed rebels in Northampton county, but they laid down their arms, and dispersed on the approach of the Government troops. Some rebel officers and a number of pieces of artillery were captured. County meetings are to be held to receive new allegiance to the U. S. Government. The people will first adopt the State Government for Western Virginia as a temporary measure, and then look to legislation by that State and Maryland for annexation to the latter.

The Secretary of the Treasury has ordered the restoration of the light on Cape Charles, and the Postmaster General will send a special agent to renew the postal connections with both counties.

A despatch from Charleston says: "The unexpected fall of our shore batteries, at Bay Point and Hilton Head, to demolish at least one of the attacking vessels,

has sadly shaken the popular confidence in the efficacy of our guns against the monster frigates and iron-clad gunboats which they may have again to encounter; and now so alarmed are many of the sorely sold souls that infest the waters of the coast, they often refuse to go on in the lengthening of the freight trains which leave almost hourly for the interior." In Savannah, the panic is even more general and more decided, whole neighbourhoods having been suddenly left deserted.

Since the withdrawal of the chief portion of the Federal troops from Springfield, Missouri, the rebels have again entered the State. A despatch of the 23rd, states that Gen. McCullough, with a large force was encamped between Springfield and Lebanon. A train of 200 men, which left Sedalia for Leavenworth, was attacked near Kansas, and the engine and four cars were captured, and the train captured. A rebel army of 4000 men, chiefly cavalry and Indians, were on the Kansas line directly west of Carthage, with the evident intention of entering that State and ravaging its southern counties. The rebel State Legislature in session at Nashville, has passed an ordinance of prohibition against the State with the Southern Confederacy. A later despatch says that Price was rapidly advancing on Sedalia.

The news from Port Royal is unimportant. The forts were being repaired and strengthened and the troops were engaged in the fortification of the island. Some of the white residents in the vicinity allege in the most emphatic terms that the mass of the people of South Carolina are heartily sick of the war, and but for the control of their leaders would be glad to return to their allegiance to the United States.

**Southern Items.**—*The Blockade.*—The statement that 510 vessels had run the blockade since the 16th of the Fifth month last, is discredited by the New Orleans Crescent. It says "this is a very wild estimate, even if it is supported by returns of statements in the departments in New Orleans, as far as New Orleans is to be considered, the last arrival via the Balize, was on the 23rd of May last. There have been some arrivals and departures of schooners from the bayous on the Gulf. There have been some coasting vessels on the coast of Carolina evading the blockade; but all these will not count for much. Some of the West India traders have met with success on the Carolina coast. Some of the foreign governments to make assertions of this character, that the blockade is easily avoided, when not a vessel has entered the port of New Orleans via the river for over five months, and only one from a foreign port." *Confederate Items.*—The Government has ordered that government to be removed from Richmond to Nashville, Tennessee.

**Prices in New Orleans.**—The Crescent gives the following quotations; rice, 7½ cents per pound; potatoes, \$2.50 a bushel; corn, \$1.25 a \$1.35; common soap, 30 a 35 cents; tallow, 40 cents; breadstuffs of all kinds scarce and steadily advancing prices.

**New York.**—Mortality last week, 297.

**Philadelphia.**—Mortality last week, 218.

**Message of Jefferson Davis.**—The Congress of the Southern States, which is now in session, has just sent to the congress by the President, a message in which he presents the views of the rebel cause. The retrospect of the past seven months is, he says, such as should fill the hearts of the people with gratitude to Providence for his kind interposition in their behalf, and abundant yield has resulted from the labors of the agriculturist, whilst the manufacturing industry of the Confederate States was never so prosperous as now. A reconstruction of the Union, is he alleges, utterly impossible; the southern people now stand upon the ground of their just assertions, on those which they were recently associated, and which they will aversion from the bare idea of renewing such a connection. The barbarous manner in which the war has been conducted by the United States is condemned, and especially the carrying out of naval expeditions with "the intention of doing not only to punish, but to humiliate, and to serve war in our midst." He argues that the south is able to prolong the contest indefinitely and with constantly increasing means of resistance, and that its freedom and independence of the north will ultimately be secured, and he concludes with the words: "While the war which is waged to take from us the right of self government can never attain that end, it remains to be seen how far it may make a revolution in the industrial system of the world, which may carry suffering to other lands as well as to our own. In the meantime,

we shall continue this struggle in humble dependence upon Providence, from whose searching scrutiny we cannot conceal the secrets of our hearts, and to whose rule we cordially submit our destinies. For the rest, we will depend upon our own resources. Liberty will always where there exists the unconquerable will to be free, and we have reason to know the strength that is given by a conscious sense, not only of the magnitude, but of the righteousness of our cause."

Arrivals and departures to the 13th inst. The cotton market active, with constantly advancing prices. Breadstuffs quiet and steady. Flour, 28s. a 32s.; red wheat, 11s. 9d. a 12s. 10d. per 100 pounds; white, 13s. a 14s.

Three British vessels of war were ready to sail for Mexico, but had been detained, owing to stormy weather. The French ships were to sail immediately. It is reported that it was at the instigation of England that the United States is to be invited to join the expedition. The Spanish journals talk of a probable Spanish protectorate as the result of the expedition.

The convention respecting the Mexican expedition is, that the invading powers shall not seek territorial advantages for themselves, nor use their influence to interfere with the rights of the people to choose their own Government. It also contains an article providing that no assistance be given to the United States to accede to the Convention in behalf of their own subjects.

The London Times declares that while steam navigation has been a scientific success, it has been a pecuniary failure, inasmuch as all the lines of ocean steamers have incurred enormous appropriations from the government to keep them afloat.

The speech of Adams, the American Minister, at the Lord Mayor's banquet, has attracted considerable attention. He was silent as to the war, but very pacific towards England. The London Daily News, says it was, not only a sensible and reasonable, and must be cordially welcomed by England at large, especially as a small but active faction is doing its utmost to misrepresent American diplomacy and create ill feeling.

Lord Palmerston made a speech on the same occasion, in which he remarked, "although circumstances beyond our control may threaten for a time to interfere with the full supply of cotton, so necessary for the productive industry of the country, yet no doubt that temporary evil will be productive of permanent good, and we shall find in various quarters of the globe, sure and certain and ample supplies which will render us no longer dependent upon one source of production for that which is so necessary for the industry and welfare of the country." The Times seeks to calm the dismay at the short supply of cotton, and says there is no ground for national alarm.

The French Government has given assurances to Switzerland which will have a tendency to quiet her apprehensions, arising from the act of the French troops in occupying the Valley of the Deppes. It is probable that this difficulty will be adjusted without any unpleasant consequences.

It is reported that Garibaldi has announced to the Central Italian Committee through Gen. Torr, his firm intention not to provoke any movement in favour of Rome or Venice. At the same time, he wished the Italian armaments and the popular sympathy for the cause of Italy, which will render us no longer dependent upon one source of production for that which is so necessary for the industry and welfare of the country. In an autograph letter, the Emperor of Austria sets forth the measures recently announced to be taken in the management of Hungary. It evinces a determination to carry out the policy of the government in Hungary.

#### RECEIPTS.

Received from Jehu Fawcett, Ed. O., for S. Allison, Jos Winder, M. Cowdward, Agt. Bonnisi Jr., Isaac Bonnell and M. W. Woodson, 8s. each, vol. 34, for T. V. French and Joshua Cope, 10s. each, vol. 33 and 34, for James Head, 5s. 10s. 17, vol. 34; for George Gilbert, Pa., \$2, vol. 35, for Amos Cope, \$2, vol. 35, for James Mains, \$2, vol. 34.

The twentieth volume of THE BRITISH FRIEND will commence with the year 1862. Friends desiring to subscribe for this valuable and ably conducted monthly, will please make early application to

J. S. HAPFINGTON,

ADDENFIELD, N. J.

Terms, two dollars per annum strictly in advance.

PYLE & McLEROY, PRINTERS,

Lodge street, opposite the Pennsylvania Bank.

# THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XXXV.

SEVENTH-DAY, TWELFTH MONTH 7, 1861.

NO. 14.

PUBLISHED WEEKLY.

Price Two Dollars per annum, payable in advance.

Subscriptions and Payments received by

JOHN RICHARDSON,

AT NO. 116 NORTH FOURTH STREET, UP STAIRS,  
PHILADELPHIA.

Postage to any part of Pennsylvania, for three months, if paid in advance, three and a-quarter cents; to any part of the United States, for three months, if paid in advance, six and a-half cents.

## The Sloth.

Let us now turn our attention to the Sloth, whose native haunts have hitherto been so little known, and probably little looked into. Those who have written on this singular animal have remarked that he is in a perpetual state of pain; that he is proverbially slow in his movements; that he is a prisoner in space; and that, as soon as he has consumed all the leaves of the tree upon which he had mounted, he rolls himself up in the form of a ball, and then falls to the ground. This is not the case.

If the naturalists who have written the history of the Sloth had gone into the wilds, in order to examine his haunts and economy, they would have drawn the foregoing conclusions; they would have learned, that though all other quadrupeds may be described while resting upon the ground, the Sloth is an exception to this rule, and that his history must be written while he is in the tree.

This singular animal is destined by nature to be produced, to live, and to die in the trees; and, to do justice to him, naturalists must examine him in this upper element. He is a scarce and solitary animal, and being good food he is never allowed to escape. He inhabits remote and gloomy forests, where snakes take up their abode, and where cruelly stinging ants and scorpions, and swamps and innumerable thorny shrubs and bushes, obstruct the steps of civilized man. Were you to draw your own conclusions from the descriptions which have been given of the Sloth, you would probably suspect that no naturalist has actually gone into the wilds with the fixed determination to find him out, and examine his haunts, and see whether nature has committed any blunder in the formation of this extraordinary creature, which appears to us so forlorn and miserable, so ill put together, and so totally unfit to enjoy the blessings which have been so bountifully given to the rest of animated nature; for he has no soles to his feet, and he is evidently ill at ease when he tries to move on the ground, and it is then that he looks up in your face with a countenance that says, "Have pity on me, for I am in pain and sorrow."

It mostly happens, that Indians and Negroes are the people who catch the sloth, and bring it to the white man: hence it may be conjectured, that the erroneous accounts we have hitherto had of the Sloth, have not been penned down with the

slightest intention to mislead the reader, or give him an exaggerated history, but that these errors have naturally arisen by examining the Sloth, in those places where nature never intended that he should be exhibited.

However, we are now in his own domain. Man but little frequents these thick and noble forests, which extend far and wide on every side of us. This, then, is the proper place to go in quest of the Sloth. We will first take a near view of him. By obtaining a knowledge of his anatomy, we shall be enabled to account for his movements hereafter, when we see him in his proper haunts. His fore-legs, or, more correctly speaking, his arms, are apparently much too long, while his hind-legs are very short, and look as if they could be bent almost to the shape of a corkscrew. Both the fore and hind-legs, by their form, and by the manner in which they are joined to the body, are quite incapacitated from acting in a perpendicular direction, or in supporting it on the earth, as the bodies of other quadrupeds are supported by their legs. "Hence when you place him on the floor his belly touches the ground." Now, granted that he supported himself on his legs like other animals, nevertheless he would be in pain, for he has no soles to his feet, and his claws are very sharp, and long, and curved; so that, were his body supported by his feet, it would be by their extremities, just as your body would be, were you to throw yourself on all-fours, and try to support it on the ends of your toes and fingers—a trying position. Were the floor of glass, or of a polished surface, the Sloth would actually be quite stationary; but as the ground is generally rough, with little protuberances upon it, such as stones, or roots of grass, &c., this just suits the Sloth, and he moves his fore-legs in all directions, in order to find something to lay hold of; and when he has succeeded, he pulls himself forward, and is thus enabled to travel onwards, but at the same time in so tardy and awkward a manner, as to acquire him the name of Sloth.

Indeed his looks and his gestures evidently betray his uncomfortable situation; and, as a sigh every now and then escapes him, we may be entitled to conclude that he is actually in pain.

Some years ago I kept a Sloth in my room for several months. I often took him out of the house and placed him upon the ground, in order to have an opportunity of observing his motions. If the ground were rough, he would pull himself forward by means of his fore-legs, at a pretty good pace; and he invariably immediately shaped his course towards the nearest tree. But, if I put him upon a smooth and well-trodden part of the road, he appeared to be in trouble and distress: his favourite abode was the back of a chair; and after getting all his legs in a line upon the topmost part of it, he would hang there for hours together, and often with a low and inward cry would seem to invite me to take notice of him.

The Sloth, in its wild state, spends its whole life in trees, and never leaves them but through force, or by accident. An all-ruling Providence has ordered man to tread on the surface of the

earth, the eagle to soar in the expanse of the skies, and the monkey and squirrel to inhabit the trees; still these may change their relative situations without feeling much inconvenience: but the Sloth is doomed to spend his whole life in the trees; and what is more extraordinary, *not upon* the branches like the squirrel and the monkey, but *under* them. He moves suspended from the branch, he rests suspended from it, and he sleeps suspended from it. To enable him to do this, he must have a very different formation from that of any other known quadruped.

Hence his seemingly bungled conformation is at once accounted for; and in lieu of the Sloth leading a painful life, and entailing a melancholy and miserable existence on its progeny, it is but fair to surmise that it just enjoys life as much as any other animal, and that its extraordinary formation and singular habits are but farther proofs to engage us to admire the wonderful works of Omnipotence.

It must be observed that the Sloth does not hang head downwards like the vampire. When asleep, he supports himself from a branch parallel to the earth. He first seizes the branch with one arm, and then with the other; and, after that, brings up both his legs, one by one, to the same branch; so that all four are in a line; he seems perfectly at rest in this position. Now, had he a tail, he would be at a loss to know what to do with it in this position; were he to draw it up within his legs, it would interfere with them; and, were he to let it hang down, it would become the sport of the winds. Thus his deficiency of tail is a benefit to him; it is merely an apology for a tail, scarcely exceeding an inch and a half in length.

I observed, when he was climbing, he never used his arms both together, but first one, and then the other, and so on alternately. There is a singularity in his hair, different from that of all other animals, and, I believe, hitherto unnoticed by naturalists; his hair is thick and coarse at the extremity, and gradually tapers to the root, where it becomes fine as a spider's web. His fur has so much the hue of the moss which grows on the branches of the trees, that it is very difficult to make him out when he is at rest.

The male of the three-toed Sloth has a longitudinal bar of very fine black hair on his back, rather lower than the shoulder blades; on each side of this black bar there is a space of yellow hair, equally fine; it has the appearance of being pressed into the body, and looks exactly as if it had been singed. If we examine the anatomy of his fore-legs, we shall immediately perceive, by their firm and muscular texture, how very capable they are of supporting the pendant weight of his body, both in climbing and at rest; and, instead of a pronouncing them a bungled composition, as a celebrated naturalist has done, we shall consider them as remarkably well calculated to perform their extraordinary functions.

As the Sloth is an inhabitant of forests within the tropics, where the trees touch each other in the greatest profusion, there seems to be no rea-

son why he should confine himself to one tree alone for food, and entirely strip it of its leaves. During the many years I have ranged the forests, I have never seen a tree in such a state of nudity; indeed, I would hazard a conjecture that, by the time the animal had finished the last of the old leaves, there would be a new crop on the part of the tree he had stripped first, ready for him to begin again, so quick is the progress of vegetation in these countries.

There is a saying amongst the Indians, that when the wind blows the Sloth begins to travel. In calm weather he remains tranquil, probably not liking to cling to the brittle extremity of the branches, lest they should break with him in passing from one tree to another; but as soon as the wind rises, the branches of the neighbouring trees become interwoven, and then the Sloth seizes hold of them and pursues his journey in safety. There is seldom an entire day of calm in these forests. The trade-wind generally sets in about ten o'clock in the morning, and thus the sloth may set out after breakfast, and get a considerable way before dinner. He travels at a good round pace; and were you to see him travel from tree to tree, as I have done, you would never think of calling him a Sloth.

Thus it would appear that the different histories we have of this quadruped are erroneous on two accounts: first, that the writers of them, deterred by difficulties and local annoyances, have not paid sufficient attention to him in his native haunts; and secondly, they have described him in a situation in which he never was intended to cut a figure,—I mean on the ground. The Sloth is as much at a loss to proceed on his journey upon a smooth and level floor, as a man would be who had to walk a mile in stilts on a line of feather-beds.

One day, as we were crossing the Essequibo, I saw a large two-toed Sloth on the ground upon the bank; how he had got there, nobody could tell: the Indian said he had never surprised a Sloth in such a situation before; he would hardly have come there to drink, for both above and below the place, the branches of the trees touched the water, and afforded him an easy and safe access to it. Be this as it may, though the trees were not above twenty yards from him, he could not make his way through the sand time enough to escape before we landed. As soon as we got up to him he threw himself upon his back, and defended himself in gallant style with his fore-legs. "Come, poor fellow," said I to him, "if thou hast got into a hobble to-day, thou shalt not suffer for it: I'll take no advantage of thee in misfortune; the forest is large enough for both thee and me to rove in: go thy way up above, and enjoy thyself in these endless wilds; it is more than probable thou wilt never have another interview with man, so fare thee well." On saying this, I took a long stick which was lying there, held it for him to hook on, and then conveyed him to a high and stately mora. He ascended with wonderful rapidity, and in about a minute he was almost at the top of the tree. He now went off in a side direction, and caught hold of the branch of a neighbouring tree; he then proceeded towards the heart of the forest. I stood looking on, lost in amazement at his singular mode of progress. I followed him with my eye till the intervening branches closed in between us; and then I lost sight forever of the two-toed Sloth. I was going to add, that I never saw a Sloth take to his heels in such earnest; but the expression will not do, for the Sloth has no heels.

That which naturalists have advanced, of his being so tenacious of life, is perfectly true. I saw the heart of one beat for half an hour after it was

taken out of the body. The wourali poison seems to be the only thing that will kill it quickly. On reference to a former part of these wanderings, it will be seen that a poisoned arrow killed the Sloth in about ten minutes.

So much for this harmless, unoffending animal. He holds a conspicuous place in the catalogue of the animals of the New World. Though naturalists have made no mention of what follows, still it is not less true on that account. The Sloth is the only quadruped known, which spends its whole life from the branch of a tree, suspended by his feet. I have paid uncommon attention to him in his native haunts. The monkey and squirrel will seize a branch with their fore-feet, and pull themselves up and rest or run upon it; but the Sloth, after seizing it, still remains suspended, and suspended moves along under the branch, till he can lay hold of another. Whenever I have seen him in his native woods, whether asleep, or on his travels, I have always observed that he was suspended from the branch of a tree. When his form and anatomy are attentively considered, it will appear that the Sloth cannot be at ease in any situation, where his body is higher or above his feet. We will now take our leave of him.—*Travels in South America.*

#### Scantlebury's Ancient Testimony.

*Testimonies of Ancient Friends revived, respecting the changeable modes of the world, addressed to those in the situation of parents.*

(Continued from page 106.)

If then "religion is a work of the heart," manifesting its fruits and effects in conversation and deportment, is it not equally clear that the changeable modes or imitations in dress could not take place or appear on the superficies of our bodies, but as the effect of a principle or disposition in the mind which desires to assimilate with the world? And may we not discover, that as the first is the work of the spirit through the cross, even so the latter is the work of the flesh through the will? And these, the apostle tells us, are contrary the one to the other. Yet have imitations of the vain and changeable spirit of the world so prevailed amongst the descendants of a self-denying people, that vestiges of the Babylonish garment do conspicuously appear in our camp; and can it hurt any of us seriously to consider to whom we or our children do indeed belong; whether to the world, or to a people redeemed from the world's spirit and lusts? Our predecessors were burning and shining lights, and many were made to rejoice in their light, which not only discovered but also burnt up the chaff; and had we kept in the same spirit, it would have remained an unquenchable fire upon the lust of the eye and the pride of life. But the present state of things amongst us too generally, may well suggest a query similar to that once proposed to the natural descendants of Abraham, viz: "The baptism of John, whence was it, from heaven or of man?" Can we now satisfactorily answer a similar question in respect to the subject before us? Would it not bring us into a strait? Perhaps many who have given way, so as to indulge their children in imitations of the world, would yet find it difficult to bring their minds to censure the contrary conduct and care of our predecessors. But how can we reconcile their circumspection and our declension?

But the testimony of Truth against the world's modes and changeableness in apparel is much older than our Society. The faith and practice of our predecessors was built upon the foundation of prophets and apostles. Amongst many other of Israel's deviations, mentioned by the prophet, it is

said, the Lord "would punish such as were clothed in strange apparel." And why punished for strange apparel, if it had nothing to do with religion? Doth our merciful Creator afflict willingly the children of men? Did not he who seeth us both within and without, know that they were gone in the way of the heathen, whereby their hearts were alienated from him? The prophet Isaiah, also, in testifying against the degenerate daughters of Zion, enumerated various articles of attire *then in use*. And if such imitation doth not spring from pride of the heart and the lust of the eye, why did the same prophet connect the attire and changeable suits of apparel with haughtiness of mien, a mincing walk, and stretched out necks. But moreover, Christ, whom we above all the people profess to be our Leader, said of his disciples, "They are not of the world, even as I am not of the world." Are we then also not of the world, while we so drink of the world's spirit as to follow it, and change with its changes. Christ further says to his disciples, "Because ye are not of the world therefore the world hateth you." But doth the world hate its own? Doth it hate those who adopt its changes, and conform to its manners? "The world loveth its own," but its friendship is enmity to the Divine life; and therefore, said the apostle John, "Love not the world, neither the things which are in the world; if any man love the world, the love of the Father is not in him." And in the following verse he tells us plainly, that "the lust of the eye and the pride of life are not of the Father, but of the world." And upon this passage, George Fox has this remark, "Who joins with that which is not of the Father, or encourages it, draws the mind from God." The same author says, "Those that follow the things the world's spirit invents, they cannot be solid; and they that run into them are *near unto the world's spirit*—the lust of the eye and the pride of life." How weighty, comprehensive, and conclusive is this short sentence of him who has been justly styled the apostle of our Society.

But should either the testimonies of ancient Friends, or other arguments on the subject, be needful to us who still make the same profession of the cross, and to bring up our children in plainness of speech, behaviour, and apparel, and who also may plainly see before our eyes the natural tendency, yea, the certain effect, of a contrary conduct, proving the need of that care in which our predecessors were exercised; yet shall any of us still say that we see no harm in this or the other conformity to the world, until the painful proof be brought to our own houses; and when too late it may be seen that "cords of vanity will draw iniquity," which has been already exemplified in many once hopeful youths; some of whose parents, it may be feared, had not used the means in their power to guard them from the contagion of the world's spirit, when a timely care might at least have been effectual to have prevented their children from being examples of liberty to others. By such an indulgence, some parents have been disappointed even in the worldly prospects they have reflected for their children. But what will be the reflection of such parents when the mind loseth its relish for all visible objects; "when the days draw nigh in which we can have no pleasure;" and with the near prospect of the great Shepherd requiring an account from those to whom he has delegated an important trust.

Great is the propensity to imitation, and the few young people amongst us, whom either the love of Truth, or the care of their parents, has kept in

simplicity, claim much sympathy, surrounded as they are by numbers in the same profession who imitate the world; so that those who do not in some degree conform, seem "as signs and wonders in Israel." Should we not then look well to our own houses, lest by any indulgence or neglect, we not only put our own children more in the way of temptation, but also increase the difficulties of other parents, and administer cause of stumbling to the youth, especially if we retain an outward consistency, or are concerned in the discipline of the society. The clothing of the children of these are noticed by others of the youth: example encourages practice in others, and thus (may it not be said) the leaven of the world spreads from family to family. But by an imitation of the world is not here to be understood the extravagance of gaiety, but that half-way imitation and changeable spirit, which, even under an appearance of plainness, seeks to borrow something from the various modes that spring up in the world. So that a fashion somewhat different from the world, and not agreeing with simplicity, seems established in our Society, until the world makes another change, and then many among us change with it, who perhaps had pleaded much convenience or improvement in the modes which they now are ready to abandon, and to adopt others as soon as the world leads the way. How can this consist with the example of our predecessors, with our own profession of the cross, or with the apostolic injunction "Be not conformed to this world."

Fashion and example of numbers seem to reconcile things, which, if singular, would even disgust some of those who adopt them: for though the present mode is not the most extravagant in gaiety that has appeared; yet it is in some respects more unseemly, if not more immodest, than some past fashions, which exhibited a more striking contrast to plainness.

These remarks, though designed to engage the attention, are not intended to wound the feelings of any parents; and if Friends will make their own reflections, it may not be needful particularly to point out those habits of the present times which are inconsistent with modesty and sobriety, yet a part of that description (and of which we are quite clear) is whatever has a tendency in any degree to lay waste or to encroach upon the distinction of sexes.

If effeminacy degrades a man, even so every attempt in females to imitate or assume a masculine habit or deportment, is rather disgusting than engaging; and the divine prohibition of such imitations, even if it has a typical allusion, may also be considered as a perpetual moral precept, viz. "the woman shall not wear that which appertaineth unto a man, neither shall the man put on a woman's garment," &c.

(To be continued.)

*The warmest and best clothing.*—Most persons suppose that fabrics made of coarse wool are the warmest and most durable. This is a mistaken idea. Owing to the lower prices of coarse wool, fabrics of this material are usually made heavier than those of fine wool, hence their greater thickness deceives persons respecting their qualities for warmth and wear. There is no heat in the wool itself; its property of what is called "warmth" is due to its non-conducting qualities. If we grasp a bar of iron on a frosty morning, it produces a disagreeable cold sensation because it is a good conductor of heat, and the warmth of the hand is rapidly carried off by the metal. On the other hand, a piece of woolen cloth, especially if it has a long nap upon it, does not feel cold because it is

a good non-conductor, and prevents the heat passing rapidly from the hand. Now the warmest fabric for clothing is that which is the best non-conductor; and Count Rumford made a great number of experiments with different materials in order to find out the best. According to his observations, the down of the eider duck, which the Esquimaux use in their clothing, is unrivalled in this respect; and the finer the fabric of woolen cloth used, the more imperfectly did it conduct the heat from the human body. As fine woolen cloth is superior to that of coarse wool as a non-conductor, it is therefore the best clothing in keeping the body warm during cold weather. We are positive that cloth made of fine wool equal in thickness to that manufactured from the coarser material, will wear much longer. The finest woolen cloth, although dearest at first, is cheapest in the end, because it is most durable and warmer; and, according to Liebig, so much heat saved is so much meat gained. It must not be overlooked, however, that there may be a very great difference between what is called "fine cloth" and cloth made of fine wool. Fine wool is our theme; it feels pleasant and soft to the touch, and it has a rich velvety appearance. There has been a great demand recently for coarse wool to be used in the manufacture of common army and other cloth, but every effort should rather be made to obtain plenty of cheap fine wool, because it is the warmest and best for clothing.—*Scientific American.*

*Manufacture of Artificial Teeth.*—It is stated that at least three millions of teeth are annually made in this country alone. The first operation, according to the method of manufacture pursued at one of the most extensive establishments in this city, is the choosing of the materials. These are feldspar, silica, and clay. To these are added various metallic oxides to produce any shade of colour desired. The feldspar, clay, &c., are ground to an impalpable powder under water, dried, and made into a paste. That composing the body of the tooth is of different materials from that composing the base or enamel. The teeth are made in brass moulds, and this is quite a delicate process. The enamel is first put in place with a small steel spatula; the platinum rivets, by which the teeth are fastened to the plate, are placed in position, and then the body is pressed into the mould. They are then submitted to powerful pressure and dried. After being dried, they are submitted to a process called bisecting in which they can be cut like chalk. They are then sent to the trimmers, who scrape off all projections, and fill up all depressions which may have been left in the operation of moulding, and then wash them with what is technically termed enamel. This is composed of various substances, more fusible than the tooth itself, and answers the glaze in common porcelain making. It is ground to a fine powder, and suspended in water, and is laid on with a camel's hairbrush. They are now sent to the gummers, who apply the gum. This is chiefly composed of oxide of gold, and is applied in the same manner as the enamel. After being dried they are burned. This operation is carried on in a muffle. The teeth are placed on a bed of crushed quartz, which is placed on a slab of refractory clay. After being exposed to an intense heat for some hours, they are taken out, cooled and sorted.

*The Pacific Telegraph.*—There is a difference of about 48½ degrees of longitude between New York City and San Francisco. If a telegram were sent instantaneously over the whole line, it would reach San Francisco at a time, according to the

clocks of that city, about three hours and fifteen minutes before the time at which it left New York, according to the clocks here. Thus a despatch sent off from this city at the high business hour of 10½ A. M. would arrive at San Francisco before the man to whom it was addressed, was out of bed; when a despatch started from this city in the edge of evening would find the same man up to his neck in business. Though these things are theoretically possible, yet practically it takes an appreciable space of time to get a despatch from New York to the Pacific. The weather is rarely favourable for the telegraphic feat of working so long a distance without repeating; and even if it were, the various divisions of the line would be scarcely ever unoccupied with business which could be suspended to let a despatch straight through. Under the present arrangement, the New York telegram is copied four or five times before it reaches San Francisco, and has to take its turn with other despatches at every repetition. Messages may be sent and answers received in the same day; but in the wires are crowded with business, communications back and forth will probably take part of two days. For all practical purposes this is almost as long as a day. For all practical purposes this is almost as long as a day, though not nearly so amazing, as the instant telegraphic flash. On specially important occasions, like the arrivals of European steamers, when the atmosphere along the whole line is just right, the wires will be worked from New York, and even from Halifax, to San Francisco, without interruption.—*Journal of Commerce.*

For "The Friend."

Musings and Memories.

DONT BE ASHAMED OF THE CROSS.

How many who desire to be true lovers and faithful followers of the Lord Jesus Christ, are yet manifesting by their actions in some things that they are ashamed of the cross, or unwilling to endure the odium which a consistent bearing of it brings upon them. Sometimes these feeble minded christians receive rebukes for their weakness and inconsistencies, from quarters where they least expected it. We have an anecdote narrated of John Berridge, one of the indefatigable labourers for the good of others, during the last century in England, which is in point. His honest zeal, and open reproaches of evil, brought upon him many scoffs and taunts from the ugly and profane, in his travels to promulgate christian principles and christian practices. One day in approaching a town, in which, on former occasions, he had received much abuse, he felt a spirit of weakness come over him, and instead of passing along the main street he turned into a bye way to escape the obloquy which, if he were observed by the inhabitants would, without fail, come upon him. As he passed along the less frequented way in which he hoped to escape detection, he met a pig driver, who immediately recognized him, and fathoming the reason of his being in such an unusual place, cried out, "you cowardly John Berridge, you are ashamed of your Master, and therefore you skulk along here to avoid the cross." The pig driver's rebuke, did him, as he often afterwards said, incalculable benefit, being stirred up and incited thereby to a willingness more faithfully under all circumstances, to stand boldly as a confessor of Christ, and which, through the grace of God, he never afterwards finched from.

On one occasion, irritated by the abundance of John's public ministrations, and the crowds who flocked to hear him, the bishop of the diocese threatened to send him to jail. John boldly told him that he had no more liking for jails than other

folks, "but," he said, "I would rather go *there* with a good conscience, than be at liberty without it." Being abundant in charity and good works, he sometimes spent his income too liberally, so that he was at times pinched with temporary want in his own household. On one occasion, having been for a long time ill, he was in actual distress from the absence of sufficient food, and knew not where to look for relief. One morning his money having been all expended, the postman brought him a letter, on which the postage was a shilling. He frankly told the man he had no means of paying him, and requested him to take it back to the office, as he did not wish anything in his house not paid for. The man, however, refused to take it, but saying he would call another day for the postage, he went away. On opening the letter, Berridge found in it a bank note for thirty pounds, from that celebrated philanthropist, John Thornton. Having, during life, borne a faithful testimony to his Divine Master, and having been taught and strengthened unflinchingly to bear his cross, he was enabled in a good old age to put off the shackles of mortality, blessing the Holy One in that he had been enabled to "fight the good fight," and in finishing his course to have the blessed assurance that he was called to go up "higher, higher, higher."

Our late Friend, Christopher Healy, narrated the following incident. Shortly after he had been received into membership amongst Friends, his brother requested that he would introduce him to Elias Potter, with whom he had some business to transact, connected with a public station Elias held. Elias Potter was a man standing high in the political world, and from the civil position he occupied, was frequently addressed with titles of honour, even by professing members of the Society of Friends. As the two brothers rode to the dwelling of the man of authority, a deep concern came upon Christopher, that he might not in the interview about to take place shrink in anywise from hearing a faithful testimony for the Truth. This language was powerfully impressed on his mind, "whosoever shall deny me before men, him will I also deny before my Father who is in heaven." He had been convinced of the impropriety of hat-honour, as offered to men, of all titles of mere compliment, and he had seen the necessity of plainness of speech, and honest truthfulness in all his intercourse with others. When he entered the presence of this great man, he approached him with the salutation, "Elias, how art thou?" The brothers were courteously, nay kindly received, and the business which occasioned their calling promptly attended to. Some time after this, Christopher's brother being with Elias, he said to him, "some of the Quakers baulk their testimonies respecting giving titles of honour, but your brother is not one of these."

Years afterwards, Christopher being on a religious visit in the neighbourhood where Elias lived, appointed a meeting for worship to be held there. The great man was active in furthering the meeting, attended it himself, and whilst in it, behaved with great solidity.

*Largest Building in the World.*—The largest building in the world will be that intended for the Industrial Exhibition in London, in 1863. There are upwards of 1200 columns and 800 girders. The aggregate weight of which iron work will be 4000 tons. The picture galleries alone will be 1200 feet in length, and more than 60 feet in height. In these enormous walls more than 6,000,000 of bricks have already been swallowed up, and more than 12,000,000 more have yet to be laid. The gallery, when completed, will be divided by semi-

circular arches into compartments; of these, two will be 325 feet long, a third 150 feet, a fourth and fifth 75 feet, and four smaller ones, 50 feet long. The nave of the building, which terminates at either end in the colossal dome, is 85 feet wide: it is formed of double columns, coupled together. One of these columns is circular, the other square; the former faces the nave, and they are each 12 inches in diameter. On the right and left of the nave are two side aisles, formed of iron columns eight inches in diameter, and placed 25 feet apart, and these will carry the gables and roof of the dome. On the right of the nave, and beyond the 25 feet aisles, are two others, formed of a fourth row of columns and the party wall which separates the building from the grounds of the Horticultural Society. These side aisles are 50 feet wide. On the left, entering from the Exhibition road, and beyond the two side aisles, there is a third avenue, which fills up the space to the walls of the picture gallery. The domes will be supported on eight pairs of columns, one pair being placed at each angle of the octagonal area, which the domes will cover.

For "The Friend."

Education.—No. 4.

Where are the Children?

Were this query running through the minds of parents very frequently, as a habit, not only during infancy and childhood, but long afterwards, it would be the means of checking our ardor in worldly pursuits. For if we must know where they are, we are likely to know also what they are doing; and thus some thoughtfulness would be awakened concerning them; and perhaps also some time taken from the cares that are wearing us down too soon, and devoted to starting, or helping them, in an early and effective industry. Though we cannot give grace to our children, we can do much towards keeping them out of harm's way; and from those evil communications which corrupt good natures. And if companionship and sympathy are helpful in the teacher's government and instruction, how much more so in the parents. It therefore behoves us very often to query Where are the children? We cannot always have them around us—that were not even desirable—they must be weaned from us and properly introduced into that world where the great battle of life is to be fought, under the banner of faith and of the cross. But if our minds are clothed with a right concern for them, as we query where are the children, effectual, fervent prayer may be begotten, on their account, that temptation may not prevail over them, wherever they are. But let us keep near them, bodily when we can properly, and when we cannot, near them in spirit. When the father goes to the plough—the seeding, or the harvesting;—to the counting-room, the machine-shop or other place of employment, should be not carry with him the recollection of the precious charge at home; and in the many opportunities of intercession which occur in the various avocations of industrial life, maintain or revive a lively exercise for the preservation of his children. Doubtless on his return to them, he will be the more cordially welcomed, and perhaps have signal evidence that his aspirations for them had been regarded by their great Care-taker in his absence. When the mother feels the press of home duties, and with the exertiveness of maternal solicitude, lays to her daily task, to provide, clothe, and cleanse, let her not forget that there are souls to be provided for, clothed, and cleansed also; and that in our varied engagements to provide things honest in the sight of all men, our lives ought to witness that "best things are uppermost" in order

that we may have "all things in their places." Children that go out to school from a family in which these aims are sought earnestly by the heads of it, will go out generally, prepared to the teacher's hand.

But, on the contrary, as a *general course*, it will be observed, that, where the father anxiously inculcates the *business hours* in the morning, and rides him hard all day, with the mind so occupied in the earth and the things of it either about home or away from it, that he almost forgets he has children or where the mother, strudling to compass inordinate aims, is careful and troubled about many things—to have so many, and such *necessaries* for her children, striving to have just a little more of the *common things* than she can comfortably provide with the help she has; and if she do not like the father, *almost forget* she has children, yet finds them continually in her way, even when they innocently seek some simple question about this great place that men call the world, of which they have to learn a very little at a time, every now and then as they can wedge themselves in between us and the various strange things that affect their unphilosophical senses—where this state of social and domestic affairs exists, and where children run almost from morning till night, and parents take not the time, if they have the inclination often to query, Where are the children, except to hunt them up, meals or to pack them off to school, as a *general course of things* it will be observed that they have picked up, or contracted some bad habits, or ill dispositions which not only make hard work for teachers, but taint and inoculate many other children, who, coming from very different home training, are brought into association with them.

Then what follows! the poor parents are shocked, to learn from the teacher, or to see by the *conduct papers*, and *recitation record*, that their darling is not doing well. They now want to know all about him—*where he is*, what company he keeps, and ask many anxious questions to solve the problem why he don't get along any better. Perhaps they even begin to suspect that he must have found some bad city-boy, or some bad-country-boy, who has contaminated him, and thus dashed the high hopes entertained on introducing him to school. Alas! how much of this sorrow and disappointment may be attributed to the want of asking at home, *Where are the children?* There was a time to know all about where he was, what he was doing, and what company he kept—whether some ill-principled bound boy—man servant or maid servant, had been his chief companion and informant. But the parents being so busy, or so lazy and fashionable as not to find time to associate with him, as much as possible, to develop his enquiries, and give them a proper direction in order to elevate his mind, and prepare it for the seeds of virtue, this responsible post was consigned over to hirelings. Some teachers I think, and some parents I know can thus solve the problem of their disappointment in the *new scholar*. Unskilful and unclean hands have "moulded his passions till they made his will."

How much better then to ask often, Where are the children? and if we find wants growing so thick upon us, that our children are robbed of that nourishment which ought to flow to them from us, why, cut those wants down! let them down to bread and water and linsey woolsey if need be, so that we may get time to know where our children are, and train them aright.

Y. W.

Eleventh month 24th, 1861.

ADDENDA.—It is intended by the foregoing to intimate, that although good children sometimes disappoint their parents' expectations because the

teacher has not in his school closely enough imitated the parents' part, yet that parents often dis-appoint themselves by not faithfully acting their own part at home. "Honour to whom honour is due."

### Flat Roofs in Palestine.

The flat roofs of the houses give rise to various customs to which we have nothing analogous. At sunset, when the heat of the day is past, people promenade there for the sake of fresh air and exercise. Calling on an acquaintance at Jerusalem, near the close of the day, I was informed that the family were on the top of the house, and I was invited to join them there, where they were taking their evening walk. In the larger towns it is no uncommon spectacle, at particular seasons, to look up and see almost every house-top thronged more or less with persons moving to and fro, or reclining at their ease. Allusions to this practice occur in the Old Testament. In 2 Sa. ii. 2, it is said that "David arose from his bed and walked on the roof of the king's house." In Dan. iv. 29, 30, we read that Nebuchadnezzar "walked on the palace of the kingdom of Babylon;" and that as he stood there surveying the magnificence of the capital, he uttered the impious boast: "Is not this great Babylon that I have built by the might of my power, and for the honour of my majesty?" He had gone to the roof probably for a different object; and it was the accidental sight of the city spread around him in its splendour which filled his heart with pride, and led him to deny his dependence on God, instead of acknowledging him as the author of his prosperity. An inaccuracy of the English version conceals from the reader this connection between the outward and the inward; the place suggested the temptation while the heart gave to the temptation its power. The margin of our Bible suggests correctly, that instead of "in," we should read "on" the palace, in this account of the monarch's boast and humiliation.

The roof was used, also, as a place for conversation, and at night, in the warm season, was often converted into a substitute for a sleeping room. It is related that Samuel, when on a certain occasion he wished a private interview with Saul, "communicated with him on the top of the house." It would appear that Saul, at least, slept there during the following night; for early the next morning, "Samuel called to Saul on the top of the house," saying, Up, that I may send thee away." (1 Sa. ix. 25, 26.) At the present day, when the nights are warm, the roof is regarded as the best place for sleeping which the house affords. It is assigned often to travellers who seek hospitality at the hands of the native inhabitants.

Another use to which the open space on the roof is applied is that of storing corn, figs, grapes, and other fruit, placed there to ripen more fully, or to be dried. It is very convenient for that purpose, because the products in such a situation are exposed to the full glare of the sun; and when safety is the object, they are more secure from pillage there than in any other part of the house. "At Deburieh, at the base of Tabor," says — Bartlett, "we established our bivouac at nightfall upon the roof of a house, amidst heaps of corn just gathered from the surrounding plain."

This custom reaches back to the very beginnings of the Bible history. The Canaanites who occupied the country before the Hebrews, made use of the same facility for ripening their harvest. The case of Rahab who dwelt in Jericho, and who

concealed the "two men" sent as spies from the Hebrew camp, shows the observance of the practice at that early age and among the aboriginal inhabitants. "She brought them up," it is said, "to the roof of the house, and hid them with the stalks of the flax which she had laid in order upon the roof;" (Jos. ii. G.) She had placed the flax there to dry, and in the emergency of the moment, took advantage of its being there, as the readiest way of concealing the men from their pursuers.

The roofs of the larger houses have usually a wall or balustrade around them, three or four feet high; so that a person there, while he has a view of surrounding objects, does not expose himself necessarily to the observation of others. Without considering this fact, it might strike one that the apostle Peter hardly acted in the spirit of the Saviour's precept (Mat. vi. 6), in repairing to the house-top for the performance of his devotions. See Acts x. 9, seq. The roof in this instance, however, may have had a protection like that mentioned above, and the apostle may have chosen this retreat because he could be secure there both from interruption and from public notice. Indeed, at Jaffa, the ancient Joppa, where Peter was residing at the time of his vision on the house top, I observed houses furnished with a wall around the roof, within which a person could sit or kneel, without any exposure to the view of others, whether on the adjacent houses or on the streets. At Jerusalem, I entered the house of a Jew early one morning, and found a member of the family sitting secluded and alone on one of the lower roofs, engaged in reading the scriptures and offering his prayers.

The Mahomedans, it is true, make no scruple about performing their religious duties in public; they court the observation of others rather than shun it. We know, also, that the Jews of old were ever prone to the same ostentation. But our Lord enjoined a different rule. His direction was:—"When thou prayest, enter into thy closet, and when thou hast shut the door, pray to thy Father in secret, and thy Father which seeth in secret shall reward thee openly."

On the roof of the house in which I lodged at Damascus, were chambers and rooms along the side and at the corners of the open space or terrace, which constitutes often a sort of upper story. I observed the same thing in connection with other houses. At Deburieh, a little village at the foot of Mount Tabor, probably the Daberath of the Old Testament (Jos. xix. 12.) I noticed small booths, made of the branches and leaves of trees, on some of the roofs. Peter exclaimed at the time of transfiguration: "It is good for us to be here; and let us make three tabernacles" or booths, "one for thee, and one for Moses, and one for Elias;" (Mat. xvii. 4.) It was certainly striking as a coincidence at least with the subject of my thoughts at the moment, that I should meet with those booths just as I was approaching Tabor, the reputed (though I suppose not the actual) scene of the vision which called forth the bewildered apostle's exclamation.

Pococke, who spent a night at Tiberias, says: "We supped on the top of the house for coolness, according to their custom, and lodged there likewise, in a sort of closet about eight feet square of wicker-work, plastered round toward the bottom, but without any door." Such places, though very agreeable as a retreat from the sun in summer, and cooler than the interior of the house, would be very undesirable as a constant abode, especially in the rainy season and during the winter. Any rooms so exposed as those on the roof, and

comparatively so narrow and confined, would be inferior to the lower and ordinary apartments of the house. To such places of retreat on the roof we may suppose the proverb to refer which says: "Better to dwell in the corner of the house-top, than with a hawking woman in a wide house;" (Prov. xxi. 9).—*Blackett.*

### Benjamin Ferris.

(Continued from page 97.)

Diary continued, Fourth mo. 2nd, 1763.—"We were favoured with the company of our Friends, Hannah Harris and Elizabeth Wilkinson at our General Meeting at Wilmington. The sittings, according to my sense of them, were favoured with a degree of the workings of Truth, that seasoning virtue, which is the crown of our meetings. The two Friends, as well as others, had good and acceptable service, and I think upon the whole there was cause of humble thankfulness because of the extendings of Divine regard therein.

"25th.—I went to Chester to see Hannah Harris, Elizabeth Wilkinson, William Horne and Thomas Goodwin, embark for England. After a meeting at that place, they went on board the Pennsylvania packet, Richard Budden master, which fell down to New Castle that night. The vessel laying there next day and the day following, I went thither, and we were mutually glad to see each other. I spent about three hours with them very agreeably, and then took a solemn farewell, in true unity and tender affection. We sincerely committed one another to the Lord, as a sole and sufficient support, in and through all the various exercises, difficulties and trials that may be permitted to attend us in our passage through this troublesome world. I returned home feeling destitute and empty, but in some degree comforted in the renewed sense that the Lord remains unchangeably the same, to supply and make up the wants and losses of his people of every kind, as they look to and depend upon him.

"Fifth month 15th.—I was at a meeting and a burial at New Castle. As we returned, we met a priest, who asked me whether we had a sermon particularly on occasion of a burial. I told him nay; we did not approve of studying sermons upon any occasion. I afterwards thought of my answer several times, and wished it had been more true, for there had been preaching that very day, which straitened me in saying Nay to the priest's question.

"Sixth month 15th.—Our Monthly Meeting day. Oh the cry which is raised in me to the Lord of all strength, that I may this day be preserved from injuring his cause, or wounding myself by any forwardness or mistaken apprehension of duty. I feel filled with weakness, fear and distress. The work is not mine, nor any qualification for it at my command. I cannot but say, help, O Lord, for thy name and cause sake, or make way for another who may more rightfully act in the station of clerk.

A release from it is very desirable to me. Oh that the cause of Truth may not suffer through me, whether I find peace in my labour or not. After I had written the above, I went to meeting in great poverty, which continued with anxious wrestlings of spirit during the greater part of the first sitting. I had, however, with humble joy to acknowledge the Lord was pleased, in the needful time, mercifully to draw near and mollify my spirit before him, clothing it in degree with Divine sweetness, which continued through the meeting for business to my encouragement, patiently to trust in him for the supply of help and strength in every service.

"Eighth month 3rd.—Having a desire to be at a neighbouring Preparative Meeting, I went in a deep sense of emptiness, not expecting that I should

\* A slight change in the English version is required here.

have anything to say, feeling in such a weak state. After a very heavy and afflicting meeting, it seemed to be my business to make several remarks, which I endeavoured to do honestly. This relieved me,—yet, after meeting, I came home in a lean situation of mind, though not sensible of any condemnation.

"6th.—I attended our Quarterly Meeting, which was remarkably small on account of a heavy rain.

"15th.—I went to the Western Quarterly Meeting, which was very large, and in the first part a pretty good time. I may here remark, that as I sat in meeting this day, some matter and judgment in cases would come before me, though it seemed as if I had no business to mention them. This brought a fear over me lest I had been mistaken, heretofore, in speaking to business. Many fears and distresses attend me, but if all may work for good, I am willing to bear them. Nevertheless for the present they are not joyous but grievous.

"Ninth month 24th.—I set out for our Yearly Meeting. I attended Darby Meeting on First day, which to me was a poor, dry time. I then went into Philadelphia and attended the several sittings of that Yearly Meeting. I may say, that in the course of the business there were remarkable times of deep travail and wading, there being strong opposition against the progress of our testimony in some of its branches. This opposition seemed at times as if it would prevail, which caused close exercise of faith and patience, to the humbly concerned ones. Yet I could not but remark the way and wisdom of Truth, which after all the strivings against it, resulted some matters on its own foundation, to pretty general satisfaction. The meeting concluded on the 30th, in the evening, under a sense of the seasoning virtue of Truth.

"Tenth month 16th.—First day. The evening was a time worthy of grateful and humble remembrance by me, for the merciful renewings of Divine favour. It was to my soul as a morning without clouds, serene and awfully affecting; although not attended with that contriving virtue which I suppose accompanies a greater degree of it. Yet my spirit rejoiced in the prevalence of peace and sweetness which measurably clothed my mind this night and most of the next day, wherein I enjoyed, in a near manner, communion in spirit with some dear Friends. This gradually passed off, yet I have since spent some time very satisfactorily with a dear friend in the truth, whose welfare and preservation I desire as my own."

(To be continued.)

From "The British Friend."

#### Quaker Analogies.

No. 1.—THE SOLDIER.

To the Editor of *The British Friend*.—The spiritual views of Friends are, many of them, peculiarly capable of illustration from the ordinary avocations of life. The New Testament is replete with instructive and forcible lessons by parables, similes, and analogies, drawn from earthly things and duties, and it may be said that every outward condition of man has its spiritual antitype or counterpart. Confirmatory of this view, the accompanying paper is forwarded, and if agreeable, it may be succeeded by similar illustrations of other social relationships. It does not pretend to embrace more than *one phase* of the Christian's duty.—*Thine Respectfully,* \* \* \*

"Endure hardness as a good soldier of Jesus Christ." Was the stern injunction of the apostle, because the life of a Christian is essentially one of warfare. Each disciple must fight the good fight of faith outwardly amongst the world, as well as inwardly in his own soul. So thoroughly was this

fact recognized by the early Friends, that despite their testimony against all wars and fightings, their published works are full of warlike expressions, and the only terms in which they could adequately describe the lives and acts of their brethren were borrowed from military life. They were indeed brave men and true, undaunted before the enemy, and turned not back in the day of battle. George Fox describes Edward Burroughs as "a valiant soldier of Christ, a warrior, and more than conqueror;" and the analogies between the soldier's life and the Quaker's duty are both important and striking.

1. *Enlistment*.—Nothing can be accomplished without this first step. Not only must there be a clear recognition of the banner under which the man enlists, but he must voluntarily enrol himself, and in so doing forego all future assumption of his own will or desires. Henceforth his time and services are the property of his King. He is fed, clothed, and cared for by the master he has chosen; and if he thinks for himself, acts for himself, or refuses implicit obedience to any command, he must be expelled as mutinous or cut off as a rebel. The first step in the life of an early Quaker was enlistment on the Lord's side. The very profession of Quakerism involves and includes this. What, then, can the modern member anticipate will be his condition, if he shrinks from *his duty as a soldier*, falters in obedience, or asserts his own will as law? The great Captain of our salvation wills no half-enlistments, no hesitating archers, nor lukewarm trumpeters.

2. *Drilling*.—Has not this a beautiful spiritual analogy in the life of the Christian? Before the enrolled volunteer can be depended on for endurance in the fight, he must undergo a severe course of discipline. The raw recruit may be equally loyal, equally earnest and brave, but he requires constant teaching and training before he is qualified for active service. He must pass through many ordeals and postures, which appear meaningless, or even foolish, to the uninitiated; but the experienced commander knows them to be all essential to the perfect development of the soldier, and that he who evades any part, or despises their littleness, can never become efficient in the ranks. Drilling not only enforces a minute obedience in little things, and an unreserved submission to the orders of another; but it brings the whole frame under control, and prepares the soldier to do any required service, without questioning its value or reasoning on its necessity.

3. *Arming*.—I need not repeat the allegorical language of the apostle, wherein he shows that every carnal weapon has its spiritual equivalent. It is, however, worth noting that in every case the weapons are provided for, and given to, those who serve. They may not use arms of their own manufacture. Faith is given to the Christian for his shield, salvation as his plumed helmet, the Spirit is his sword, and righteousness the breastplate, wherewith he goes forth fully equipped by the *free gifts* of his Captain. Neither is the common soldier trusted with arms at all, until by systematic drill and long discipline he has proved himself capable of using them. Whether fighting or not, his daily rations are provided for him, and his clothing is made to one pattern, that he may always be recognized from the enemy. The spiritual analogies of these two things are not peculiarities of outward food or of bodily costume, but the daily manna wherewith he subsists, and the robe of righteousness wherewith his soul is clothed upon of Christ, and by which he shall be ever recognized.

4. *Fighting*.—After enlisting, and being disciplined and armed for the fight, he may not select

his own field of action nor choose out the enemy for attacking. How entirely are his movements dependent on his Chief! Marching and countermarching, fighting or retreating, not as he thinks best, but according as he is commanded. *But so long as the enemy is before him and unsubdued*, he never lays down his arms, or forgets the one object of his life; he longs to go forth to battle, and is ever willing to sacrifice himself, so that the King's enemies are destroyed. So was it with the early Friends, their swords never rusted in the scabbard. How, then, can the Christian Quaker of this day suppose that he has no open fighting to perform, or that a truce has been proclaimed for him, when the enemies of Christ are mighty as ever, vaunting themselves in wickedness, and carrying his fellow-men captive by tens of thousands? If always on the watch, and praying to be sent forth to battle, his arms will assuredly never lie idle or unused, until that day when he is called away from the church militant to the church triumphant, from the earthly banner to the heavenly crown!

5. *Promotion*.—No man can promote himself. He who has watched the self-sacrifice and faithful zeal of the obscure private, bestows his reward upon him—promotion, not in sudden jumps, but step by step. Faithful service in the lowest is the only qualification for advancement, and they who survive are ever anxious to step into the more arduous responsibilities of those above them who die off. "Fill up the ranks" is the universal cry, all longing to be commissioned to the vacant posts of toil and danger, and to gather in fresh recruits to supply their own places. "Fill up the ranks" must be our cry also. The least must be willing and ready to accept a commission to rise higher, and with something of the ardent zeal of the earthly warrior pay of their own great Chieftain, that he would grant unto them higher services and greater conquests; but each fighting bravely and earnestly, *in his own sphere*, until his prayer is granted. "He that is faithful in little shall become ruler over much," is a promise Divine and sure; but the lukewarm warrior, who slumbers on the field, or is content with never advancing higher, is a sad and pernicious example to the Christian army.

This subject bears a much more minute analysis than can be here given, but these brief outlines may induce some readers to follow them out for themselves, and also to test the Society of the present day by the military language of our predecessors. How is it that the numerous warlike terms, with which our early biographies and epistles abound, have so died away from amongst us now? We often hear of the steward, servant, child, &c., (and on these states we may hereafter offer a few thoughts), but we seldom read of the Quaker soldier. Is it because the enemy has disappeared from amongst mankind, or because we have got into a sort of earthly Canaan of our own, that we are not waging a more active war against the adversary whose lands we once so successfully invaded? There is no neutral ground, there can be no truce on earth between the kingdom of God and the kingdom of Satan. If we do not invade and attack him, he assuredly will invade and destroy us. It is only by our members awakening to their military duties that the battle can be turned from the gate, and our Jerusalem be saved from the besiegers. We must not sit placidly at ease behind the ramparts erected by our ancestors, fancying them impregnable or perfect, waiting until our very walls are thrown down before we arouse from our torpor; but we must rally forth again, as of old, under the all-conquering banner of that Prince and Saviour, who "giveth power to the faint, and to them that have no might he increaseth strength."

For "The Friend."

## A Passing Glance at the Inland Sea of Japan.

The great island of Nippon, in Japan, is separated from the smaller islands of Kiusiu and Sikok at its south-western end, by a broad passage extending east and west for about three hundred miles, with a breadth of from ten to sixty miles. This strait bears the name of the Suwonada or Suwo sea, and furnishes a safe inland passage for vessels to the great cities of Ohosaka and Miyako.

In the summer of 1860, a British steamer and a sailing vessel obtained permission from the Japanese authorities to pass from Nagasaki through this inland sea to procure horses and fodder for the Chinese expedition then lying in the gulf of Petcheleu. The following article is made up from a account that has been published of this voyage, which gives us an interesting sketch of a portion of that country, hitherto unseen by modern Europeans at least. The western entrance to the inland sea is a narrow strait, not a quarter of a mile wide, between Nippon and Kiusiu, and the abundance of the population began to show itself. There were numbers of large junks, perfectly clean, elaborately carved, each carrying a large, beautiful white sail on a most composed of various pieces of wood, bound together with rings of iron, as is the case with the best class of English and American ships. The cottages of the smaller villages were shaped somewhat like the huts of the islands of the Pacific; but in the other villages there were good large houses, some of them double storied, others with verandahs round, and steps leading up to them. Every turn of our ship gave some new effect of scenery, and the chief impression conveyed was the beauty, the quietness, the peacefulness of this entrance to the inland sea.

The town upon the right, on entering the channel, is called Kokurusu, and after passing it, the sunken rocks in the way are pointed out by tall, erect stones, but shaped at the top. Indeed, all through the inland sea, sunken rocks are marked by stone shafts; and other means, such as light-houses, are employed to render navigation safe. We next came to another large town on the left, called Simonosaki, with fine temples behind it enclosed in wood. In front of it, there was an excellent stone sea wall, with convenient piers and large junks lying alongside of them. The whole town seemed to have turned out to gaze at us, and the wonder-struck crews of the native vessels raised their arms to us by way of salutation.

Proceeding down the inland sea, the south shore was about ten miles distant, and the north about fifteen. The white puckered sails of junks were plentifully scattered over the blue water, and their seamen examined us through rather dim telescopes of native manufacture. On the south side, the mountains were very high, rising up occasionally into volcanic like peaks. There was a good deal of wood and pasture upon them, and also many barren peaks, especially near the shore. Still everywhere, in Japan, the amount of wood excites attention. The fields are surrounded by thick belts of tangled trees and brush-wood, and the growth is preserved by a Japanese law that every person who cuts down a tree, must plant another instead. After passing on the right the channel between Sukiu and Sikok, the Suwo nada appeared to close up altogether, owing to the immense numbers of islands and islets. Many of these were almost pyramidal shaped, and yet terraced for purposes of cultivation in an almost impossible manner. Every little bay had a village in it, and the bright verdure came close down to the water's edge; but here and there a red barren hill looked as if it had been peeled of its vegetation. A sky

so bright and blue, and an air so dry and pure as we there enjoyed, are rarely to be found anywhere. As the fourth day of our voyage drew on, the hills became very barren, being of hard rounded sandstone, only very imperfectly sprinkled over with bushes and trees. On some of the more richly wooded hills, there was table-land at the top, with green cultivated fields and tracts of warm, sunny pasture spotted with little black cattle. Passing into a picturesque loch, with high dark wooded hills around, and a mile or two in breadth, we noticed many fields interspersed among the trees and jungle. In a small bay just beyond, there was a large cove, substantially walled in, and a gently shelving sandy shore, affording good anchorage. In a larger sea on which we soon entered, bounded on the south by the high mountains of Sikok, and on the north by innumerable islands, and with no visible outlet to it, the barren redness of some of the hills rather augmented the brilliancy of the scene by adding another colour to the deep blue of the water, the bright blue of the sky, the forests' dark green hue, and the white shining clouds lying along the mountain tops. As we got on, however, not even the coast of southern China could have presented a more sterile appearance; and from one of the mountains on the south, there arose the yellow smoke of a volcano. Suddenly, another change; we were among small islands, lying close together, of soft rock worn by the sea into fretted caves, and covered thickly with green ferns. There were little bays with sandy beaches, and little cottages where one would gladly have made selection for a summer residence. The larger villages had breakwaters and piers before them, indicating no small amount of enterprise and trade.

The morning of our fifth day, as the anchor was being raised, presented a most wonderful dawn. First, a pale translucent green light filled the whole heavens, gradually changing into a deep ruddy brown, which seemed not so much to colour as to permeate water, islands and sky, and from that softening into a celestial rosy red. Beside the spot where we had anchored, there was the tree fringed *Tecado*—the great road which runs the entire length of the three large islands of Japan. Here, as elsewhere, it is a fine broad road, in excellent repair, with side walks for foot passengers, lines of trees on either side, and tea houses at convenient distances for the refreshment of travellers. Those houses have no furniture beyond the beautifully clean matting of their floors; but when required, the weary wayfarer will be provided with a stool of some kind, and with a quilt and a small bamboo pillow. Tea, rice, fish and sweet cakes are served by young female attendants, who take pleasure in making themselves as agreeable as possible, and whose appearance is often very charming, if not strictly beautiful in western eyes, from their ruddy complexions, finely developed forms, desire to please and everbearing cheerfulness. Indeed, there was nothing struck me so much everywhere, as the unmistakable and unwavering happiness of the people of all classes in Japan.

Towards the east end of the Suwo nada, that sea opened out widely, and we found ourselves in a vast bay, the shores of which were crowded with towns, villages and white palaces, and the water all dotted over with innumerable junks, making their way to or from the great port, Ohosaka. The end of this bay forms a large semicircle, across which ran a ripple line, marking the influence of the fresh water from the river Engawa, which falls into it. On shore the semicircle was occupied by the town of Ohosaka, extending apparently about ten miles, and diversified by large white palaces surrounded by trees. A thick line of junks kept

advancing into the river, showing that the trade of the place must be enormous; and as they followed the windings of the stream, their sails appeared to be moving among the trees on land. The fields to the left of the river, as we faced the town, were very low, and protected by large substantial sea walls. Numerous junks were lying at anchor beside similar walls, raised for their protection, and lines of stakes pointed out the way of entrance. Many of the junks were lying beside a large building, probably the custom-house, and near it there was a strong fortification armed with cannon. The river appeared to be run off into numerous canals, which traversed the town in all directions, and were frequently crossed by elegant bridges, over which streams of passengers were passing. Though foreigners have not been at Ohosaka for a long time, it was visited by Jesuit missionaries in the sixteenth and seventeenth centuries; and it was in 1614 that the Emperor Xogunsuma drove away all Christians from it. We steamed within two miles of the shore, and found there a depth of about five fathoms. In the distance the mountains converge, forming the valley of the Engawa, on which, forty miles off, is Miyako, the capital, where the Mikado—"the Lord of the World"—resides in a state of deified isolation. The Siogoun or Temporal Emperor resides at Yedo—"River's door"—where the temporal business of the country is chiefly transacted; but Miyako is the greatest manufacturing place and commercial emporium of the whole empire. None of the other ports can for a moment compare in size or importance with Ohosaka, which has been rightly described by Dr. Williams as one of the largest cities in the empire, but not yet visited by any foreign ships. Its great extent was not less striking than its appearance, so far as our glasses could determine, of prosperity and wealth.

As the expedition had received orders not to allow any person to land from it, we steamed for about ten miles along the north side of the bay to Hiogo, the place which is to be opened for foreign trade in 1863. The shore, as we went along, was almost a continuous stretch of villages, but soon rose up behind into mountainous cliffs, on one of which were two white houses that might have been the abode of hermits. Through the Kiuo channel, on the east side of the island of Sikok, we passed into the open sea on the south side of Japan, and on the second day, we saw the snow streaked peak of the volcano Fusuama, the holy mountain of Japan, rising above high distant clouds. The white palaces which we saw from the inland sea, may have had their traditions and dread memories, the villages their simple but affecting tales, and the mountains their ancient legends; but to us these things were a sealed book. All that was open to us on which to report, was the beautiful scenery of a succession of sea lochs unparalleled in any other part of the world, and the indications of the existence of a large, industrious, comfortable and almost wealthy population, such as mountains and islands no where else present.

## THE FRIEND.

TWELTH MONTH 7, 1861.

In our last week's number was published the Annual Report of "The Female Society of Philadelphia for the Relief and Employment of the Poor," which contains the following announcement: "In assembling to prepare for opening the House of Industry for the coming season, we find our funds totally inadequate for our necessities, being barely sufficient to meet the debts already contracted.

As our nearly income is always very trifling, we rely mainly on our sales and donations. The former being much diminished the past year, and the donations not more than half the usual amount, we are now under the necessity of asking immediate and generous aid from our friends, to enable us to give employment to half our accustomed number."

We bring this appeal again before our readers, in the hope of securing their attention to the pressing wants of this valuable institution, and inducing those of them who have the means at command, to give it the aid it requires. We think a more unexceptionable mode of extending relief to the poor who are willing to help themselves, could not be provided and executed than that which is pursued by this unostentatious society.

Respectable but poor women, who are struggling to procure the daily bread necessary to keep themselves and their children alive,—having first been visited by some of the members, and their characters and true condition ascertained—are allowed to come to the House of Industry, where they are provided with needle-work, which they perform in a large comfortable room, furnished for their exclusive accommodation; they partake of a good wholesome dinner ready cooked for them, and are paid on an average fifteen cents per day for their labour. At the same time their infants and young children are efficiently cared for and fed in another apartment in the house by a person specially employed for that service; and care is taken to have the children old enough to learn, introduced into suitable schools. The garments, bed clothing, &c., thus manufactured, if not made to order, are kept for sale in the store. Two members of the Society are in attendance throughout the day, and while having a general oversight of the establishment, often beguile the labours of the poor women by reading from the Bible to them, and other entertaining and instructive matter, suited to their capacities and education.

The Society has been in existence for a long time, and by its means hundreds of deserving females, with nothing of their own to depend on but the labour of their hands, year after year, have been enabled to get through the cold, pinching months of winter with comparative comfort to themselves and their children; and while striving to bear up at other seasons amid want and distress that often sunk them almost below hope, they looked forward with eager expectation to the opening of the House of Industry, as a blessed means, whereby they could obtain daily employment, bringing a certain though very moderate remuneration. In how many cases this expectation was give place to bitter disappointment at the opening this year, must depend upon the means placed at the disposal of the Society. They say they must have immediate and generous aid to enable them to give employment to half the accustomed number. We understand they have generally opened the house with from one hundred to one hundred and fifty in attendance, but that they have not the pecuniary means to commence this year with more than thirty.

We trust their appeal will be promptly and liberally responded to, and that the members will be encouraged in their disinterested labour by the pecuniary support their institution so fully deserves.

#### SUMMARY OF EVENTS.

*Great Britain.*—News from England to Eleventh 21st. It is reported that a large steamer had left London loaded with manitions of war for the rebel States.

The rebel steamer Nashville, which ran the blockade at Charleston, had arrived at Southampton. On the 19th ult., the Nashville boarded the American ship, Harvey Birch, bound from Havre for New York, in ballast,

took off Capt. Nelson and the crew, and then burned the ship to the water's edge. The Nashville landed Capt. Nelson and the crew of the Harvey Birch at Southampton, and remained there herself with the rebel crew.

It is reported that several steamers have been insured in London for a run from England to New Orleans and back.

By a late Parliamentary enactment, imprisonment for debt is practically abolished in England and Wales. A debtor, who is unable to discharge his debt, will not be allowed to remain in prison beyond fourteen days.

The Times attributes the inactivity in the demand for cotton in India to lingering hesitation as to the American supply, but says that other circumstances have also operated to check a revival. The real cause of the present stagnation is not scarcity of cotton, but the absence of a demand for calico, the markets of the world being glutted with Lancashire goods. Manufacturers, in curtailing operations, are doing what they must: have done sooner or later, irrespective of the stoppage of the American supply.

The weather had been very stormy around the English coast, and numerous disasters were reported.

The exports of specie from Great Britain during the first nine months of the present year amounted to \$85,000,000, and the imports of specie during the same period, were \$73,297,295.

The Manchester markets were firm with but a small business doing.

The Liverpool market for cotton and breadstuffs was nearly unchangeable.

*France.*—The deficit in the budget is about \$200,000,000, and a new loan is necessary. To bring the expenditures within the measure of the receipts of the Government, it is said there will have to be a considerable reduction of the army and navy.

The war vessel was wrecked at St. Petersburg. The last ships of the season were leaving Cronstadt. A Russian army of 15,000 men, had sustained a disastrous defeat in the mountains of Circassia, no less than 6,000 of them being killed and wounded.

*United States.*—*The Export Trade* which has been the subject of our year is likely to continue so far some time to come. Private letters, as well as agricultural authorities, in Western Europe, concur in saying, that from the United States large supplies of breadstuffs must be had until the next European harvest. The exports of the potato crop in Ireland are not likely to show itself fully upon the market just now. The deficiency to be supplied will, however, soon show itself upon the price of Indian corn with which the West is loaded, but which will not be marketable until the spring of 1862, when a water navigation is resumed.

*Spain.*—The Capt. General, General Giron, who was lately convicted at New York of participation in this nefarious traffic, has been sentenced to death. His execution is fixed for the 7th of Second mo. next.

S. P. Skinner, who was convicted at Boston of fitting out a vessel for the slave trade, has been sentenced to five years imprisonment, and fined \$5,000.

*New York.*—Mortality last week, 322.

The exports of domestic produce last week from this port amounted to nearly \$4,000,000. The import entries of foreign merchandise were nearly \$1,600,000. The money market is well supplied, and the rates easy. The total receipts from customs during the last month were \$1,741,940.

*Philadelphia.*—Mortality last week, 237.

The total funded debt of the city is said to be \$18,530,000.

*Western Virginia.*—In accordance with the almost unanimous vote of the people at the election on the 24th of Tenth month, the convention to form a new State out of Western Virginia assembled at Wheeling on the 26th ult. The attendance was large, thirty-seven counties being present. It was resolved to refer the question in relation to the propriety of organizing a new State. The work of forming a state constitution has been assigned to committees. It is supposed that a gradual emancipation clause will be adopted in the constitution.

*Washington.*—Real estate in and around Washington was much depressed in value, so that in the month of August, the price of the war; but the "Star" of that city says that it is rapidly recovering from the temporary shock which reduced the prices of all kinds of property. Land in the vicinity has been lately sold at double the price it would have brought six months since. The rebel blockade of the Potomac does not interfere much with the passage of small vessels laden with wood, coal and provisions.

The Congress of the United States assembled in Washington on the 2nd inst., thirty-seven senators and one

hundred and fourteen representatives being present at the opening of the session. The States of Delaware, Maryland, Kentucky and Missouri, are fully represented, and Virginia has two Senators and three representatives from the western part of the State. Arkansas, Alabama, Florida, Georgia, Louisiana, Mississippi, North Carolina, South Carolina and Texas are wholly unrepresented, and Tennessee also, except a single senator, who was chosen before the State seceded.

*Chicago.* At the U. S. mint during the past month consisted of 1,875,870 pieces, of the value of \$3,015,225.

*The Grain Markets.*—The following were the quotations on the 2nd inst. *New York.*—Wheat active, sale of 350,000 bushels a \$1.21 a \$1.25, for Chicago spring, \$1.29 a \$1.30, for Iowa and Wisconsin, and \$1.32 a \$1.34, for red state and western; \$1.43 a \$1.45, for white Michigan. Corn, sales of 260,000 bushels a 67 cts., for western yellow, and 63 cts., for inferior mixed. *Philadelphia.*—Prime red wheat, \$1.35 a \$1.39; white \$1.45 a \$1.48; old red yellow, 63 cts.; new, 47 cts. a 55 cts. *Oct. 40.* a 45 cts.

*The War News.*—The Summary, which for some years past has been furnished to the readers of "The Friend," has aimed at presenting a condensed statement of the more important events transpiring in this and other countries, as gleaned from the daily press. The object has been to give a brief and accurate statement of the outline of facts within the narrow limits assigned, without comment or expression of opinion upon them. When the insanely wicked and unnatural rebellion in the South broke out, and the United States government rendered aid to the rebellion, there was of necessity, a marked change in the character of the Summary. The leading events since, have been mainly those connected with the disturbed condition of the country, but such as they were, the compiler has endeavored to give them without undue coloring or false bias. It is hoped such a brief weekly record was acceptable to our readers generally, but from several intimations received lately, it is believed a portion of them would prefer obtaining their information respecting the war, from other sources, thinking it out of place in "The Friend;" it is therefore omitted the present week.

Nothing could be further from the mind of the writer than a wish to encourage in any way the fell spirit of war—a spirit which he deems wholly irreconcilable with the pure, peaceable kingdom of Christ, and he is not aware that he has ever written a single line having such a tendency.

The testimony of our religious Society upon the subject of war is very dear to ever true Friend, and must be faithfully maintained if we are really alive in the Truth.

#### RECEIPTS.

Received from A. Garretson, Agt., O., for Parker Aves. \$71, to 27, vol. 25; from Jesse Hall, Agt., O., \$4, to 27, vol. 25; from Elisha Sidwell and Jos. Lusk, \$2 each, vol. 34; from Henry Knowles, Agt., N. Y., for Jos. Collins and Alonzo Knowles, \$2 each, vol. 34, for Benj. Boss, Benj. R. Knowles and David Narmore, \$2 each, vol. 35.

#### WEST-TOWN BOARDING SCHOOL.

A Stated Meeting of the Committee to superintend the Boarding School West-Town, will be held there on Fourth day, the 18th of Twelfth month, at 10 o'clock, a. m. The Committee on Admissions will meet at 8 o'clock the same morning, and the Committee on Instruction at 7½ o'clock on the preceding evening. The Visiting Conference will meet at the school on Seventh day, the 14th of the month.

JOEL EVANS, Clerk.

Twelfth month 4th, 1861.

The twentieth volume of THE BRITISH FRIEND will commence with the year 1862. Friends desiring to subscribe for this valuable and ably conducted monthly, will please make early application to

J. S. LYNNCOTT,

Haddonfield, N. J.

Terms, two dollars per annum *strately in advance.*

MARRIED, at Friends meeting, Adrian, Michigan, on the 14th of Eleventh month, 1861, Moser, son of Aaron and Ann Comfort, and SARAH M. daughter of Thomas and Lucy Mosher, both of the same Monthly Meeting.

DIED, on the 30th of Ninth month, JESUSA WRITALE, M. D., in the sixty-second year of his age. A member of Northern District Monthly Meeting.

# THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XXXV.

SEVENTH-DAY, TWELFTH MONTH 14, 1861.

NO. 15.

PUBLISHED WEEKLY.

Price Two Dollars per annum, payable in advance.

Subscriptions and Payments received by

JOHN RICHARDSON.

AT NO. 116 NORTH FOURTH STREET, UP STAIRS,  
PHILADELPHIA.

Postage to any part of Pennsylvania, for three months, if paid in advance, three and a quarter cents; to any part of the United States, for three months, if paid in advance, six and a-half cents.

From "The Leisure Hour."

## The Miners of Cornwall.

For the larger proportion of the copper and tin, and much of the lead and various other metals, used in our manufactures, we are indebted to the labours of about thirty thousand of the industrial classes in the county of Cornwall. These thirty thousand of our compatriots are in some respects a peculiar race, of whom the world knows little, and who have a substantial claim to more consideration and regard than is generally awarded them. As we are convinced that the reader will find it worth his while to make their acquaintance, we shall endeavour, as briefly as may be, to present him with such a sketch of the workers in and around the mines of Cornwall, and their circumstances, as will perhaps effect that object.

The habit of the Cornish miners is invariably at no great distance from the mine in which they and their families find employment, wherever that may be, and that for a reason which will presently appear. We may divide them into three classes: the tut-workers, the tributers, and the surface-workers. The tut workers, (or task-workers), are those who sink the shafts, excavate the lateral galleries, fix the supporting wood-work, and perform various other duties in preparing the mine for the excavation of the metals, and in maintaining it in working condition. All their work is done by task or by contract, which in their case is the same thing; and when employed they know perfectly well what their earnings will be.

Such is not the case with the tributers, however: these cannot be tasked, for obvious reasons, one of which is, that they would have small inducement to energy if they were so employed.

The tributers work the mineral vein, or lode, as it is called among miners, and, by the system on which they work, it is made their interest to get out as much of the ore as they can as they possibly can. Instead of fixed wages, they receive a "tribute" or per-centage upon the value of all they dig out—an arrangement which, if it exposes them to loss of labour when the mine becomes suddenly unproductive, may chance to enrich them of a sudden by a stroke of fortune. Of course the amount of the tribute varies with the good or bad character of the mine—its productiveness or non-productiveness. In fact, this variation is so great that the tribute may be as low as two and a half

per cent, or as high as fifty or sixty per cent, upon the value of the ore obtained; and this may happen without affecting the receipts of the workmen, who may earn just as good wages in the one case as the other, because the tribute will rise or fall in proportion to the amount of labour involved in the excavating processes in relation to the result produced. This system of labour has been in operation in the Cornish mines for many generations, and is found to work well; and though it is open to the objection that it makes a speculation of the labourer's toil, yet that objection is really to a great extent obviated by other arrangements, and it is not easy to see how the plan is to be superseded with advantage either to the employer or the employed.

The third class, or the surface-workers, are those who do not enter the mine at all, but who are employed in rough sheds and workshops at the pit's mouth, in washing, sorting, stamping, and preparing the ore for the use of the smelter. These amount to above one-third of the mining industrials in Cornwall, and consist for the most part of women, young girls, and children of both sexes.

The tut-workers and the tributers work in the mine eight hours out of the twenty-four; and, considering that they have to breathe an atmosphere seldom as low as 50°, and often much higher, and one that is invariably moist as well as hot, and that their exertions are most laborious, eight hours is long enough. But there is another drawback besides the heat and moisture; in most mines, the depth the worker has to descend is something appalling, and the mode of descent most wearisome, and not a little perilous. Thousands of miners have to drive daily to their labour to a depth exceeding five or six times the height of the mountain, and to make the descent by a ladder placed almost perpendicularly in the shaft. It has been calculated that one-fourth of a miner's muscular force is exhausted daily in thus going to and returning from his work—the return journey, or the "coming to grass," as the miners call it, where the depth is so great as that above mentioned, occupying about an hour, and landing the miners at the top in a state approaching to utter prostration. It is satisfactory, however, to be able to state that this tax on the toiler's energies is in the course of abatement, through the substitution of "man-machines," by the use of which the workers in many mines are already lifted up and down as so much dead weight.

Let us now follow the miners to their work. Yonder is the mine; you cannot see the shafts, but you see the tall chimney of the monster steam-engine that pumps the mine dry; you see a group of rough sheds partly roofed and partly open to the sky, and here and there around and in front a number of lofty scaffolding and platforms, surmounted with iron chains, blocks, and pulleys. Besides these things, there are the grim outlines of vast wheels and machinery. Towards these things as a centre, a number of tram-roads, laid in the soil, converge from all directions; and as the dawd begins to glimmer over the barren waste, the chimney belches forth its black smoke, the ponderous

wheels commence their deliberate revolution; chains clank, cyclopean hammers bang, and a grinding grinding sound rises in the tranquil air, which all day long shall boom across the moor, and give note to the quiet heavens of the toil and turmoil of man in the bowels of the earth.

The undulating waste around the mine is dotted in various directions with the low-roofed cottages of the miners, and from these, at the sun's level rays penetrate the morning mist, the miners and their families are seen emerging and plodding towards the scene of their daily avocations. The women, girls, and children, whose work is upon the surface, disappear in the sheds, where we may leave them for a while, while we follow the husbands and fathers to their labours below.

The first thing the miner does is to step into a house allotted for the purpose, where he strips off his clothes, and puts on an underground suit of coarse flannel. Thus equipped, he hastens to descend the shaft, which, by a series of ladders, leads him through the darkness, lighted only by the candle stuck in his cap, to a depth of perhaps fifteen hundred feet. Arrived at his level, he traverses the gallery to reach his peculiar "pitch," or place of work, and there, in company with his comrade, or, if the lode is roomy enough, with his three or five comrades, or even more, passes the day in violent bodily exertion, in a temperature almost tropical, by the glimmer of the tallow candles. His work is often of the severest kind; it is not the friable coal that he has to dig through, but the hard granite or the slate rock, and, were it not for the use of gunpowder, with which he blasts the stubborn masses, he would sometimes labour in vain. He is urged to do his utmost by the system of payment, which proportions his reward to his success, and in consequence allows himself no relaxation in working hours. Not indulging in idle moments, he is almost as little given to idle words; as a rule, if you listen for an oath, you are likely to listen in vain. The miner will be heard at times humming the verse of a Methodist hymn; and his speech, when he talks, is apt to be to the purpose in hand. In the course of the day, the miner is visited at intervals by the captain of the mine, who sees that all is going right, who directs his operations, and whose frequent presence prevents the fraudulent transfer of ore from one "pitch" to another, by which dishonest workers are tempted to increase their amount of tribute. For his personal comfort while at work, the miner is dependent upon the freedom of ventilation in the mine. When his "pitch" is situated at a great distance from the shaft, and at a great depth, his situation is all but intolerable. In such places the temperature is nearly ninety degrees, and men have been known to lie near half a stone in weight by very short labour under such circumstances.

This picture is not very attractive; but, on the other hand, it is interesting in the dark shadows which chequer the prospects of the mining collier. The underground worker of Cornwall is happily not subject to be stifled by poisonous gases, or blown to atoms by explosions of fire-damp; he carries no Davy's lamp; he does not need any

safeguard of the kind; and his wife and children have no fear, when he descends to his work in the morning, lest he should be hauled from the pit a blackened corpse, or the fallen mine should prove his grave.

But, to return now to the surface-workers. The ore, when it is lifted from the mine and brought on the tramway to the rough sheds to be dressed, is mixed with a large quantity of extraneous matter, such as slate, granite, quartz, and various earths. To free it as far as possible from this useless waste, and to prepare it for the furnaces of the smelters, is the function of the surface-workers, who do what is termed the "grass-work" of the mine. The first thing to be done is to break the whole of the produce of the pit into small gravelly pieces. In mines yielding pure ore, the pieces, when thus broken, are ready for the smelter; and in most mines yielding a profit, parts of the lode or lodes will be found thus productive; but these are exceptional cases, and the major part of the mass brought "to grass" has to undergo a regular course of dressing before the smelter will offer a price for it. The process of dressing varies in different places, though some of the details are the same. Our limits will not allow us to enter minutely on this part of the subject, nor would the general reader thank us for so doing. Enough to say, that the true ore is separated from the waste matter with which it is solidly incorporated, by repeated washings and crushings, effected partly by hand and partly by appropriate machinery.

The young girls and children sort the mass, according to a plan which experience has shown to be profitable; and a powerful machine, similar in principle to that used in the Staffordshire Potteries for crushing the flint, and with which a number of ponderous hammers are worked by steam power, is used for crushing it to small fragments and to powder. The crushed mass is subsequently subjected to various washings, in a series of apparatus differing somewhat in different mines, but all effecting the same object—the separation of the ore from the waste. Without an abundant supply of water, the thing could not be done at all; but the drainage of the mine supplies the water, which thus, from an enemy underground, is transformed to a valuable ally above. The ore being much heavier than the waste, it is clear that, if the whole mass be thoroughly crushed and comminuted, and then carefully washed, the latter may be all carried off by the water and the former left in a state of purity. An approximation to this result is, however, all that in practice is obtained, for the very obvious reason that it would not pay to prosecute endless washings. Much of this labour, which goes by the technical names of spalling, buddling, jigging, trucking, etc., is performed by the miner's family, his wife, his sons, and his daughters, who work on the whole about ten hours a day in summer, and something less in winter. Their avocation, though specially grimy and sloopy, is not unhealthy, and the sounds of cheerfulness and mirth are as sure a concomitant of the grass-work of a mine, as are the turbid streams of water and the red ochre hue of the laughing chattering workers. The surface-workers have an hour's interval each day for dinner, which they take in summer on the slope of the nearest hill, which they are willing to exchange for the blacksmith's shop or the drying-room in the frosts of winter.

The underground worker is the first to finish his day's work. One by one, as sunset is nearing, they may be observed rising up out of the several shafts, fagged, weary, and dirty, into the light of day—the remainders of their bunches of candles dangling at the skirts of their jackets. Their

flannel suits are sodden with the steam and reek of the mine, and they make at once for the engine-house, where they wash themselves clean in the warm water of the engine-pool, hang up their underground clothes to dry, and put on once more their decent garments. By this time the surface-workers have also finished their daily task; wives and mothers, girls and boys, have laid aside their implements of labour, and have washed their faces, and the several families are now seen re-uniting, and retracing their way to their cottage homes. But the evening is yet young, and, if it is summer time, there are yet a few hours of light remaining, during which the miner employs himself with his boys in cultivating a small patch of land which he has inclosed from the waste, and which furnishes him with many a humble meal for his family. By the hour of curfew, the worn miner is generally bound for bed: he has enough of candlelight and darkness in the mine, and (after the first flush of youth has flown) is seldom a night-watcher.

But what does the Cornish miner get by such a life as this?—what are his wages? We cannot give a definite reply to these questions. The tut-worker, as he undertakes a certain contract, may be pretty sure of his earnings; but if he makes a bad bargain, he must abide by it, and, in that case, will be but scantily paid. It is found, however, on the average, that the tut-worker's income is about fifty shillings a month. The tribute-worker is differently situated; he agrees to dig out ore to so much per-centage on its value, and not till the ore he has dug is bought by the smelter does he know exactly what he will receive. If he is in want of money, however, he can draw on account, and money thus drawn is emphatically called *subsist*; but, as the sales take place every week, he is not likely to long in ignorance of the state of his finances. The sales of copper ore are held at Redruth, Truro, and Poole, and the ore is sold by sample, the samples having been first assayed by assay masters. It is said that at these sales thousands of tons of copper ore are sometimes sold without the utterance of a single word. The agents for the copper companies seated round a table, hand up a ticket stating what they will give per ton for the several samples. These written tenders are afterwards printed in a tabular form; the highest sum offered for each lot is underlined in the printed table, and who has made the offer is in the purchase column. It happens not unfrequently, when the result becomes known, that the purchasers had drawn nearly all that is due to them in the shape of *subsist*, and have but a small balance to receive. On the average, the tributer gains but a trifle more than the tut-worker.

The Cornish miner is generally a civil, thoughtful, and rather taciturn individual. He is habitually provident, and out of his weekly wages of twelve or fourteen shillings will insure in a sick club, and save a trifle for old age, or a rainy day. He is subject to a disease called the miner's consumption, of which it is said that nearly half the miners die; and, as a rule, he is past work before the age of threescore, an age at which the agricultural labourer is often in his full vigour. This prospect of life is, perhaps, above the average of that of the industrial classes in the mass, and the Cornish miner, therefore, need not complain. There is a fatal exception, however, to be made in the case of the lead miners; these men are invariably the victims of slow but sure disease, which, terminating in consumption, generally consigns them to death before their fiftieth year.

In intellect the Cornish miner is far superior to the field-labourer, or the rough miners of the north.

His necessities generate a shrewdness which grows with his years. He has to exercise his judgment in contracting for work, whether by task or by tribute, and in a sense may be called his own employer. His wages are dependent on his skill and his capability of forethought, as well as his industry, and a blunder in his contract may subject him to a long period of poverty. On the other hand, there is always the hope, or the chance, at least, of good fortune occurring, and he is not without his bright visions of ease and competence, though these are very seldom realized. All this sharpens his faculties and affords them healthy exercise, and the result is evidenced in the long-run by the growth of a rather superior intelligence upon common subjects. This may account in part for his susceptibility to religious impressions; for it is the densest ignorance that is most impervious to religious teachings. In reference to this subject we may record that, throughout the whole of the mining districts, the Sabbath is observed and honoured in a way that affords a remarkable contrast to the practice which obtains in too many of our industrial localities. Everywhere the pitmen are seen on the Sunday, as the hour of service approaches, wending, with their families, towards their several places of worship. All are decently clad and scrupulously clean, and they mark, by the sobriety of their demeanor, their reverence for the day of sacred rest.

*The Main thing in Religion.*—The main thing in religion is to keep the conscience pure to the Lord, to know the guide, to follow the guide, to receive from him the light wherewith I am to walk; but to wait till the Spirit make them manifest to me; not to run into worship, duties, performances, or practices, because others are led thither, but to wait till the Spirit lead me thither. He that makes haste to be rich, (even in religion, running into knowledge, and into worship and performances, before he feels a true and clear guidance,) shall not be innocent; nor the Lord will not hold him guiltless, when he comes to visit for spiritual adultery and idolatry. The apostles were exceedingly tender in this point: for though they certainly and infallibly knew what was to be believed; yet they were not lords over men's faith, but waited till He who is Lord of the faith, would open the way into men's consciences. They did not take upon them to be able to turn the key, to let in truth and conviction into men's spirits, (as men in these days have been too apt to undertake;) but directed them to Him who had the key, there to wait for the conviction and illumination of their minds, and so to receive in, as they found him give forth to them.—*Isaac Perinington.*

*A Roman Town in France.*—The French Archeological Commission has recently been making excavations on the site of the buried Gallo-Roman town of Port, (*Portus Abnonius*.) At only a few inches below the surface of the soil are the ruins of a vast Gallo-Roman habitation. Between the remains of the walls, which are about three feet in height, are fragments of pavements in concrete, mosaic, marble, and brick, all for the ground floor apartments. Fragments of pottery and of earthenware, vases, tiles, bricks used for stores, articles and household utensils, together with coins, medals and jewelry, etc. have been brought to light and carefully preserved. Other excavations, at a distance of between two hundred and three hundred yards, have led to the ruins of other buildings.

Resign and deny thyself wholly; for though true self-denial is harsh at the beginning, it is tough in the middle, and becomes most sweet in the end.

## Scanlonbury's Ancient Testimony.

*Testimonies of Ancient Friends revived, respecting the changeable moods of the world, addressed to those in the station of parents.*

(Continued from page 107.)

How many are the complaints of Israel's degeneracy which may but too aptly apply to us as a people, also greatly favoured and widely departed from the way cast up:—"he was found in a desert land;" then his inscription was holiness to the Lord; he was compared to "grapes in the wilderness; to the first ripe in the fig-tree, but they went to Baal Peor;" &c., then, "the glory of Ephraim departed like a bird from the birth, and Ephraim was bereaved of his children," even when he had brought them up. When Israel joined in affinity with the nations, he went out of that divine inclosure allotted him, and thereby became a prey to his enemies: and it is also as we have been drawn out, that the enchantments have prevailed, and the beauty and goodness of our tents have been spoiled.

Let many desolate houses now bear testimony. Where are the children or descendants? Can it be said that instead of the parents there are the children in the Truth. Where are many, who but a few years since appeared innocent children: how are they robbed and spoiled, and led captive into a strange land. And if our children take the same liberties that have carried many into the world, and others to ruin every way, what solid ground have we even to hope their preservation in the Truth?

If we put our children in the way to shun the cross, or furnish the means thereunto, how can we seek for their divine protection? Shall the unfaithful or divided heart draw nigh to offer an acceptable sacrifice to Him who knoweth what is in man, and hath declared that "every man of the house of Israel, who setteth up his idols in his heart, and cometh to the prophet, such he will answer according to the multitude of their idols?" It appears that Eli did not let his sons pass without admonition; and had he used his power of restraint, their iniquity would not have been laid upon him, nor is it likely the ark of the covenant would have fallen into the hands of the Philistines.

Seeing then that we have a power and a trust committed to us over our children, while they are in a state of dependence, shall our indulgence or neglect, any more than Eli's, be purged by sacrifice; or by offering: nay, rather have we not seen in degree the sentence fulfilled on many who have suffered the wills of their children to rise above the testimony of Truth. Some have been cut off in the flower of their age, and some that remain, instead of adding comfort to their parents in the decline of life, have been instruments of bitterness, even "to consume the eyes and to grieve the heart." Eli was also admonished, by being reminded of the divine visitation to his fathers, when "they were in Egypt in Pharaoh's house;" and did not the same power also plainly appear even to our fathers, and delivered them from grievous servitude to the prince of this world (the prince of the power of the air and airy spirits), who still ruleth in the children of disobedience? "What then have we to do to go again in the way of Egypt," or even to put upon our children any of the badges of the house of bondage from which we have been redeemed; or what can it avail to garnish the sepulchres of our fathers, or to claim a descent from the faithful, if we let fall their testimony and example; and in such defect, if we had sprung from Noah, Daniel or Job, could they redeem either son or daughter? Could even the

daughter of the patriarch Jacob be preserved when she went out to see the inhabitants of the land? She was taken in a snare which troubled Israel, and brought even him (who was called a prince that had power with the Most High) to servitude more closely into the state of his household, before he built an altar to renew his covenant in Bethel: where in the day of his distress, he had been favoured with an heavenly vision when he anointed the pillar, and vowed a vow to the Lord.

Seeing then that many of our children have not only gone out to see the people of the land, but have introduced their habits and manners among us, have we not also need to cleanse our families from the vanities of the world, before we can with clean hands offer sacrifice, or availing call upon the name of the God of Jacob?

Our ancient Friends compared the marks of the world's spirit in clothing to the signs of leprosy, which sometimes appeared not only on the bodies, but also on the garments, and on the walls of the houses of the children of Israel. And if we cannot consistently gratify our children in their desires after those things which our forefathers considered as the plague of leprosy; much less if parents kept their places, would the spots of the world appear upon innocent babes, before they know their right hand from their left; yet in whom the propensities of the world might too soon appear without the aid of such early cultivation by the hands of the parents, to whom, in such instances, a double portion of blame must attach: who, instead of dedicating them to divine disposal for Nazarites or for prophets, seem to dedicate them to the world by fixing its badges upon them, which are suares likely to entangle their unfolding faculties, and also to promote a desire for liberty in those who are more grown; and is not this like giving the Nazarites wine to drink and saying unto the prophets, "Prophecy not?"

The effect of a worldly spirit is doubtless apparent in many things amongst us besides dress. Even deviations from simplicity and conformity to the world may be observed in the houses and equipages of some who appear plain in their apparel, which cannot fail to be an occasion of stumbling to the youth amongst us, and also to the serious of other societies; and we have each need to look well to our respective propensities, and consider whose mark or standard we bear. But an imitation of the world in dress is the object and subject of those remarks; and perhaps there is no deviation amongst us that is so general, that so immediately attaches to our persons, and seems to affect sobriety and modesty, so much as dress, though considered by some of the professors of Truth as a thing of little consequence. In support of this opinion, so opposed to the testimonies of our predecessors, it is alleged that some, who appear in modish habits, are evidently under serious impressions, and discover much religious sensibility; whilst others, in a plain dress, but too plainly evince that an earthly spirit hath absorbed the dew of their youth; but it would be a superficial conclusion to infer from hence that dress is of no importance.

(To be continued.)

For "The Friend."

## A Word of Encouragement.

It seems the part of faith to recognize in the dispensations of Divine Providence the hand of mercy and wisdom, believing that He who created all things by the word of his power is yet able and disposed to work for the good of his creatures, and the glory of his own ever-blessed and worthy name. Unto all things he hath appointed their season, and

these we are bound to believe shall work together for good to those that love and fear him; so that the Lamb and his followers shall have the victory, even though trials and temptations, and manifold sufferings be their allotment—though the enemy may be permitted to magnify himself and roar against them.

To the tribulated followers of a suffering Redeemer, there seems a word of encouragement, from Him who "maketh darkness his secret place," and "the clouds are the dust of his feet." The wing of his goodness is still over his church and people, whom he will deliver from the pride of man, and hide from the strife of tongues; scattering and subduing their enemies by his own holy power, even as in former days when the persecutor and defiler was laid low. The spirit of self-exaltation, from whose vaunting we have suffered, being brought thereby into captivity, the Lord will lift up his standard against, so that it shall not continue to prevail against the cause of our espousal, as we continue to wrestle for the blessing of deliverance and preservation.

To the wrestling seed, the Lord will continue to manifest himself, causing them in due season to behold of the travail of their souls and be satisfied; and "the watchmen shall see eye to eye when the Lord bringeth again Zion," she "shall be redeemed with judgment, and her converts with righteousness," to the praise of his name and the joy and rejoicing of all his children.

In sufferings and deliverances, it seems not designed or meet that we should have respect to ourselves alone, but also to the good of others, and the glory of God; and that the cry of the church should be, "God be merciful to us, and bless us, and cause his face to shine upon us;" and for this end, "That thy way may be known upon earth, and thy saving health among all nations;" and again, "Restore unto me the joy of thy salvation, and uphold me by thy free spirit; then will I teach transgressors thy ways, and sinners shall be converted unto thee;" so that when she who hath been tossed upon the waves of affliction and temptation shall be brought out of the furnace, there may come out with her abundance of blessings. "Oh Judah, he hath set a harvest for thee, when I returned the captivity of my people."

A time of deep suffering and proving seems to have ever been the allotment of the church, before it hath been redeemed from accumulated corruptions, and brought again into the obedience of faith, and the enjoyment of harmony and peace. And may we not now believe that the darkness and cloudiness through which we have been passing—and in which we seem still to be groping, even till the night is at hand—is but the prelude to a brighter day, when the dispersed of Judah, and the outcasts of Israel, may again be gathered, by the same divine Power which raised us up in the beginning to be a people. Let this be our faith—knowing that the greatest darkness sometimes precedes the brightest day, and this near the time of its dawning—that we may witness a corresponding experience. "As thou hast believed, so be it done unto thee." Let us seek thus to believe, hounding ourselves under the mighty hand of God, which is upon us for good, even that He may bring down the hills and exalt the valleys.

Eleventh month, 1861.

Where the river is the deepest the water glides the smoothest. Empty casks sound most, whereas the well-fraught vessel silences its own sound; and as the shadow of the sun is largest when his beams are lowest, so we are always least when we make ourselves the greatest.

For "The Friend."

## BIOGRAPHICAL SKETCHES

Of Ministers and Elders and other concerned members of the Yearly Meeting of Philadelphia.

JOHN SHARPLESS.

John Sharpless, son of John and Hannah Sharpless, of Ridley, near Chester, was born sometime in the year 1699. He was married on the 18th of Ninth month, 1725, to Mary Key, who soon deceased, and on the 31st of First month, 1729, he was united to Elizabeth Ashbridge. He appears to have been a sound, judicious Friend, and stood for a considerable time in the station of an elder. He deceased Eighth month 17th, 1769, aged seventy years. His widow survived him but a few months, dying Twelfth month 18th, 1769, aged fifty-eight years.

PIERRE HADLY, a minister, deceased Third month 4th, of the year 1769.

SARAH BEAUMONT, an elder of Wrightstown, deceased Third month 18th, of the year 1769.

ESTHER ATKINSON, an elder of Burlington, deceased Ninth month 9th of the year 1769.

And during the same year, the particular date not reported, the following elders deceased, viz:—MARGARET ROSE and MARGARET BUNTING, both of Germantown; MARGARET BACON, of Salem, New Jersey, MARY SHOTWELL, of Rahway, and JOHN WILLIAMS of Shrewsbury.

NICHOLAS AUSTIN.

Nicholas Austin was born about the Tenth mo. 1695, in New England. His residence after manhood was at Abington, near Philadelphia, where he was pretty early in life brought under the power of Truth, and was qualified for usefulness in the church. On the 27th of Fifth month, 1721, he was married at Abington to Jane Fletcher. About the same time he came forth in the ministry, in which he laboured to the satisfaction of his Friends, and for the furtherance of the blessed cause of Truth, for nearly or quite fifty years. His first certificate for traveling abroad was granted him Sixth month 6th, 1723, to visit New England, and Thomas Fletcher, a valuable Friend, of whom we have already given an account, was his companion. In the year 1728, he again visited New England, bringing returning certificates that his "visit was acceptable," his "testimony edifying," and "his conversation agreeable." In 1738, he visited Long Island and New England, as he did again in 1740, with a valuable fellow labourer in the Gospel, Thomas Wood. In 1744, he received a certificate to visit the northern colonies, and in 1747 he was again generally through New England. In all these visits he brought back with him testimonials of the unity of Friends with his Gospel labours. Being left a widower, he, in the summer of the year 1753, married Sarah Field, a fellow helper in the Gospel, of Middletown, Bucks county, who after ministering to his comfort for eleven years, was taken to receive the reward of well doing, leaving him yet toiling in the church militant. Beside his various travels abroad, he was industrious in his Master's service near home, and having finished the work allotted him below, he was gathered home in peace, First month 15th, 1770, being seventy-four years and four months old.

MARY NICHOLS.

Mary, the wife of Thomas Nichols, was born in England, about the year 1680. The time of their marriage is unknown, but they obtained a certificate for themselves and children from a meeting at Rugby, in Staffordshire, dated Seventh month 21st, 1711. This certificate was accepted by Phila-

delphia Monthly Meeting, Sixth month 9th, 1712. These Friends did not tarry long in the city, but removed with their family first to Concord in 1714, and from thence to within the limits of Newark Monthly Meeting, about the close of 1715, the certificate from Concord bearing date First month 12th, 1716, being received at Newark for them in the following month.

Although no mention is made on the minutes of the Monthly Meeting at Newark of the fact, yet it appears that Mary stood in the station of an acknowledged minister. At least she did a few years afterwards, and no notice of her recommendation can be found. She was one of the most useful members of that monthly meeting, abundantly employed in the discipline and in religious visits to the families of Friends. Her services in the ministry of the Gospel were acceptable to the church, and she long laboured in the unity of the one spirit, and died in near fellowship with the faithful in Christ Jesus. Her death took place Third month 14th, 1770, being very aged, probably about ninety years old.

JOSIAH FOSTER.

Josiah Foster was born in Rhode Island about the year 1682, of honest parents, professors of the Truth, as held by the members of the Society of Friends. From his own account it appears that in his youthful days he was fond of the vanities of the world, and lived much in its spirit. Soon after arriving at manhood he removed to the province of West Jersey, where he settled at Evesham, marrying Anne, a daughter of Benjamin Burden. He was then, as far as we can understand, a sober orderly citizen, but he had not known a thorough change of heart, and reconciliation unto God through Jesus Christ our Lord. He was first effectually reached through the powerful ministry of our Friend, Thomas Wilson, and remaining faithful to the visitations of Divine Grace then granted him, he grew in the saving knowledge of the Truth. Though abiding under the cross of Christ, and watching unto prayer, he witnessed his own strong will to be brought down and subdued. In after life, he could not but with fervent gratitude at seasons, pour forth his acknowledgment to the Father of mercies for the blessed visitations and assisting baptisms of his Holy Spirit. He knew from heart-felt experience, that it was not by works of righteousness, but by his own mercy that the Lord saveth us, even by the washing of regeneration and the renewing of the Holy Ghost. Yea, he had witnessed these shed on him abundantly through Jesus Christ our Saviour.

He grew in grace, became a father and an elder in the church, anxiously concerned for the promotion of the cause of Truth and righteousness in the earth. His heart longed that that blessed spirit of grace and Truth, which had in measure set him free from the body of sin and death, might reach unto others, and that many a ye, all the human family might be gathered thereunto. He was a judicious father in the Truth, giving tender advice and counsel to such as were seeking to act under holy influences, yet he was a sharp reprover of obstinate sinners. His honest, unflinching support of right in conduct and conversation, gave great force to his advice and his reproofs. In conversation he was free, and was easy of access. In meetings for worship and discipline, his deportment was awfully reverent and unaffectedly grave, as in solemn waiting he laboured for the arisings of life. This qualified him in many ways to serve the church and his brethren.

He was of a benevolent spirit; his house and his heart were open for the cordial entertainment of

strangers, especially those who were travelling in the service of the ministry of the Gospel of Christ. Yet his benevolence was not confined to the members of his own Religious Society. His heart expanded in love towards all, and being blessed with a sufficiency of this world's goods, he was enabled by a kindly distribution at times, to make the hearts of many widows and fatherless children rejoice. He was a pillar in the church, and in his own family an affectionate husband, a tender and judicious father, and a good master. In society he was a kind and peaceable neighbour, having the love of most or all of those acquainted with him. His conversation and conduct demonstrated to those around him, that he had learned the christian lesson of doing unto others as he would wish others to do to him. His example herein was well worthy the following of all, especially of those who make profession of the same blessed Truth unto which he had mercifully been led.

Having by the Divine blessing on his care and industry realized a good estate, he desired to be released from the cares and cumbrous of much business, and to attain this end he removed to Mount Holly a few years before his death. Here retaining his integrity, love for the truth, living in good esteem with all, his faculties little impaired by age, he quietly and peacefully lived until an apoplectic stroke came upon him. Being thereby rendered unable to assist himself he returned to Evesham, where, in the dwelling of his son, he awaited the call of his Lord to come up higher. A lively sense of divine mercy and goodness accompanied him to the last, of which he frequently gave evidence. His departure took place Fifth month 9th, 1770, he being in the eighty-eighth year of his age.

For "The Friend."

## The Manufactures of Philadelphia.

I have often heard it said by well-informed men, that Philadelphia, including a circle of ten miles radius—was one of the greatest manufacturing districts in the world, if regard be had to the variety as well as the amount of its products. A recent report of the Philadelphia Board of Trade gives much curious information on this subject, some extracts from which, will no doubt, interest many of the readers of "The Friend." The report embraces a complete and authentic census of the manufactures of the city, which it is said, exceed in the aggregate of establishments, persons employed, and value of production, the like return from most single States in the Union. The value of textile fabrics made, is greater than that for the entire city and state of New York in 1855; that of iron and its manufacture is nearly equal, and the aggregate of all classes for this city alone, is half that of the aggregate manufactures of New York city and state in 1855. In this last named account, also, the four-mills, tanneries, saw-mills, salt works, lime and other large country products, amount to more than a hundred million dollars, leaving a little over two hundred million for all others. "Taking from the total production of the city, every article of local consumption, there remains a sum of a hundred million dollars in value of goods made here, and distributed to all parts of the United States, and almost of the world. The exchange which this export brings to Philadelphia is the main source of its wealth, the basis of its prosperity and the assurance of its permanent growth. The population of the city is now fully 600,000, with additions to its built up area taking place during the present year, sufficient to accommodate at least 15,000 persons. One hundred thousand adults are engaged strictly in manufactures and in establishments producing at least

Selected.

## LINES ON A SKELETON.

Exactly forty years ago, the *London Morning Chronicle* published a poem, entitled "Lines on a Skeleton," which excited much attention. Every effort, even to the offering of a reward of fifty guineas, was vainly made to discover the author. All that ever transpired was, that the poem, in a fair, clerly hand, was found near a skeleton of remarkable beauty of form and colour in the Museum of the Royal College of Surgeons, Lincoln's Inn, London, and that the Corator of the Museum had sent them to Terry, editor and proprietor of the *London Morning Chronicle*:

Behold this ruin! 'twas a skull,  
One of eternal spirit full;  
This unwarmed cell was life's retreat;  
This space was thought's mysterious seat;  
But the generous vision filled this spot!  
What dreams of pleasure—long forgot!  
No Hope, nor Love, nor Joy, nor Fear,  
Have left one trace of record here.

Beneath this mouldering canopy  
Once shone the bright and busy eye;  
But start not at the dismal void;  
If social love that eye employed,  
If with no lawless fire it gleamed,  
But through the dim of love was beamed,  
That eye shall be forever bright,  
When stars and sun are sunk in night.

Within this hollow cavern hung  
The ready, swift and useful tongue;  
If falsehood's honey it disdained,  
And where it could not praise, was chained—  
If bold in virtue's cause it spoke,  
Yet gentle concord never broke—  
This silent tongue shall plead for thee  
When time unveils eternity.

Say, did these fingers feel the mial?  
Or with its curv'd rubies shine?  
To bow the neck or raise the gem  
Can little now avail to them?  
But if the page of truth they sought,  
Or comfort for the mourner brought,  
These hands a richer meed shall claim  
Than all that wait on wealth or fame.

Avails it whether bare or shod  
These feet the path of duty trod?  
If from the bowers of ease they fled,  
To seek affliction's baneful shed,  
If grandeur's guilty bride they spurned,  
And made to virtue's cot returned—  
These feet with angel's wings shall vie,  
And tread the palace of the sky.

For "The Friend."

## Musings and Memories.

## LOVE TO MAN.

Our blessed Saviour came in the fulness of Divine love, to save those who were ready to perish. He laid down his life for sinners, that they, through faith in him, might witness their sins forgiven them, and those cleansing baptisms which prepare for an inheritance in the kingdom of purity and peace. Such love for the souls of men sunk in sin and wretchedness, has in measure actuated many of the followers of the Lord Jesus since his day. Some ministers of the Gospel have so longed for the everlasting happiness of all their fellow beings, that nothing seemed too near or too dear for them to part with if the sacrifice might only tend to promote the spiritual good of one poor sinner. The love of others in greater or less perfection is a fruit which the heart of every true christian—the love of the Saviour richly blessed to us, earnestly long that others may partake of the like happiness. Our longings for their spiritual good will tend also to quicken our desire for their earthly comfort. We shall feel for their trials, and if we can, by any exertion of our own, we shall turn away calamities from them. Many instances might be given of ministers of the Gospel, and of earnest hearted lovers of the Truth,

five hundred dollars yearly; while probably 5000 should be added to this number, for manufactures of a grade producing less than five hundred dollars worth, and occupying but a part of the time of one or more persons. These minor occupations may probably be placed at half a million of dollars in value." "The utmost pains" says the intelligent and laborious secretary of the Board of Trade, Lorin Blodget, to whom the duty of making this investigation was intrusted—"have been taken to verify every return in detail, and to prepare every summary from accurate original details only. The summaries were computed with care, and stand just as the final additions made them, no class having been estimated for."

The whole amount of manufactured goods is summed up as being 152,355,318 dollars; being the product of 6467 establishments, employing 75,535 males and 32,396 females, the capital invested in them being \$81,608,502, and the value of raw materials employed \$77,473,677. If we deduct twelve per cent. for interest and wear and tear of capital, these figures will leave a gross sum for wages and profit on capital, of about six hundred dollars per hand employed.

This aggregate is distributed as follows—

Textile fabrics, including cotton, woolen, mixed cotton and woolen goods, silk and hair-cloth, 30,338,917 dollars, produced in 641 establishments, employing 13,234 males and 13,040 females, and \$13,833,266 of capital, with a cost of raw materials of \$15,811,309.

Manufactures of iron and steel in whole or part, 21,594,097 dollars, produced in 873 establishments, employing 15,876 males and 56 females, the capital invested being 15,295,785 dollars, and the value of raw materials 9,953,201 dollars.

The manufactures of gold and silver amount to 4,030,380 dollars, and employ 1,671 males and 278 females. To this must be added the amount of the coinage at the mint, 5,097,032 dollars, which includes \$354,000 of copper and nickel coinage, or nearly \$51 million cents.

The manufactures of wood amount to 6,153,715 dollars, being produced at 592 establishments, employing 4,855 males and 15 females, the capital invested being \$3,278,652, and the value of the raw materials, \$2,457,954.

Of glass, potteries and bricks, the amount is estimated at 3,665,106 dollars, produced in 96 establishments, and employing 2,892 hands. This estimate includes 20 glass works, producing 1,200,000 dollars, owned and the glass sold here, but located in New Jersey.

In and near the city are 19 paper mills, producing annually, 6,160 tons of paper, valued at 1,323,160 dollars, and employing 299 males, and 165 females.

Newspaper publishers, printers, book-binders and book-sellers produce annually, 6,441,403 dollars, and employ 2,933 males and 943 females.

The manufacture of clothing and apparel is carried on in 1,523 establishments, employs 14,142 males and 16,389 females, and the grand total of all objects of clothing and articles of personal wear is 23,758,546 dollars.

The manufactures of leather, exclusive of boots and shoes, amount to 5,928,525 dollars, those of soaps, candles and oils, to 4,261,916 dollars, and of chemicals and of associated articles, to 6,014,459 dollars.

The details of these enormous aggregates are curious and interesting. The baker's bread, ship bread and crackers mount up to 2,214,856 dollars, and employ 878 males and 34 females.

The willow basket and cedar ware sum up 123,518 dollars,—the ink and shoe blacking to

265,000, the boots and shoes to 5,330,000, the malt liquors to 2,223,000 dollars.

Twelve hundred thousand dollars worth of bricks are made—eighteen hundred thousand dollars worth of cabinet ware and two million dollars worth of candles and soap.

The carpets show three millions—chandeliers one million, men's clothing ten millions, roasted and ground coffee half a million, stoves and hollow ware of iron 1,300,000, envelops 48,000 dollars, glue and curled hair 560,000, hats 1,164,000, maps 118,000, ladies' cloaks 700,000, laces, straw goods and other millinery, a million, morocco leather, and newspapers, each 1,700,000, paper hangings nearly half a million, photographs 167,000, artificial limbs 53,000, artificial fingers 56,000 and artificial teeth 324,000 dollars. The marble cutters produce a million of dollars, the meat curers four and a half million, the calico printers, four million. Razor straps amount to 17,500 dollars, saddle and harness to a million, segars to a million and a quarter, the sewing machines to a quarter of a million, the spun silk to half a million, the silk fringes and trimmings to a million and a quarter, starch to 210,000, refined sugar to 6,356,000, tallow to half a million, trunks and carpet-bags to 200,000, type and stereotype plates to 420,000, umbrellas to 1,200,000, and vinegar to 183,000 dollars.

The population dependant on these artisans for support is probably not less than four hundred thousand in a community of at least seven hundred thousand, and that being the probable population of the area represented in these reports. When we reflect that each family of this vast labouring hive around us, occupies in the majority of cases a separate brick house, built with due attention to convenience and ventilation, provided amply with pure water, gas and cooking ranges, when we see that all the means of living are cheap and abundant, when we glance in passing into the neatly furnished apartments, and see the appearance of comfort and plenty everywhere apparent, when we know that the means of good instruction are within the reach of the children of all, and survey the quiet decorum and contented industry so generally prevalent, we have great occasion to rejoice over the solid, and we may hope enduring prosperity of the great city founded by William Penn.

*The Pin of Scandal.*—Wilberforce relates that at one time he found himself chided as "St. Wilberforce" in an opposing journal, and the following given as an instance of his Pharisism:

"He was lately seen," says the journal, "walking up and down in the Bath pump-room, reading his prayers like his predecessors of old, who prayed in the corners of the streets to be seen of men."

"As there is generally," said Wilberforce, "some slight circumstance which perverseness turns into reproach, I began to reflect, and I soon found the occasion of the calumny. It was this: I was walking in the pump-room, in conversation with a friend; a passage was quoted from Horace, the accuracy of which was questioned, and as I had a Horace in my pocket, I took it out and read the words. This was the plain 'bit of wire' which factious malignity sharpened into a pin to pierce my reputation."

How many ugly pins have been manufactured out of smaller bits of wire than even that!

There is no other way than whole-hearted and honest-hearted Christianity to attain the heavenly kingdom.

not called to labour in word and doctrine, devoting themselves, and all that they have had, for the promotion of the Redeemer's Kingdom in the hearts of the children of men. Love for the Lord Jesus has given birth to love for all those for whom he died.

I have had brought to my remembrance this afternoon a case in which a poor christian woman and her young children, were the means, under Providence, of saving many lives. I had been musing on that love which prompts to earnest endeavours to benefit man's spiritual condition, when this incident, showing the earnestness of human love and sympathy for their bodily comfort and preservation, came into mind. At first I did not see how the anecdote illustrated the subject of my previous thoughts, but the more I mused the more harmony appeared between them. Let us give a brief review of the story, which was narrated by an individual named Sherbourn. He was a conductor on a railroad through Western Virginia. In that part of the country, the population being small, the number of stations were few and of course far between. In one place the road passed over the hill side above a valley lying amid the peaks of the Blue Ridge. In this valley three miles from the nearest station, resided a widow of the name of Graff, with her three daughters, the oldest of whom was not over twelve years. A few acres around their small cottage were well cultivated, and in summer time the children always looking nice and clean, were in the habit of walking to the station, three miles off, with berries to sell to the passengers. The conductor, who had children of his own, became very much interested in the little girls, who seemed to have been well disciplined, and brought up in the love and fear of their Heavenly Father, and often when their berries were sold he would invite them to ride in the cars, stopping it near their home to allow them to get out. They were thankful, and a strong feeling of love grew up between them. In the early part of the winter of 1854, the weather was very cold, and the snow lay nearly three feet deep on the mountains surrounding their little valley. On the night of the 26th of the Twelfth month, there was suddenly a change in the temperature, it became warm and rained heavily. Much of the snow was swept from the mountains, laying the valleys under water. That night the train with Sherbourn in it, was passing along the road. It was intensely dark, when about midnight a sharp whistle from the engine started him to his feet. He knew there was danger, and sprang towards the nearest brake, but the brakemen were all at their posts and the train soon was brought to a stand. With his lantern in hand the conductor passed out. There was a great fire of pine logs, and a small distance before the train was a deep gulf, which the snow and rain from the mountain in rushing down into the valley, had torn away. One minute more of onward progress, and the whole train had been precipitated into a chasm, and at the speed in which they were going, it had been morally impossible for any individual in those cars to have escaped with life.

The widow Graff and her children had found out that a slide from the mountain had carried away the rail road, and in that chilling storm they had dragged logs, and brought light brush from their house in the valley below, had built a fire, and kept it up as a beacon, which speaking vividly of danger, ensured the safety of the train. For two hours they had stood beside it, drenched with rain and sleet. As Sherbourn came to them, the widow grasped his arm, and ejaculating thanks to her Heavenly Father that they had given warning in time, she said she would have lost

her life rather than the train should not have been stopped. "Oh! I prayed that we might stop the train, and my God, I thank thee!" The children were crying for joy, and near by stood the engineer, firemen and brakemen, with tears streaming down their cheeks.

The conductor returned to the cars, and on informing the passengers of the wonderful escape they had made, the men and many of the women turned out in the storm to see. When they returned, their pale faces gave evidence that they felt from what a death they had been saved, through the christian heroism of the widow and her children, and they raised in the cars a purse containing \$460, which they presented to her. She declined for a long time to receive any reward for the performance of her duty, but it being suggested that it should go towards enabling her to educate her children, she at last received it on that ground. The railroad company built her a new house, gave her and her children a free pass to ride on their road, and orders were given that all the trains should let her off at her own house. The conductor needed not such an order, they fully appreciated the kindness which she had shown them, and were prepared to return it, whenever an opportunity offered.

Such is an outline of the incident brought to my memory, and as I mused, it seemed to me, that something like the feeling which prompted that noble widow and her girls in that stormy night to work and watch, actuates many of the disciples of the Lord Jesus in their labours for the good of others. Ah! they see, that many of their fellow men in their sinful courses, are hastening as rapidly into the jaws of eternal destruction, as surely as that night train was hurrying onward into darkness to be dashed to pieces in that awful gulf. In various days they endeavour to stop the headlong career of such, before it is too late. Some raise a beacon fire of awful warning; as with language of energy imbued with a holy love of souls they exclaim—"Why will ye die!" Some follow the unawakened, or it may be the despairing sinner into the chamber of pestilence, that if it may be, they may be enabled even from the very jaws of death, to lead the poor sinner to the arms of the Saviour, who can save to the very uttermost those who come unto him. Yes, some through intense love for the brotherhood, have laboured even in the midst of pestilence to arouse, to alarm, to lead the unawakened to Jesus Christ for salvation, to stir up the faithful yet desponding ones, to turn to him for consolation, and have joyfully taken all the risk which the polluted atmosphere they breathed in ministering to the sick, could bring upon them, yea, have with gladness toiled on, when they felt assured death would soon be their portion.

As I have mused on the love for the souls of others which has been manifested by the saints, many events of history have crowded on my mind. I have thought of John the Evangelist, following the backsliding youth into the haunts of robbers to reclaim him; of Paul's vehement outburst of love towards his lost brethren of the house of Israel; and of Roger Gill's pressure of spirit to come to Philadelphia to die for his friends there. We need not give a list of those in whose actions this unselfish love has been in dominion. This we may be assured of, that every true christian feels it stirring within him; the brighter and heavenlier, the more he resembles his Divine Master, who died that we might live, who gave his life, the just for the unjust, that he might bring us to God.

Be not proud of riches, but afraid of them, lest they be as silver bars to cross the way to heaven.

*Sleep.*—The first sensation of drowsiness is nature's call for sleep. Waking shows the body is rested. After the degree of strength of which the state of the system is capable, is restored by sleep, longer stay in bed only relaxes. He perverts reason who, by a habit of artificial excitement, keeps awake so late that he is not ready to rise by day-break—nature's undoubted signal for quitting repose, obedience to which secures a desire to rest at the fit hour. Some people close their shutters against it. George III. consulted his household physicians separately, as to the modes of life conducive to health and longevity; and as to the importance of early rising, there was full coincidence. Old people, examined as to the cause of their longevity, all agree that they have been in the habit of going to bed early, and rising early. In debilitated people, a degree of fever, or something resembling it, comes on toward evening; going very early to bed is of great consequence to them. Rising an hour or two earlier than usual often gives a vigour which nothing else can produce. Many people, at waking, feel a disposition to rise; they lose it by indulging in a lethargic state, or lolling longly in bed. We lose vigour by lying in bed in health longer than for sleep; the mind is less tranquil; the body than is less disposed for refreshing sleep; appetite and digestion are lessened. After long or late mental exertion, sleep is a watch; the thoughts continue themselves, effecting useless fatigue. Some people cannot go to sleep; they hope to find refreshment in an additional nap; another, and another leaves them more languid; they fancy themselves unfit for exertion until they have taken a breakfast, which they make no effort to merit. Nothing breaks up the strength sooner than want of sleep at the hour nature obviously designed for repose, marked as well by the regular return of day and night, as by our own feelings, if not pre-empted by artificial habits. Labour, which is light in the day, is burdensome in the night. The accumulated amount of the day are sufficient for the temporary exhaustion of the system; the rest of the night is requisite to recruit us for each successive day.

Large springs should send forth their waters without pumping. Your benevolence should seek the poor, before the poor seek your benevolence. Hospitality is seed, and the husbandman does not become wealthy by sowing his seed, but by sowing it.

## THE FRIEND.

TWELFTH MONTH 14, 1861.

The discipline of the religious Society of Friends was instituted under the authority of Christ, and framed for the building up and preservation of the church in the faith, and for keeping the members in the observance of "all things whatsoever He had commanded them." If Christ is the author of that faith and the obligations connected with it, then any change which modifies the one or lays hurtful to the other, must be unauthorized by him, and unprofitable to the best interests of the society.

It is one of the natural results of the want of a clear comprehension of the faith of Friends, or a departure in heart from it, to seek for a change in the discipline of the society, as it was established under Divine Wisdom, by faithful members in times gone by; when there were few if any within its borders who called the truth of its doctrines and testimonies in question; when their obligation was practically exemplified in the consistent lives

of those who promulgated them and conducted its affairs, and when even those who fell short in the maintenance of its testimonies admitted, at least theoretically, their accordance with the requisitions of the gospel. The followers of Elias Hicks, while they remained within the society, strove to do away with those portions of the discipline which they felt to be barriers to the acceptance and diffusion of their unsound sentiments, and when they went out from it, they carried their wishes into execution. The history of the society shows it has been thus in every instance where any portion of the members, larger or smaller, has severed from the acknowledged faith, and sought to introduce into it, modifications and novelties, which are incompatible with the simple spiritual religion ever maintained by Friends.

This should make all doubly cautious about tampering with the long established rules of the society, or attempting to discard or weaken those restrictions which are designed to assist the members in walking within the straight and narrow way, and which under the Divine blessing have been more or less instrumental in so doing for thousands.

So intimately are the testimonies of Truth held by the society connected together, so dependent is the harmonious working of the whole system of church government upon a faithful maintenance of each and every part, that we may be assured, wherever there is a voluntary surrender of any portion of the discipline in order to allow of greater latitude in doctrine, or to sanction the conduct of those who are unconvinced of or unwilling to uphold all the testimonies Friends are called to bear, it will be but the beginning of continued and wider departures,—the first false step into a broad way, which unless retraced, will lead further and further from the place of peace and safety. It is the ordinary course of declension. Unfaithfulness brings weakness and dimness, and increases the tendency to lower the standard still more, until meetings may find themselves yielding progressively to an influence at first hardly recognized, and becoming advocates for things they would once have unhesitatingly condemned as totally irreconcilable with our religious profession.

We have been led into these reflections by a communication in last month's number of The British Friend, which we think strikingly illustrates the continuous series of changes from "the good old way" of our religious Society, which must legitimately follow from the alterations made in the discipline of London Yearly Meeting.

When the proposition was made to that meeting to strike out of the fourth query the part which related to plainness of speech, behaviour and apparel, the idea was studiously inculcated by those who advocated it both there and in this country, that no intention was entertained of lowering the standard of the society's testimony to plainness, or to introduce any new practice in dress among its members: it was merely to take the words out of the query, and place them in the advices. Many Friends in that meeting, warned it that the desire for the change proposed, indicated a departure from the principles of the society, and that whatever might be the object professed to be aimed at, the effect of altering the discipline must be not only to confirm and encourage that departure, so that the members would become assimilated with the world in dress and address, but it would open the way for other testimonies and practices of the society being brought into disesteem, and the discipline being altered to admit of other innovations. The warning was disregarded, and short as has been the time since the

alteration was made, we fear the prediction is fast being fulfilled. Already many who take an active part in transacting the most important affairs relating to the welfare of the society, neither wear the plain dress nor adhere to the form of speech, which have so long marked the consistent Friend, and several have been recorded as ministers, who are in the same category. The opinion is freely expressed that all outward distinguishing marks of a Friend ought to be done away, and in many places it is sorrowfully apparent that it will require but comparatively little more time to attain to this desired end.

In our allusion to individuals, we disclaim any wish to set in judgment upon them as christian professors; they may be sincere in their avowal of acting in accordance with their views of what is right, and fairly represent the religious standing of those who approve of their course; but they and their coadjutors have introduced strange and hurtful novelties within our pale, and are seeking to change many of the characteristics of the Society of Friends, and those members of it who are unprepared and unwilling to give up those characteristics, and are conscientiously opposed to the principles from which they believe this anomalous state of things arises, are called upon by the strongest and purest motives that can influence the religious mind, to examine and consider the facts as they really exist, to watch for and test the fruits of the system of religion which has newly sprung up among us, while they seek for a qualification to distinguish rightly between thing and thing, and strength to hold fast to the faith and practices essential to the existence of true Quakerism.

Our readers are aware that many other alterations in the discipline have followed the first modification deemed necessary by the party alluded to, in order to adapt the society and its profession to the increased light of the nineteenth century, and we need not now recite them. The following article in The British Friend to which we have referred, is another among the continued developments of this same spirit, which, we apprehend, will not rest satisfied until it has assimilated the bodies of professors where it bears rule, with most of the forms and practices of other religious denominations.

"On the occasion of recording a minister at Hardshaw East Monthly Meeting, held at Manchester on the 10th ult., a very unexpected, yet interesting discussion arose on the inexpediency of recording ministers at all. Six or eight Friends expressed themselves very strongly on the subject, which evidently took considerable hold of the meeting. They urged that the present system had many disadvantages—the 'setting apart' of any particular individuals savoured much of 'hierarchy,' and was very apt to make men thus placed liable to act and feel as 'lords over God's heritage,' instead of being all as brethren, and calling no man master. Another serious evil thus pointed out was that though the ministry and services might, at the time of his acknowledgment, be acceptable and edifying, yet the time might come—and occasionally *did* come—when there was not the same life and power manifested, and yet there could be no recall! Again, it was a serious thing to acknowledge the services of those from whom many might differ on very essential points of faith and doctrine; and on all these grounds it was urged to be inexpedient, unwise, and unquakerly, thus, to elevate into the gallery those who might far better minister among us as brethren."

Comment upon the weakness of the reasons assigned for the proposed change is unnecessary, but we would call the attention of our readers to the deplorable laxity that must exist in reference to

the holding of sound doctrine, wherever the last reason given is a valid one, for the difference "on very essential points of faith and doctrine" implies, that either the person recommended as a minister is known to be unsound in the faith, or if he is sound, that many of those recommending him do not hold the doctrines of Friends.

Connected with the movements respecting the ministry, is another proposed change that has obtained no little advocacy, and which, from the observations given in the account of the Yearly Meeting of Ministers and Elders, it would appear has already been carried out in some places. It is, that the practice should be abolished, of ministers laying their religious concerns before the meetings to which they belong, or being obliged to obtain a certificate before going abroad. In alluding to the observations of a Friend in the last Yearly Meeting of Ministers and Elders, the British Friend says he spoke of "the omission that had taken place in reference to the inquiry as to Friends in the ministry *travelling without certificates, &c.*, which was held to be a lowering of the wholesome disciplinary care of the church over its members. Another Friend followed in pretty much of a similar view on the matter. This brought out some remarks of an explanatory character, which however, all did not consider quite relevant;" and another warned Friends, "to get to the watch-tower and see that [they] were not deserting or lowering the standard of Truth." The account states there were not less than forty persons recorded as ministers last year, or four times the number of former years, and while dress and address in imitation of the world are not thought of sufficient importance to offer an obstruction to occupying the most important stations in the society, we need not be surprised at so rapid an increase of those recorded as ministers.

It is in sorrow, and in no spirit of party hostility that we lay these things before our readers. We feel that the events of the day and the signs of the times call loudly on Friends everywhere, to rally to the original and only ground of peace and safety. Never was there more need for them to present an unbroken front to the world, and labour harmoniously for the support and spread of those pure, spiritual views of the Gospel, and the practices growing out of them; which have characterized the Society from the beginning; but this unity, and its accompanying strength can never be known by it, while so radical a difference exists between those who feel bound to the support of all our doctrines and testimonies, and a party which is breaking down the old landmarks, and urging the Society into conformity with the spirit and manners of the world.

It is hazardous to attempt alterations in the discipline in times of commotion and defection in the Society. There is then greater danger of being misled by other motives than the requirements of Divine wisdom. Within the last few years several Yearly Meetings, from causes too patent to require exposition, have thrown open their whole codes for emendation. The consequences of the alterations made are but partially developed; time will make them more apparent. In the meantime it will be well for us all to give heed to the advice already quoted, "to get to the watch-tower and see that we are not deserting or lowering the standard of Truth."

#### SUMMARY OF EVENTS.

Great Britain.—News from England to the 24th ult. The rebel steamer Nashville was still at Southampton. The captain states that she had been brought there to have her top deck taken off and to be fitted out as a vessel of war. It was not certain that this could be

dons without a violation of the Queen's proclamation of neutrality.

Deputations from the governments of Canada, New Brunswick and Nova Scotia, had arrived in London for the purpose of urging the British Government to aid in the construction of the projected rail road from Halifax to Quebec.

Layard, under Secretary of State for Foreign Affairs in a speech before his constituents, alluded at some length to the American question, and defended the policy of the British Government. He regretted that policy had been misinterpreted in America, and broadly asserted that the English people sympathized deeply with the American people. He believed the time would come when the policy of England would be justly appreciated. He denied that events in America are any proof of the breaking down of democratic institutions.

The Liverpool cotton market had declined  $\frac{1}{4}$ . The quotations were, fair to good,  $\frac{1}{4}$ ; Middle,  $\frac{1}{4}$ ; and low,  $\frac{1}{4}$ . In port were 587,000 bales, including 273,000 American. Breadstuffs unchanged.

France.—The Bank of France has reduced the rate of discount to five per cent.

A reduction of from 80,000 to 100,000 men, was proposed in the men to return home on a furlough of one year. The Minister of Marine objects to any reduction whatever in his department. The government will not raise a loan at present.

Italy.—The Italian Parliament was re-opened at Rome on the 21st inst. The Deputy of the President of the Council explained the present state of the Roman question. He said he had drawn up a plan of reconciliation between religion and liberty, and between the State and the Church. He had requested the Emperor Napoleon to become mediator, but owing to the hostile disposition of the Emperor, the part of the Roman Court, the mediation had not been attended with any result.

Portugal.—The funeral of the late King took place at Lisbon on the 16th.

Tenth month 13th, states that Canton has been evacuated by the British.

Cuba.—A letter from Havana, dated Eleventh month 30th, mentions the landing of a cargo of 625 African slaves at Manzanilla, a point on the Spanish coast of the island. It was stated that several other cargoes were on their way. The present Captain General is believed to be sincerely opposed to the traffic, and yet it is continued through the connivance of the local authorities.

Bolivia.—Deploable accounts are received from Bolivia. The commanding general at La Paz has ordered the execution of over two hundred persons engaged recently in revolutionary movements. Among those to be executed, were ex-President Cordera, Gen. Hermosa, a number of priests and four monks.

UNITED STATES.—The President's Message which was sent to Congress on the 2nd inst., is a plain, practical, unpretending paper, its chief aim being to give information clearly and satisfactorily in the briefest manner. Its contents relate principally to the rebellion in the Southern States and the means employed for its suppression. He recommends that the loyal regions of East Tennessee and Western North Carolina should be connected with Kentucky and other faithful parts of the Union by railroad, and advises that Congress provide for the construction of a road as specifically as possible. The operations of the Treasury since the adjournment of Congress have, he states, been attended with signal success, the patriotism of the people having placed at the disposal of the Government the large means demanded by the public exigencies. The expenditures during the three months ending Ninth month 30th last amounted to \$98,239,733, and there was at that period a balance in the treasury of \$4,292,776. The revenue from all sources, including loans, for the year ending Sixth month 30th last, was \$86,885,900, and the expenditures at the same period were \$84,576,854.

The expenditures of the Post Office Department during the last fiscal year were \$13,667,759, showing a decrease of about eight per cent, as compared with those of the previous year. The revenue from all sources was \$20,406, being about two per cent. less than in the previous year.

The cash receipts from the sales of public land during the past year have exceeded the expenses of the system only \$200,500. The sales have been entirely unproductive, as we learn from the report of the Secretary of the new states and territories of the northeast have not been restricted by the diversion of large numbers of men from agriculture to military service. The receipts of the Patent Office have largely declined.

The efforts for the suppression of the slave trade have recently been attended with unusual success, five cargoes were being fitted out for the trade, having been seized and condemned.

The Territories of Colorado, Dakota and Nevada, created by the last Congress, have been organized, and civil administration has been inaugurated therein.

A bill for the purpose of amending the act passed by telegraph to California and published in the San Francisco papers of the next morning.

The Property and Slaves of the Rebels.—The United States Secretary of the Treasury has issued regulations relating to the disposition of the property of rebels found and brought within the territory now or heretofore occupied by the forces of the United States in the revolted states. The chief features of the order are these. The Secretary of the Treasury is to appoint agents, whose duty it shall be to gather and prepare for market the property of rebels under their supervision. All slaves found within the limit of the agent's authority may be and are to be by him employed in gathering and preparing for market the cotton and other crops. The slaves are to be enrolled and set to work in a systematic manner, and a strict account of their labour kept, for which a fair compensation is to be paid. When the cotton and other articles are prepared for market they are to be shipped to New York, consigned to the U. S. agent at that port.

Despatches from Charleston, S. C., via Memphis, state that the rebels are endeavoring to burn the cotton and destroy their crops of cotton and rice, to prevent their falling into the hands of the U. S. agents.

Senator Trumbull of Illinois, has introduced into the Senate a bill confiscating the property and giving freedom to the slaves in rebellion. The bill was ordered to be printed and referred to the Committee of the Judiciary. It provides for the absolute and complete forfeiture to the United States of every species of property belonging to persons, who, during the existence of the present rebellion, shall take up arms against the United States.

It is the claim of the bill, that any person who gives them aid and comfort, to the persons they hold in slavery, declares the slaves thus forfeited free, and makes it the duty of the President to provide for the colonization of such of them as may be willing to go, in some tropical country, where they may have the promise of a large enforcement, to be secured in all the rights and privileges of freemen.

Exchange of Prisoners.—Eleven officers and 240 privates of the North Carolina regiment captured at Hatteras, have been sent from Fort Warren to Fortress Mifflin, to be exchanged for an equal number of the Federal troops now confined at Richmond.

Trade of Chicago.—The following is a statement of some of the leading articles received at Chicago during the present year; flour, 1,339,491 bushels; wheat, 17,581,521 bushels; corn, 26,154,425 bushels; oats, 1,390,122 bushels; rye, 482,495 bushels; barley, 704,971 bushels; wood, 912,518 bales; lead, 12,645,398 pounds; butter, 2,265,148 pounds; lard, 1,279,434 pounds; live hogs, 265,484; dressed hogs, 149,218; beef cattle, 148,220; beef, 41,300 bales; pork, 44,381 bales; lumber, &c. The following are the items show a large increase upon last year's business.

The Southern Indians.—A delegation from the Creeks, Cherokees and Seminoles, has arrived at Washington. They were sent to examine and report to their people the true condition of political affairs, which has been much misrepresented to them.

New Orleans.—The New Orleans Crescent of the 25th ult. gives the following quotations; flour, \$1.50 a 12 lb barrel; corn, \$1.00; rye, \$2.25, per bushel; whiskey, \$1.10; lard, 19 cts. a 30 cts.; bacon, 22 cts. a 25 cts.; tallow, 25 cts.; molasses, 14 cts. a 21 cts.; no sales of cotton or tobacco. The exchange of the day is \$1.25 a \$1.26. The high rate of exchange is attributed to the anxiety of some parties to place their funds in Europe. A conspiracy among the Union men has been frustrated.

Anthracite Coal.—The quantity sent to market this year from the Pennsylvania mines, is 7,629,585 tons, the quantity shipped last season, was 7,912,808 tons, showing a falling off of only about 283,000 tons.

New York.—Mortality last week, 380.

Congress.—A prominent subject of discussion has been the manner in which the war has been conducted, and the cause of the several disasters which have befallen the Federal arms. The Senate, by a vote of 23 to 9, passed a resolution providing for the appointment of a Joint Committee of three members of the Senate and four members of the House, to investigate the conduct of the war. John C. Breckenridge, senator from

Kentucky, having fully identified himself with the rebel cause, was expelled by a unanimous vote of the Senate.

The Public Finances and Revenue.—The Secretary of the Treasury estimates the revenue from customs for the year ending Sixth month 30th, 1862, at \$34,198,602, about \$22,000,000 more, he thinks, can be realized from the direct tax, public lands and other sources, making a total revenue of \$54,000,000. He recommends that the duties on tea, coffee and sugar should be increased, and that no further alterations of the tariff should be made during the present session of Congress. The sum of \$50,000,000, at least, will, in his opinion, be required to meet unavoidable disbursements, and pay the interest on the public debt. He recommends an increase of the direct tax, and the levy of duties on distilled liquors, tobacco, bank notes, carriages, on legacies, evidences of debt, instruments for the conveyance of property, &c, to make up the required sum. The amount to be derived from taxation forms but a small portion of the sums required for the expenses of the war, these will have to be obtained mainly from loans. The amount of loans effected, and of Treasury notes issued within the last month, is stated to amount to \$197,242,588. The total actual and estimated expenditures for the year ending Sixth month 30th next, amounts to the enormous aggregate of \$545,400,422, making further loans to the extent of at least \$250,000,000, necessary to meet the wants of the year. The fiscal year, ending Sixth month 30th, 1863, will, he supposes, require an expenditure of \$653,000,000.

#### RECEIPTS.

Received from John Aikins, Pa., \$2, vol. 34; from P. P. Duau, N. J., \$2, vol. 35, for Thos. S. Wright, N. J., \$2, vol. 35; from Elisha Hollingsworth, O., \$1 to 52, vol. 34, and for H. M. Penrose, \$2, vol. 34; from F. Taber, Mass. \$2, vol. 34.

#### FRIENDS' ASYLUM.

Committee on Admissions.—Samuel Bettle, Jr., No. 149 N. Chestnut street; Charles H. Smith, No. 224 Market street; William Bettle, No. 426 N. Sixth street, and No. 100 S. Third street; John C. Allen, No. 335 S. Fifth street, and No. 321 N. Front street; Horatio C. Wood, No. 612 Race street, and No. 117 Chestnut street; John M. Whitely, No. 1517 Filbert street, and No. 410 Race street; Walter Morris, No. 209 S. Third street; Nathan Hillier, Frankford; Elliston P. Morris, Germantown, and No. 805 Market street.

Visiting Managers for the month.—Mark Balderston, Benjamin J. Urew and James Thorp.  
Physician and Superintendent.—Josiah H. Worthington, M. D.

#### WEST-TOWN BOARDING SCHOOL.

A Stated Meeting of the Committee to superintend the Boarding School at West-Town, will be held there on Fourth day, the 18th of Twelfth month, at 10 o'clock, A. M. The Committee on Admissions will meet at 8 o'clock the same morning, and the Committee on Instruction at 10 o'clock on the preceding evening. The Visiting Committee attend at the school on Seventh day, the 14th of the month.

JOEL EVANS, Clerk.

Twelfth month 4th, 1861.

For the accommodation of the Committee, a conveyance will be at the Street Road Station on Seventh day afternoon, the 14th inst., to meet the train that leaves Philadelphia at 2 o'clock; and on Third day afternoon the 17th, to meet the trains that leave the city at 2 and 4.15.

An adjourned meeting of the Institute for Colored Youth will be held at the Institution on Lombard St. above Seventh St., on Second day, the 16th inst., at 3 o'clock, P. M., to consider the propriety of changing the time for holding the Annual Meeting of the Corporation.

The twentieth volume of THE FRIENDS FRIEND will commence with the year 1870. Friends desiring to subscribe for this valuable and ably conducted monthly, will please make early application to  
J. S. LIPPINCOTT,  
Haddonfield, N. J.

Terms, two dollars per annum strictly in advance.  
FILE A MELKOY, PRINTERS,  
Lodge street, opposite the Pennsylvania Bank.

# THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XXXV.

SEVENTH-DAY, TWELFTH MONTH 21, 1861.

NO. 10.

PUBLISHED WEEKLY.

Price Two Dollars per annum, payable in advance.

Subscriptions and Payments received by

JOHN RICHARDSON,

AT NO. 116 NORTH FOURTH STREET, UP STAIRS,  
PHILADELPHIA.

Postage to any part of Pennsylvania, for three months, if paid in advance, three and a-quarter cents; to any part of the United States, for three months, if paid in advance, six and a-half cents.

## The Widow's Mite.

In all the varied collection of coins and metals which the munificence of the government has secured for this cabinet, commemorating as they do nationalities and dynasties long since swept from the earth, as well as principalities and powers that still have a living fame and active existence; and recalling, as they do, so much of history and biography as to bewilder the mind of the beholder, there is, *one* object which, above all others, interests the visitor.

At a small case near the entrance, which contains among other curiosities, the ancient Jewish coins, the stranger has his curiosity awakened by observing the earnest and eager, but suppressed inquiries of some, and the contemplative sadness of others whilst directing their attention to a very ancient looking and diminutive object labelled "The Widow's Mite."

It is the smallest of copper coins, its metallic value being scarcely one-tenth of our *cent*, yet, from the associations and reflections to which its name gives rise, as well as from its rareness, it is valued beyond price; or, to use the words of the official in attendance, "No money would buy it."

The printed slip attached, which gives its name, states that it was found in the ruins of Jerusalem, but does not inform us whether there were any other specimens of the coin extant, or whether this is the only remaining evidence of the existence of a description of money, two pieces of which once constituted the whole wealth of a pious but destitute daughter of Israel.

Whilst viewing this precious relic, the mind readily but insensibly reverts to the period and circumstance where alone its existence is recorded, and from which our impressions concerning it are drawn. We forget, for the time, that we are in a modern temple containing more of the products of a new Opib than the edifice which the wise, yet foolish King of Israel erected, could exhibit of gold and silver treasures.

The *mite* before us, serves to transport us at once to the Holy City, and introduces us into the temple dedicated to the worship of Jehovah. It carries us back in chronology more than eighteen hundred years, and places us amongst a people to whom our hemisphere, which now conduces so largely to the weal or woe of myriads of mankind,

was utterly unknown. We see around us, in imagination, multitudes who have come up to the temple to offer sacrifices and to make intercession for forgiveness of their sins; or to return thanks for being better and holier than other men.

Among them, seated "over against the treasury," we behold the great Teacher, observant of those who entered the sacred edifice, ostensibly to worship, but, too frequently, only to "have honour of men," from the amount of their alms gifts, as well as the length and frequency of their prayers.

As their several contributions to the treasury are deposited, we hear Him say to His disciples, when "there came a poor widow and she threw in two mites, which make a farthing," "this poor widow hath cast more in than all they which have cast into the treasury, for all they did cast in of their abundance, but she, of her want, did cast in all that she had, even all her living."

His life is thus brought into review before us, surrounded by his disciples listening with surprise to his words of wisdom and instruction, or questioning him as to the meaning of his parables, and inquiring when his predictions are to be fulfilled. We observe the sternness with which he rebukes the bigotry, hypocrisy, and intolerance of the Scribes and Pharisees—the priest and the Levite; or the unbelief, renality, and crimes of the Sadducees. But with what mildness does he address the poor, the lowly, and the sorrow stricken! How forgivingly does he remitt them of their sins, supply their wants, heal their diseases, and relieve their sufferings; making his gospel, indeed, "glad tidings to the poor!"

We see the temple, too, in all its grandeur—its extensive courts and colonnaded porticoes—its gilded portals and gorgeous adornments—its "golden stones," not one of which was to be left standing upon another.

We see the throng of worshippers departing, after having made their sacrificial offerings and paid their vows, or delivered up their accustomed amount of prayer. Among all these, none interest us so much, nor excite our sympathies so strongly, as the "poor widow." We are anxious to penetrate into her history. How long has she been a widow, and by what circumstance did she become so? Is she still in the spring-time of life, like Ruth; or has she, like Naomi, "no longer any hope"? Have length of days and many sorrows made her weary of the world, and anxious to "flee away and be at rest"? How came she to be so poor that her whole wealth consisted of the pittance with which she had just parted; and how will she sustain life in the future?

In answer to the latter suggestion we can only surmise that she has heard from the great Master the injunction, "Take no heed for the morrow," and has entire faith that He who provides the young ravens with food, and does not suffer a sparrow to fall unnoticed, will not let her want. We admire such reliance upon the Eternal Providence, and her gift is magnified in our estimation thereby, beyond any which kings or potentates e'er gave. We are anxious to trace her course thenceforth. Did she have a home to return to and kind friends

to welcome her, or was she without shelter or refuge—alone in the world? Perhaps her life is devoted to the exercise of pious duties until death shall afford a pro-pect of deliverance from her sorrows; but, of all these inquiries, each must remain unanswered, for none remains to tell us aught concerning her.

It were vain to look for her retiring figure in the market place, or in the marts of trade where Jews and Gentiles congregate to traffic and to barter, that they may cunningly convert their shakels into talents, and be "clothed in purple and fine linen, and fare sumptuously every day."

Nor yet need we search for her where learned rabbis are expounding the law, and the traditions of the fathers, or unravelling the mysteries of the prophecies of Ezekiel and Daniel, and debating the propriety of paying tribute to Caesar. She has vanished for ever, but of her existence we have full assurance, since the gospel asserts the fact, and this silent witness, the *mite*, corroborates it.

Here our reverie is disturbed, and we are recalled to the recollection of surrounding objects, by the inquiry, "Have you seen the Japanese coins, and other presents made by the embassy to the director of the mint?" The spell is dissolved; and we lift our eyes, not to behold Mount Olivet, but the weights and precipes of the Sierra Nevada, displayed upon the walls of the cabinet, to furnish a view of the auriferous regions of California and the labours of the "gold hunter." We step across the chasm of eighteen hundred years, and, instead of dreaming of the *past*, we realize the *present*, in these evidences of its daring enterprise and great results. Jerusalem and Judea fade away in the distance, but their remembrance can never be obliterated; nor can all the rich treasures of the Pacific coast, or the gaudy frippery of Japan, make us ever forget that little copper coin, the *widow's mite*.—From *Musings in the Cabinet of the United States Mint*, by M. J. T.

*Humming-Birds*.—How wonderful must be the mechanism which sets in motion and sustains for so lengthened a time the vibratory movements of a humming-bird's wings! To me their action appears unlike any thing of the kind I have ever seen before, and strongly reminds me of a piece of machinery acted upon by a powerful spring. I have been particularly struck by this peculiarity in the flight, as it was exactly the opposite of what I expected. The bird does not usually glide through the air with the quick darting flight of a swallow or swift, but continues tremulously moving its wings while passing from flower to flower, or when taking a more distant flight over a high tree, or across a river. When poised before any object, this action is so rapidly performed that it is impossible for the eye to follow each stroke, and a hazy semi-circle of indistinctness on each side of the bird is all that is perceptible. The wood produced by the wings of these little birds appears to be very considerably different from that which we see in the example of *Cyanonnyxia cyanoccephala*, which had flown into the room, was hovering over a large piece of wool, the entire surface of the wool was

violently agitated. Although many short intermissions of rest are taken during the day, the bird may be said to live in air—an element in which it performs every kind of evolution with the utmost ease, frequently rising perpendicularly, flying backward, procoucting or dancing off, as it were, from place to place, or from one part of a tree to another, sometimes descending, at others ascending; it often mounts up above the towering trees, and then shoots off like a little meteor at a right angle; at other times it quietly buzzes away among the little flowers near the ground; at one moment it is poised over a diminutive weed, at the next it is seen at a distance of forty yards, whither, it has vanished with the quickness of thought. During the heat of the day the shady retreats beneath the trees are very frequently visited; in the morning and evening the sunny banks, the verandahs, and other exposed situations are more frequently resorted to.—*From a recent English Publication on Humming-Birds.*

For "The Friend."

### Misings and Memories.

#### EVIL AND ITS REMEDIES.

In the good providence of the Almighty, it generally happens that in whatever region of the earth a deadly poison is found, an antidote may be discovered there also. When sin entered into the world through the disobedience of man, the remedy was then and there made manifest, even the Lamb of God who taketh away the sin of the world. Since that day, when for the lost in sin and for those condemned to sit in the region and shadow of death, light and immortality were revealed through the promise of the coming and offering of the Lord Jesus Christ, it has at times pleased God, in his Omniscent mind, and Omnipotent power, seeing the end from the beginning, when one of the children of men through submissio to the power of evil, proves a curse in his human creation, to raise up and qualify another, who should be instrumental to remedy the evil or close its career. Ignatius Loyola, who a fanatic devotion to the papal cause, led him to establish a religious order, which did much to strengthen the declining pomp and power of Rome throughout nominal christendom, had for a contemporary, Luther, the greatest enemy that papacy in its spiritual wickedness had ever known. The year which saw Napoleon Bonaparte a babe in Corsica, saw Arthur Wellesly, afterward Lord Wellington, a babe in his mother's arms in Ireland. The child, who after he arrived to manhood, in his career of ambition, devastated the fairest portions of Europe and placed the crown of France, one of its fairest kingdoms, on his own brow, was gladdening the hearts of his parents by his infant smiles, at the same time that other babe who lived to tear the crown from his grasp, and effectually check him in the career of victory, was by his birth shedding the light of joy through another dwelling.

In all history, the christian philosopher can see the good hand of his God working the counsels of his own will and wisdom, even amid the free will actions of wicked men, the contests of ambition, the misdirected operation of benevolence, and the workings of religious light, virtue and truth. In the old testament history, wherein we are as it were, made acquainted with the secret springs of national movements and individual actions, we find many instances recorded to show how the Most High brings forward, at the right time and place, the remedies for the evils which beset his people. When Goliath comes forth to defy Israel, and through them their God, the stripling David is providentially brought there

with a shepherd's sling, ready to put his hand to the smooth stones which lie in the brook, and in the strength of a present Omnipotent helper, to meet and slay the formidable foe. If Achitophel is in the court of Absalom seeking with cunning counsel to support him in his rebellion, and to establish an unrighteous reign, God has a Hu-hai at hand, in his overruling providence, to turn Absalom from following the advice of worldly wisdom, and to cause the great master of reason and artifice, in the chagrin of disappointment, to leave the court he could not govern, and to hang himself at home. Sisera flees from the sword of Barak and the armed hosts of Israel, to find his death from the nail of Jael in the tent of Heber the Kenite.

But we need not follow the Jewish history, where every event is plainly working to bring about God's purposes of grace, where providential ordering is visible at every step. In considering these things, it is needless to inquire how far the individuals who are raised up by almighty power to stay some great evil, to punish some great oppression, to bring forth some new discovery, which shall minister to the present and future well-being of men, are themselves aware of the high control exercised over their apparent free will, reasonings, feelings, and actions; we can well understand that Omnipotence can overrule all, that he can stimulate the mind to unusual strength of discernment, give it new powers to investigate, and can cause even actions, which in the motives of the doers are far from pure, yet to work out good purposes of his grace.

I have been recently reading an interesting account of Elizabeth Walker, of England, and have been much struck with the means employed by Divine providence, in enlightening her whilst in a state of unbelief and of midnight darkness, of depression and despair. Her maiden name was Sadler, and she was born in the year 1623. As a child she was grave and thoughtful, always aiming to be useful, and when very young in life, entrusted by her mother with keeping the family accounts, so as to receive the title of her mother's little house-keeper. She had suffered in bodily health through the criminal carelessness of a nurse, who had half-starved her, and much feebleness from this cause attended her through life. Her conscience was remarkably tender, and on one occasion, having been tempted to take an apple, it was long a cause of great mental disquietude to her, although she immediately returned it to the place from which she had lifted it. On another occasion she told a falsehood. This is believed to have been the last which, knowingly, she ever uttered, yet it was for many years an occasion of sore anguish and distress to her. She was of a sensitive nature, which from bodily indisposition, was morbidly acute, and no doubt but the enemy of all good took occasion, from her infirmities of the flesh, to drive the poor sin hating soul to the borders of despair. Trials of various kinds attended her, she became very low spirited and desponding, and at last seemed to give up to the complicated difficulties, which real sorrows magnified by a morbid tendency to afflict herself, the off-spring of disease, seemed to spread before her. At last the enemy of souls, working in the mystery of mental weakness, endeavoured to persuade her to believe that this world of sorrow was but a creature of chance, a creature without design, that in short, there was no God. It is doubtful whether, even for one moment, such a monstrous idea was really believed by her, but the temptation to believe it was pressed upon her by Satan, who would have made her think she believed it, and further torture her tried mind with the con-

triction, that she must be abandoned indeed to think so. She felt a terrible feeling of despair. Human help she knew could not avail her, and of heavenly help, in the feeling of her own wickedness and temptation to unbelief, she thought there was no hope. In this time, in the contradiction of her temptations and doubts, she became anxiously desirous that the Lord might manifest himself to her in wrath,—in a way so terrible that she might be left without any doubt as to His existence. In the very spirit in which she thus wrestled for an evidence, there was, if her bewildered mind could have grasped it, the assurance that she did believe in him. He heard her, he answered her, but not in the whirlwind, the storm, or the earthquake, which she prayed for, it was rather in the still small voice of love and everlasting mercy.

Her father had been brought up in the country, and having always retained a great love for flowers, he, in his affluence, surrounded himself with many beautiful ones. At this time of Elizabeth's sorest anguish, she often sought amid these flowers some comfort. Gazing on a Chalcidion Iris, whose gorgeous flower bespoke the wonderful working of the God of grace and glory, her heart was suddenly lifted up in adoring gratitude to Him who had so clothed it with beauty. In the feeling of love which sprung up in her comforted heart, all doubt, all distrust disappeared.

Of her after course we may briefly say, she married Dr. Walker. Her married life was a life of labour to promote the happiness of others, and it was one of great happiness, mixed with a due proportion of trial to herself. She was married in 1650, and deceased, Twelfth month 27th, 1690. The gloom of her early years was followed by a maturity of sunny brightness, and a close radiance, which though not unattended with clouds, spoke of a glorious morrow in a world of unalloyed joy.

The narrative of Elizabeth Walker shows us God's providential power, the same which brought a David with his shepherd's sling to slay the boastful career of a Goliath, and which enabled a blinded Damon to shake down the pillars of the house of Sargon, at Gath, manifested in mercy whilst causing one of his inanimate created beauties to dissipate the beleaguering hosts of despair, which the grand adversary of good had gathered to destroy the present peace and everlasting well being of one of his sin hating children. Faint hearted christian, never despair! God will not forget his church or people. Has he permitted a captivity to come upon them? then he has a Moses in the wilderness preparing to lead them forth in triumph, or an Ezra and Nehemiah are being nourished in affliction, who with weeping and supplication, will be enabled to bring them back to the desolate house of their fathers, to rebuild the walls, to set up the gates and to confirm and support the good laws which the Lord their God hath given to their fathers.

#### The Demon of the Dinner Table.

"I've studied Glanville and James the Wise, And admired black-letter tomes that treat Of demons of every shape and size, A christian man is presumed to meet; But I find no hint in truth or fable, Of the demon of the dinner table."

Yet never was elf, nor browie, grave-yard ghost, nor spectre that walks in the moon-light, more real or more mischievous than he. Nor is it against the fiend of the wine cup that I would warn you now. He has long been under the ban. Your ancestral wine-glasses stand unused behind the china. The decanters are banished from side-board and closet. Your name has stood these ten years past on the Total Abstinence pledge, and

men pronounce you a "consistent temperance man," while in your heart you silently echo their verdict.

With a self-complacent smile you sit down at your well spread board and are thankful that you have had the courage to banish the tempter from your table and your household. All honour to you, and to all who have done so much! But did you ever dream that a fellow-fiend came in, unchallenged, bidding in the dainty folds of the napkin, or playing at bo-peep among the silver? You never catch him swimming in the rich gravy, laughing at you out of the quivering jelly, or floundering on the platter in his impish merriment. You never dream how he has been playing his pranks all the morning, at the kitchen fire-side, peeping from the cookery-book, looking from the spice-boxes, whispering in good Margery's ear, and skillfully setting a snare for your feet into which you shall walk with wide open eyes, unwarned and unspied. For will not that wilying Nelly coax you to "take a little more of this nice pudding," "just a little of this delicious jelly?" How the saucy eyes of the dinner-jelly twinkle with delight as the pudding and the jelly go down, where the roast beef, the chicken, the gravy, the pickles, and the preserves have gone before! and you stand up at last, in the sorry fix of the little boy who cried because he "felt as if his jacket was buttoned up—and it wasn't."

But soon the retribution comes, in leaden limbs and apoplectic brains; in heart-burn and headache, and the thousand shapes of after-dinner discomfort. The poor overloaded stomach is taking its revenge: muscle and nerve, feeling and thought, must wait upon digestion.

What care you now for the bunch of violets a tiny hand has gathered for "dear papa," or the little gem of poetry that Nelly has been saving to read to you? There was an hour this morning when the breath of those sweet blossoms would have conjured up from the past a fair picture of an old brown farm-house and a sunny bank behind it, where the violets grew larger, and bluer than violets ever grew elsewhere; of a bright little fairy in a blue frock and a dainty pink sun-bonnet shading her golden hair, and two hands eroded full of the wonderful blue violets, a perfect type in face and figure of the little fairy beside you; and you would have clasped the little one in your arms, with a blessing on your lips, and an overflowing love in your heart. Now, with a mighty effort, you summon resolution enough to utter a stupid "thank you," and stretch yourself on the sofa for an after-lunch nap. There was an hour this morning, when on the wing of thought your spirit would have soared upward, "singing like the lark at heaven's gate." Then, you recognized your kinship to all things good, loving and beautiful. Then, you were a man, with a strong arm and a clear head, doing a man's work and thinking a man's thoughts. You sold yourself for a half hour's gratification, to the hands of the demon, and he has made you a dolt for the rest of the day.

Are you a victim of the fiend of the wine-cup? Some friendly hand may be outstretched to save, one honest voice may be raised in warning, before it is too late. The tears and patient love of a suffering wife, or the innocent reproach of the unblinded eyes of a little child may exercise the fiend. But are you possessed with the demon of the dinner-table? Heaven help you! Wife, servants, friends, all the usages of society are in league against you. Nothing short of a miracle may turn you from the royal road you are travelling toward a premature grave, or a gouty old age.—*F. Malvin.*

### Scuttlebury's Ancient Testimony.

*Testimonies of Ancient Friends received, respecting the changeable mules of the world, addressed to those in the station of parents.*

(Concluded from page 112.)

The Apostle tells us, (and which we may esteem a great remedy to poor fallen man) that the gifts and calling of God are without repentance; agreeing also with that of the prophet Isaiah, "I am found of them that sought me not." Thus many, ever dwelling in Babylon, have heard the call to come out of her; which heavenly visitation, as the "voice crying in the wilderness, prepare the way of the Lord," doth beget a degree of tenderness, which may long attend a mind wherein is great mixture; but true submission to the yoke of Christ, or faithfulness to the measure of grace received, is another thing. Therefore this plea for liberty has only a sandy foundation which will not abide the storm. The testimonies and example of our predecessors are against it; the example of the faithful, in the present day, is against it. Did ever any come in amongst us at the right door, grow in the Truth, and become useful members, and yet retain these badges of the world? Did ever any who had a birth-right in the society advance in a religious growth, while they either retained these imitations of the world, or encouraged others therein? Or was it ever known that any amongst us went from simplicity, though but a little way, to meet the world's modes, without suffering loss in the better part? Therefore "take us the little foxes that spoil the vines, for our vines have tender grapes." The measure of grace received, teacheth and giveth power to deny the world's lusts; and if we do not, by faithfulness to the gift, subdue these things, the spirit that upholds them will assuredly destroy that greenness which may for a time appear, and this the dear-bought experience of many witnesses will confirm.

If, on the other hand, any who have been educated in a plain habit, or have taken it up from principle, should suffer the world to gain the ascendancy in their minds, and yet retain the form of dress which either education or principle had put upon them; such instances prove the need of watchfulness, but are no plea for those liberties in question. He that journeyed from Jerusalem to Jericho, fell among thieves, and we being a people professing that the substance and end of shadows and types is come, may believe and see that "He who builded Jericho, loath his first-born, and setteth up the gates thereof, in the loss of his youngest son."

Some parents who have given way in what seemed very small things, have found their hands entangled when they wished to make a stand on seeing their children go greater lengths than they expected. Such, and all parents who feel their difficulties, claim the sympathy of their friends, and are not unknown to Him who hath all power in his hand, and who heard the petition of faithful Abraham, even that Ishmael might live before Him, whose blessing on faithful labours is still effectual, to "turn many of the children of Israel to the Lord their God."

*Is it worth while to Hate?—*At best, life is not very long. A few more smiles, a few more tears, some pleasure, much pain, sunshine and shadow, clouds and darkness, hasty greetings, abrupt farewells—then our little play will close, and injured and injurer will pass away. Is it worth while to hate each other?

If every individual member of a church would do his or her duty, the church would do right as a whole.

*Give Your Horses Light and Air.*—History informs us that a certain emperor loved a favourite horse so much that he had a golden manger made for him. This extravagance appears unpardonable in the estimation of many now-a-days, and yet it is more pardonable than the opposite extreme—meanness in the treatment of the horse. In looking at the construction of a very large proportion of our horse-stables, I am sometimes led to think that the object of the builder must have been to see how widely he could depart from every principle of humanity and expediency—humanity in compelling a patient and faithful animal to remain penned up in a close, dark, and filthy apartment—expediency, in thus sacrificing not only the comfort, but the health, and consequently, the usefulness and value of the animal. Light is indispensable to the plant, and to man—is it less so to the horse? If it is, why? When the tyrants of the old countries sought to inflict their most fearful punishments, next to death, confinement in a dark cell was considered the most severe. Is it reasonable that the horse—whose native home is in the desert and wilderness, where there is nothing to obstruct the free light of heaven—is it reasonable, I ask, that he should not suffer from confinement to our generally dark and gloomy stables? Is it not a shame, in a land like ours, where glass enough for a moderate-sized window can be had for fifty cents, that a valuable horse should be shut up, day after day, in a dark stall or stable? Let every horse owner's heart, if he has one, answer! Is foul air wholesome for plants? Certainly not. Is it wholesome for men? Most emphatically, no! If not wholesome for plants or men, can it be for horses? The answer is as emphatically, no! Why, then, are the majority of our stables constructed without regard to that most important feature, ventilation? In thousands of cases an animal, than which none other loves the fresh air better, is doomed to confinement for days and nights at a time in a stable, the atmosphere of which is so foul that a man would almost die in it. How many of the diseases to which our horses are subject, may be traced to this unpardonable error? I say unpardonable, for no man possessed of either common sense or common humanity, would thus punish one of his best and most faithful friends—the horse.

A word in conclusion. Farmers, if you would have healthy, lively, serviceable horses, give them plenty of light. God will supply it, if you will only furnish the means whereby it may be made to reach your stables. Look to the ventilation of your stables if you would not have prematurely old and worn out horses. Depend upon it, plenty of light, and plenty of fresh air in your stables, will save you many a dollar in the course of a lifetime.—*Farmer and Gardener.*

For "The Friend."

For our Young Friends.

The subjoined memorandum concerning our dear deceased Friend, Daniel Wheeler, is recommended to the serious personal and solid consideration of our beloved young members.

There cannot be a surer axiom, than that "Truth no years impair." That high and holy way to the kingdom, which ever remaineth unchanged and unchangeable, consisting in submission and obedience of the heart to Christ Jesus, the way, the truth, and the life, must ever lead its faithful followers into creaturely abasement, self-denial, and the daily cross. But as in the case of D. W. the blessing of sweet peace will ever make up as the hundred fold reward in this life, for all the flesh-dreaded sacrifices we may be called to make, and what is infinitely more to be desired,

will prove the gracious earnest of eternal rest and joy in the world to come.

"Then if any, particularly in the younger walks of life, tired of feeding upon "the husks" which this world can only give, are desirous of becoming precious plants of the Lord's right hand planting, but are high being stumbled either at the discouraging prospects around, or at the humiliation and self abasement which the truth as it is in Jesus would bid and ever must lead into, may you be animated and strengthened to diligence in the good old way of mortification and self-renunciation, by the great cloud of witnesses who have gone before you, by the way-marks, worthy of much honour, you still remain, and by the consoling, inconvertible assurances, "the foundation of God standeth sure, having this seal, the Lord knoweth them that are his."

In setting out on the heavenly journey, it is very important to remember *Who is the way*; and that while there are many smooth and easy roads that seem to lead to peace, there is *but one safe one*. The continued sacrifice of animal life under the law, followed by the precept, "without the shedding of blood there is no remission," together with the great propitiatory offering, in the fulness of time, of the dear Son and sent of God, thus setting us an example that we should follow His steps, clearly point out the necessary offering up of the fleshly life and will of man, as the sacrifice which alone can be acceptable to our Father who is in Heaven: being the way in which the righteous in all ages have overcome the world, the flesh, and the Devil, and have trod the tribulated path to blessedness. Hence strivingly applicable to each of us is the language of a great disciple of Jesus: "I beseech you therefore brethren by the mercies of God, that ye present your bodies a living sacrifice, holy, and acceptable unto God, which is your reasonable service."

That precious and only saving Light and Spirit of your dear Redeemer, which hath shown some of you especially the vanity and vexation of pursuing the idols of this world—the lust of the flesh, the lust of the eye, and the pride of life, and also that you have no continuing city here, but are fast passing from a world of probation, is alike able and greatly disposed to carry on the work of redemption and salvation even to the end, as you are willing to give yourselves up to His yoke and government, and to walk in the straight and narrow way, which alone leadeth unto everlasting life. His saving hand is not shortened, His tender compassions fall not those who seek Him with the whole heart; and crowns of rejoicing and joy, endless and soul satisfying, will richly and unspeakably repay for all the trials, temptations, and tribulations which can assail the heaven-bound pilgrim, through the few and fleeting years of this short and unsatisfying state of human existence.

The extract from Daniel Wheeler's Journal, to which the youthful reader's attention is particularly directed, is:—

Being made a partaker of the great privilege enjoyed by those who are of the flock of Christ, I being enabled to distinguish between the voice of the good Shepherd and that of the stranger, he was earnestly desirous that obedience should keep pace with knowledge. He waited patiently upon the Lord for instruction in his various stumplings; and being brought into a state of deep humility and prostration of spirit, he was made sensible that the only path in which he could walk with safety was that of self-denial. Much mental conflict was at this season his portion, but peace was only to be obtained by an entire surrender of the will: and in conformity with what he believed to be required

of him, he adopted the plain dress. He once recounted to a Friend in lively terms, the trial it was to him to put on a different hat to that which he had been accustomed to wear; especially as in going to the meeting at Woodhouse, he generally met a number of his former gay acquaintances, whom he crossed on the way to their place of worship, which he had himself previously been in the practice of attending. In this instance, it was hard to appear openly as a fool before men, he thought if his natural life might have been accepted as a substitute, he would gladly have laid it down—but this was not the thing required. He diligently examined his heart, and believed he clearly saw his Master's will in the requisition, and that it was a discipline designed to bring him into a state of child like obedience and dependence. In great distress he cried unto the Lord for help, and a passage of Scripture was powerfully applied to his mind, "whosoever shall confess me before men, him will I confess also before my Father which is in heaven, but whosoever shall deny me before men, him will I also deny before my Father which is in heaven." His resolution was immediately taken; he put on the hat, and with his mind steadfast upon the Lord, set out to join his Friends at meetings. His difficulties vanished, sweet peace was his covering; and he was enabled experimentally to know the fulfilment of that declaration, "greater is He that is in you, than he that is in the world."—*Friend's Library, vol. 7th, page 23.*

*Singular Tiger Anecdote.*—A curious anecdote is related in the Paris papers, of a tiger domiciled in the menagerie of the Jardin des Plantes. One of the peculiar features of this specimen of the feline tribe is, that he was never yet known to be in a gentle mood unless on the occasion about to be cited. To be in a perpetual passion seems to have been his normal state. Each day his keepers were in the habit of giving him, for the good of his health, several living cocks and rabbits, besides the usual rations of meat; otherwise the doctors of the menagerie were of opinion that he would languish and die. But the terrible animal has been tamed in a most unexpected manner. Last week a pretty little bantam pullet was thrown into the cage to sharpen the tiger's appetite for some blocks of meat which he had declined to eat. Not in the least alarmed by his terrible roars, she advanced with the most unsuspecting confidence to peck the food that was lying untasted before him, and when she had satisfied her hunger, began to examine closely the claws of the monster. Far from being affronted at this familiar treatment, he appeared to be delighted with the new inmate of his cage, and when the keepers managed to take her away, he obstinately refused to taste any food, either living or dead, till she was put back again.

*Sir Charles Napier's Estimate of Military Glory.*—Nineteen long letters from Lord Ellenborough! He has made me Governor of Scinde, with additional pay; and he has ordered the captured guns to be east into a triumphal column with our name. I wish he would let me go back to my wife and girls, it would be more to me than pay, glory, and honours. This is glory is it? Yes. Nine princes have surrendered their swords to me on the field of battle, and their kingdoms have been conquered by me and attached to my own country. Well, all the glory that can be desired is mine, and I care so little for it, that, the moment I can, all shall be resigned to live quietly with my wife and girls; no honour or riches repays me for absence from them. Otherwise, this sort of life is life to me; is agreeable, as it may enable me to do

good to these poor people. Oh! if I can do any good thing to serve them where so much blood has been shed in accursed war, I shall be happy. May I never see another shot fired! Horrid, horrid war! Yet, how it wius upon and hardens one when in command.

*The Constellation of the Southern Cross.*—The two great stars which mark the summit and the foot of the cross have nearly the same right ascension, it follows that the constellation is nearly vertical at the moment when it passes the meridian. This circumstance is known to every nation that lives beyond the tropics, or in the southern hemisphere. It is known at what hour of the night in different seasons the southern cross is erect or inclined. It is a time-piece that advances very regularly nearly four minutes a-day, and no other group of stars exhibits to the naked eye an observation so easily made. How often have we heard our guides exclaim, in the savannahs of Venezuela, or in the desert extending from Lima to Truxillo, "Midnight is past; the cross begins to bend!"—*Humboldt.*

For "The Friend."

The following testimony to the value of some of the principles held by our religious Society was written about two hundred years ago by one who was educated and who died a member of the Papal church, but who was favoured to place no reliance whatever in formalities of religion, independent of a state of constant waiting for a knowledge of the Divine will in the soul; and who recognized in a remarkable degree, "not only intellectually, but what is far more important, she recognized practically, that God orders and pervades our allotment in life; that God is *in* life, not in the mitigated and merely speculative sense of the term, but really and fully; not merely as a passive spectator, but as the inspiring impulse and soul of all that is not sin; *in* life, *in* all life, *in* all the situations and modifications of life, for joy or for sorrow, for good or for evil. The practical as well as speculative recognition of this principle, may be regarded as a sort of first step towards a thorough walk with God. A heart unsubdued, a heart in which worldly principles predominate, does not like to see God in all things, and tries ceaselessly to shake off the yoke of divine Providence. To the subdued heart, on the contrary,—to the heart in which christian principles predominate,—that yoke always is, and of necessity always *must* be, just *in proportion* as such principles predominate, the yoke which is easy and the burden which is light!"

"There was a lady of rank," she relates among some other incidents, "whom I sometimes visited."  
\* \* \* \* \* "This lady began to be touched with the sense of God. The circumstances were these. At a certain time she proposed to me to go with her to the theatre. I refused to go, as independently of my religious principles and feelings, I had never been in the habit of going to such places. The reason, which I first gave to her for not acceding to her proposition, was of a domestic nature, namely, that my husband's continual indisposition rendered it inconvenient and improper for me. Not satisfied with this, she continued to press me very earnestly to go with her. She said that I ought not to be prevented by my husband's indispositions from taking some amusement; that the business of nursing the sick was more appropriate to older persons, and that I was too young to be thus confined to them. This led to more particular conversation. I gave her my reasons for being particularly attentive to my husband in his seasons of ill health. But this was not all, I told her that I entirely disapproved of theatrical amuse-

Selected for "The Friend."

## ON THE DEATH OF A FRIEND.

Another harp is added  
To the angel choir above,  
Another voice is joining  
In the choral hymn of love.

Another barque is anchored  
By that far distant shore,  
Where time's rude tempest shaketh  
The fragile skiff no more.

Another south had parted  
From its poor wings of clay,  
And on its wings exulting  
Hath swiftly passed away.

Another gem is sparkling  
In the Redeemer's crown,  
Another watching spirit  
Sends her fond blessing down.

In tones of sweetest music  
The silent greeting falls,  
Hush ye the voice of sorrow,  
For 'tis an angel calls.

"Joy for my conflict ended,  
And the dark river passed,  
Joy I that my soul hath entered  
Its happy home at last!"

"Joy for the chain is broken  
That long to earth hath bound I  
Joy I that your weary sister  
Her perfect rest hath found I

"Joy I that my soul beholdeth  
Long worshipped and adored,  
And in his love rejoiceth,  
My Saviour, and my Lord!"

A. W. H.

For "The Friend."

A certain Scotchman being solicited to enter the army, and fight for his country, said to the officer who was desirous to enlist him, "I will ask you two questions, sir, which, if you answer to my satisfaction, I shall have no hesitation to take up arms. The first is, Can you tell me if I kill a man that he will go to heaven? or can you say whether, if I am killed myself, I shall go there?" To these two solemn and important questions the officer could give no reply. "Well, then," said the Scotchman, "I dare not send a fellow creature unprepared into eternity, neither dare I rush into my self unbidden." A brave and noble resolution!

*The Christian's Strait.*—In the Apostle Paul's Epistle to the Philippians, he speaks of being in a remarkable "strait betwixt two"—between his desire to live and his desire to die. Yet life here and life hereafter had each the same charm, and from the same cause, according to his apprehension. To live was Christ, and to depart was to be with Christ. The sweet and fervent Toplady has well expressed this in four simple lines—

"Thou to praise, and thee to know,  
Constitute my bliss below;  
Thee to see, and thee to love,  
Constitute my bliss above."

No earthly gratification can counterbalance the loss of that peace given as the reward of obedience.

*Impure Water.*—Set a pitcher of water in a room, and in a few hours it will have absorbed nearly all the respired and perspired gases in the room, the air of which will have become purer, but the water will be utterly filthy. The colder the water is, the greater its capacity to contain these gases. At ordinary temperatures, it will absorb a pint of carbonic acid gas and a large quantity of ammonia. This capacity is nearly

doubled by reducing the water to the temperature of ice.

*Thirtieth Annual Report of the Board of Managers of the Association of Friends for the free instruction of Adult Colored Persons.*

REPORT.—To the Association of Friends for the free instruction of Adult Colored Persons, the Managers Report:—

The schools were regularly opened on Second-day evening, the 3rd of Tenth month, 1860, with Thomas Waring as principal of the men's school, and three assistants, and Sarah M. Alexander as principal of the women's school, with four assistants. Some of the Managers were present at the opening; and 21 men and 60 women were entered as pupils.

The schools were continued as usual, five evenings in the week, till the close of Second month. The whole number of men entered has been 96, and the average attendance for the whole time, 27.

This number is small, and the Managers very much regret that so few have partaken of the advantages offered. A number of these have, however, been remarkably regular in their attendance; one man having been absent but four evenings during the session, and several others were nearly as regular.

The whole number of women entered was 232, and the average attendance 64, which is the largest average of which we have any record, and which has not been equalled, at least since the school came under the care of this association in 1845. On one evening, there being a lecture, 130 women were present, and on an ordinary school evening 116 attended; the average for Eleventh month was 58. The number was often greater during this month than could be comfortably accommodated, and it was found necessary to employ another teacher, that all might be properly attended to.

Reading, writing, spelling and arithmetic, with the study of geography on the outline maps, are the principal exercises, and although the course is necessarily somewhat monotonous, yet the Managers have been gratified with the increased interest evinced, and attention paid by the scholars to their studies, and to the instruction given by their teachers, and, we believe, this greater degree of industrious application has been owing, in no small measure, to the industry and cheerful devotion of the teachers to the important duties devolving upon them, and to the introduction, as circumstances would permit, of occasional interesting exercises, out of the usual routine of studies.

This interest has also probably been promoted by the lectures which have been delivered occasionally by the friends of the school. A number of subjects have thus been brought to the notice of the scholars, and explained in a familiar way, and they have evinced by their careful attention and interested countenances, that they were both gratified and instructed. Among the subjects thus treated of, were the following, viz: On the advantages of learning to read, ancient and modern history connected with geography, the compound blowpipe and nature of flame, letter writing, physiology, &c., &c.

We believe there has been an improvement of latter time in the general appearance and deportment of the scholars, and they have been very satisfactory in these respects during the session just closed.

The schools have been frequently visited by the Managers, and the Committees have reported their condition to the Board from time to time.

The number of interested friends who have

ments; and that I regarded them as especially inconsistent with the duties of a christian woman. The lady was far more advanced in years than I was; but whether it was owing in part to this circumstance or not, my remarks made such an impression on her, that she never visited such places afterwards."

"But our intercourse with each other did not end here. I was once in company with her and another lady who was fond of talking, and had read the writings of the christian Fathers. They had much conversation with each other in relation to God. The learned lady, as might be expected, talked very learnedly of him. I must confess that this sort of merely intellectual and speculative conversation in relation to the Supreme Being, was not much to my taste. I scarcely said any thing; my mind being drawn inwardly to silent and inward communion with the great and good Being, about whom my friends were speculating. They at length left me. The next day the lady, with whom I had previously had some conversation, came to see me. The Lord had touched her heart; she came as a penitent, as a seeker after religion; she could hold out in her opposition no longer. But I at once attracted this remarkable and sudden change, as I did not converse with her on the day previous, to the conversation of our learned and speculative acquaintance. But she assured me it was otherwise. She said it was not the other's conversation which affected her, but *my silence*; adding the remark, that my silence had something in it which penetrated to the bottom of her soul, and that she could not relish the other's discourse. After that time we spoke to each other with open hearts on the great subject."

It was then that God left indelible impressions of grace on her soul; and she continued so athirst for Him, that she could scarcely endure to converse on any other subject. That she might be wholly his, God deprived her of a most affectionate husband. He also visited her with other severe crosses. At the same time he poured his grace so abundantly into her heart, that he soon conquered it, and became its sole master. After the death of her husband and the loss of most of her fortune, she went to reside on a small estate which yet remained to her, situated at the distance of about twelve miles from our house. She obtained my husband's consent to my going to pass a week with her, for the purpose of consoling her under her afflictions. The visit was attended with beneficial results. God was pleased to make me an instrument of spiritual good to her. I conversed much with her on religious subjects. She possessed knowledge, and was a woman of uncommon intellectual power; but being introduced into a world of new thought as well as new feeling, she was surprised at my expressing things to her so much above what is considered the ordinary range of woman's capacity. I should have been surprised at it myself, had I reflected on it. But it was God, who gave me the gift of perception and utterance, for her sake; he made me the instrument, diffusing the flood of grace into her soul, without regarding the unworthiness of the channel he was pleased to make use of. Since that time her soul has been the temple of the Holy Ghost, and our hearts have been indissolubly united."

The narrator was about twenty years of age at the time of the above occurrence.—*Upham's Life of Guyon.*

Believers should neither be "proud flesh, nor dead flesh," fellow-members should have fellow-feelings.

visited the schools, has been unusually large, and, we believe, their presence has had an animating effect on both teachers and scholars. It is still a cause of regret that so few members of the Association avail themselves of this pleasure, as, we believe, they would in this way become much more interested in the concern, and would feel themselves amply repaid for the time occupied in the visit.

The practice of reading a portion of the Holy Scriptures each evening before closing the schools, has been continued, and the Moral Almanac and a considerable number of Friends' Tracts have been distributed among the scholars and were gladly received.

On the closing evening, all the Managers, and a large number of other Friends were present; and it was very pleasant to observe the gratitude which was evidently felt by a large number of those who had partaken of the benefits conferred by the schools, and were now present to express their feelings of thankfulness to their teachers, and to the Association which had thus benefited them. Many creditable and interesting letters were written by the pupils of the women's school, and addressed to the teachers, &c., expressive of their appreciation of favours received. (A few of which are appended to this Report.)

In the men's school, many of the pupils present spoke feelingly of the advantages they had received from the limited education already obtained, and encouraged us to persevere in the work. They regretted that so few of their brethren seemed properly to appreciate the opportunities afforded, and exhorted each other to more diligence, that they might make more earnest exertions in future in the good work of acquiring an education.

Although the disadvantages that many of the colored people have laboured under, and are still subjected to, even in our city, prevent them as a class from making that rapid progress in learning which we would look for under more encouraging auspices, yet there have been many instances of remarkable advancement among them, and their general progress has been quite satisfactory.

When we consider the great injustice and oppression which are now being heaped upon this unfortunate class in many places, it behoves us to do what we can to promote their interest and well-being; and we believe that even the limited education which they acquire in our schools, tends greatly to promote their welfare, and adds much to their respectability and usefulness as citizens, by qualifying them to fulfil in a better manner the duties of parents, and to conduct the business operations in which they may be engaged both for themselves and their employers more successfully.

The Managers remarked, on the occasion of closing the schools, as at other times, that many who had been brought up in the Southern States, and had been denied the opportunity of getting an education, seemed most to value the facilities here afforded for acquiring knowledge. The accounts which some of these gave of their former lives and experience in a land of bondage, were very touching, and we feel it to be our pleasure, as well as our duty, to extend in this manner a helping hand to those who are calling to us to aid them in throwing off the shackles of ignorance and degradation.

In looking back, we believe there is abundant cause for encouragement to press forward with renewed zeal, in what we feel to be a good work, and to endeavour, as far as lies in our power, to help those who stand so much in need of our sympathy and aid.

Signed on behalf of the Board of Managers,  
GEORGE J. SCATTERGOOD, Clerk.

For "The Friend."

#### Spectrum Analysis.

For about a year past, scientific men both in this country and in Europe have been actively engaged in investigating some extremely curious properties of light brought prominently to the notice of the scientific world, after years of careful study, by two German professors, living at Heidelberg, named Bunsen and Kirchhoff; and as some of the results of their experiments are truly wonderful, it has been thought that a brief account of some of the facts connected with the "Spectrum Analysis," for so the investigation is styled, might be interesting to the readers of "The Friend."

Chemistry teaches us that most of the various substances around us, such as wood, earth, or stones are not simple bodies, but are composed of two or more simple bodies combined together in such a manner that the original properties of both the elements are disguised or lost, and a new body with new properties is produced. Thus water is formed by the union of two gases very much like air in many respects, but which when they combine together, shrink down to something less than the one thousandth part of their former bulk, and form the liquid, water, so entirely different from either of its components. The very air we breathe is not a simple body but a mixture of two gases, both entirely unfit in their separate state to support life, and which when combined in a different proportion form the highly poisonous and corrosive nitric acid. There are about sixty simple bodies or elements, known to chemists, who have long made it one of their chief pursuits to discover the composition of terrestrial bodies;—to find out what elements they contain and in what proportion. Of latter time, the restless, active minds of the scientific Germans have taken a bolder flight, in attempting not only to analyze substances on the earth, but to tell us the composition of the sun, and even, to a certain extent, of the fixed stars. The method adopted in this new branch of study, is to inspect the light of a flame in which some of the substance to be examined is burning. When sunlight is made to pass through a prism it is decomposed, and a series of the most beautiful colors is produced, arranged in regular order, and similar in all respects to those of the rainbow, which bright collection of colors is called the solar spectrum. Now if instead of using sunlight to make our spectrum we employ some artificial light, we shall find that the spectrum has altered, and that it changes with every change in the substance producing the light. When common salt is placed in a flame, and the light decomposed by a prism, there is no red, no blue, and no violet color shown, but only a band of bright yellow; and if lime is placed in the flame, a red spectrum only is produced. Every known substance appears to produce its own peculiar appearance when its light is decomposed, and no two substances produce the same appearance. Here then is the foundation upon which this new science rests;—that as every element has its characteristic and unmistakable marks when it is burning, and as those marks are constant, it is reasonable that whenever we find these marks in any flame, we should suppose the substance to be present, of which they are the certain indication.

The apparatus employed is quite simple, consisting of a gas flame, in which is placed the substance to be examined, a prism for decomposing the light, and a microscope for magnifying the spectrum which is produced. But with these simple and apparently unpromising instruments, Bunsen and Kirchhoff have been able to ascertain the composition of bodies in a surprisingly accurate manner, and to detect the presence of some sub-

stances with a degree of delicacy almost infinitely beyond that of any of the old methods of testing. A quantity of soda amounting to the millionth part of a grain, gives a strongly characteristic appearance in the flame, and even the one hundredth part of this small quantity may be distinctly recognized. All other substances which can be made to burn, may, in a similar manner, be detected in almost incredibly small quantities. A very curious experiment may be tried by using the simple gas flame and observing its spectrum, then throwing into the air in a distant part of the room, a little finely powdered table salt, not more in bulk than a small pin-head, and again observing the spectrum; almost immediately the peculiar effect of the salt will be seen, and will continue visible for many minutes.

Bunsen and Kirchhoff having satisfied themselves, after a long course of experiments, that every substance had its own peculiar spectrum, and having made themselves familiar with the spectra of all known substances, boldly announced the existence of a new and hitherto undiscovered metal, because they had found in examining the flame produced by the solid residue of a certain mineral water, colored bands which they could not refer to any substance known to chemists. This was of course demanded of the truth of this startling announcement, and they set themselves earnestly to work to produce a specimen of this new element. By the evaporation of upwards of *forty tons* of the Durham mineral water, they obtained about an ounce of the new metal in a state of combination, and were able to show conclusively that it was something quite different from any previously known element. Since the discovery of this new metal, which has been called Cesium, they have announced the existence of still another metal; and a resident of London has discovered a third new body, similar in some respects to sulphur.

But how are we to apply this method of analysis, delicate though it be, to ascertaining the composition of the sun and stars? Though we are unable to take our instruments to the sun, yet if the sun's light reaches us, we can examine it with complete accuracy, and it would appear from the experiments which have been made, that nearly all the substances which compose the earth's surface may be recognized in the light of the sun. As the process becomes more refined, and as the operators become more expert in their observations, it is highly probable that it can be shown that the earth and the sun are identical in composition.

It seems almost presumptuous to attempt to examine the composition of the stars, and to say whether or not they contain the common elements of the earth, but the Heidelberg professors have not hesitated to apply their method to some of the brightest of the fixed stars, and they state that they find material differences between the light of the stars and of the sun, and between that of the stars themselves, rendering it highly probable that they are composed of very different materials from those of the solar system. There are, however, practical difficulties in the way of analyzing starlight, owing to the immense distance intervening between the stars and the earth, and the small amount of light which can be collected from any one star, which must preclude any thing like thorough investigation of the stellar worlds.

The whole subject of spectrum analysis is now being diligently examined by a large number of scientific men, and some of the greatest intellects of the day are devoting themselves earnestly to the further prosecution of the research, and when their results are made public we may look for curious and startling developments.

## THE FRIEND.

TWELFTH MONTH 21, 1861.

*Meditations and Hymns, by "X." Protestant Episcopal Book Society, Philadelphia, 1224 Chestnut street.*

A small duodecimo volume with the above title and imprint, has been sent to us by the unknown author. It is neatly got up, and there is more originality of thought in several of the pieces than is often met with in similar publications. There is some true poetry in the collection, though the versification too often lacks smoothness. The views of christian doctrine inculcated are generally those we approve, but to some of the sentiments we decidedly object, believing them to be unscriptural; and as we do not unfrequently see the same set forth in similar compositions, which find their way to the centre tables of Friends, we will give two or three quotations of objectionable passages, and a few remarks upon the subject.

"Are any pure? Hath love a law,  
By which unmingled, spotless worth,  
Alone may claim regard from her?  
Then may she turn to-day from earth." Page 16.

Speaking of the graves of christians,  
"May it be mine to know their safe repose,  
Where'er I fall, what'er my mortal state;  
Sin shall cease here—here all pursuing foes,  
As heavenward, I enter death's dark gate." Page 13.

"The righteous praise Him, even when they fall—  
And miss the path, in that true penitence  
Which weeping doth retrace each erring step." Page 112.

In allusion to thoughts of the dying hour,

"All my joys,  
Those finished, thou yet shaping in my hands  
Then rose and stood as stern accusers forth,  
Urging my guilt—*ay, even my holy things*  
Dust threaten me with hell." Page 136.

"Infirmity is lost, and yet by it  
The christian hath his gain. Care my disease,  
And my Physician will return no more." \*

Speaking of the evil in the heart,

"No strength of mine  
Can east it out; and He on whom I call  
Permitting still its presence, only saith,  
My grace sufficeth for thee. Give me, Lord,  
That grace, and while thy purpose holds me here,  
Teach me how with corruption to abide,  
Not loving it, nor murmuring—but with hope  
So much more ardent, longing to be free." Page 161.

If we understand these passages aright, their import is, that we are not to expect to be entirely free from sin in this life; that none are pure; sin ceases only at the grave; and that even our most righteous works—our "holy things"—are polluted, and would bring destruction upon us. That if we were entirely free from disease (sin), our great Physician would not be required, or return to us; and that He permits its presence, teaching us how to abide with our innate corruption, longing to be free.

The natural man so revolts from the crucifying operations of the Holy Spirit, by which alone the heart can be thoroughly purged or cleansed, that he is very willing to be cheated into the belief he may commit a certain portion of sin daily, and yet be acceptable in the Divine sight, and sure of salvation through what Christ has done for him without him.

All men have sinned and come short of the glory

of God. No man can of himself resist temptation to sin, or deliver himself from its power and guilt. Christ is the alone Redeemer and Saviour of man. He came to destroy the works of the devil; to offer himself a propitiation for the sins of the world; to give grace to as many as would receive him; to become the sons of God and joint heirs with him; to save men from their sins; to give himself for us, that he might redeem us from all iniquity, and purify unto himself a peculiar people; that he might sanctify and cleanse the church, and present it to himself a glorious church, not having spot or wrinkle, but being holy and without blemish. He commanded those who would be members of this church, to be perfect, even as their Father in heaven is perfect; to abide in Him; to seek for the gift of the Holy Spirit which should be given them, and guide them into all truth; promising to be with them unto the end of the world.

Now it is evident that if men cannot become so completely under Christ's government as to cease from all sin—which is the service of the devil—and have their hearts made pure, redeemed from all iniquity; if they cannot live in perfect accordance with the will of God, and hence free from impurity, then the object and efficacy of his coming and ministry are unaccomplished and unattainable. Then we are commanded by an infinitely wise and merciful Creator to do that which he has withheld from us the power to perform.

According to the apostle, we are his servants whom we obey, "whether of sin unto death or of obedience unto righteousness." If then men can never become so established in the service of Christ, but that they must sin, and thus continue to be more or less the servants of Satan, it follows that notwithstanding all that Christ has done and continues to do for his disciples, yet he must share his dominion in their hearts with his and their adversary, who is too powerful to permit all his works to be destroyed there, even though Christ came expressly for that purpose. Were this true, it would be great injustice to make death the wages of sin, seeing that without Christ, according to his own testimony, man can do nothing, and yet He would have withheld the grace needful to keep him in a state of purity.

Christ commands his disciples to abide in him, and the apostle says that "whosoever abideth in Him sineth not," and again "he that saith he abideth in him, ought himself also to walk even as He walked," which was holy, harmless, undefiled and which is therefore the duty of all who profess to be Christ's followers. This proves there is a possibility of living free from sin, of becoming members of that glorious church which Paul declared the true believers had come into in his day, even the general assembly and church of the first born, which are written in heaven; for which Christ gave himself that he might sanctify and cleanse it with the washing of water by the Word; that he might present it to himself a glorious church, not having spot or wrinkle or any such thing, but that it should be holy, and without blemish."

The members of this church having been created anew in Christ Jesus, old things are passed away, and all things are become new and all things of God; which necessarily excludes sin; and the works of righteousness or "holy things" of such as have experienced this new birth, are the product of the Holy Spirit operating in the heart and prompting thereto, and therefore are free from pollution and can bring no condemnation; according to the scripture "for we are his workmanship, created in Christ Jesus unto good works, which God hath before ordained that we should walk in

them;" and these works which God hath ordained that we should walk in, must be free from sin, and are a proof that we have the faith which purges the heart and brings into the condition in which, and in which only, we can see God.

There is reason to fear, that in the anxiety to inculcate the doctrine of the atonement, and an imputative righteousness, this of perfection is too much lost sight of, or doubted in the present day. There is none more clearly set forth in the scriptures, and our early Friends contended for it in opposition to the carnal professors, who pleaded for such during the term of life; and we trust that those who now desire to walk like good old Zacharias and his wife, in all the commandments of the Lord blameless, will not permit the gospel standard to be lowered, but keep in view the mark for the prize of their high calling in Christ Jesus, even to be set free, by obedience to the law of the Spirit of life in Him, from the law of sin and death. "Shall we continue in sin that grace may abound? God forbid. How shall we that are dead to sin live any longer therein." It is doubtless a great attainment, to be kept day by day, through the power of the Holy Ghost, from sinning in thought, word, or deed; but it is nevertheless attainable. "Whosoever is born of God doth not commit sin; for his seed remaineth in him, and he cannot sin because he is born of God."

## SUMMARY OF EVENTS.

*Great Britain.*—News from England to the 5th inst. On the 15th, the mail steamer Europa, arrived at Halifax with important intelligence. This announcement to the British Government has occasioned some anxiety by the United States steamer San Jacinto to deliver up Mason and Sidel, the rebel Commissioners to Femece and Great Britain, had aroused a general feeling of resentment and indignation. According to general report, a Cabinet of Ministers had been called to meet the return of the Commissioners, and an apology for their arrest, and had instructed the British Minister at Washington to make these demands. The Europa brought out a special messenger with despatches for Lord Lyons. The Government of the President is, for the most part, eminently unfriendly. The Times does not expect that the Federal Government will comply with the demand of England, and anticipates an immediate rupture with the United States, one of the earliest effects of which would be the breaking up of the blockade of the Southern ports, "letting free our industry from anxiety of a cotton famine and giving sure prosperity to Lancashire through the winter, at the same time we shall open our trade to 8,000,000 in the rebel states, who desire nothing better than to be our customers." At a private meeting held by the Queen, and attended by the Emperor, the export from the United Kingdom or carrying coastwise, of all gunpowder, saltpetre, nitrate of soda and brimstone.

A large number of naval vessels are ordered to be ready for immediate commission.

The transport "Victor" was to leave Woolwich Arsenal on the 5th for Halifax, with 30,000 stand of arms, large quantities of ammunition, and six Armstrong pieces. She will be convoyed by the Orpheus, of 21 guns.

The iron plated steamer Warrior is to be ready for foreign service immediately, and her destination will depend on the answer from Washington.

The London Times predicts three things to immediately follow an outbreak with the United States, namely, the destruction of the Southern blockade; the complete blockade of the Northern ports; and the recognition of the Southern Confederacy by France and England.

The Daily News rejoices that the American Congress meets before the English demands can get out, and hopes that it will act with honour and dignity, and that the golden opportunity will be taken.

The general belief in the United States seems to be that the act complained of as an outrage on the British flag, was only the exercise of a lawful belligerent right.

The Liverpool cotton market was inactive at former quotations. Stock in port, 351,000 bales, including 254,000 American. Breadstuffs were higher, flour had improved 6s. 1d. and is quoted at 2s. 3d. wheat had advanced 2d. 4d. Consols at 92.

mited to live just long enough to have her strength tested, that she had appeared in a plain simple garb, and was very happy whilst wearing it.

She seemed much to fear she would not bear her increased sufferings, and the closing scene, as she ought, but she was mercifully favored in this respect, for the morning previous to her death, she told us that she could now pass through the valley and shadow of death, and "fear no evil;" that she had had something like a vision or sense of heaven; that she found herself walking close by the side of her Saviour, that she was permitted to know Him, and that he looked upon her in a most benign manner, and that she felt entirely calm. She looked upon her father and said, "I have had a hard struggle to find my Saviour." He said, "but thou hast found Him, I trust." "Yes," she said, "I determined not to cease the struggle but with life."

She was now so entirely released from all agitation or anxiety, and so free from suffering of body, that she could not realize that the hand of death was then upon her, though the family were all collected round watching for the parting moment. She continued in this state for seven hours.—About five hours before her departure, seeing her family weeping, she asked the cause of it; her mother told her we were weeping on her account. She then said, "I do not suffer; I am released from all pain; why do you weep?" After lying still for some time, she turned to her eldest sister and said: "Caroline, am I going?" She told her we believed so. She then said, "do not weep for me, pray for me." She then spoke to her father and mother, sisters and brother, separately, warned them not to leave repentance, and the soul's salvation, to a death-bed;—took a final leave of her grandmother and aunts;—to her eldest sister, who clung to her, she said "Caroline, we have spent a great deal of time together on earth, let us spend Eternity together in Heaven."<sup>8</sup>

About two hours before her close, her friends informed their friend E. E., that Helen was sinking very fast; she accordingly went at once to see her for the last time. As she approached the bed, the dear lamb looked up with a sweet composure on her countenance, and said: "I am going! I am going! but there is hope ahead now! hope ahead! like a little star guiding me onward:—I feel very calm."

A few minutes before the vital spark fled, she seemed to be engaged in prayer, and from the expression of her countenance, it seemed to those around her, as if the glories of Heaven were already revealed. She then raised one of her hands over her face for a minute, then gently laid it down again, and sweetly sank to her everlasting rest, as we have good reason to believe, through the everlasting and adorable mercy of her crucified but risen Lord, who testified, "Whosoever cometh to me, I will in no wise cast off." But let none presume, remembering that we cannot turn, or come to Him when we please; it is only as we co-operate with his grace, and the offices of mercy, at the time we feel Him to be near, calling and warning and wooing us; we must not dare to choose our own time and way, but be willing to be accounted fools for His blessed name's sake, and despising the shame for the hope that is set before us.

Oh, what is there in this world worthy to be put in competition with a well-grounded hope in a dying hour, that our peace is made with God? or what will not a man give in exchange for his soul's peace at such an hour?

<sup>8</sup> This sister has since deceased. We understand she made a peaceful close.

#### Remarkable Ancient Manuscripts.

It is now nearly twenty years ago that Dr. Tatam, who has since been made archdeacon of Bedford, was commissioned by the English government to purchase in Egypt certain Syriac manuscripts, which were known to exist in the monastery of S. Maria Deipara, in the valley of Nitria, or of the Natroa Lakes, situated about sixty miles W.N.W. of Cairo. This scholar returned to England, with a large collection of most valuable manuscripts more or less imperfect. His bargain with the monks had been that he should purchase the whole collection; but it was afterwards ascertained that they had concealed and withheld a large part of their library. This fact was brought to light by Pachó, a native of Alexandria, who had been authorized to make a further search for similar literary treasures in other Egyptian convents. It was in 1847, that this gentleman discovered and procured nearly two hundred volumes from the same house of S. Maria Deipara, whence the first instalment had been obtained. It seems that the monks of this convent, who had contrived to deceive and defraud Dr. Tatam, required very delicate handling before Pachó could be sure that he had received all the remaining Syriac manuscripts in their possession. However, he was as astute as they were, and the second moiety of the collection was added to the first moiety in the British Museum, which has become the richest library in the world in Syriac manuscripts.

One of those manuscripts is marked Add. MS. No. 12150, on the catalogue of the Museum. It contains four treatises in the Syriac language, namely, the long lost book of Eusebius on the Theophaonia, or Divine manifestation of our Lord, Syriac versions of the recognitions of Clement of Rome, and of the controversial work of Titus, an Arabian bishop, against the Manicheans, and also another lost work of Eusebius, his contemporary history of certain martyrs in Palestine during the persecution of Diocletian, in the beginning of the fourth century. Translations of the first three have previously been printed, and Dr. Cureton has now published a translation of the latter. Dr. Lee, who edited the Theophaonia, expressed an opinion that the manuscript must be at least a thousand years old, and he afterwards discovered on the margin of one of the leaves in the body of the volume, a transcript of a note of the date of the writing, which added nearly five centuries to the age of the manuscript. This note was as follows:—"Behold, my brethren, it should happen that the end of this ancient book should be torn off and lost, together with the writer's subscription and termination, it was written at the end of it thus, viz: that this book was written at Orhoo, a city of Mesopotamia, by the hands of a man named Jacob, in the year seven hundred and twenty-three, in the month Tishria the latter it was completed. And agreeably to what was written there, I have also written here without addition. And what is here, I wrote in the year one thousand and three hundred and ninety-eight of the era of the Greeks." These dates answer to A. D. 411 and A. D. 1086 of our era, so that before the close of the eleventh century, this manuscript was already regarded as an ancient volume, and the library of this Egyptian monastery was even then, we may suppose, falling into a state of neglect. That which the annotator feared actually came to pass. The end of the volume was torn off, and the book was brought to England by Dr. Tatam, and used by Professor Lee, in this imperfect state, with its dated subscription lost. When Pachó, several years afterwards, brought the remaining Nitrian manu-

For "The Friend."

scripts to the British Museum, the missing fragment was found among them; and on the last page Dr. Cureton had the delight of reading the autographic and dated *finis* of the original scribe. The history of the book is summed up, as follows, by Dr. Cureton:

"Among all the curiosities of literature, I know of none more remarkable than the fate of this matchless volume. Written in the country which was the birth-place of Abraham, the father of the Faithful, and the city (Edessa or Orfa), whose king was the first sovereign that embraced Christianity, in the year of our Lord 411, it was at a subsequent period transported to the valley of the Asetics in Egypt, probably in A. D. 931, when 250 volumes were collected by Moses of Nisibis, during a visit to Bagdad, and presented by him, on his return to the monastery of S. Maria Deipara, over which he presided. In A. D. 1086, some person, with careful foresight, fearing lest the memorial of the transcription of so valuable, beautiful and even at that remote period, so ancient a book should be lost, in order to secure its preservation, took the precaution to copy it into the body of the volume. At what period the fears which he had anticipated, became realized, I have no means of ascertaining; but in A. D. 1837, "the end of the volume had been torn off;" and in that state, in A. D. 1839, it was transferred from the solitude of the African desert to the most frequented city in the world. Three years later, two of its fragments followed the volume to England; and in 1847, I had the gratification of recovering almost all that had been lost, and of restoring to its place in this ancient book, the transcriber's own record at the termination of his labours, which, after various fortunes in Asia, Africa and Europe, has already survived a period of 1436 years."

*The Danger of Sinning as at the Waters of Strife.*—Are there not some in this day, who, with sorrow of heart, have observed the heat and bitterness of spirit which exist, and how differences and controversy concerning religion have eaten out the life of love and tenderness that was in many? and those who have hurt the great thing in themselves and one another, have brought on death, darkness, dryness, and sensible withering,—and cannot fail to do so; seeing bitterness of spirit and prejudice, with similar frames of mind, in man or woman, separate from God. For "God is love, and he that dwelleth in love, dwelleth in God, and God in him." And Christ hath said, "He that abideth in me, and I in him, the same bringeth forth much fruit; for without me, ye can do nothing. If a man abide not in me, he is east forth as a branch, and is withered." So, not abiding in this pure love to God and his image in his children, hath caused many to fall short, and hath hindered their progress, and made them lose sight of their way, and the "Guide of their youth:"<sup>9</sup> thus, they have not fully followed the Lord in the regeneration, who renews according to the increase of light, and the measure of his manifestation; whereby they might know, even in this life, a being "changed into the same image, from glory to glory, even as by the Spirit of the Lord."—*Lilian Stene.*

The journey we have all to take is so great and wonderful, that I marvel it is not always in our thoughts.

No earthly possessions—no mental endowments, can supply the place of religion—because that alone brings salvation to man.

Do not disdain good people on account of their follies or deficiencies in matters of little importance.

"Trust in the Lord at all times."

Paul Gerhardt, a German poet and divine, was born in Saxony, in 1506. He entered the ministry, and for ten years performed the duties of his sacred office in the Nicolai Church at Berlin. "But his religious sentiments," writes his biographer, "did not wholly coincide with those of his king, and Gerhardt, too conscientious and too decided to affect opinions which he did not entertain, was deprived of his appointment, and ordered to quit the country. Utterly destitute, not knowing where to lay his head, or how to provide for his helpless family, he left the home where he had spent so many happy years. But no affliction, however terrible, could shake his confidence in Divine wisdom and mercy. After some consideration he determined on directing his steps to his native land, Saxony, where he yet hoped to find friends. The journey, performed on foot, was long and weary. Gerhardt bore up manfully; his heart failed him only when he gazed on his wife and his little ones. When night arrived, the travellers sought repose in a little village inn by the roadside, where Gerhardt's wife, unable to restrain her anguish, gave way to a burst of natural emotion. Her husband, concealing his anxious cares, reminded her of that beautiful verse of Scripture, "Trust in the Lord with all thine heart and lean not to thine own understanding; in all thy ways acknowledge him, and he shall direct thy path."

"The words uttered to comfort his afflicted partner impressed his own mind so deeply that, seating himself in a little arbour in the garden, he composed a hymn," of which Madame de Pontés gives us the following translation:—

"Commend thy ways, O mortal!  
And humbly raise thy sighs  
To Him, who in His wisdom,  
Rules earth, and sea, and skies.  
He who for all has found a spot,  
Wind, wave, and ocean dread,  
Will find a place, O doubt it not,  
Thy foot can likewise tread!  
In Him alone confide thou must,  
Ere He will bless thy deed;  
In His word must thou put thy trust,  
If thy work shall succeed.  
Murmur, and vain repining,  
And effort,—all will fail;  
God will not listen unto these,—  
Prayer can alone prevail.  
All means and ways possessing,  
Whatever He does is right;  
His every deed a blessing,  
His steps one path of light!  
To thee it is not given  
The tempest's rage to quell;  
God reigns supreme on heaven,  
And all he does is well.  
True, it may seem a moment  
As though thou wert forgot,  
As though he were unmindful  
Of thine unhappy lot;  
As though thy grief and anguish  
Reached not the eternal throne,  
And thou wert left to languish  
In sorrow and alone.  
But if, though much should grieve thee,  
Thy faith shall not be ravaged,  
Be sure He will relieve thee,  
When thou expect'st at least.  
Then hail to thee victorious!  
Thou hast, and thou alone,  
The honour bright and glorious,  
The conquest and the throne."

Not many hours after Gerhardt had thus expressed his unshaken faith in the Most High, he found by experience that God indeed had not forgotten him. "Evening had now deepened, and the pastor and his wife were about to retire to rest, when two gentlemen entered the little parlour in which

they were seated. They began to converse with the poet, and told him that they were on their way to Berlin to sack the deposed clergyman, Paul Gerhardt, by order of their lord, Duke Christian of Mersburg. At these words Madame Gerhardt turned pale, dreading some further calamity; but her husband, calm in his trust in an overruling Providence, at once declared that he was the individual they were in search of, and inquired their errand. Great were the astonishment and delight of both wife and husband when one of the strangers presented Gerhardt with an autograph letter from the duke himself, informing him that he had settled a considerable pension upon him to atone for the injustice of which he had been the victim. Then the pious and gifted preacher turned towards his wife, and gave her the hymn which he had composed during his brief absence, with the words, "See how God provides! Did I not bid you confide in him, and all would be well!"

Let us all take this lesson to our own hearts,—those hearts so prone to sink under the burden of anxieties, cares of Him who has commanded us to cast our burden upon him.

How many, faint in prayer though praying still,  
Feel God can help, mistrustful if he will!  
Which to a parent most unkind would prove,  
To doubt his power or to doubt his love?

A. L. O. E.

#### The Potato Rot.

The prevalence of the potato rot in Europe the present year, has caused both practical and scientific men to give increased attention to the subject, to ascertain, if possible, the cause and cure; and although the results of past researches in this field have not been such as to raise very exalted anticipations of the present, the subject is one of such vast importance as to give it great interest, and cause us to hope, even against hope, that a remedy may be at last discovered, that will banish the malady from the earth, or bring it under easy control.

Professor De Bary, a celebrated botanist of Leipzig, has published a pamphlet on the subject, in which he reviews what has been written on the subject worthy of notice, and gives the results of a series of experiments to ascertain the habits of a peculiar parasite which always precedes, and which he believes is the immediate cause of the malady. It is a fungus growth, or mildew, of a peculiar character, propagating and spreading with marvellous rapidity, in moist weather, or even in water, appearing on the leaves, and destroying the tissue of them, and producing brown spots. In dry weather it cannot flourish, but dies. This fungoid matter is washed down among the tubers by rains, where it propagates with the same rapidity as upon the leaves, those near the surface suffering as the most, while tubers deeper in the soil often escape.

The Professor arrives at the following conclusion:—"It is quite useless to attempt to destroy, by any external remedies, a parasite which so completely undermines the tissue of the plant, as in the case of the vine mildew, where the threads of the parasite creep over the surface. Early planting, removal of the haulm when diseased, drying of the tubers, and other remedies which have been recommended, must be considered rather as palliatives than as preventives. De Bary, however, suggests one mode which may, in all probability, prove useful in careful, intelligent hands. A plot of ground, of sufficient size only for the production of the seed tubers which may be requisite, and as distant as may be in the farm from the general potato crop, is to be selected, and that perfectly well drained, and as much adapted as

possible for the growth of healthy tubers. This is to be planted with tubers which show no outward trace of disease. The crop is then to be watched carefully, and the moment a diseased leaf appears, it is to be removed and destroyed, the cultivator himself undertaking the task, and going carefully over the plot, which must, of course, be of manageable dimensions, two or three times a day.—The stems are also to be washed, and, if necessary, they, as well as the leaves, must be removed. The zoospores, under such circumstances, unless brought from a distance, cannot be washed down to the tubers, and a very few only will be diseased. A repetition of the process would, in all probability, banish the malady, in a great measure, from the farm. It is obvious, however, that the cultivator must have a distinct knowledge of his enemy before he sets to work, and not mistake merely withered or curled leaves for the ravages of the mildew.

Having given so much as the results of scientific experiments, we now call attention to the plan of growing potatoes free from rot, which also has the advantage of accelerating their maturity—a very important matter for those who grow potatoes for market near large cities. At the late exhibition of the Imperial Horticultural Society at Paris, M. Gauthier exhibited specimens in illustration of a method he has adopted for giving additional vigour, and accelerating the maturity of potatoes, so as to a great measure to save them from the disease. He takes up his potatoes as soon as ripe, and selects the best tubers among the largest or medium size, and puts them into flat square crates, about twenty-eight inches long, fourteen inches broad, and five or six inches deep, open at the top and bottom, and between the bars, and with two thick cross-bars underneath, so that when packed one upon another, there may be a free circulation of air between each.

They are then exposed for a month at least in the open air and rain, and are kept during the winter in a shed or garret, where they will not freeze; but not in a dark cellar, and always where there is as free a circulation of air as possible. With this treatment they soon become green, and the eyes push, but not with weak and sickly shoots, as in the cellar, but short, thick, green shoots, which must be kept with the greatest care, from being rubbed off or injured. The roots, therefore, are never disturbed in the crates, but are carried in them to the planting ground. This is done as early in the season as the ground can be got ready, and these shoots are found to form stems, much more healthy, vigorous, and productive, and more capable of resisting the disease than those which have lain dormant through the winter until the moment of planting; besides, they may be taken up, being ripe, before the disease appears to any extent. M. Gauthier says that when tubers are large, and have to be cut for planting, it increases very much their vigour and productiveness, if they are cut in autumn, three or four weeks after they are taken up, instead of performing the operation at the time of planting.

The Cotton Trade in Lancashire.—The Manchester Examiner gives, as the results of the inquiries by its correspondents into the rate of employment in the cotton trade in Lancashire, the following:—Number of mills working full time, 292; ditto five days, 76; four days, 300; three days, 119; stopped, 149; total number, 836. Number of people working full time, 44,393; ditto five days, 15,572; four days, 55,397; three days, 28,532; stopped, 8,063; total number of work-people enumerated, 172,257.

For "The Friend."

## BIOGRAPHICAL SKETCHES

Of Ministers and Elders and other concerned members of the Yearly Meeting of Philadelphia.

## GEORGE MIDDLETON.

George Middleton was engrossed with the vanities of the world, and was one amongst those who run the broad way to destruction, when he was arrested in his downward career by the awakening grace and spirit of our Lord Jesus Christ. As the Lord made known to him his blessed Truth, he bowed in submission thereto, and came to abide under the cross. Being convinced of the principles of Truth, as held by Friends, he became diligent in his attendance of Meetings for Worship and Discipline, and there was enabled to wait in reverent humility and holy watchfulness unto prayer, for the arising and circulation of Divine life. Being thus favoured to witness his inner man to be strengthened, his spiritual faculties were quickened thereby, and he was enabled to see, and helped to perform his duty to his family, and to bring them up in the fear of the Lord, and in that plainness of speech, that sobriety of behaviour, and that consistency of apparel, as made them good examples to others. The friends of his meeting, seeing the proof of his care and love for the cause of Truth, and judging that he who ruled his own household well, might be fitted for usefulness as a ruler in the church militant, appointed him an elder. His day's work however, was nearly completed, bodily weakness came upon him, and he but rarely was able to attend any sittings of the Meetings of Ministers and Elders. His release came to him on the 26th day of the Sixth month, 1770, he being aged about 48 years. He had been a member of Crosswicks meeting.

For an account of DANIEL STANTON who deceased Sixth month 29th, 1770, aged 62 years, it is sufficient to refer our readers to his journal.

## CORNELIUS CONRAD.

This Friend, a grandson of Dennis Conrad, who came from Crefeld, in Germany, was born in Abington, Philadelphia county, about the year 1712. His father died when he was quite young, and in the liberty which this event gave him, he ran out from the simplicity of the Truth. Yet, under the visitations of divine Grace, he was preserved from gross evils, and with advancing years, his conduct became more steady, and his conversation more sedate. The good influences of his Heavenly Father's love were evidently at work in him, although he had not as yet given up to bear the cross of Christ.

After his marriage, he grew more religiously thoughtful, and manifested that it was becoming more and more his chief concern, to walk as becometh the gospel of Christ. He was a careful father, endeavouring to bring up his children in the fear of God, and in the diligent attendance of religious Meetings. As he was a good example in these respects himself, his admonitions had weight, and his restraints were more cheerfully submitted to. Being faithful to the instructions of grace, he grew in religious experience, and became a useful member of the church. His talents were improved by use and though of a very meek and quiet spirit, yet giving up with cheerfulness to the appointments placed upon him by his friends, he was enabled to perform them in a proper manner, and to the benefit of the body.

For several years he was an elder of Hiorsham Particular Meeting, not in name only, but being through the Divine assistance a qualified labourer in that station, when he was removed from works

to reward, which took place Seventh month 12th, 1770, his loss was very sensibly felt in his Monthly Meeting. He was aged 58 years nearly.

## ELIZABETH MIDDLETON.

Elizabeth, the wife of Amos Middleton of Chesterfield Monthly Meeting, New Jersey, was one who in her younger days, ran in the way of vanity, whose broad and greatly thronged path, was much to her natural taste. But being again and again visited by Divine grace, she gave up thereto, and abiding under the cross, she witnessed the purifying baptisms of the Holy Spirit to work out that change of heart, through which she became a child of the kingdom. She now became a diligent attendant of religious meetings, and waiting therein on the Lord in great humility of mind, she was often instructed in heavenly things. Her duty towards her children and family being clearly unfolded to her, she endeavoured to bring them up in the nurture and admonition of the Lord, in plainness of speech, behaviour and apparel.

Being brought under exercise on account of the church and strengthened to labour therein, her Friends deemed that a gift of eldership had been committed to her, and appointed her to that station. Her decease took place Eighth month 19th, 1770, she being about 47 years of age.

## MARGARET CHURCHMAN.

Margaret Brown, a daughter of William and Esther Brown, was born at Chichester, then in Chester county, Pennsylvania, First month 13th, 1707. Her parents were honest, consistent members of the society of Friends, who laboured as qualified by Divine Grace, to educate their children in obedience to the Truth. Whilst she was quite young, her parents removed to Nottingham in Maryland, where her father died before she was ten years of age. The care of Margaret after this devolved on the widow, who was enabled to exercise the authority of a rightly anointed christian mother over all the flock left to her oversight and guidance. Her daughter Margaret was early awakened to the necessity of seeking after a knowledge of the Truth, and grew in experience and religious weightiness of spirit. In her 23rd year she was married to our valued friend John Churchman, and as she had been an exemplary and dutiful daughter, so she proved a loving and faithful wife, a tender and concerned mother. She continued to be a diligent seeker after Truth, and receiving divine instruction, she grew in spiritual knowledge, and in her 34th year, the Lord Jesus committed a gift in the ministry of his blessed gospel to her. She was often exercised in this line to the comfort and edification of the churches at home and abroad, her communications being attended with divine life and gospel sweetness, and being delivered in pertinent language, free from unbecoming gestures. She at different times visited meetings in Pennsylvania and the Southern provinces. She was a good example in plainness, diligent in the attendance of meetings, and waiting therein in humble watchfulness for the arising of life. She was a servicable member in meetings for business, having a good clear sense of discipline, and a faithful becoming zeal that the testimony of Truth in all its branches might be maintained. She was well qualified for the important service of visiting families, in which she was frequently engaged.

During the latter part of her life she was afflicted with a cancer on the head. The consequent suffering she bore with remarkable patience and resignation, whilst the innocent cheerfulness which had characterized her in health, remained unimpaired. She continued to attend religious

meetings, when her doing so was matter of marvel to those who knew her affliction, but at last her weakness became so great as wholly to confine her. Her love to the Truth, and to the friends of it, continued warm to the last, when her spirit escaped from its worn out tabernacle. Her death took place Seventh month 28th, 1770, she being in her 64th year.

*Spiders Foretell the Weather.*—Quatremar Disjoul, a Frenchman by birth, was adjutant general in Holland, and took an active part on the side of the Dutch patriots who revolted against the Stadtholder. On the arrival of the Prussian army under the Duke of Brunswick, he was immediately taken, tried and having been condemned to twenty-five years imprisonment, was incarcerated in a dungeon at Utrecht, where he remained eight years. Spiders, which are the constant and frequently the only companions of the unhappy inmates of such places, were almost the sole living objects which Disjoul saw in the prison of Utrecht. Partly to beguile the tedious monotony of his life and partly from a taste for natural history which he had imbibed, he began to seek employment, and eventually found amusement in watching the habits and movements of his tiny fellow-prisoners. He soon remarked that certain actions of the spiders were immediately connected with approaching changes in the weather. A violent pain on one side of his head to which he was subject at such times, had first drawn his attention to the connection between such changes and corresponding movements among the spiders. For instance, he remarked that those spiders, which spun a large web in a wheel-like form, invariably withdrew from his cell when he had his bad head ache, and that those two signs, namely, the pain in his head and the disappearance of the spiders were as invariably followed by very severe weather. So often as his head ache attacked him, so regularly did the spiders disappear, and then rain and north-east winds prevailed for several days. As the spiders began again to show themselves in their webs, and display their usual activity, so did his pain gradually leave him until he got well, and the fine weather returned.

Further observations confirmed him in believing these spiders to be in the highest degree sensitive of approaching changes in the atmosphere, and that their retirement and reappearance, their weaving and general habits, were so intimately connected with changes in the weather that he concluded they were of all things best fitted to give accurate intimation when severe weather might be expected. In short Disjoul pursued these inquiries and observations with so much industry and intelligence, that by remarking the habits of his spiders, he was at length enabled to prognosticate the approach of severe weather from ten to fifteen days before it set in, which is proved by the following fact, which led to his release.

When the troops of the French Republic overran Holland in the winter of 1794, and kept pushing forward over the ice, a sudden and unexpected thaw in the early part of the month of December, threatened the destruction of the whole army, unless it was instantly withdrawn. The French generals were thinking seriously of accepting a sun offered by the Dutch and withdrawing their troops, when Disjoul, who hoped that the success of the Republican army might lead to his release, used every exertion and at length succeeded in getting a letter conveyed to the French general in January 1795, in which he pledged himself, from the peculiar actions of the spiders, of whose movements he was now enabled to judge with

perfect accuracy, that within fourteen days there would commence a most severe frost, which would make the French masters of all the rivers, and afford them the sufficient time to complete and make sure of the conquest they had commenced, before it should be followed by a thaw.

The commander of the French forces believed his prognostications and persevered. The cold weather which Desjournal had announced, made its appearance in twelve days, and with such intensity, that the ice over the rivers and canals became capable of bearing the heaviest artillery. On the 25th of January, 1795, the French army entered Utrecht in triumph, and Quartemar Desjournal, who had watched the habits of his spiders with so much intelligence and success, was, as a reward for his ingenuity, released from prison.

## DARK HOURS.

For "The Friend."

Weeping may endure for a night, but joy cometh in the morning.—Psalm xxx. 5.

Dark hours of night!

Your gathering gloom, comes o'er my spirit closing out the light,

My soul but feebly lifts itself in prayer—  
Sweet Hope is stilled with the deadly air,  
That folds her round in this her living tomb,  
But Patience waits the dawning of the day  
Which follows in night's track, for those who watch and pray.

Dark hours of night,

Ye have your ministry, if the chastened heart,  
Receive the lesson ye would teach, aright;  
On earth we know all good has its alloy,  
Sorrow and gloom endure but for a night,  
And with the morning light cometh our joy.

Phild., Tenth month, 1861.

M. H. W.

For "The Friend."

To the Editor.—By inserting the accompanying lines in "The Friend," it will oblige a constant reader of "The Friend."

Twelfth month, 1861.

Reflections occasioned by the removal of Tabitha Middleton, wife of Benjamin Middleton, of Wellingborough, Northamptonshire, Great Britain, who died on the 18th of Tenth month, 1860, by Ann (Tuke) Alexander.

Ah! sorrow spreads her sable veils,  
Affliction's billows roll,  
The rising stream invades my breast,  
And overwhelms my soul.

For I behold from Israel's coast,  
Another warrior gone,  
A faithful way-mark—firm support,  
The appointed work has done.

Now gathered to that glorious rest,  
Which mercy has prepared,  
Receives the promise to the just,  
An hundred fold reward.

Arrayed in robes of purest white,  
The crown immortal wears,  
And numbered with the saints in light,  
The palm of victory bears.

But long will memory revive,  
The labours of her love,  
Long will her bright example live,  
And animating prove.

Her spirit with the gathered few  
In the great Master's name,  
To pure devotion's altar drew,  
And spread the sacred flame.

Or when commissioned to declare  
Glad messages of peace,  
The feeble drooping mind to cheer,  
And fainting hope increase.

Or with authoritative power,  
To spread the alarm of war,  
Proclaim the awful midnight hour,  
And caution to prepare.

In all the holy mandate heard,  
She faithfully obeyed,  
Whether in publishing the word,  
Or suffering with the seed.

But ah! in virtue's sacred cause,  
She now no more appears,  
No more to advocate her laws,  
The gospel trumpet bears.

Oh, Zion! well may I review,  
Thy desolated walls,  
Well may I mourn the very few,  
On whom thy weight devolves.

How many valiants thou hast lost  
Thy vacant seats make known,  
How many champions of thy host  
Are from the battle gone!

But ease my soul! not thus deplore  
The losses we sustain,  
To Zion is the promise sure,  
Her peace will still remain.

And doubtless all redeeming grace  
Fresh watchers can appoint,  
On them the warrior's armour place,  
Amount and re-anoint.

*Coldness of Meteoric Stones.*—A fall of meteoric stones took place at 2 h. 14 m. P. M., on July 14th, 1860, at Dburmsola, in the Punjab, and was accompanied by a tremendous noise and a great number of detonations, similar to the discharge of heavy artillery. Three witnesses saw a flame, two feet broad and nine feet long, passing obliquely over the station after the explosion had already occurred. The direction is stated as being from the N. N. W. to the S. S. E., and stones were found at five different places in this locality. They penetrated the ground to the depth of from twelve to eighteen inches, and it is reported that persons who picked up some fragments, before they held them in their hands half a minute, dropped them again, owing to the intensity of the cold, which quite benumbed their fingers. The largest piece found weighed 320 lbs. The observation of the intensity of the cold of the fragments is a matter of great interest and importance. The little meteorite passed in its cosmical path during an incalculable period, through an excessively cold space (—100° C.). By the resistance of the atmosphere, light and heat are developed, which latter might even produce a melting on the surface of bad conductors while the inside of it remains quite cold.—*Silliman's Journal.*

For "The Friend."

## Benjamin Ferris.

(Concluded from page 110.)

Diary continued.—"Twelfth mo. 28th, 1763.—Now this year draws near its close, I may say it has been one wherein I have witnessed many trying dispensations inwardly, which I have not written, and which are known to the Lord alone. He has, I humbly hope, measurably been near me at times, to sanctify the trials to me, confirming my devotion to him, and my desire to follow wheresoever he may lead me.

"Although I am ready to conclude my path is different from that of most others, which thought frequently occasions fear that I am not under the Lord's notice for good, yet I cannot but acknowledge he has in his great love and condescension, at times, been pleased to manifest himself to my soul, as a morning without clouds, and in such a way as he saw best, renewed my strength, and given me encouragement to persevere, I hope in a good degree of faithfulness, to this day. There has been something on my mind for some time to do in a private way, which I have reasoned against until it has passed from me, either be-

cause I thought it not of sufficient weight, or not attended with the certainty I desired. I was fearful of acting from any other movement than that which only makes fruitful and profitable to the laborer. My forbearing being through innocent fear, I hope I am excused.

"First month 27th, 1764. In company with John Perry I went to Nottingham, and next day was at their Monthly Meeting there. I found no sufficient motive to meddle amongst them, though I did not apprehend things so well, that there was no need of help.

"31-st. I came home, and had the company of our ancient Friend, John Smith, to Newport.

"Second month 13th. I attended our Quarterly Meeting. It was a very wet time. Exceeding leanness and poverty attended me, which is often my lot."

In the Second month, Benjamin Ferris attended Philadelphia Monthly Meeting, and in the Fourth month he accompanied Benjamin Trotter, who had been at the General Meeting at Wilmington, to Center. From thence he went to attend a neighbouring Preparative Meeting, whither he felt his mind drawn, and in it was led into fervent exercise, that he might be preserved from all deception. In much weakness, he felt best satisfied to drop a few hints to those assembled, for their neglect in bringing their children and young people to meetings with them.

On the 12th, he was at Center Monthly Meeting, which was to his satisfaction and peace of mind. On the 23d, with his sister Deborah, he left home to visit their relations in New England, and at Orlong. Of this journey, an account of their setting out is only preserved, this part of his Diary being very much worn away, and many leaves entirely lost. The second part of his Diary, commencing Seventh month, 1764, was printed many years since, and will be found principally in an account of Benjamin Ferris, in "Thomas Scattergood and his Times." We shall not therefore incorporate any part of it here. Benjamin continued to grow in experience, and became a useful member of the church militant. On the 24th of the Tenth month, 1765, he was married at Uwhelan, to Hannah Brown. He was happy in this conjunction, having a companion who feared the Lord, and was of a meek and quiet spirit. After his marriage he engaged in the business of school keeping, which allowed him considerable leisure to be at home with his beloved wife. He says: "Thus happily we passed our time, though not exempt from a share of the exercise and tribulation arising from the world and its spirit; but as we were one in faith, practice and judgment, we could sympathize together, and were made to each other true help-mates."

They had one child, who was a healthy babe, but who was removed from them by death, when little more than a year old. The death of the child was followed towards the close of the year 1767, by that of its mother, and Benjamin was left mournful and desolate. Yet his God, the God of his father, did not forsake him, and at seasons much spiritual consolation was administered to his afflicted mind.

His own health soon became delicate; symptoms of a pulmonary affection appeared and increased, until in the spring of 1771, in the 31st year of his age, he was removed from all the trials and temptations of time.

There is nothing of any value, but the love of God, and the accomplishment of his will; which is pure substantial happiness; a joy that no man taketh from us.

*Life among the Africans.*—The following is an extract from a recent letter from Dr. Livingstone, in which he speaks of the natives of the Upper Zambesi river: "Many of these tribes are governed by a female chief! If you demand anything of a man, he replies, 'I will talk with my wife about it!' If the woman consents, your demand is granted. If she refuses, you will receive a negative reply. Women vote in all the public assemblies. Among the Bechuanas and Kafirs the men swear by their father; but among the veritable Africans, occupying the centre of the continent, they always swear by their mother. If a young man falls in love with a maiden of another village, he leaves his own, and takes up his dwelling in hers. He is obliged to provide in part for the maintenance of his mother-in-law, and to assume a respectful attitude, a sort of semi-kneeling, in her presence. I was so much astonished at all these marks of respect for women, that I inquired of the Portuguese if such had always been the habit of the country. They assured me that such had always been the case."

*Nicotine.*—It is stated that the tobacco crop of the world is 550,250,000 lbs. It is found that the poisonous alkaline principle—nicotine—to which tobacco owes its deleterious properties, forms on an average about 5 per cent. of the tobacco of commerce, so that about 27,562,500 lbs. of this poison are annually produced. The pure nicotine is a colourless acid liquid soluble in and heavier than water. The quantity above stated would fill nearly 100,000 wine barrels, and would give 293 grains, or rather more than a table-spoonful to every man, woman and child in the world. As nicotine is an energetic poison, a few drops of which are fatal, it is probably not too much to say that the annual crop of tobacco would furnish nicotine enough to destroy at a single dose every living creature on the face of the globe.

For "The Friend."

#### On Religion and Worship.

Let us all strive to gather to the place of silent worship, unmolested as we are by the people of the world, as those were in ancient days, who were often driven from place to place, and distressed in many ways, to which we are strangers. They were faithful in the discharge of the duty to God resting upon them. Is there not in this evil day, as much necessity for us to gather together for the spiritual worship of the Almighty, who is the same yesterday, to-day and forever; whose unlimited power is as able to sustain us as a people, to the admiration of surrounding beholders, as he was in days past? Let us then be faithful in this duty, for it is required of man to humble himself before his Maker, and return thanks for his blessings, which are unceasing. Yet we are often thoughtless, easy and indifferent about these things, especially the younger people among us. But we are still cared for by a compassionate Saviour, who knows our weakness, and is still graciously waiting on us, poor sinners as we are, but we stand aloof and obey not the call that is going forth, "Come unto me all ye that are weary and heavy laden, and I will give you rest." Oh! let us all be aroused to a just consideration of our condition, and not venture to sleep as upon the brink of a precipice, but apply ourselves in earnest to the great work of salvation, before that awful sentence is proclaimed,—"he that is filthy, let him be filthy still." The only means of becoming clean and happy here and hereafter, is by earnestly endeavouring to know and perform the will of God, and this we cannot do of ourselves, but He, in his

matchless mercy, who gives every one of us a portion of his Holy Spirit, which, if allowed to operate on our souls, will perform the work for us. It is this unspeakable gift which makes us uneasy when we do wrong, and fills the mind with joy and comfort when we do right; and can we think we are doing right, when we will not abstract one hour in the week from our temporal affairs, to devote it to meeting with our friends for engaging in the worship of God, who has condescended to create us, and bestow upon us all that we have;—a being kind, benevolent and unlimited in power! How bountifully has He provided for our comfort and accommodation while here, furnishing us with suitable food and raiment, and enanelling the fields with flowers, and instructing every warbler of the grove in its song. He has endowed us with reason, to understand a portion of his wondrous works, and has given us a capacity to acquaint ourselves with Him, the author of them all. Yet our minds are turned from him, unto the fading things of this delusive world, and our hearts set upon them; our desires and thoughts are not enough set upon that endless eternity to which we are hastening. Were our Creator and Preserver to withdraw his holy presence, and the many blessings he dispenses, we would find we were indeed poor miserable creatures, able to do nothing of, or for ourselves. "It is in him we live, and move, and have our being;" and if we pursue not the course which is consistent with his will, from day to day, but settle down at ease, pursuing our own delights, and conclude there is no profit derived from attending meeting, and striving to worship in spirit and in truth, what can we expect or hope when our time is closed here? Then we will be brought to our feelings, and find we were not placed in this transitory scene merely to eat, drink, sleep and indulge in pleasures, and after a few years vanish away like a dream or vision of the night. Though our frames shall decay, when it may please Him who created them, to call for the spirit which animates them, yet our spirits shall exist forever. When this life ceases, we must enter upon eternity, which will be either miserable beyond description, or unspeakably happy; and the few uncertain moments of our present state are allowed us to prepare for it. Let us then be awakened, and make the best use of our time, and not be treading the ways to Babylon, and seeking to please the carnal will, which must be sacrificed in walking in the strait and narrow way. Oh, how wrong it is then, we are not willing to love and follow Him who has borne our griefs and carried our sorrows; who was wounded for our transgressions and bruised for our iniquities, and who has chosen us as a people, to serve and obey him. But all we, like sheep, have gone astray. May it be consistent with his holy will, who is long-suffering and of tender mercy, to arrest us in our course, as he did Balaam, and turn us back once more, into that path which our worthy ancestors suffered so much to walk in. Were the young and rising generation encouraged by the example and help of the older ones, I trust there would be judges raised up as at the first, and counsellors as at the beginning, and the waste places in our borders would be repaired. May the Almighty yet be pleased to turn the captivity of the church as the streams of the South, and enable Zion to put on strength in his name, and Jerusalem her beautiful garments, that the offerings of Judah may be pleasant to him, as in days of old, and as in former years. Our principles are the principles of Truth: they have long stood the test of investigation. Our worship and discipline are evidently not the contrivance of man, and there is nothing wanting but

a consistent course on our part. Though there are in the present day, troubles without and trials within, yet let us "press towards the mark for the high calling of God," leaving the things that are behind, that we may be found in a state of readiness to receive the call when the conflicts of time are done,—"steward give up thy stewardship." If we obey his commands, the glorious Lord will be unto us as a place of broad rivers and streams, and will be our Judge and our law-giver.

In order that those precious experiences may be ours, we must be faithful in what is committed to our trust, by him who has called us to glory and to virtue. Let us all then, be willing to gather together and worship God, who created the heavens above and the earth beneath, and all that in them is; and put up our prayers and earnest supplications unto him, to be pleased to bless us with his holy presence, and to preserve us from sleeping the sleep of spiritual death. May the fathers and mothers in the church be more inwardly gathered to the one Shepherd, and into the one sheep-fold, that as a people, we may continue to be one in discipline, one in faith and doctrine. The strife and contentions, with an abundance of self-righteousness, which so much exist at this time, are not accompanied with the presence of Life and Truth. No indeed, dear Friends! His life-giving power leadeth unto peace with all men. May the aged be found labouring more harmoniously together, and encouraging the youth, that the pure testimonies of Truth maintained by our worthy predecessors, may be handed down to posterity unswayed; that so from generation to generation, there may be more and more building on that same sure foundation, Christ Jesus, the eternal Rock of ages. If this be our happy experience, though all outward things may be tossed to and fro, yet when our sojourn here shall cease, we will be ready, like the faithful who have gone before us, to join the just of all generations in singing praises, saying, "great and marvellous are thy works, Lord God; just and true are thy ways, thou King of saints." A. D.

12th mo., 1861, Columbiana Co., Ohio.

*Working Cows.*—We find a communication in the Ohio Cultivator as to the mistaken exemption of cows from labour, from which the following extract is taken:—"I do not think cows are much better than women, or than mares; and so I am of the opinion they might work as well as the female man and the female horse. In Germany they have to do it, and the owner is greatly the gainer, while the cow is none the worse off for having to work. Many a small farmer could make money did he work his cows, while, when he does his work with oxen or horses, he expends all his profits upon those animals and their feed, which keeps him poor. Let him have four cows, and to plough, use two half of the forenoon, and then change, and so in the afternoon, milking them three times a day. In resting time they should be grazing, or eating mown grass. A little grain must be fed, but this would repay in the greater abundance of milk and butter. How proud I should feel, were I a farmer, to drive my team of four fat cows to market with a load of grain, produced with the aid of cow labour. My neighbours might laugh at me while using my cows upon the farm, but when I should have realized the fruits of their labour, and the saving of oxen and horse flesh, my turn would come to laugh."

Salvation is in no part of scripture represented as attainable by the indolent Christian.

*The Stone upon the Grave's Mouth.*—The narrow doorway, not more than three feet high, had a ponderous stone door, which turned on stone hinges or pivots at top and bottom, like that of the dungeon of the Mamertine prison beneath the Capitol at Rome. This door had been evidently placed at such an inclination as to cause it to shut by its own weight. In addition to this, and outside of it, the door was shut by a contrivance that deeply interested us. In the Scripture narrative of the burial of our Lord, we read that they "laid Him in a sepulchre which was hewn out of a rock, and rolled a stone unto the door of the sepulchre." (Mark xv. 46.) Here we had before us the very thing which these words describe—the only case so far as I know in Judea, in which that ancient apparatus for closing the grave's mouth remains in the present time. It is a large circular stone, shaped like a mill-stone, and set on edge. A deep niche or recess is cut into the solid rock to the left of the door, into which the stone might be rolled aside when the tomb was to be opened. When the tomb was to be closed up, the stone would be again rolled back into its proper place; its disk being large enough to make it not only cover up the circular doorway, but to enter and fit into another niche on the right side of the door, and thus completely to shut it in. In other words, the circular stone was large enough to overlap the door on both sides, and being caught by the niches within which its opposite edges rested, it would be kept firm in its position; and thus the rather that the cut or groove cut into the solid rock in front of the doorway, and in which the stone travelled, had such an inclination as to prevent the stone from rolling back, or even from being pushed aside without the application of a powerful force.

Looking at this stone, as it stood within the deep oval niche to the left of the doorway into which it had been rolled, we realized, as we had never done before, the difficulty to which the pious women of Galilee referred when, on their way to the Saviour's tomb, "they said among themselves, Who shall roll us away the stone from the door of the sepulchre?" (Mark xvi. 3.) The stone too, when rolled aside, as we saw it, into its niche or recess, would form precisely such a seat as one might sit on by the grave's mouth; thereby suggesting to us the position that was most probably occupied by the angel beside the empty tomb of our Lord, when the women of Galilee drew near. The lower side also of the door was in perfect harmony with what we are told of Mary Magdalene, that she "stooped down" in order to look into the sepulchre.

Few will be at any loss to understand that an amount of additional interesting circumstances like these gave to this ancient Hebrew tomb, which helped to place more vividly before us the whole scene of the burial and resurrection of Christ. It is the testimony thus borne at every step, so incidentally and yet so irresistibly, to the truth of Scripture history, and to the reality of so grand events which it records, that makes a journey through Judea so indelibly affecting to every Christian mind.—*Bachman's Clerical Burlough.*

*Rights of Gleaners in France.*—What could be more beautiful and kind than such legislation as this? The court of highest jurisdiction in France has recently decided that in that country, a farmer has no right to turn sheep into his own fields, so that two days after crops have been taken off, so that the poor may enter and glean the set-overs. Neither has a farmer a right to let out the privilege of gleaning for payment. This law applies to vineyards as well as grain fields."

*Florence Nightingale on Crinoline.*—It is, I think, alarming, peculiarly at this time, when the female ink-bottles are perpetually pressing upon us "woman's particular worth and general mission-ness," to see that the dress of woman is daily more and more unfitting them for any "mission, or usefulness at all." It is equally unfitting for all poetic and all domestic purposes. A man is now a more handy and far less objectionable being in a sick room than a woman. Compelled by her dress, every woman now either shuffles or waddles; only a man can cross the floor of a sick room without shaking it. What is become of woman's light step—the firm, light, quick step we have been asking for? A nurse, who rustles (I am speaking of nurses professional and unprofessional) is the horror of a patient, though he perhaps does not know why. The fidget of silk and erinoline, the rattling of keys, the creaking of stays and of shoes, will do a patient more harm than all the medicines in the world will do him good. The noiseless step of woman, the noiseless drapery of woman, are more figures of speech in this day. Her skirts (and well if they do not throw down some piece of furniture) will at least brush against every article in the room as she moves. Fortunate it is if her skirts do not catch fire, and if the nurse does not give herself up a sacrifice, together with her patient, to be burned in her own petticoats. I wish the Registrar-General would tell us the exact number of deaths by burning occasioned by this absurd and hideous custom. I wish, too, that persons who wear erinoline could see the indecency of their own dress as other people see it.—*Notes on Nursing.*

*The Late Ann Jones.*—The following was expressed by Ann Jones in Stockport Meeting, the 28th of First Month, 1841:—A salutation of encouragement springs in my heart this morning to the mourners present, the tried, the proved ones; to some who may be said to be the Lord's poor and afflicted children, for such there are in this company I do believe; and although it is a day of discouragement and treading down in our poor, scattered, backsliding and worldly-minded society, yet I would say to these, Cast not away your confidence, cast not away the shield as though it had not been anointed with oil, for I have seen a brighter day than that is about to dawn; and though I may not see it with the natural eye, yet I have seen it in this meeting in that which cannot deceive, and never has deceived me. And I do believe a brighter day is approaching; for the Almighty will have a people professing as we do, that will show forth His praise to the nations, and He will yet overturn the wisdom of the wise, and will bring to naught the counsel of the prudent, and show himself to be God over all, blessed for ever. He will work, and who shall hinder? bringing forth as he did our early predecessors and forefathers in the Truth, from all the lo here's and lo there's, out from amongst the world's people, from the will and wisdom of man, living in the faith of the gospel, not in their own righteousness, but in the righteousness of the saints. And if some present who love the Lord Jesus Christ in sincerity and are afraid to offend him, are but willing to abide in the patience and the faith, this language will assuredly be fulfilled in their experience, I have refined thee, but not with silver; I have chosen thee in the furnace—and if willing to abide therein, they can come forth as fine gold, bearing the inscription of holiness to the Lord, as prepared and qualified vessels sanctified and fitted for the Master's use, sent to preach among the nations the unsearchable riches of Christ. These will be permitted at times to sit under his shadow with great delight, and his

fruit will be pleasant to their taste; you who are hungry and thirsty will have to come to the waters, and he that hath no money may come and eat that which is good; and let your souls delight in fatness, for His land is full of blessing, and in the Lord Jehovah is everlasting strength, for the Lord God Omnipotent, Omnipresent, Omnipotent, reigneth over all.—*British Friend.*

*Strange Sight—Seventy Swarms of Bees at War.*—Ezra Dibble, a well known citizen of this town, and for many years engaged extensively in the management of bees, communicates to us the following interesting particulars of a battle among his bees!—He had seventy swarms of bees, about equally divided on the east and west sides of his house. One Sunday afternoon, about three o'clock, the weather being warm, and the windows open, his house was suddenly filled with bees, which forced the family to flee to the neighbours. Dibble, after getting well protected against his assailants, proceeded to take a survey, and, if possible, learn the cause which had disturbed them. The seventy swarms appeared to be out, and those on one side of the house were arrayed in battle against those on the other side, and such a battle was perhaps never before witnessed. They filled the air, covering a space of more than one acre of ground, and fought desperately for some three hours—not for "spoils," but for conquest; and, while at war, no living thing could exist in the vicinity. They stung a large flock of Shanghai chickens, nearly all of which died, and persons passing along the roadside were obliged to make haste to avoid their stings. A little after six o'clock, quiet was restored, and the living bees returned to their hives, leaving the slain almost literally covering the ground, since which but few appeared around the hives, and those apparently stationed as sentinels to watch the enemy. But two young swarms were entirely destroyed; and aside from the terrible slaughter of bees, no other injury was done. Neither party was victorious, and they only ceased on the approach of night, and from utter prostration. The occasion of this strange warring among the bees is not easily accounted for, and those most conversant with their management never before heard of or witnessed such a spectacle as here narrated.—*Loceunt (Ohio) Reporter.*

Never be ashamed of confessing your ignorance, for the wisest man upon earth is ignorant of many things, inasmuch that what he knows is mere nothing, in comparison with what he does not know. There cannot be a greater folly in the world than to suppose that we know everything.

The curious man goes about to gratify his curiosity, but he will never travel far enough to find anything more curious than himself.

## THE FRIEND.

TWELFTH MONTH 28, 1861.

The conductors of a journal like "The Friend," occasionally find themselves embarrassed by the expression from different classes of readers, of approval and disapproval of the same thing, arising from the diversity of taste and feeling, and making it difficult to decide how to act in relation to the matter filling their columns, so as to give as little cause for complaint as practicable. Supposing all to be equally alive to impressions of right and wrong, yet the

sensibilities of all are not alike affected by the same cause; mental constitution and culture, as well as the stand point from which a subject is viewed, exercise a strong influence on the judgment respecting it, so that the same exhibit of subject, or the subject itself, which may awaken uneasiness or disapprobation in some, will be dwelt on by others as being particularly proper and desirable. With those having the oversight of "The Friend," where the principle of Truth, including the doctrines and testimonies of our religious Society and its church government, are involved, of course there can be neither doubt nor hesitancy; but it is not always that all our readers see exactly alike as to where and how these are implicated.

We have been led into these reflections by the very opposite opinions expressed to us relative to the appearance in our columns of any notice of the prominent events of the war now unhappily waged in our country. Some Friends having communicated to us their doubts of the propriety of spreading before the readers of "The Friend" information of any of the military events transpiring, as our readers are aware, we concluded to discontinue—at least for a time—that portion of our "Summary of Events." Since doing so, we have had transmitted to us abundant complaint of the omission. Friends, of equal religious standing with those who suggested the discontinuance, say it is information of transactions affecting the welfare, not only of the country at large, but of every citizen within it, which should be given in the least objectionable manner, and they earnestly request the resumption of our former condensed statement. Many take no newspaper, being unwilling to admit within their family circle, the contaminating literature they so frequently contain, and have therefore relied upon the brief accounts published in our Journal, for their knowledge of the progress of this fratricidal contest, with which accounts their families have heretofore been satisfied; and this knowledge, unless thus furnished, they say they must look for in other publications, where it is mixed with a great deal calculated to excite unchristian feelings, and weaken our testimony against war, let it occur under what circumstances it may. Some may feel themselves conscientiously re-trained from reading any thing which draws their attention to the evil actions going on in the world; others, equally sensitive and sincere, may feel no requisition to remain in ignorance of events which must mark the history of the age in which we live, inconsistent as they may be with the christianity so loudly professed.

Our desire is to make "The Friend" a mean for promoting the feelings of christian love and self-denial, which, as they are yielded to, root out those lusts and passions from which war always has its origin; and to encourage our members to maintain inviolate all the testimonies of Truth, among which there is none more precious than that of peace and good will among men, invariable fruits of vital christianity; and we think a knowledge of some of the dreadful horrors of war, may sometimes impress the mind with the value of these fruits, as forcibly as delineations of the blessings which they confer.

On this subject, then, as in some other cases, we must exercise our own discretion, as to what items of intelligence respecting the war we shall lay before our readers, entreating them to put on charity in judging of each other, and of our efforts to instruct and entertain them; at the same time assuring them that we will endeavour to give place to nothing that will promote a martial spirit, and will be glad to avail ourselves of whatever contributions they may favour us with, to promote the objects to which "The Friend" is devoted.

## SUMMARY OF EVENTS.

**FOREIGN.**—News from England to the 12th inst. The angry excitement occasioned by the capture of Mason and Slidell, had not subsided, and there appeared to be no abatement in the warlike preparations. It is stated that the British ministers consider the act contemplated to be wholly indefensible. The Times of the 10th says, that the latest advices from America encourage the hope of a disavowal by the Cabinet at Washington of the San Jacinto outrage, and a surrender of the Southern Commissioners. The Liverpool markets were without material change. It is asserted that the British government, in answer to petitions from the manufacturing districts, had given assurances that the cotton ports would be opened within two months. The Constitutional, Patrie, Debats and several other French journals say that France will remain neutral in the event of war between England and America. The Debats editorially state that France has no interest to weaken the power of the United States, and that French commerce would gain enormously by a maintenance of neutrality.

Gen. Scott, who recently went to France on account of infirm health, had returned in the Arago. Previous to embarking, he had a long interview with Prince Napoleon. It is reported that the General was charged with the expression of the French Emperor's desire to bring about a pacific solution of the question lately pending between the Emperor of the French, the Emperor of Great Britain. Immediately on the announcement of the affair which has caused the difficulty, Gen. Scott, who was then in Paris, published an able and conciliatory communication on the subject, which was calculated to allay the prevailing irritation in England.

The Bank of Amsterdam and the Bank of Holland have raised their rate of discount to four per cent. The rate of discount at Hamburg had fallen to three per cent. There was much disturbed feeling at Warsaw, Poland.

A number of vessels are named as having sailed, or being about to sail from the British ports, with troops, arms and ammunition, for Canada.

It is quite probable the danger of a rupture with Great Britain, on account of the arrest of rebel ministers, has been much exaggerated; but at best it is to be feared it may leave a rankling feeling of irritation, which will be unfavourable to continued peace.

**UNITED STATES.**—The *Trouble with England*.—It is understood that the government admits that in the affair of the British ministers, the conduct of the Secretary on the part of Capt. Wilkes with certain legal technicalities, and it is reported that the despatches sent to London on the subject, are of a dignified but most conciliatory nature. It is believed the administration will do all in its power to preserve peaceful relations with Great Britain.

**Congress.**—The Senate has passed a resolution offered by Sumner, of Massachusetts, that the army shall not be used to surrender fugitive slaves.

The House of Representatives has passed, by a vote of 73 to 29, a resolution offered by Julian, of Indiana, instructing the Committee on the Judiciary to report a bill to amend the fugitive slave law of 1850, as to forbid the recapture or return of any fugitive from labour, without satisfactory proof being first made that the person so taken as fugitive is loyal to the government. The Homestead bill has been introduced in the House, and postponed by a vote of 88 to 50. Various bills have been passed, making appropriations for military purposes.

**The Exports and Imports.**—The exports of domestic produce continue on a large scale, while the imports are very light, the whole amount entered at New York last week being only about half a million of dollars. There has, notwithstanding, been an advance in the rate of exchange, from the fear of a war with England, inducing some of the agents of foreign capital to be anxious to return it to Europe. Some exports of specie were made from New York last week; but if the course of trade continues as heretofore, they will probably not be heavy or long continued.

**Philadelphia.**—Mortality last week, 243. The population according to the census of last year, the number of slaves in the district was 2,185; of free coloured persons, 11,131. The total population numbered 61,122.

**New Orleans.**—A letter from a rebel soldier addressed to a friend in Frankfort, Ky., after stating their determination to resist as long as possible, says a General compels me to add, that more than a majority of our people, and those, too, of the best classes, are Union

men, and will aid the Lincoln invasion whenever an opportunity offers." The writer, it is stated, occupies a high social position in New Orleans, and has a good opportunity of knowing the popular sentiment.

**Charleston, S. C.**—Nearly 600 buildings were destroyed by the terrible conflagration on the 11th and 12th inst., and the loss of property is estimated at more than five millions of dollars. The Charleston Courier says, the city has received a terrible blow, which will take the work of years to repair.

**Rebel Forces.**—The late messages of Southern Governors and other official documents put forth by the State authorities, enable us to form a pretty correct estimate of the number of their soldiers, now in the field. The total in round numbers is 350,000 men. Of these, Virginia furnishes 85,000; North Carolina and Tennessee about 30,000; Texas, 30,000; Georgia, 27,000; Louisiana, 25,000; Arkansas, 24,000; and the other seceding States, smaller quotas. The army is composed almost entirely of men who enlisted for twelve months, and whose term of service will expire within the next three months. The Richmond papers, in anticipation of the return of these men to their homes, and the difficulty of supplying their places, urge a resort to conscription to keep up the army.

**Kentucky.**—A few days since, the main body of the rebel forces, under Gen. Buckner, remained at Bowling Green, where they were strongly fortified and entrenched by the scattered army and militia of the State. Gen. Buell, were steadily advancing in that direction, and a decisive conflict was expected to take place ere long. In the event of Gen. Buckner's defeat, the Federal army, it is supposed, will proceed toward Nashville, Tennessee.

**Missouri.**—The military operations in this State have of late been disastrous to the rebel cause. Many detached bands of rebels have been captured or dispersed in the western portion of the State, and on the 18th, one of their camps near Warrensburg was surprised by a portion of the Federal army, and prisoners were taken. In all about 1800 rebels had been captured. Gen. Price was at Osceola, with the remnant of his army, which, according to report, had been greatly reduced by desertion.

**Southern Items.**—The Memphis Avalanche of the 17th inst. says that the rebels have been evicted by the rebels. They were strongly fortifying New Madrid, Missouri. Centerville, in front of the strong position of the great rebel army, in Virginia, has, it is stated, been fortified in the most formidable manner. The Tennessee Legislature has adopted a series of resolutions relative to the opening of the Southern ports, and recommending that no crop of cotton be planted for the ensuing year. Silver is selling in Richmond at 25, and gold at 35 per cent. premium. The U. S. troops at Port Royal have been reinforced, and now number more than 20,000. Bennett has been occupied by a portion of them. A reconnoitering party of four hundred men had penetrated some distance into the interior, without meeting with any opposition. A body of 1500 rebels which were on the route, fled on the approach of the U. S. troops. A considerable quantity of fine sea island cotton is to be had at Charleston, S. C., for 25 cents per lb., by which the rebels are enabled to purchase, hitherto contrived to elude the blockade. Tybee island is occupied by 1000 U. S. troops. An expedition has sailed from Port Royal, for Fernandina, Fla. Considerable success prevailed among the troops at Port Royal, leading to the belief that the blockade of the position has been over-estimated. Sudden and great changes of temperature frequently occur. Universal depression is reported throughout the South. The state of affairs in New Orleans is especially gloomy. An insurrection among the negroes is said to have broken out in Mississippi, by which much property has been destroyed.

## RECEIPTS.

Received from Lewis Bedell, N. Y., \$3, to vol. 27, vol. 34 from John A. Potter, act. N. Y., \$2, vol. 25, and 30 from J. C. S. S., act. N. Y., for 30 Bds., \$15; from W. H. Wright \$2, 34, for B. Bowenman, S. C. 27, vol. 35, from Jesse Haines, Pa., \$4, vol. 33, 34, and 35; from Robt. Miller, O., \$4, vol. 33, and 34.

PILE & M'ELROY, PRINTERS,  
Lodge street, opposite the PENNSYLVANIA BANK.

# THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XXXV.

SEVENTH-DAY, FIRST MONTH 4, 1862.

NO. 18.

PUBLISHED WEEKLY.

Price Two Dollars per annum, payable in advance.

Subscriptions and Payments received by

JOHN RICHARDSON,

AT NO. 116 NORTH FOURTH STREET, UP STAIRS,  
PHILADELPHIA.

Postage to any part of Pennsylvania, for three months, if paid in advance, three and a-quarter cents; to any part of the United States, for three months, if paid in advance, six and a-half cents.

For "The Friend."

[We have received from a Friend in the West a small pamphlet, with a request that some portions of its contents should be republished in our columns. We take from it "a brief and serious warning to such as are concerned in commerce, &c.," by Ambrose Rigge, which, although it has been in "The Friend" before, will bear to be read again, and its important matter renewedly pondered.]

*A Brief and Serious Warning to such as are concerned in Commerce, &c.*

Many days and months, yea, some years, hath my life been oppressed, and my spirit grieved, to see and hear of the uneven walking of many, who have a name to live, and profess the knowledge of God in words; yea, and also of some who have tasted the good word of God, and have been made partakers of the power of the world to come, and have received the heavenly gift and grace of God, which teacheth all, who walk in it, to deny all ungodliness and worldly lusts, and to live soberly, honestly and righteously in this present world; whose faithfulness, with great reason, hath been expected to God in things of the highest concern, and to have walked as lights in the world, and in all faithfulness both to God and man, to have stood as living monuments of the mercies of the Lord, letting their lights so shine before men, that they might see their good works, both in spiritual and temporal concerns; and so might have honoured and glorified God in their day and generation, and have convinced, or confounded, gainsayers, putting to silence the ignorance of foolish men, whereby the worthy name of the Lord, by which they have been called, might have been renowned through the earth, and his precious truth and glory spread to the ends of it; that many, through beholding their good and exemplary conversation in Christ, coupled with the holy fear of God, might have desired to lay hold of the skirt of a christian indeed, whose praise is not of men, but of God.

These are the fruits which we have laboured and travelled for through many and great tribulations, that many might be turned to righteousness, and that the knowledge of the power and glory of the Lord might cover the earth, even as the waters do the sea. This was, and is, our only end and design, which, blessed be the Lord, many are witnesses of, and established in, to our abundant joy

and comfort; but there are some amongst us who have not walked humbly with the Lord, as he hath required, nor kept in that low estate, neither inwardly nor outwardly, which becometh such, who are travelling up to Zion, with their faces thitherward, but have gone from that Rock, which is firm and sure, into the great sea of troubles and uncertainty, where some have been drowned, others hardly escaping, and many yet labouring for the shore, with little hope of coming at it; who have not only brought themselves in danger of suffering shipwreck, but have drawn in others, and have endangered them also; which hath opened the mouth of the enemies of Zion's welfare, to blaspheme His great and glorious name, and hath eclipsed the lustre of the glorious Sun of Righteousness, both in city and in country: this is a crying evil, and ought not to go unproved, and that with a severe countenance, for God is angry with it, and will assuredly punish it.

Many have got credit upon the account of Truth, because at the beginning it did, and doth still lead all who were and are faithful to it, to faithfulness and truth even in the unrighteous mammon, and to let their yea be yea, and their nay be nay, even between man and man in outward things; so that many would have credited one that was called a Quaker with much, and many, I believe, did merely on that account, some whereof, I doubt, have just cause to repent of it already; but if truth and righteousness had been lived in by all who profess it, there had been no such occasion given; for they who still retain their integrity, to the truth and life of righteousness manifested, can live with a cup of water, and a morsel of bread in a cottage, before they can hazard other men's estates to advance their own; such are not forward to borrow, nor to complain for want, for their eye and trust is to the Lord their preserver and upholder; and he hath continued the little meal in the barrel, and the oil in the cruise hath not failed to such, till God hath sent further help: this is certainly known to a remnant at this day, who have coveted no man's silver, gold nor apparel, but have and do labour with their hands night and day, that the gospel may be without charge.

It is so far below the nobility of christianity, that it is short of common civility and honest society amongst men, to twist into men's estates, and borrow upon the Truth's credit, gained by the just and upright dealings of the faithful, more than they certainly know their own estates are likely to pay; and with what they borrow reach after great things in the world, appearing to men to be what in the sight of God and Truth they are not, seeking to compass great gain to themselves, whereby to make themselves or children rich or great in the world: this I testify for the Lord God, is deceit and hypocrisy, and will be blasted with the breath of his mouth, and we have seen it blasted already.

And that estate that is got either with the lending, or with the hazard of lending another man's, is neither honestly got, nor can be blessed in the possession; for he that borrows money of another, if the money lent be either the lender's proper estate, or part of it, or orphans' money that is en-

trusted withal, or widow's, or some such, who would not let it go but upon certain good security, and to have the valuable consideration of its improvement; and the borrower, though he hath little or no real or personal estate of his own, but hath got some credit, either as he is a professor of the Truth or otherwise; and hath, it may be, a little house, and a small trade, it may be enough to a low and contented mind; but then the enemy gets in, and works in his mind, and he begins to think of an higher trade, and a finer house, and to live more at ease and pleasure in the world, and then contrives how he may borrow of this and the other; and when accomplished according to his desire, then he begins to undertake great things, and gets into a fine house, and gathers rich furniture and goods together, launching presently into the strong torrent of a great trade, and then makes a great show beyond what really he is, which is dishonesty, and if he accomplishes his intended purpose, to raise himself in the world, it is with the hazard, at least, of other men's ruin, which is unjust: but if he falls short of his expectation, as commonly such do, then he doth not only ruin others but himself also, and brings a great reproach upon the blessed Truth he professeth, which is worse than all; and this hath already been manifested in a great measure, and by sad experience witnessed. But the honest upright heart and mind knows how to want, as well as how to abound, having learned content in all states and conditions; a small cottage and a little trade is sufficient to that mind, and it never wants what is sufficient: for He that clothes the lilies, and feeds the ravens, cares for all who trust in him, as it is at this day witnessed, praises to God on high; and that man hath no glory in, nor mind out after, superfluous or needless rich hangings, costly furniture, fine tables, great tracts, curious beds, vessels of silver, or vessels of gold, the very possession of which creates envy.

The way to be rich and happy in this world, is first to learn righteousness; for such were never forsaken in any age, nor their seed begging bread: and charge all parents of children, that they keep their children low and plain in meat, drink, apparel, and everything else, and in due subjection to all just and reasonable commands, and let them not appear above the real estates of their parents, nor get up in pride and high things, though their parents have plentiful estates, for that is of dangerous consequence to their future happiness: and let all who profess the Truth, both young and old, rich and poor, see that they walk according to the rule and discipline of the gospel, in all godly conversation and honesty, that none may suffer wrong by them in any matter or thing whatever; that as the apostle exhorted, "they may owe nothing to any man, but to love one another; for love out of a pure heart, is the fulfilling of the law;" which law commands to do justly to all men. And he that hath but little, let him live according to that little, and appear to be what in truth he is; for above all God abhors the hypocrite; and he that makes haste to be rich falls into snares, temptations, and many foolish and hurtful lusts, which draw many in perdition; for the love of money

is the root of all evil, which, while some have coveted after, they have erred from the faith, and pierced themselves through with many sorrows.

For preventing this growing evil for the time to come, let such by faithful Friends be exhorted, who either live without due care, spending above what they are able to pay for, or run into great trades, beyond what they can in honesty and truth manage; and let them be tenderly admonished of such their undertakings: this will not offend the lowly upright mind; neither will the honest-minded, who, through a temptation, may be drawn into such a snare and danger, take occasion to stumble, because his deeds are brought to light. And if after mature deliberation, any are manifested to be run into any danger of falling, or pulling others down with them, let them be faithfully dealt withal in time, before hope of recovery be lost, by honest faithful Friends, who are clear of such things themselves, and be admonished to pay what they have borrowed faithfully, and in due time, and be content with their own, and to labour with their own hands in the thing that is honest, that they may have wherewith to give him that needeth, knowing that it is more blessed to give than to receive. And if they hear, and are thereby recovered, you will not count your labour lost; but if they be high, and refuse admonition, it is a manifest sign all is not well. Let such be admonished again by more Friends, and warned of the danger before them; and if they still refuse and reject counsel and admonition, then lay it before the meeting concerned, about Truth's affairs, to which they do belong; and if they refuse to hear them, then let a testimony go forth against such their proceedings and undertakings, as not being agreeable to the Truth, nor the testimony of a good conscience, neither in the sight of God nor man. This will be a terror to evil doers of this kind, and a praise, encouragement, and refreshment to them who do well, and nothing will be lost that is worth saving by this care; for he that doth truth, whether in spiritual or temporal matters, will willingly bring his deeds to light, that they may be made manifest to all, that they are wrought in God.

These things lay weightily upon me, and I may truly say, in the sight of God, I write them in a great cross to my own will, for I delight not, nay, my soul is bowed down at the occasion of writing such things; but there is no remedy, the name of the Lord has been, and is likely to be greatly dishonoured, if things of this nature be not stopped, or prevented for time to come: therefore I beseech you all, who have the weight and sense of these things upon you, let some speedy and effectual course be taken to prevent, what possibly we may, both in this and all other things, that may any way cloud the glory of that sun which is risen among us. And make this public, and send it abroad to be read in true fear and reverence; and let all concerned be faithfully and plainly warned, without respect of persons, by faithful Friends, who have a concern for God's glory, and his church's peace and prosperity upon them: so will the majesty and glory of God shine upon your heads; and you shall be a good saviour of life, both in them that are saved, and in them that are lost.

Written by one who longs to see righteousness exalted, and all deceit confounded.

AMBROSE RIDGE.

Custom can never alter the immutable nature of right; neither can fashion ever justify any practice, which is improper in itself.

Gaiety proceeds from pride, and pride is the root of all evil.

*Benzole—Its Nature, Properties and Uses.*—Robert Niehol, in his beautiful poem "Do not Scorn," has taught us a moral lesson in regard to the wrong of despising the meanest of God's creatures; and a far higher teacher of morals—the Saviour—has rebuked the pride of man by placing "the glory of Solomon," in his kingly robes, beneath that of the flower which blooms in the valley. As it is with moral lessons drawn from natural objects, so is it in regard to useful lessons derived from art and science. Perhaps there is not a more fetid and offensive substance to be found than coal tar, and yet from it we derive some of the most useful, pleasant and beautiful substances adapted to the wants, the pleasures and tastes of refined and common life.

Who would have imagined that this fetid substance could be made to yield a product which "the fair and the gay" would use as a perfume for the toilet? but it is even so. And from that dirty, black substance, who could ever have imagined that dyes rivaling the Tyrian purple, the cochineal crimson, and orchello lilac could be obtained? and yet it is even so. At the present day rich perfumes and brilliant colours are manufactured very extensively, as profitable branches of the arts, from coal tar. But beside these, there are other useful products obtained from the same source, and none more so than the liquid benzole. Many persons have heard of it, and have wondered what it was—whether solid, liquid or gas; or whether it grew upon a tree, or came up out of the caves of the earth like petroleum oil.

Benzole was first discovered by Prof. Faraday, many years ago, when experimenting with the condensed vapours of oil; but it derived its name afterward by having been obtained in distilling benzoic acid with lime. Benzoic acid is a product of the odorous gum-resin obtained from the *Styrax benzoin* of Sumatra and Borneo. Benzole is a clear colourless liquid of a peculiar ethereal, agreeable odor; it boils at 168° Fah.; its specific gravity is 0.85, and it freezes at 32° Fah., and becomes a white crystalline mass.

When solely obtained from benzoic acid, it was very expensive; but, in experimenting with coal tar about the year 1847, C. B. Mansfield, of Manchester, England, found, among several of the oils obtained at different degrees of temperature in distillation, benzole, as the second of six—all of different specific gravities. This discovery led to its becoming comparatively cheap, and from that day to this, its application has been extending. It is now manufactured from the naphtha obtained from coal tar, in large quantities, in London, Manchester, Glasgow and nearly all the large cities in Great Britain. A few years since its manufacture was introduced from London into this section of our country, and is now conducted in North Second street, in the Eastern District of Brooklyn. Crude naphtha is distilled in an iron still, at a temperature varying from 176° to 194° Fah.; benzole passes over, and is condensed. It, however, contains some impurities which are removed by re-distillation and washing with dilute sulphuric acid, water and weak alkali, in succession. A fluid called "benzole" is obtained as one of the products of petroleum oils.

When atmospheric air slightly warmed, is passed through benzole, it takes up a portion of it, and becomes a vapour of great illuminating power. In 1836, a patent was taken out in England by M. Becl for forcing common air into a reservoir containing benzole, and burning the vapour thus obtained in the same manner as common coal gas. Since that period several apparatuses have been devised for using it. Were it not that it con-

denses in cold weather, and chokes up the pipes, it would be the most convenient known substance for making gas to illuminate large houses, schools, colleges, &c., in the rural districts.

Benzole dissolves resin and fatty substances, and is used for removing tar, resin and grease spots from light kid gloves and silks. It has been imported from Europe, and sold in small bottles at extravagant prices for such purposes. Since the war commenced, and turpentine has become so high in price, petroleum benzole has been used, to a large extent, as a substitute for mixing wipants, and in the making of varnishes. In England, it is used for scouring greasy wool in carpet manufactories. As it is a powerful solvent of India rubber and gutta percha, it makes with them a very adhesive cement.

By adding benzole cautiously to strong nitric acid, assisted by a gentle heat, a compound is formed in the form of a yellow oil, which, when the mixture is diluted with water, sinks to the bottom of the vessel. This oil has a sweet taste and the odor of bitter almonds, is used in perfumery, and is sold under the name of the oil of bitter almonds.

By combining nitro-benzole with hydrogen, aniline is formed, which is the basis of the beautiful purple and red colours that have lately been introduced into the arts of dyeing and printing. As heretofore manufactured, such colours have been subject to deterioration by fading when exposed to sunlight, but this defect, we have reason to believe, has been surmounted. Several samples of fabrics coloured with aniline products manufactured in France, have lately been furnished us for trial by exposure to solar light, and thus far the test has been favourable.

Benzole is a carbide of hydrogen. It consists of twelve atoms of carbon and six of hydrogen. As a solvent, it is nearly similar to ether and alcohol, and it may be used as a substitute for these fluids. Many of the most beneficial improvements that have been made in recent years, have been in reclaiming and applying to useful purposes things, which were formerly held to be positively useless. This has been the case pre-eminently with such products as benzole.—*Scientific American.*

*Undue Discouragement; Unavailing Lamentation.*—I know that there is much discouragement presented to the diffident mind in this time, but such things are like the "clouds," which are not to be observed; and those "winds," which are to be disregarded, with respect to our individual engagements, in true dedication to the Most High.

In low times, and when we see our own deficiencies, it behooves us to cleave to our Almighty Helper, in humble desire after ability to "leave the things that are behind, and, reaching to them that are before, to press towards the mark for the prize of our high calling of God in Christ Jesus." We are sometimes prone to waste our precious time in sitting under an unavailing lamentation as to the past: this weakens us still more, and we begin to fear that now it can be no use to hope for the future. What a pity this would be! Come then, let us now and henceforth, "give all diligence to make our calling and election sure." I speak as to our places in the church on earth, and the glory of the world above.—*Sarah [Lynes] Grubb.*

*Plaz Cotton.*—Excellent prints are now manufactured from the newly-invented Fibrella, or flax cotton, with an admixture of twenty-five per cent. of cotton. The cloth is stated to be decidedly superior to cotton fabric, while the raw material can be afforded for seven cents per pound. So says the *Providence Journal.*

For "The Friend."

## Carbon-Oil. Lamps and Explosions.

A poor dependence is, sometimes at best, worse than none. A gate or fence-panel were better down, than propped with a rotten stake; for if down it would be watched; but if poorly propped, a little additional breeze might break the poor dependence, and expose the crop to devastation, whilst the farmer rests in his false security. It is thus even with many other props. If we take a man's endorsement, whether of a note or a sentiment, we should be sure that we have good backing before we lean upon it, and especially before we let the mind rest in a feeling of security.

As life is too valuable to be jeopardized needlessly, it may be worth while to inquire what we rest upon as a proof of the safety of our carbon-oil-lamps. Alcohol, burning-fluid, and ether, will inflame in a saucer by the touch of a lighted taper; but, few of the many oils sold as carbon-oil and Kerosene will do so. One extensive dealer in Philadelphia assured me that certain oil which he now to be unsafe in lamps, would not inflame by a taper in a saucer, even when spread out quite thin. The best test is the *weight*, as shown by an hydrometer—the heavy oils being the safest, other circumstances alike. \* Few families have hydrometers, to denote specific gravity. It may therefore assist some to inquire, first, into the Causes of Explosions; secondly, into the Quality of the Oil; thirdly, the Structure of Lamps; and lastly, Precautions.

1. *Probable Causes of Explosions.*—Bad oil; keeping the cans or lamps in very warm places; offering the wick to remain too high or become rusted, so as to heat the burners and upper part of the lamp and also the oil; filling the lamps while they are warm, or in a very warm room, or near a light or a fire; most of which circumstances promote the formation of the gas, *which, by mixing with air and taking fire, is always the immediate cause of the explosions*, no matter what other circumstances may attend. A storekeeper may pull out the bung of his oil-barrel, and throw in a flaming taper, or coals of fire; and though the act might put his customers to flight, for a moment, it is hardly likely that the oil would fire. Yet if that would *not*, has he proved that that very oil when heated to a certain moderate degree, would not blow off a gas which when mixed with atmospheric air would be explosive? He has not; it is proper therefore, we should look to other causes than the mere inflammability of the oil. Besides those causes above enumerated, there is one which shop-dealers particularly should be aware of, viz.: allowing the hole between the burner and the inside of the fount, (which hole is solely for the over-ozing oil to run back into the fount), to be made, or to become too large; i. e., large enough to carry down flame to the inside of the lamp where gas may be present. When a lamp is exposed to considerable or sudden variations of temperature, by carrying it in and out doors, or by suddenly opening a door or window admitting cold air on the lamp, a circulation of air in and out this hole goes on, to an extent proportioned to the difference of temperature between the inside and the outside of the lamp. Now if the oil in the lamp is *such, or so heated*, as to have thrown off gas, and the air is thus mixed with it, the lamp may be said to be charged; and we need only the right sort of a *touch-hole* to be ready to fire. The same aperture which is intended to take in the over-ozing oil, and thus also allow circulation of air, may, by being too

large for those purposes, serve the end which we do not want, viz, that of a touch-hole: more of this in another place. It may be remarked however, that if this hole, or the several holes or openings between the floor of the burner and the inside of the lamp, and the space along the wick between the wick and the wick-holder, and all other spaces or openings communicating between the inside of the lamp and the place where the flame is, if all these be small enough to agree with the principle of the *Safety lamp*, then the oils which would be exceedingly dangerous under other circumstances, might, under these, be burned with safety. If upon inquiry of the dealers and manufacturers of oil-burners, we find they do not make much account of this precaution, it may in some instances perhaps be because they either have not much acquaintance with the principle of Sir H. Davy's discovery, or because the great demand for their wares has pressed their philosophy out of memory for a time.

Another cause may be, *too small a wick*; which would, if very much smaller than the tube, leave the non-required touch-hole along side of it. A fact was communicated to me in the course of an hour's inquiry (of several proprietors,) on these points, showing the importance of being not *very negligent* of this particular.

2. *Quality of the Oil.*—It would not be proper, perhaps, if practicable, in the infancy of the coal-oil business, to denote particular preferences amongst manufacturers.

Those oils which are the clearest, with a slight olive or amber tinge—a specific gravity of from 41 to 43—which burn away slowest, giving the most light and least smoke, are most to be relied on.

To test by its inflammability, the oil should be poured into something (a pound weight with a low rim) shallow and about uniform in depth, and just enough of the oil to cover the bottom. Then touch the surface with a lighted taper. This is by no means a sure test; for it is the *gas* from the oil which explodes, and not the *oil itself*. If it inflames, doubtless it will be by reason of the decomposition of the oil as thus exposed in the vessel, first, in the form of gas: but though it should not (so exposed) be inflamed, we do not know that it would not, under a little more heat in a lamp, throw off gas of such kind and quantity as to be dangerous.

3. *Structure of Lamps.*—The points to be aimed at for safety are, 1st, to prevent too much communication between the inside of the fount and the flame; or, in other words, too large openings through the bottom of the burner. The purchaser has only to unscrew the burner, and turn it upside down, to satisfy himself about this. The hole should not be much larger than that of an ordinary knitting-needle. If it should be, he can reduce it by a wooden plug. The safest and neatest opening is one on each side the wick-tube, which will admit a slip of a visiting card out so as to be about one-half or three-fourths as wide as the wick. Safety depends not on the length of this slip, but on the width—the narrower the better, if paper will pass through it. Neither does safety depend on the number of holes, but on the average diameter of each, which should not be much larger than the size before stated. These openings should be kept clear of fallen fragments of wick, and dust.

The second point in the structure of lamps is such an arrangement of the burner and wick, as will allow the greatest increase of light, with the least communication of heat downward. So many styles of burners abound that, by keeping in view the principle of conduction, so as to avoid heating the oil below, we may look to the shop-man for particular information.

4. *Precautions.*—Fill the lamps always by daylight, and not near a fire! For, though 9,999 persons might do otherwise *without* accident, yet who would want to be the 10,000th *with* an accident?

Keep the oil cans and lamps cool, when set away. The wicks must fill the tubes.

If oil is spilled, clean it up at once;—“do it and it will be done” “for good”—perhaps to save life—if not, for a good habit. Grease unites with this oil, and will greatly assist in the cleansing operation.

After all, it must be conceded that the loss of life in consequence of the use of these oils, has been small, considering the number of persons every way concerned in them, and the quantity of oil handled and consumed. Y. W.

24th of Twelfth mo. 1861.

*The true Gospel Faith that overcomes the World.*

—Truly, there is great profession of religion in the present day; and amongst the various professors, scarcely any but who recognize the name of our blessed Lord; but how few the number of those that are his followers upon the terms He prescribed,—in a life of self-denial, and the daily cross;—or that can believe in that faith, which works by love, to the purifying of the heart. We often hear of declensions in the church, which are said to have occurred in the long dark night of apostasy; as if that night had passed away, and the true gospel light now shone, and that day had dawned, which hath restored all things to their primitive beauty. But, alas! I cannot help fearing, that the apostasy still continues; only the shade of darkness is a little varied from what it was, and things rendered more plausible by this variation. I verily believe, that the light of the glorious gospel would shine forth abundantly in the present day, if man would but look where it is to be seen; but instead of this look many, by not keeping their spiritual eye turned towards it, behold nothing but the shadow, and yet think they are in possession of the substance.—*Daniel Wheeler.*

*Louis Napoleon* has issued an edict, in which he announces that in future no attempts are to be made to supply the colonies of France with negro laborers from the coast of Africa. He admits that the practice, which had been so loudly denounced by the friends of freedom, in which French agents had been engaged on the Mozambique coast, were calculated to warrant the belief that the French government desired to patronize a modified system of slave labour. So also, he admits that there were equally strong, if not greater objections to the system pursued on the Western coast of the African continent; and it is now ruled that the policy of the Government must be changed.

*Words in Use.*—Professor Max Muller, in his admirable lecture on the Science of Language, (call it if you will, Glossology or Logology,) tells us that out of the 50,000 words or so in the English tongue, it has been found that a rustic labourer only uses 300. An ordinarily educated man is supposed to use 3,000 or 4,000, while a great orator reaches 10,000. The Old Testament contains 5,642 different words, and the works of Shakespeare about 15,000; those of Milton about 8,000.

*Life through Death.*—This know for certain, no man or woman can be quickened and raised up into the life of the second Adam, till the life of the first Adam be taken away from them.—*Williams Deussen.*

\*Pittsburgh dealers say that *some heavy oils are not safe*, so that although specific gravity is a general rule, it has some exceptions.

For "The Friend."

## BIOGRAPHICAL SKETCHES

Of Ministers and Elders and other concerned members of the Yearly Meeting of Philadelphia.

## JOHN ROBERTS.

John Roberts, of Evesham, N. Jersey, was born about the close of the year 1712. Having yielded in younger life to the cleansing, illuminating visitations of Divine Grace, he was prepared for usefulness in the church both by example and precept. He was appointed an elder, and his life and conversation were consistent with the Truth he had been convinced of, and the profession which he made in the world. In the various social and religious engagements to which he was called in life, he was a good example, kind as a husband, helpful as a neighbour, cheerfully hospitable to all, and lovingly active in serving the widow and fatherless. His death, which was a sudden one, was much lamented. He departed this life, Ninth mo. 15th, 1770, being in the fifty-eighth year of his age.

## MARGARET ANDERSON.

Margaret Anderson, the wife of William Anderson, of Haverford, was for many years an acceptable minister of the gospel of Christ, as was also her beloved husband. She deceased Eighth mo. 20th, 1770.

## THAMER THOMAS.

Thamer Thomas, who, for about forty years, had been a valuable elder of Haverford Meeting, deceased some time during the year 1770, aged eighty-three years.

## RICHARD JONES.

Richard Jones, an elder of Goshen Monthly Meeting, deceased Seventh month 14th, 1770, aged ninety-three years. He had been in that station for nearly fifty years. In early life he appears to have been an active and useful member of the church militant, but to have been much confined for a long period prior to his close, by infirmity of body.

ELIZABETH JANNEY, of Duck Creek; ELIZABETH MOTT, of Burlington, and MARY SIMPKINS, of Kingwood, all ministers of the gospel, deceased during the year 1770. Beside these Friends, JOSEPH WARDELL, of Sitewesbury, and JAMES BARRAM, of Chester, both elders in good standing, were called from works to rewards.

## MARY LIPPINCOTT.

Mary Burr, the daughter of Henry and Elizabeth Burr, of Burlington, New Jersey, was born in the year 1688. She was favoured to have religiously minded parents, who sought to restrain her from evil, and to bring her up in conformity with the Truth. The pious instruction and christian discipline of her parents were greatly blessed to her, and she was enabled to close in with the merciful visitations of Divine Grace, when very young in life. Being led into humble, careful walking before the Lord, she found no inclination to follow after the vanities, the follies, the fashions of the world, which are so attractive in the eyes of many of the inexperienced among the children of men.

Whilst still quite young, she was married to Jacob Lippincott, and soon afterwards removed with her husband within the limits of Salem Monthly Meeting, where she resided during the remainder of her life. She was exemplary in her domestic relationships, in her social obligations, and in her religious duties. A good wife, faithful and loving until death removed her dear husband from her; a tender mother, watchful and careful

over the little flock committed to her care; a good neighbour, ready to render aid and assistance to all; one given to hospitality, and very charitable to the poor.

She was blessed with a large share of understanding, which she exercised under the cross, and seemed in no wise exalted thereby. Her conduct was solid and weighty, and whilst remarkably affable in conversation, she was also very instructive. Receiving instruction from the Fountain of life and truth, she was enabled to give good and seasonal advice and admonition to her children and others, whilst travelling earnestly in spirit for the increase and spread of the cause of pure spiritual religion through the earth.

Her spiritual gifts, religious faithfulness and natural parts, fitted her for extensive usefulness in the church, and much labour therein came upon her. She was for a long time in the station of an elder, and was diligent in the attendance of all her religious meetings, whilst ability of body was declined her. She was subject, particularly in the latter of her life, to bodily infirmities, which oftentimes kept her at home. But when able to sit with her Friends, she was of those who were diligently concerned to wait for and wrestle after the arising of the pure Truth into dominion. She was, indeed, one well qualified to labour as it were in very deeps for the exaltation of that Truth.

She was a true mourner in Zion, and often expressed her grief to see how far the corruptions, vain fashions and customs of the world were finding entrance amongst Friends, and how tawdrily dressed some were who came to our places of worship.

She had many close exercises and sore trials to endure both through afflictions of body and mind, yet she bore all with great resignation, and was full of sympathy with others in their troubles, often visiting and comforting such. Before the close, she told her friends she thought her day's work was nearly ended, and on the 9th day of the First month, 1771, she departed without sigh or groan.

She seemed to be gathered as a shock of corn in due season, into the heavenly garner, and her friends felt that for her there was no cause to mourn, having no doubt of her having entered into the everlasting rest prepared for the people of God. She was in the seventy-third year of her age.

*Effect of Commerce.*—It can be proved that wherever legitimate trade has been fostered and protected on the African coast, and native industry encouraged, the slave-trade has gradually disappeared.

A few years ago, slaves were almost the only commodity exported from the Bight of Benin. In 1857 the total declared value of exports of palm-oil, cotton, ivory and cotton cloths, amounted to £1,062,800. From Lagos alone there was in 1857, as compared with 1856, an increase of 1,050 tons of palm-oil, 8061 lbs. of ivory, and 81,353 lbs. of cotton. In 1853 the total quantity of palm-oil exported from the same place was only 100 tons. This development of native industry has materially increased the value of labour and of the labourer. In 1853, three strings of cowries, equivalent to threepence sterling, were the price of common labour per day. In 1857 it had risen to fifteen strings of cowries, equivalent to sevenpence halfpenny, or 150 per cent. In the former year the value of an able-bodied slave from the interior was from four to five bags of cowries. In 1857 it was from ten to twelve bags, or from £4 10s., the lowest price, to £13 12s. 6d., while the price of a domestic slave at Lagos has reached to fifteen bags of cowries, or £16 17s.

6d. As a consequence of this increased value of labour, the slaves are enabled by frugality and industry, soon to purchase their freedom, and thus the system of domestic slavery is undermined entirely by the operation of legitimate trade and industry.

An enormous development of trade in native raw cotton has likewise taken place at Abbeokuta alone, stimulated by Mr. Thomas Clegg, of Manchester. In 1851-2 nine bags, weighing 1,510 lbs. were exported from that place as an experiment. In 1858 the quantity had reached as high as 1,819 bags, weighing 220,000 lbs., and in 1859, 3447 bags, or 416,344 lbs. The great importance of the development of the culture of raw cotton in Africa may be estimated from the calculation namely, that if the production of this valuable staple increased during the next ten years in the same ratio as it has done during only the last two, Africa will be able of herself, to supply this country with as much cotton as she requires.

To the Sherbro, also, legitimate trade has increased to a most encouraging extent simultaneously with the diminution of the slave-trade. The latest official returns show exports to the amount of £61,000, including ten packages of raw cotton, and 300 tons of native packages of raw cotton. The palm-oil exported was of the declared value of £51,000, and this from a locality which, scarcely six years ago, exported only slaves.

Loando, in the Portuguese territory, south of the line, from which port nine-tenths of the slaves formerly exported used to be taken, and which annually furnished the Brazilian market with from 39,000 to 40,000 negroes, exported in 1857 goods to the value of £29,781 14s. 6d. while the imports amounted to £29,384, of which £23,560 duty was paid. The imports thus exceeded the exports by the sum of £53,603. Amongst the latter was a small quantity of raw cotton, viz., 10,267 lbs., valued at £149 14s. 6d., or 3½d. per lb.—*Paper of English Slave-Trade Conference.*

*The Right Sort of Religion.*—We want a religion that goes into the family, and keeps the husband from being spiteful when the dinner is late, and keeps the dinner from being late—keeps the wife from fretting when the husband tracks the newly washed floor with his muddy boots, and makes the husband mindful of the scraper and the door mat—keeps the mother patient when the baby is cross, and keeps the baby pleasant—amuses the children as well as instructs them—wins as well as governs—projects the honeymoon into the harvest moon, and makes the happy hours like the eastern fig-tree, bearing in its bosom at once the beauty of the tender blossom, and the glory of the ripened fruit. We want a religion that bears heavily, not only on the "exceeding sinfulness of sin," but on the exceeding rascality of lying and stealing—a religion that banishes small measures from the counters, small baskets from the stalls, pebbles from the cotton bags, clay from paper, sand from sugar, chicory from coffee, anatto from butter, beet juice from vinegar, alum from bread, strychnine from wine, water from milk-cans, and buttons from the contribution box. The religion that is to save the world, will not put all the big strawberries at the top, and all the bad ones at the bottom. It will not offer more baskets of foreign wines, than the vineyards ever produced bottles, and more barrels of Genesee flour than all the wheat fields of New York grow, and all her mills grind. It will not make one half a pair of shoes of good leather, and the other of poor leather, so that the first shall redound to the maker's credit, and the second to his cash. It will not put Govin's

stamp on Jenkin's kid gloves, nor make Paris bonnets in the back room of a Boston milliner's shop, nor let a piece of velvet that professes to measure twelve yards, come to an untimely end in the tenth, or a spool of sewing silk that vouches for twenty yards, be nipped in the bud at fourteen and a half, nor the cotton thread spool break to the yard-stick fifty of the two hundred yards of promise that was given to the eye, nor yard wide cloth measure less than thirty-six inches from selvedge, nor all-wool delaines and all-linen handkerchiefs be amalgamized with clandestine cotton, nor coats made of woolen rags pressed together, be sold to the unsuspecting public for legal broad-cloth. It does not put bricks at five dollars per thousand into chimneys it contracted to build of seven dollar materials, nor smuggle white pine floors that have paid for hard pine, nor leave yawning cracks in closets where boards ought to join, nor daub ceilings that ought to be smoothly plastered, nor make window blinds of slats that cannot stand the wind, and paint that cannot stand the sun, and fastenings that may be looked at but are on no account to be touched. The religion that is to sanctify the world, pays its debts. It does not consider that forty cents returned for one hundred cents given, is according to gospel, though it may be according to law. It looks upon a man who, having failed in trade, continues to live in luxury, as a thief. It looks upon a man who promises to pay fifty dollars on demand with interest, and who neglects to pay it on demand, with or without interest, as a liar.—*Congregationalist*.

#### Facts from the Census.

As the exact and official returns of the Census are being made public, we behold more clearly the precise march and direction of the population which has been filling, during the last ten years, the unoccupied territory of the Union. Its grand and main course is Westward, with some currents to the North-west and some to the South-west. The flood of population over some of our new States in the far west, has probably never been equalled in the history of emigration, both in the character of the emigrants and in the number placed upon new soil, where before were the animals of the prairie and the forest, and the roving Indian. Minnesota, for instance, increases from 6,077 inhabitants in 1850, to 162,922, in 1860, or at a rate of increase of over *twenty-five hundred per cent.*; Oregon from 13,294 to 52,464, or at the rate of two hundred and ninety-four per cent.; Iowa from 192,214 to 674,948, or 251.22 per cent.; Texas from 212,592 to 602,432, or 183.37 per cent.; Wisconsin from 305,391 to 775,873, or 154.06 per cent.

Arkansas increases one hundred and seven per cent., and Illinois over one hundred per cent. The average rate of the growth of population in all the States the last decade, is 35.92 per cent. There are nineteen States below this average, the lowest in order being Vermont, 0.32 per cent.; then New Hampshire, 2.55 per cent.; and the next South Carolina, 5.28; Maine following with 7.73, and Tennessee with 11.68, and one powerful Virginia, with only 12.27, while North Carolina shows only 14.23. There are eleven States counting 19,525,555 inhabitants, or an average of more than one and a half millions each, namely: Illinois, Indiana, Ohio, Pennsylvania, Massachusetts, New York, Tennessee, Missouri, Virginia, Kentucky and Georgia.

The black current must always be the important one to the statistician of this continent. The census reveals a steady stream of negroes from the

sea-board toward the South-west. The average increase of the slaves is moderately large, or 23.42 per cent. There is a loss in but two States, Delaware (of 21.48 per cent.,) and Maryland (3.52.) The increase in Virginia is 3.85 per cent., and in South Carolina 5.28—this small advance evidently, resulting from exportation. Kentucky, too, shows an increase of but 4.87 per cent., the last decade. It is believed no very important numbers have been exported during the last ten years from that State. North Carolina exhibits an advance of 14.74, and Tennessee of 15.17 per cent. Missouri presents a larger increase than was expected—namely, 31.51. The great increase is in Texas, where it reaches over *two hundred and ten per cent.*, (210.66;) in Arkansas it is 135.89, and in Florida, 57.09; in Mississippi, 40.93.

In two States only are the slaves more numerous than the whites: in South Carolina, where they number 402,541, against 291,623 of the white inhabitants, and in Mississippi, being 436,696 to 353,969 whites. Their largest number in any one State is in Virginia, (490,887,) and the next is Georgia, (462,332.)

In the Territories there are ten slaves enumerated in Nebraska, twenty-four in New Mexico, and twenty-nine in Utah. The District of Columbia shows a loss of slaves of 13.72 per cent.

Among the *free coloured* population the increase is very small through the Union—only 10.68 per cent. Their largest numbers are to be found, as usual, in Virginia, Maryland, and Pennsylvania. Little valuable, in a statistical point of view, is to be extracted from the tables of this population, as the diminution from banishment or emigration cannot be distinguished from that arising from natural and regular causes. The theory sustained recently by an able statistician in Washington—Weston—that the free negro inevitably diminishes on this continent, is not yet sufficiently confirmed by facts to be admitted as a satisfactory scientific hypothesis. The race undoubtedly dies out in climates not adapted to it—as, for instance, in the Northern States; but whether it decays in freedom, in the Middle or Southern latitudes, does not yet fully appear. In many of the Southern and Western States there are laws expelling the free negro, and their decrease, observed in those States, during the last decade, may be due to these extraneous causes. Their largest increase in a slave State, is in Georgia, (18.91 per cent.;) in Alabama, 16.11; in Maryland, 12.04. The greatest decrease in Arkansas, 77.47. The greatest increase in a free State, in Minnesota, 457.18 per cent. In New York, they lose 2.18 per cent.—*New York Times*.

*Plainness.*—Advised, that all Friends, both old and young, keep out of the world's corrupt language, manners, vain and needless things and fashions, in apparel, buildings, and furniture of houses; some of which are immodest, indecent, and unbecoming; and that they avoid immoderation in the use of lawful things, which, however innocent in themselves, may thereby become hurtful; also all such kinds of stuffs, colours and dress, as are calculated more to please a vain and watery mind, than for real usefulness; and let tradesmen and others, members of our religious Society, be admonished, that they be not necessary to these evils; for we ought to take up our daily cross, minding the grace of God, which brings salvation, and teaches to deny all ungodliness and worldly lusts, and to live soberly, righteously, and godly in this present world, that we may adore the gospel of our Lord Jesus Christ in all things; so may we feel his blessing, and be instrumental in his hand for the good of others.—*Philadelphia Disciple*.

For "The Friend."

"To yield in trifles is the art of life,  
And truly conquer by declining strife."

This was doubtless the view of him who counsels them that would be wise and live in peace, that "if the ruler rise up against thee, leave not thy place, for yielding," said he, "specifically great offences, and a soft answer turneth away wrath. A wholesome tongue is a tree of life, and the words of a wise man are gracious. Whoso keepeth his mouth and his tongue, keepeth his soul from troubles, and he that followeth after righteousness and mercy findeth life, righteousness, and honor; for it is an honor for a man to cease from strife, and he that ruleth his spirit is greater than he that taketh a city. The beginning of strife is as when one looketh out water, therefore, said he, leave off contention before it be modded with; for wisdom is a defence, and better than strength or weapons of war."

How often have the flood-gates of temptation been opened by the indulgence of a captious, contentious spirit, whereby the mind, losing its true balance, hath become involved in unhappy and fearful delusion, so as to mistake good for evil, and evil for good, being betrayed into that way which seemeth right to a man, the end whereof are the ways of death! Such we may believe, is no very rare experience; and if the many sufferers whose sorrows may be traced to something like this, could only be brought to perceive the true spring of all their perplexities and troubles, and to an honest acknowledgment of their discovery, we should doubtless find less of the disposition which seems now to prevail, whereby we are induced to cast the blame of our afflictions upon something foreign from ourselves.

It seems to be the work of our common foe to magnify the evils without and around us, in order to divert our attention from the enemies of our own households, and lead us into contention and strife, that having broken our ranks and thrown us into confusion, he may reign in undisputed dominion. How specious are the devices by which he is seeking to draw us off the watch, and array one against another in secret or open hostility, in order that we may be scattered from our Captain and Leader; and being thus disbanded, lose the ground and strength whereunto we may have attained, so that his kingdom may be more effectually established, even as that of Saul the enemy of Israel.

But blessed be the God of David and of our forefathers, who hath not left himself without a witness, nor his people without a deliverer, who shall cause the house of Saul to become weaker and weaker, and the house of David to wax stronger and stronger, until the mountain of the house of our God shall be exalted above all the mountains, and the people shall flow thereunto as doves to our windows. The arm of the enemy shall be broken and the power of Truth established, for the Lord will turn again our captivity, and restore the house of Israel to their promised inheritance. When the accuser of the brethren shall have been cast out, peace shall be restored, and unity and harmony again prevail, as in the days of our forefathers, when a standard was lifted up against him.

Old telegraphers say that the heavy snow storms that occur in the desolate western regions through which the new Pacific telegraph line runs, will render it impossible to keep the wires in working order during the winter. These storms sometimes fall six and eight feet thick, and the immense weight of snow would not only break the wires, but they could not be repaired until the snow had disappeared, which sometimes is for several months together.—*Late Paper*.

*Seasonable Hints about Personal Comforts.*—A thin shawl may be made warm by folding a newspaper inside of it. The paper is impervious to the wind and cold air from outside, and prevents the rapid escape of the warm air from beneath it. Every one knows that the heat of the body is carried off much more rapidly in a high wind than in a calm. The wind blows away the heat evolved from the body; but in a perfectly still air this heat remains and constitutes an atmospheric envelope so nearly of the same temperature with the body itself, that the latter is not so quickly robbed of its natural heat.

There are some very interesting facts about the body in its power to make and contain the heat, which are familiar to all when told, but which are seldom thought of in daily experience. For example, the body will hold a great deal more heat than it gets from its own furnace. The stomach is a furnace, and our food is the fuel. It keeps up a uniform temperature in the blood equal to about 98 degrees of Fahrenheit's thermometer. If the stomach could consume food fast enough to maintain the heat, the body could not be frozen by any extreme cold. But in proportion to the severity of cold to which the body is exposed, is the rapidity with which it loses heat. Some substances taken into the stomach make a hot blaze much sooner than others, as brandy. To put brandy in the stomach is like putting pitch under a steam boiler. It soon burns out, and the greater heat injures the furnace.

We say that the body will hold more heat than it gets from its own furnace. Heat is measured by degrees. On going out from a warm room the body will immediately begin to lose its heat, and it must part with a certain number of degrees before it can get to feel cool. The direction has sometimes been given—"Don't hug the stove, if you are going to set out on a cold journey." But experience says—do hug it. Get in as many degrees of heat as you can carry, if it is 500. Then wrap yourself up well, and you can economize these 500 degrees through a long ride. But if you had taken only 100 degrees at the start, they would have been exhausted mid-way of the journey, and then you would have begun to feel cold. Nevertheless, it is an unhealthy habit to accustom one's self on ordinary occasions, to more heat than is usually needed. This is a very common fault and bears on the pocket as well as on the health. One may easily get the habit of requiring two or three more blankets on a bed than are necessary. Some families will burn twice the fuel that others do, and enjoy less comfort.

The extremities of the body get cold first, often to a painful degree, while the trunk is warm. But so long as the trunk keeps warm, in a person of common vigorous health, there is little fear of "catching cold" by aching toes or fingers. In rail-car riding, it is much safer for the health to let the toes ache, than to allow the lungs to feed on the foul air set out on the stove.

When you set out on a winter journey, if you are liable to suffer from cold toes, which many people do in spite of "rubbers," fold a piece of newspaper over your stocking, which you can readily do, if your boots or shoes are not irrationally tight. This is better than "rubbers," which are, in fact, very cold comforters in extreme, while they make the feet sweat in moderate weather. The main use of India-rubber over-shoes is to keep out water, and for that they are second only to a stout, water-proof, first-rate calf-skin boot. There is not a more unwholesome article of wear made, than the high-topped rubber boot. It makes the foot tender, especially of children, gives an

ugly gait, and when left off in any weather, the wearer is liable to "catch cold." Crispin is the best friend of the human foot, when his leather and stitches are honest.

Although the body can take in a greater number of degrees of heat than it gets from its own furnace, the stomach, yet its capacity is limited in this respect. For example, when the hand is warm, you cannot hold it in the air of a hot oven for a second; but when it is cold, and especially when damp also, you may hold it there for some time without feeling the heat very sensibly, and for a long time without being obliged to withdraw it. And so of the whole body. It appears, then, that the body may carry less, as well as more heat, than the quantity supplied by its own furnace. Its extremities and its surface often become painfully cold.

In winter, a traveller occasionally finds in a hotel a deficiency of bed covering, or in the sensitiveness of disease, he may require more than in health. The newspaper for which he paid two cents on the car, spread under the upper cover, will be equal to an additional blanket.

A piece of silk oil-cloth, stretched in the folds of a shawl, is more flexible than the paper, and will last a whole winter. It has the advantage of securing inward warmth without the additional weight of a thicker garment.

The constitutional vivacity and temper of a person has much to do with his endurance of cold. For this vivacity is a sort of nervous fire that lessens the sensibility to outward impressions. An indifferent, milk-and-water person, without energy and tone of will, is at the mercy of every cold blast that sweeps around the corner. He, and especially she, has no defence but to wear a dozen shawls during the day, and sleep under a pile of blankets at night. One without any mental purpose, (unfortunately there are such,) though in vigorous health, is much more liable to catch cold than a spirited, delicate body bent on some positive pursuit.

*A Ministry flowing from the Divine Spring.*—Although there have sometimes been words in my heart, and, as it were, in my mouth, which I do not know but they might have been of ease to myself, and of service to others, had I delivered them; and I have been spoken to by some Friends, both in a private and public capacity, or station thereon; but I was always forbearing and backward that way, and have been afraid of too much forwardness in some, who, I have been and still am afraid, have not edified thereby. I had always a fear, and a dislike to, the noise of the tool, the working of self and the creature, in our meetings, as it was not to be heard in the building of the Lord's house or temple of old. But that ministry which comes with a true flow from the Divine spring, having its evidence and authority with it, I still loved, and greatly do love, and the vessel it flows through, for its sake, whether it be in rebukes or consolation, as the Almighty is pleased to give, and the case may require. Whether it may be more or less, it is beautiful; and if rightly received, it is comfortable and edifying.—*Thomas Roylance*, 1774.

*Virtue and Health from Eight to Sixteen.*—Lord Shaftesbury recently stated in a public meeting in London, that from personal observation he has ascertained that of the adult male criminals of that city nearly all had fallen into a course of crime between the ages of eight and sixteen years, and that if a man lived an honest life up to twenty years of age, there were forty-nine chances in his

favour, and only one against him, as to an honorable life thereafter.

This is it in the physical world. Half of all who are born, die under twenty years of age, while four-fifths of all who reach that age, and die before another score, owe their death to causes of disease which were originated in their "teens." On a careful inquiry it will be ascertained that in nearly all cases the cause of moral and premature physical death are pretty much one and the same, and are laid between the ages of "eight and sixteen years." This is a fact of startling import to fathers and mothers, and shows a fearful responsibility. Certainly a parent should secure and retain, and exercise absolute control over the child until sixteen; it cannot be a difficult matter to do this, except in very rare cases, and if that control is not wisely and efficiently exercised, it must be the parents' fault; it is owing to parental neglect or remissness. Hence the real source of ninety-eight per cent. of the crime of a country such as England or the United States, lies at the door of the parents. It is a fearful reflection, we throw it before the minds of the fathers and mothers of our land, and there leave it, to be thought of in wisdom, remarking only as to the early seeds of bodily disease, that they are nearly in every case sown between sundown and bed time, in absence from the family circle, in the supply of spending money never earned by the spender, opening the doors of the confectionaries and soda fountains, of beer and tobacco and wine, of the circus, the negro minstrel, the restaurant and the dance: then follow the Sunday excursion, the Sunday drive, with easy transition to the company of those whose ways lead down to the gates of social, physical and moral ruin. From, "eight to sixteen" in these few years are the destinies of children fixed; in forty-nine cases out of fifty fixed by the parent! Let every father and every mother, solemnly vow;—"By God's help, I'll fix my darling's destiny for good by making home more attractive than the street!"—*Hall's Journal of Health*.

*Progress of the West Indies.*—We lately read a little work of about ninety pages, published by the Messrs. Longman, London, from the pen of Charles Buxton, M. P., son of Sir Thomas Fowell Buxton. This work contains an amount of evidence from official documents, and the statements of the governors of the islands, of their extraordinary progress in wealth, civilization, and general prosperity, which is delightful. At the end of his treatise, Buxton sums up the following paragraphs.

To men of business one fact will show the sound commercial state of the British West Indies, namely, that in 1857, the Colonial Bank received bills from the West Indies to the amount of more than £1,300,000, and less than £8,000 were returned. Nor was there a single failure in the West India trade during the frightful commercial crisis in the autumn of that year. And as a demonstration that the West Indies are advancing with great rapidity, we may give a few statistics, which simply show that trade and agriculture are expanding year by year. The total exports from Great Britain to the West Indies in 1857, were valued at half a million more than the average of the preceding ten years, and actually in that year exceeded her exports to Sweden, Norway, Denmark, Greece, the Azores, Madeira, and Morocco all combined. The exports and imports together of the West Indies amounted, in the four years ending with 1852, to just £32,500,000; in the four years ending with 1857 to just £37,000,000, an increase of £4,500,000 in four years. In the year 1857, the total trade to and from these islands was valued at £10,735,-

000, and the value of the sugar imported from them into the United Kingdom, in that year, was no less than £5,618,000.

These official statistics and reports absolutely demonstrate the fact that the West Indies are rapidly advancing in wealth and prosperity; nor must it be supposed that they are merely "putting money in their purse," without a corresponding advance in the general character of the people.

The change from the old state of things is described on all hands as being most gratifying, and especially in those thousands of cases where the negroes have built altogether new villages for themselves. The cottages are either neatly thatched, or shingled with pieces of hard wood. Some are built of stone or wood; but generally are plastered also on the outside, and whitewashed. Many are ornamented with a portico in front, to screen the sitting-apartment from sun or rain; while for the admission of light and air, as to add to their appearance, they exhibit either shutters or jalousies, painted green, or small glass windows.

The number of such settlements that have been established since emancipation is almost incredible. Within eight years of that event, nearly two hundred villages of the kind we have been describing had been built, and full 100,000 acres of land purchased by the negroes of Jamaica alone.

*How we are Justified.*—Then, according to the Scriptures, Christ died for all that which live, should not hereafter live unto themselves, but unto him which died for them and rose again, 2 Cor. v. 15.—that without faith it is impossible to please God, Heb. xi. 6.—that without repentance the sinner shall perish, see Luke xiii. 3, 5.—and without holiness no man shall see the Lord, Heb. xii. 14. And, (in the words of Archbishop Tillotson, in his Sermon 4th, Concerning the Incarnation of our blessed Saviour, on John i. 14.) we add, that "the salvation which the Son of God hath purchased for us, and which he offers to us by the gospel, is not to be accomplished and brought about any other way, than by forsaking our sins and reforming our lives. The grace of God, which hath appeared to all men, and brings salvation, will not make us partakers of it in any other way, or by any other means, than by teaching us to live ungodliness and worldly lusts, and to live soberly, and righteously, and godly, in this present world. God sent his Son to bless us, by turning us away every one from his iniquities; and unless this change be effectually wrought in us, we are utterly incapable of all the blessings of the gospel of Christ. All that he hath done for us, without us, will avail us nothing, unless we be inwardly transformed, and renewed in the spirit of our minds, unless we become new creatures, unless we make it the continual and sincere endeavour of our lives to keep the commandments of God."

"The obedience and sufferings of our blessed Saviour," continues the Archbishop, "are indeed accounted to us for righteousness, and will most certainly redound to our unspeakable benefit upon the performance of the condition which the gospel doth require on our part, namely, that every man that names the name of Christ depart from iniquity. And the grace of God's Holy Spirit, is ready to enable us to perform this condition, if we earnestly ask it, and do sincerely co-operate with it; provided we do what we can on our part, God will not be wanting on his. But if we receive the grace of God in vain, and take no care to perform the condition, and neglect to improve the grace and assistance of God's Holy Spirit to that purpose, we have none to blame but ourselves; because it is then our own fault, if we fall short of that happiness.

which Christ hath purchased and promised to us, upon such easy and reasonable conditions as the gospel proposeth."—Richard Chazide.

*Progress of American Inventions in Europe—Boot and Shoe Machinery.*—Some few weeks ago, we noticed a new and greatly improved sewing machine, the invention of — Salisbury, an American gentleman, and we intimated at the same time that a company was about being formed in Coventry for the manufacture and sale of these machines. Within the last few days our attention has been called to another patent sewing machine, and from what we could see of its action, and the work it is capable of performing, there is little doubt but that it will effect as great a revolution in one department of the boot and shoe trade, as the ordinary sewing machine has done in the other. The machine is known as "Blake's patent sole-sewing machine," and is, we understand, the invention of a young man from the United States. It is large and imposing in appearance; standing beside the little modest-looking ordinary sewing machines like a Triton among the minnows. The machine is made upon an entirely distinct principle to that of any other sewing machine yet invented, inasmuch as it sews with one thread only, and of course the action is obtained in an entirely different manner. When seen at work, one feels no doubt as to the quality and strength of the sewing. With each revolution of the wheel a formidable looking needle, holding a good thick waxed thread, descends with a sharp thud into the substance to be sewed, and by some legerdemain that we failed to perceive, loops itself underneath and comes up again with a snatch that tightens the stitch much more effectually, and altogether puts into the shade the old scientific turning out of the elbows, leaning forward of the chest, and desperate final jerk which the knight of the stall was in the habit of forcing home the soiling stitch, and clenching an argument with any friend who might happen to be present during the process. The material being sewn at the time of our visit was two pieces of sole leather just cut from a dry hide; the two measured three-eighths of an inch in thickness, and from the ease with which the needle went backward and forward through this substance, there was not the slightest doubt but that it might be made to go through double the thickness if required. The seam is along a channel that is afterward closed up so effectually that it is difficult to see the stitches, and the old channel-sewn sole is again produced as perfect and even much more perfect than it used to be by hand.

In the making of boots and shoes by this machine the sole is arranged for the "upper" to come between the inner sole and the outer one; the boot is then placed under the machine, and without the necessity of a welt, the whole is fastened together by stitches that go through the entire thickness of soles and upper, yet so neatly as to leave no ridge to irritate a tender foot on the inside, or expose the sewing to the wear of the pavement on the outside. When it is added that a pair of soles can be sewn on and completed in three minutes, it will be seen how completely impossible it is for human labour to compete with this machine. When the machine was first invented, only the sides were sewn up, and the toes and heels were left to be pegged or nailed; now, however, by a very beautiful contrivance, the machine can be made to sew round the toe and heel of the boot with the same ease as any other part. It is calculated that a woman could superintend one of these machines, and turn out 100 pairs of boots per day on an average. We were shown a pair of ladies' boots made by a machine of this

kind, and for neatness and finish they excelled any hand-made boots we have ever seen. Some shoes of a stronger description were also shown, and these were equally excellent. If arrangements can be made for securing the machine for Coventry, there seems no cartily reason why Coventry should not become as celebrated for the manufacture of machine-made boots and shoes, as it has hitherto been for ribbons and watches. The machine patented by Salisbury is acknowledged to be a superior machine for light sewing to any at present in the market; this can be employed for preparing the tops, while Blake's sole-sewing machine would complete the boot; and under these circumstances, the home trade would in all probability be the least part of the demand that would spring up.—Coventry Herald.

*The Bushmen of South Africa.*—On the flanks and in the valleys of the Snowberg, or Snowy Mountains, which form the Northern boundary of the Cape, humanity is found in the very lowest state of degradation in which it has ever been exhibited. The Bojesmans, or Bushmen, two or three specimens of which race were brought to this country a few years ago, present an exaggeration even of the hideous form which characterizes the Hottentot. Hunger, and cold, and nakedness, and every description of privation and distress, have so dwarfed their forms, and depraved their minds, that they present a spectacle painful to look upon. The stature of these pigmy inhabitants of the desert rarely exceeds four feet, or four feet two inches. Thieves by profession, cruel and treacherous, without a fixed habitation, without society, without any sort of common interest or government, and living only from day to day, and from hand to mouth, they were objects of loathing to neighbouring tribes, even before Europeans had approached their country. The more civilized of the Hottentots and Kaffirs waged a deadly war against them; and the sight of one of these diminutive savages is said to rouse the passions of that race to an uncontrollable fury. Many years since, a Kaffir saw in the Government House at Cape Town, among other domestics, a Bushman eleven years of age. With the impetuosity of a beast of prey he darted upon him, and transfixed him with his agassasi.

The little intelligence which the Bushmen possess, is displayed chiefly in robbery and the chase. Rivaling the antelope in fleetness, and the monkey in agility, they accompany their wild, half-famished, savage dogs until they come within horseshot of their game, or run down the objects of their pursuit. Arrayed generally with a bow, a quiver full of arrows, a hat and a belt, leather sandals, a sheep's fleece, a gourd, or the shell of an ostrich's egg, to carry water, these puny creatures wander over their parched and desolate plains, supported by a food which, unless when occasionally varied by the luxuries of the chase, consists entirely of roots, berries, ant-eggs, grasshoppers, mice, toads, lizards, and snakes. They smear the arrows which they use for hunting, and in war, with a poison which, extracted from a bulb, and mingled with a venom drawn from the jaws of the yellow serpent, forms a compound of the most noxious character, for no creature was ever pierced by a dart prepared with the deadly virus, and lived. They have another poison more fearful in its effects, which is extracted from a caterpillar. The agony produced by it, Dr. Livingstone says, is so intense, that the person wounded eats himself with knives, and flies upon human habitations a raving maniac. The effect upon the lion is equally terrible. He is heard moaning in distress, becomes furious, and bites trees and the ground in his rage.

They are said to be totally void of natural affection;—"Kicherer, who lived for some time in their neighbourhood," of parents throwing their tender offspring to the hungry lion, who stood roaring before their cavern, refusing to depart until some peace-offering was made to him." They shun the face of strangers, concealing themselves amongst rocks and bushes, and even throwing themselves over precipices, rather than fall into the hands of their enemies. But they have been known, when escape has been cut off, to fight with the most determined resolution. Religion they have none. They regard the thunder as the voice of an angry demon, and they reply to it with curses and imprecations. Their language is inarticulate to all but themselves; and there appears to be scarcely even a possibility of either civilizing or converting them. In the north-east of Natal, where the Bushmen appear in their lowest type, they reside in holes of the earth scraped out with their nails, or rather with their claws. "They will not receive kindness," says a close observer of their character; "or if they do, they only make a return of treachery, robbery, and murder. No presents of cattle or corn, no inducements to locate and settle, can prevail upon them to relinquish their wild life, or to make any approach towards civilization." The only satisfactory thought connected with them is the belief of their gradual extinction. They exist, in the meantime, an awful proof of the degradation, which humanity, in its gradual deterioration, can fall, and an instance of physical and moral degeneracy probably unparalleled in the world.—*London Quarterly.*

## THE FRIEND.

FIRST MONTH 4, 1862.

### SUMMARY OF EVENTS.

**UNITED STATES.**—*The Difficulty with England settled.*—Earl Russell, the British Minister for Foreign Affairs, in a despatch to Lord Lyons, dated Eleventh mo. 30th, recites the circumstances of the arrest of the rebel Commissioners as reported by the Commander-in-Chief, Williams of the steamer Trent, and expresses the hope that the government of the United States will of its own accord offer "such redress as alone could satisfy the British nation, namely, the liberation of the four gentlemen and their delivery to your lordship, in order that they may again be placed under British protection, and a suitable apology for the aggression which has been committed. William H. Seward, the U. S. Secretary of State, in his answer to this communication, admits that the proceeding objected to cannot be justified upon the construction of maritime law heretofore maintained by the United States; that the claim of the British government is just, and only in accordance with what the United States has always insisted upon in similar cases. Lord Lyons is informed that Mason, Sillwell and the two secretaries, now in confinement at Fort Warren, will be cheerfully liberated, and he is asked to indicate a time and place to receive them. It is stated that the President and Cabinet were unanimous in their decision that the rebel agents ought to be given up. The U. S. Secretary of State discusses the whole subject in detail, and finally acquiesces in the course, his satisfaction that a great principle of international law for which the United States has always contended, but which has been denied by Great Britain, has now been firmly established by the action of the latter. Henceforth the "right of search" of neutral vessels by belligerents must be considered at an end.

*The Great Rebellion.*—Although no military movements of great importance have occurred for several weeks past, the impression seems to be gaining ground that the chief vigor of the insurrection has been exhausted, and that the "great day" is at hand. The great armies in Virginia, near Washington, remain nearly in the same positions. The only serious collision which has recently occurred, took place at Drainesville, a village, seventeen miles west of Washington, between 2500 rebels and some of the Federal troops; the rebels

were defeated with a loss, according to their own account, of 230 men. Another naval expedition is nearly ready to sail from the Chesapeake. The accounts from Missouri represent that Gen. Price with the rebel army greatly reduced in numbers, was to retreat southwards, leaving small parties of hard rebels, in the western part of the State, had been captured or dispersed, mostly without much bloodshed. In all, upwards of 2500 of the insurgents had been taken prisoners. The North Missouri railroad has been greatly damaged by the destruction of the bridges having been burnt, and portions of the track destroyed. Western Virginia appears to be clear of the rebel forces, most of those who threatened that region having been transferred to the Southern army in Kentucky. The expected battle at Bowling Green, Ky., has not yet taken place.

It is stated that the great rebel army that several troops were moving against the Confederate forces at that place. Great preparations had been made for its defence.

*Southern Items.*—All the Charleston insurance companies, with one exception, have gone into liquidation, in consequence of the losses by the great fire. Sixteen old ships laden with stone, have been sunk off Charleston harbour, about two and a half miles from the shore. They are expected to close the channel effectually for all, except quite small vessels.

The U. S. fleet off Port Royal has captured a number of the rebel privateers, and is now blockading the blockade.

The south-east channel has been buoyed out, not less than thirty feet of water were found in any place. Large quantities of cotton had been gathered and stored in the government warehouses.

Theybald Island, in the U. S. troops were still engaged in making intrenchments. Reinforcements continued to arrive for Gen. Sherman's army, and it was supposed it would soon be strong enough to occupy Savannah.

The rebel Congress at Richmond have resolved that no peace ought to be concluded with the United States, until it secures to them the opportunity of forming a part of the Southern Confederacy. The Fort Smith (Ark) News of the 12th says, that the Creeks, Cherokee and Seminoles are deserting the cause of the South. About 4000 Indians, it is stated, had taken up arms for the Union.

The Mississippi Legislature has a plan under consideration to advance planters twenty-five dollars per bale on cotton. It is also proposed to charter banks based on cotton.

*Bank Suspension.*—On the 30th ult., the banks of Boston, New York and Philadelphia suspended specie payments. The New York banks last about \$1,000,000 of gold in the two previous weeks, only about one million of which has gone abroad, the rest having been sent into the interior, or remaining in private hands. The specie of the New York banks had been reduced to \$25,500,000 at the time of suspension.

*New Mexico.*—Forts Craig and Stanton on the Mesilla border, which had fallen into the hands of the rebels, have been retaken by the Federal forces. A movement was made to be made against the rebels in Arizona.

*High Duties.*—A bill has been passed by Congress, and will be presented to the President, increasing the duty on tea, coffee, sugar and molasses. The duty on tea of all kinds is twenty cents a pound; on coffee, five cents on sugar, 2½, 2 and 5 cents according to quality, and on molasses, 6 cents per gallon.

*Gold.*—The London market, week 359. On the 30th sales of exchange on London were made at \$1.12½. Gold was not in much demand at ½ premium. Stocks all higher.

*Philadelphia.*—Mortality last week, 286; of consumption, 16; scarlet fever, 16; small-pox, 15; diphtheria, 15. *Deaths in Georgia.*—Letters from Fort Royal give a melancholy account of the condition of affairs on the seaboard of these two States, especially of the first named. The entire coast, from Warsaw Sound, forty miles below Fort Royal, to North Edisto Inlet, forty miles above the same place, is deserted by its white inhabitants, and the slaves are practically free. This state of affairs exists inwards for a distance of at least ten miles, and in places for as much as from twenty to thirty miles. About half the cotton houses in this district have been burnt, in some instances, by the owners, and many of the rebel troops have been driven to the district alone, there are about 16,000 slaves whose masters have fled, leaving the negroes to roam about and do as they please. Many of these poor creatures are in a destitute condition, being in want of both food and clothing. They generally regard the Northern troops as their friends, and are eager to serve them in any way they can.

*The Grain Markets.*—The following were the quotations on the 30th ult. New York—Chicago spring wheat,

\$1.27 a \$1.30; red winter, \$1.36 a \$1.39; white, \$1.47 a \$1.52; oats, 40 cts. a 43 cts.; mixed corn, 62 cts. a 65 cts.; yellow, 65 cts. a 66 cts. *Philadelphia*—Red wheat, \$1.32 a \$1.35; Southern white, \$1.35 a \$1.45; rye, 75 cts. a 73 cts.; new corn, 69 cts. a 68 cts.—old 63 cts.; oats, 39 cts. a 40 cts.; barley, 76 cts.; clover seed, \$4.25 a \$4.35; Timothy, \$2.20; flax-seed, \$2.10.

*FOREIGN.*—Liverpool dates to Twelfth mo. 15th.

Prince Albert died on that day, after a short illness. He was forty-two years of age, and was generally respected for his benevolence and uprightness of character.

The war feeling still raged fiercely in England, an military preparations were being hurried forward. A number of soldiers had been shipped for Canada, and the government had chartered various steamers for the transport of others.

Not much change in the Liverpool markets. The London money market was well supplied; the rate for the best bills, 2½ per cent.

The monthly statement of the Bank of France shows an increase of cash on hand of nearly forty millions of francs.

During a late visit of the Emperor of Austria to Venice, he ordered all political prisoners to be set at liberty.

The eruption of Mount Vesuvius continued. Earthquakes were frequent in the neighbourhood of Naples, falling on 21st ult. In Greece, and the village was in imminent danger of destruction by lava. In the bay of Naples, the sea had receded a considerable distance.

Canton, China, was finally evacuated by the English on the 21st of Tenth month. Shanghai was in a state of alarm, in consequence of the proximity of the rebel army. The English and French troops assisted the Chinese to hold Che-Foo against the insurgents, who ultimately retreated.

### RECEIPTS.

For Jos. Collins, N. Y., \$2, vol. 34, p. 112, rec \$2, vol. 35.

Received from Asa Garretson, agt. O, \$1, to 52, vol. 35, for Benj. Hoyle, S. Vols. 34 and 35. From Mrs. Daniel, N. Y., \$1, to 53, vol. 35; from Amos Battery, Ill., for Russel Tarr, \$2, vol. 34; from T. Churchill, Ill., for Edw. Prichard, \$4, vols. 34 and 35.

### PHILADELPHIA ASSOCIATION OF FRIENDS FOR THE INSTRUCTION OF POOR CHILDREN.

A Stated Meeting of the Association will be held on Second-day evening, First month 6th, 1862, at half past seven o'clock.

EDWD. RICHES, Clerk.

**DIED**, on the 7th of Twelfth month, 1861, at the residence of her parents, in Westmoreland county, Penna., CHARLOTTE D., daughter of Frederick and Emelie Mark, a member of Providence Monthly Meeting, in the twenty-third year of her age. Her illness was of eight days' duration, during which time she frequently spoke of the prospect of death, saying, "If I go now, I believe my soul will be at rest; nothing in my way;" and again, "If I go, I hope it will be a profit to all of us." Some hours before her death, she said to her mother, "Give my love to all my friends and acquaintances; I love them all." Calling her sisters to her bedside, she said to them, "I want you to be good children, and do your duty to God." Her close and peaceful and calmness—leaving to her afflicted family the consoling belief that, through Divine mercy, her spirit has been received into the mansions of eternal happiness.

On the 17th of Twelfth month, 1861, at the residence of her parents, in Westmoreland county, Penna., LOTISIA, daughter of Frederick and Emelie Mark, in the seventeenth year of her age. Her illness lasted seven days, and during the greater part of that time, she manifested no desire to recover; but frequently asked her parents to pray for her, that she might be relieved from her sufferings, and to be with her during her illness. "There is a better home prepared for me than you can have here." Her suffering was much greater than that of her deceased sister; she bore it, however, with fortitude not very common in one of her age.

In this day of depravity, while so many of our young members turn their backs upon the Truth and its testimonies, it may be a satisfaction to many Friends to learn that these dear children were received into membership at the request of their parents, about nine years ago, and although surrounded by many snares and temptations, they were preserved in a good degree in that plainness and simplicity which the Truth leads into, and their conduct gave evidence that they loved our religious Society and its principles.

*An Epistle in True Love, containing a Farewell Exhortation to Friends' Families.*

*Dear Friends,*—Who have retained your integrity, love, and life in the precious Truth, and are making it your chiefest interest to exalt the same to the earth: To all such is my endeared love, in the blessed fellowship of life and peace, beseeching Almighty God on your behalf, that you may stand in that liberty wherewith Christ hath set you free; taking good heed that you be not again entangled with the surfeiting cares of this uncertain world, lest your understandings be darkened, and you thereby be incapable of answering the end for which the Lord raised you up: For although you, whom I am at this time drawn forth in exhortation, may not be concerned in a Doctrinal Testimony, yet, my dear Friends, you have known in overcoming by the blood of the Lamb and his power, and to you it is given, not only to believe, but to be as pillars in God's House. And I must say, that there is a great work for you to do in this day of outward ease; and were I not pressed in spirit, in a sight and sense I have had of the state of the churches, I should at this time have been silent; but now for the Lord's sake, and the churches reformation, I entreat the faithful to come up to the help of the Lord against the mighty.

If any enquire, what I have seen in the light of the Lord, so mightily to obstruct the prosperity of Truth in the earth, I do with sorrow answer, It is the spirit of the world, pride, covetousness, fleshly ease, with self-interest.

Now, that there may be a regulation, which is the Lord's love and mercy is afforded, is the real cause of this epistle.

And the way to promote, and I hope, in the Lord's time, to effect it to God's honour, and the benefit and enlargement of the churches, is,

First, For the faithful (who are as pillars) fathers and mothers in the church, carefully to observe the operation of God's Holy Spirit, and thereby you will be enabled to set up an holy discipline in your own families; being often inward, attending upon the Wonderful, Counsellor. So shall you be engaged, in due time, to gain upon each church which you belong unto: For, dear Friends, if ever there was need for the Seers to be inward with the Lord, in deep mourning, the husbands apart, and their faithful wives apart, it looks to me to be in our day. For oh! how is the care and counsel of the

Lord, which was conveyed to us through our faithful elders, with respect to gospel order, slighted; and thereby a libertine spirit got up, both in habit and conversation: And it is to be feared, that those worldly spirited ones rather serve themselves, than the true and living God.

And that such may be provoked to return to the Lord with unfeigned repentance, I am at this time concerned, to recommend the excellent method which Joshua, that brave captain under the great King of kings took, when he had led the children of Israel into the promised land, and divided unto them their lots, after he had powerfully and wisely gone in and out before them, until, by the strength of the Lord, they had fought their battles, and subdued their enemies, taking cities from them, till they were grown a rich and numerous people, and possessed of vine-yards and olive-yards ready planted to their hands: then this blessed servant of the Lord, who no doubt had a clear sight of the danger they were in, of forgetting the Lord, the true and living God, by whose powerful arm their fathers were brought out of the house of bondage, according to his promise made to his faithful servant Abraham; I say, this wise leader in Israel commemorates the mercies, victories, and wonderful deliverances of God to them, without the least ostentation, or desire of honour, name or fame in the world, or amongst them; but in a lively, powerful exhortation, expresseth himself in these words:

“Now therefore fear the Lord, and serve him in sincerity and truth, and put away the gods which your fathers served on the other side of the flood, and in Egypt, and serve ye the Lord. And if it seem evil unto you to serve the Lord, choose you this day whom you will serve, whether the gods which your fathers served, that were on the other side of the flood, or the gods of the Amorites, in whose land ye dwell: but as for me, and my house, we will serve the Lord.” Josh. 24: ver. 14, 16. But verses 21, 22: “If ye forsake the Lord, and serve strange gods, then will He turn and do you hurt, and consume you, after that he hath done you good. And the people said unto Joshua, Nay, but we will serve the Lord.”

Dear Friends, observe what influence this lively zeal, and godly resolution, had upon the people; so that there appeared a willingness in them to put away those things which grieved the Lord, and hindered them from serving him fully and freely, saying, “God forbid, that we should forsake the Lord, to serve other gods.”

And now my dear Friends, whom God hath blessed with a large talent of grace, by which you have been enabled to make a good confession to his name and Truth, in holiness of life in this land, where my lot is now fallen, to travel up and down in the love of God, for no other end than that an increase of love and faithfulness may be known in the gathered churches of Christ. In order thereto, I beseech you look into the true state of the churches, and see if you, with me, cannot behold a great declension from the primitive plainness, simplicity, and sincerity which Truth led our faithful Elders into. Oh! the testimonies they have

left us, of the care they had to order their conversation in words, habit, and deportment, so as to answer the witness of God in all men with whom they had to do.

And now with sorrow I lay before you, that in my late travels I saw too many taking up a fleshly case, by letting an earthly carnal mind prevail, even to the neglecting the assembling themselves together, to wait upon the Lord, and worship him in spirit and in truth.

This I know is the cause of grief to you faithful elders; but that you may be blessed with peace here, and leave a sweet memorial to after ages, let it be your care in each church, to stir up the negligent to a lively commemoration of the mercies of God; and with due care to use your christian authority, in the management and settlement of your own families in that decent order we, through the mercy and wisdom of God, have been established in.

And for your encouragement therein, the Lord will be unto you a sun and a shield; and grace and glory, and no good thing will be withheld from such, who in the love of God diligently labor, hope, and patiently wait, to see Zion's righteousness go forth as brightness, and her salvation as a lamp that burneth; that the Gentiles may see her light, and all kings her glory.

Oh! I have to say, such sound pillars keeping faithful to the end, shall be crowned with glory, honour, immortality, and eternal happiness, for ever and ever. And if I may yield you a little hand of help, it is farther in my heart to leave this farewell exhortation, to all fathers and mothers, masters and mistresses, especially of the younger sort; those who have in any measure tasted of the good Word of life, and of the powers of the world to come; that all such be very careful, to walk worthy of the vocation wherunto they have been called, in honesty, sobriety, and true humility, having your minds girded with the girdle of Truth. So shall your conversation answer the witness of God in the hearts of your children and servants; and also to such who do not profess with us, with whom you may be concerned. For, Dear Friends, your candles have not been lighted by the Lord, to be put out again, or you to hide the light thereof from your families or neighbourhood, under a bed, or under a bushel. Therefore I desire you may arise, and trim your lamps, and be watchful that your lights may be kept shining, and lamps burning: For it is not enough carelessly to retain a knowledge of what the Lord hath done in times past; but that there be a daily waiting upon, and supplicating the Lord, for the renewing of his love and life, that thereby you may be kept alive to him, and may be a sweet savour of life unto life, in your families and neighbourhood: So will the Lord be glorified; and your souls, that are thus renewed, keeping under the power of the holy cross of Christ, in the whole management of your conversation; you, I say, shall then enjoy a serene quiet, when the Lord is pleading with backsliders, and the wicked among the children of men.

And Friends, this know, that the day of the Lord's sifting the churches hastens on apace: and my fervent labour is, that all those who make

mention of the name of the Lord in his holy way, may so demean themselves in true self-denial, as that, when proved by Divine Wisdom, they may be found of that sound wheat, not one grain of which may be lost. And in order that it may be so, I entreat all, whom the Lord hath blessed with families, that they carefully observe the appearance of the grace of God, in every of its operations and drawings. And whatsoever the Lord thereby concerneth any one to, do let it be done with the utmost diligence. So will parents be good examples to their children, and masters to their servants. For the heads of families are, or ought to be, the Lord's ministers under him, ruling their families in the power of love, by which they have known a being turned from darkness, to the true Light, Christ Jesus: For surely, it is by this power of love, that we are enabled to order our families rightly, both in life and manners. Therefore I would desire, that all may see to the discharging of their duty aright, as in the sight of an all-seeing God.

(Concluded next week.)

**The Three New Territories—Colorado, Nevada, Ducatala.**—The organizing of the new Territories has increased the number of Territories in the United States to seven, including the previously existing ones of Washington, Nebraska, Utah and New Mexico.

The first of these Territories, Colorado, includes parts of Kansas, Nebraska, and Eastern Utah. Its boundaries run as follows:—Beginning at a point where the 102d degree of West longitude from Greenwich crosses the 37th parallel of North latitude, thence north along said 102d parallel to where it intersects the 41st degree of north latitude, thence west along said line to the 109th degree of West longitude, thence south along said line to the 37th degree of North latitude, thence east along the 37th degree of North latitude to the place of beginning. The Territory contains about 100,000 square miles, and at this time a population of some 25,000 persons. The Rocky Mountains divide the Territory into two parts, westward from them flowing a large number of rivers, tributary to the Colorado, and eastward others, equally numerous and large, tributary to the Arkansas and South Fork Platte Rivers. It includes the famous mining region, Pike's Peak, rich in gold and other metals, cut off by deserts from the more fertile Western States, but destined to be the home of advancing civilization, and to give up its treasures at the summons of enlightened toil.

Nevada is taken from Western Utah and California. Its boundaries are as follows:—Beginning at the point of intersection of the 42d degree of North latitude with the 39th degree of longitude West from Washington; thence running south on the line of this 116th degree West longitude until it intersects the northern boundary of the Territory of New Mexico; thence due west to the dividing ridge separating the waters of Carson Valley from those that flow into the Pacific; thence on this dividing ridge northwardly to the 41st degree of North latitude; thence due north to the southern boundary line of the State of Oregon; thence due east to the place of beginning. That portion of the Territory within the present limits of the State of California, is not to be included within Nevada until the State of California shall assent to the same by an act irrevocable without the consent of the United States. The Territory includes the lovely Carson Valley, the memory of whose beauty lingers with the traveller in his journey through arid plains and over rugged mountains, and whose wondrous fertility, even under the rudest cultivation, shows what may be expected there when intelligent in-

dustry has free course. Great mineral wealth, especially of silver, in which it is richer than any other part of the world, and unlimited capacity for the raising of agricultural products, will combine at an early day to transform this region into a rich and populous State.

In general terms, Dakotala lies between latitude 42 deg. 30 min. and 49 min. north, and longitude 90 deg. 30 min. and 103 deg. west. It is bounded on the north by British America, east by the States of Minnesota and Iowa, south and west by Nebraska. Its length from north to south is 450 miles, its average breadth is about 200 miles, and it has an area of 70,000 square miles. It was formerly a part of the Territory of Minnesota, but was detached when that became a State. The Indians belonging to the Yankton, Sisseton and Sioux tribes are numerous, and live chiefly by the chase. The Territory includes open, grassy plains, high-rolling prairies, a great number of lakes and ponds, and very numerous valuable rivers. The climate of the south is mild; that of the north severe, though less so than might be expected from its high latitude. The land is well timbered, and the valleys are highly productive. Coal abounds in some parts, and other minerals add wealth to the region. The game is plentiful, and of great value for its furs.—*Ledger.*

**We must Reap what we Sow.**—"As the tree falls, so it lies." Let none deceive themselves, nor mock their immortal souls, with a pleasant, but most false, pernicious dream, that they shall be changed, by a constraining and irresistible power, just when their souls take leave of their bodies. No, no, my friends, if you sow vanity, folly, visible delights, fading pleasures; no better shall you ever reap than corruption, sorrow, and the woful anguish of eternal disappointment. Faithful is that most Holy One, who hath determined, that every man and woman shall reap what they sow. And will not trouble, anguish and disappointment, be a sad and dreadful harvest for you to reap, for all your mis-spent time and substance about superfluities and vain recreations? Retire then; quench the Holy Spirit in yourselves; redeem your precious, abused time; frequent such conversation as may help you against your evil inclinations; so shall you follow the examples, and keep the precepts of Jesus Christ, and all his followers. For hitherto we have plainly demonstrated, that no such way of living, as is in request among you of the land, ever was, or can be truly christian.—*William Penn.*

**The Cost of Fences.**—The Maine State Agricultural Report presents some striking statistics in relation to the cost of fencing. The fences of the State, cost \$25,000,000; the repairs require \$2,500,000 annually; 6 per cent. interest is \$1,500,000; and a renewal in 20 years would be \$1,250,000; making the total yearly expense \$5,250,000—or two-thirds the original cost of the Erie Canal. A strong argument in favour of soiling. Estimated cost of road fences, supposed to be at least one-sixth part of the whole, \$3,125,000. The interest and cost of annual repairs and renewing would be \$531,000—the tax paid annually by the farmers of Maine to take the highway as public pasture. To this sum is to be added \$150,000, the yearly cost of breaking through snow drifts caused by such fences, and of opening roads. These estimates will do to apply to all other places besides Maine. The custom now is that every man shall fence out all intruders; the time may come when this will be among the things of the past, as much as that of walking towns to shut out human marauders.

**Those who have the Care of Young Females.**—How valuable is the power entrusted to those who superintend the employments, and direct the habits of young females, of leading them, by the force of personal example, away from the common snares into which the vanity of their hearts is so continually entangling them. I allude, more particularly, to the subject of dress; the study and love of which is so prominent a weakness in the female mind. If placed in authority over them, are you conscientiously careful to watch over yourselves, lest any exhibition of "broided hair, or gold, pearls, or costly array," (1 Tim. ii. 9, 10), on your part, should be the means of exciting vain thoughts and desires on theirs; but "as becometh women professing godliness," do you rather seek to show "them, that you prefer the being arrayed with good works, and with that which "is not corruptible, even the ornament of a meek and quiet spirit, which is in the sight of God of great price," (1 Pet. iii. 4).—*Mary Ann Kelly.*

**What a Volcano can do.**—Cotopaxi, in 1738, threw its fiery rockets 3000 feet above its crater, while in 1774 the blazing mass, struggling for an outlet, roared so that its awful voice was heard a distance of more than six hundred miles. In 1797 the crater of Tanguaragua, one of the peaks of the Andes, flung out torrents of mud which dammed up rivers, opened new lakes, and in valleys of a thousand feet wide made deposits of six hundred feet deep. The stream from Vesuvius, which in 1737 passed through Torre del Greco, contained 33,600,000 cubic feet of solid matter; and in 1794 when Torre del Greco was destroyed a second time the mass of lava amounted to 45,000,000 cubic feet. In 1679 Etana poured forth a flood which covered eighty-four square miles of surface, which measured 100,000 cubic feet. On this occasion the scoriae formed the Monte Rossi, near Niccolosi, a cone two miles in circumference and 400 feet high. The stream thrown out by Etana in 1811 was in motion at the rate of a yard per day for nine months after the eruption; and it is on record that the lava of the same mountain after a terrible eruption, was not thoroughly cooled and consolidated ten years after the event. In the eruption of Vesuvius, A. D. 70, the scoriae and ashes vomited forth far exceeded the entire bulk of the mountain; while in 1660 Etana disgorged more than twenty times its own mass. Vesuvius has thrown its ashes a star as Constantinople, Syria, and Egypt; it burlesques eight pounds in weight to Pompeii, a distance of six miles, while similar matters were tossed 2000 feet above its summit. Cotopaxi has projected a block of 109 cubic yards in volume a distance of nine miles; and Sambava, in 1815, during the most terrific eruption on record, sent its ash as far as Java, a distance of 300 miles surface and out of a population of 12,000 souls only 2 escaped.—*Recreative Science.*

**The only Safe Dwelling-place.**—The older grow, the more needful I find the watch: there is no other safe dwelling-place; there is no cessant of arms; the warfare is continual, and must continually be maintained. But to such as endeavor through watchfulness and prayer, to quit themselves like men, strength will be administered in due time not only to stand fast in the faith, but to become strong; yea, they will be "strong in the Lord, and in the power of his might." So that I very much desire, that the minds of all may be clothed with the invincible armour, wherewith they will be "able to stand in the evil day, and, having done all, stand."—*Daniel Wheeler.*

*Copy of a Memorial of the Religious Society of Friends on the impending difficulties between Great Britain and the United States of America.*

To VISCOUNT PALMERSTON, First Lord of the Treasury, and EARL RUSSELL, Principal Secretary of State for Foreign Affairs.

The undersigned, acting on behalf of the Society of Friends throughout Great Britain, request the considerate attention of the First Lord of the Treasury and the Foreign Secretary, to a few observations on the present critical aspect of affairs between this country and the United States of North America, offered as they are under a strong sense of religious duty.

We have, on former occasions, so fully stated our conviction that all War is unlawful for the Christian, that it is needless now to repeat it. But there are circumstances connected with the present difficulties between the two countries, of so marked and peculiar a character as, in our apprehension, to justify this special appeal to the Government.

To these are, perhaps, no two independent nations on the face of the earth so closely united together as England and America by the combined ties of blood, of language, of religion, of constitutional freedom, and of commercial interest; and no two nations between whom a war would be a more open scandal to our common Christianity, or a more serious injury to the welfare and progress of the human race.

The hatred of a brother when once offended is a proverb. Nor were the feelings which existed between England and America after the War of Independence and the War respecting the Rights of Neutrals, by any means an exception to this proverbial truth. By degrees, however, animosity and mutual suspicion subsided. The reciprocal visits of enlightened travellers, the vast increase of commercial relations, and the healthy emulation in Christian philanthropy, in science and in literature were, under the Divine blessing, producing an improved tone of both personal and national feeling; when at length, in 1860, the visit of the Heir-apparent of the British throne to the United States seemed to complete the *entente cordiale* between the two countries. It is little more than twelve months since English subjects and American citizens were alike rejoicing in this healthy condition of the relations between these two great divisions of the Anglo-Saxon race.

Now, however, with sadness of heart we see all this sorrowfully changed, and a question of international law, which if it could be submitted to a competent tribunal of able jurists, whether European or American, or to the mediation or arbitration of any independent State, might probably in a few hours be settled to the satisfaction of all parties, appears to be in imminent danger of occasioning a vast destruction of human life, a prodigious waste of treasure, a total interruption of trade and social intercourse, and an incalculable amount of moral evil; whilst it is just as impossible, in the nature of things, for the question of right or wrong to be really cleared up by such an appeal to the sword, as it was for the guilt or innocence of the accused, in medieval times, to be settled by the wager of battle or the passage over burning ploughshares.

Under these circumstances, we look with confidence to the Government and legal advisers of our beloved Queen, fully believing that it is their honest desire that so awful and so unnecessary a calamity—we might say so great a national sin—as a war with America should be averted. In this confidence we are emboldened respectfully to ask, whether it is not possible to use the interval

which must necessarily elapse between the transmission of the views of the British Cabinet to Washington and the arrival of the reply, in preparing so to meet that reply, (whatever it may be), that the next step may not be a declaration of war, but the putting of the remaining issue, if any, between the two countries in train for a pacific decision.

We rejoice to see the principle of Arbitration strongly recommended by the Plenipotentiaries of the European Powers who were parties to the Treaty of Paris. Where a prospective provision of this kind exists in international Treaties, any difficulty which may arise would naturally take the course thus prescribed for its settlement before the question of right becomes merged in the storm of passion. And though there may be no such prospective provision applicable to the present difficulty, we would respectfully submit that it may not be too late for our Government, strong in the consciousness of right, to propose such a reference, should the reply from Washington not effect the happy and peaceful termination of the dispute.

There are many circumstances in the present position of England, which enable her to maintain a perfectly temperate and conciliatory attitude; and would it not seem ungenerous to drive matters to extremities with the United States at the time when they are engaged in a struggle for their national integrity, if not for their national existence? May we then at Christians appeal to the enlightened rulers of this highly professing Christian country; imploring them, whilst commendably vigilant for the interests and the character of England, to endeavour to follow out the Gospel rule of doing as they would be done by,—a rule not less binding on nations than on individuals.

But though we thus address those whose counsels direct the State, and with whom may rest the final decision for Peace or for War, we are well aware that much depends upon the avoidance of all exasperated feeling on the part of the public at large, often too ready to encourage a war at the first outbreak of difficulties; and we greatly desire that a thoroughly pacific temper may be maintained and increase amongst us as a nation, and especially that it may be promoted by all those who profess to preach the Gospel of Peace. There may have been words as well as deeds on the part of the Government or the people of the United States, which have tried the temper and the patience both of our statesmen and of our fellow countrymen generally, but it is surely more truly dignified, as well as more truly Christian, to meet provocation with a calm reference to law than to exhibit a retaliatory spirit.

We would further suggest that after the vast sacrifices which England has made for the abolition of the Slave Trade and Slavery in our own possessions and by other countries, which has been an object so consistently promoted through life by the Statesmen whom we are now addressing, it would be deeply humiliating if, by being involved in this War, our country should ultimately find itself in active co-operation with the South and Slavery against the North and Freedom; though in saying this we do not intend to express our approval, in all respects, of the course pursued by the North in reference to Slavery.

We may perhaps be permitted to mention, as an additional reason for our strong advocacy of the preservation of Peace with America, that as the principal Founders of two of its States, and many of the original settlers of other States, were our brethren in religious profession, between whom and ourselves a cordial correspondence has been maintained for nearly two centuries, we have a special religious as well as national interest in the ques-

tion. And though the Government of those States has long passed into less pacific hands, yet our brethren there still have a considerable influence on their State Legislatures, and their voice has often been heard with effect at Washington. We shall therefore at once apprise our American Friends of the step which we have now taken, and shall urge them also to use their influence in furtherance of the cause of Peace.

May He who still ruleth in the Earth, by his providence as well as by his grace, grant that the Wisdom which is from above, and which is pure, peaceable, gentle and easy to be entreated, may so prevail in the councils of the two Governments and in the hearts of the people, that the impending scourge of War may be averted from the kindred nations on each side of the Atlantic, and from the waters of that ocean which should unite rather than divide them!

London, the 9th of 12th Month, 1861.

(Here follow the Signatures.)

*Diversion of Red River—It Proposes to flow to the Gulf by the New Channel.*—It has for some years been evident that, by a sure and rapid process, the connection between Red river and the Mississippi is being cut off. The effect of the complete consummation of this process, now going on with extraordinary and alarming rapidity, will be to divert Red river into the Atchafalaya, which affords a channel for its waters, and compel it to flow to the Gulf at Berwick's bay. Thus the whole of the immense and productive regions lying in the valley of the Red river will suffer the embarrassment of being shut off from communication with its natural market, while New Orleans will lose the rich trade which the river country annually pours into her lap. These contingencies are not remote. They will surely happen within a few years if something be not done to obviate them. For some years past the connection between Red river and the Mississippi has been growing more and more precarious, till, in low water, it is almost entirely lost. In the high water season the volume of water, which pours down the Atchafalaya exceeds the flow of Red river, as the Mississippi actually backs up through Old river, so that the current sets back instead of into the main stream.—*New Orleans Delta.*

*Bad English Punctuation.*—One capital fault which pervades and vitiates many people's compositions is ignorance of the principles of punctuation. Sometimes nothing of this sort is attempted, and sometimes dashes are made to do duty indiscriminately. From this follows, as a necessary consequence, a general looseness of construction in the sentences. They are sure to be more or less deformed and ill-conditioned; with participial clauses running loose, or relatives whose references are uncertain. Short sentences and short words are generally best, inasmuch as they are less likely to be misunderstood, and do not require to be read twice. Sometimes the meaning expressed is entirely different from the one intended, or at all events is susceptible of various interpretations. Some sentences are so clumsily put together, that, if printed as written, they would be almost unintelligible; just because the writers have, through laziness or ignorance, accustomed themselves to scribble on without inserting the proper stops as they go. They "stand not upon points." They forget how they began the sentence, and how it ought to end, and thus it comes out imperfectly articulated.—*Leisure Hour.*

Nothing else than watchfulness and prayer, can sustain the life of faith.

For "The Friend."

King William the Third and Principal Carstairs.

The following account of a courageous act, which perhaps averted from Scotland the horrors of a civil war, will be read with interest.

The Presbyterian establishment set up by the Parliament of 1690, was not launched upon its course without difficulty. There were many points to settle; the country remained in an excited, and in many parts, in a disaffected state; and the Government was anxious to consolidate itself by every security in its power, and to the oath of allegiance was added accordingly the oath of assurance, in which the swearer declared that William was King *de jure* as well as *de facto*. It was believed that the Presbyterian Clergy would have no scruple to such an oath, and their great patron, the Earl of Crawford, gave his word for them. He was found however to be mistaken. The General Assembly of 1694 firmly refused to subscribe the oath. His Majesty's Commissioner, Lord Carmichael, had instructions to dissolve the Assembly if it continued obstinate in its refusal. Reluctant to proceed to this extremity, and perplexed what to do, he had despatched a messenger to London to receive final instructions. The King had drawn up a preperatory answer to the Commissioner, to maintain his alternative in the face of what he considered little else than rebellion, and despatched a messenger with the answer, when one appeared on the field, to whom not only on this business of the Scottish Church, but in many other grave State matters, William owed perhaps as much as to any other of his friends and counsellors—Principal Carstairs. Carstairs was a man of great address, and of infinite tact, of strong intellect and kindly feelings. He had known the torture of the thumb screw in the days of Lauderdale, and yet was no fanatic. He had gone into exile, and yet earned and enjoyed the confidence of William at the Hague, and yet he was no mere politician. At the Revolution he had been made Principal of Edinburgh College, and to him more than to any other man, the church of the Revolution owes the terms of its establishment and the nature of its constitution. He knew his countrymen, and he knew his Royal master; and he now ventured on a step that showed the bravery of his devotion to both, and averted a collision that might have been disastrous. He was in London when the messenger came from Scotland, and learned nothing of the matter till the messenger was despatched on his return. On reaching home, reading his letters, and learning the nature of the business and the answer the King had sent off, he saw the crisis was urgent, and hesitated not what to do. Carstairs managed to get hold of the messenger just as he was ready to start, and required him in the King's name to deliver his despatches to him. In possession of these, he went directly to the King's apartment. The Lord in waiting told him that his Majesty was gone to bed; but Carstairs told him that he had come on business of the greatest moment and must get admittance. On entering the room he found his Majesty asleep. He drew aside the curtain, went down on his knees by the bed side, and then awakened the King. Amazed to see his chaplain at such an hour and in such a posture, he asked what was the matter. "I am come," said Carstairs, "to beg my life." "Is it possible," said William, "that you have done any thing deserving of death?" Carstairs told him that he had detained the Royal messenger, and produced the despatches he had taken from him. William was not a man easily to brook such interference, and sharply asked Carstairs how he had dared to countermand his orders. Carstairs begged to be heard

in his defence. William listened attentively, while he urged that the Episcopalians were already his enemies, that this oath would make the Presbyterians his enemies too; that oaths were of little avail to a prince if he lost the hearts of his subjects; but that if he yielded this to them he would bind them forever to his throne. The frown gradually left William's countenance as Carstairs proceeded; and in the end he told him to throw the despatches into the fire, and write such instructions as he thought best. It was done; and the messenger was soon upon the road travelling post haste to Edinburgh.

"Meantime both the Commissioner and the Ministers were in the utmost perplexity. On the very next day the Assembly was to meet, and still the messenger had not returned. Lord Carmichael, by the instructions he had, was bound to dissolve the Assembly. The ministers were determined to assert their authority, and to meet notwithstanding. Both alike dreaded the result. Happily the messenger arrived on the morning of the eventful day, and when his packet was opened, it was found to the joy of all, that it was his Majesty's pleasure to dispense with the oaths. When the Assembly met, every minister was more hearty than another in praise of the King. From that day to this there has been no collision between the Church and the Sovereign, in regard to the calling of Assemblies. The Commissioner dissolves the Assembly as if all the power were with him, the Moderator dissolves it as if all the power were with him. Either in like manner, nominates a day for a new one. Thus the old question is still kept alive, but the perfect understanding and inviolate faith of both the parties, has prevented it from assuming a troublesome shape."

On War.

For "The Friend."

Who are they that go to war? It is declared by the Lord's Prophet, "And he shall judge among many people, and rebuke strong nations afar off; and they shall beat their swords into ploughshares; and their spears into pruning hooks: Nation shall not lift up sword against nation; neither shall they learn war any more." The Christian dispensation was ushered in with the most gracious language: "Glory to God in the highest; and on earth peace, good will to man." The whole life of our gracious Lord, and all his precepts, were contrary to war. He declared, "My kingdom is not of this world; if my kingdom were of this world, then would my servants fight!" Whose servants then are they that fight? are they not the servants of the spirit of this world which rules the nations of the earth, who were they truly the Christians they profess to be, would learn war no more? When shall we look for Him to judge among many people, and rebuke strong nations afar off, if it is not in this last, and lasting dispensation? We have all felt his rebukes in our hearts when we have wronged our neighbour, "for God hath showed thee, O man! what is right; He hath rebuked many people, his judgments are in the land, yet who taketh it to heart?"

The most important thing for us is to become subjects of the King of kings, in order that we may wear a crown of righteousness in the world to come. Can those who go to war fulfil the divine injunction, "Bless them that curse you, do good to them that persecute, and despitefully use you?" "If thine enemy hunger, feed him; if he thirst, give him water to drink; for thou shalt reap coals of fire on his head." Our Lord and Saviour Jesus Christ has left us one of the most striking examples of meekness, forbearance, and forgiveness, that could be. He suffered himself to be crucified, although he was Lord of heaven and earth. When

the high priest came to take him with swords and staves, "Peter drew his sword, and struck a servant of the high priest, and smote off his ear, Jesus said unto him, Put up again thy sword into his place, for all they that take the sword, shall perish with the sword." Then shall any poor mortal presume to take the sword to fight about worldly matters, that are comparatively so little consequence, when our glorious Lord patiently submitted to cruel wrong and sufferings, although He could have commanded "more than twelve legion of angels" to defend himself and his righteous cause? From that day down to the present time, it hath been those that take the sword, who persecute the servants of the Most High. The apostles and martyrs were put to death by the power of the sword; and it is the same spirit now, that prompts those who would compel, by fines and imprisonments, to learn the art of war, and to give war their support, those who are conscientiously opposed to it, because Christ has forbidden it.

The Most High declared by his prophet, "As I live, saith the Lord, every knee shall bow to me, and every tongue shall confess before God." Yes, it is with him we have to do, either in mercy, or in judgment, and as we bow unto him in perfect sincerity of heart, He will teach us of his ways, and bring us into his own peaceable lamb-like spirit, which always breathes peace on earth, and good-will to man. When in this state, we are enabled to "do unto others as we would have others do unto us." Did this spirit prevail, there would be no more wars and fightings; because Christ would purge the heart from all the lust for honour, for riches and grandeur, the lust for superiority one over another, all which are contrary to his spirit. As we obey his teaching in the heart, giving heed when his witness reproves us, or makes us uneasy, when we are doing, or are going to do wrong, leading us to strive to do that which is well pleasing in his sight, and showing us what particular thing he requires us to do; then we will be brought into a willingness to lose all for his sake, rather than to gain the whole world, with all its honours, and lose our own souls. Oh, remember our Saviour said, "If any man smite thee on the one cheek, turn to him the other also; and if any man take thy coat, let him have thy cloak also; and if he compel thee to go a mile, go with him twice." Now, He does not teach his disciples to demand these things, but only to suffer in meekness and forbearance, what the avarice and covetousness of ungodly men may demand; and although He may suffer these "to stretch forth their hands against certain of his disciples," yet we may remember He said, "Even the very hairs of your heads are all numbered." Yes, He has carried all those victoriously over their enemies, who have put their trust in him; as witness the prophets, apostles and martyrs, and no one of those, according to the New Testament and history, ever had any thing to do with war after they were converted to the Christian religion. J. B.

Stark Co., Ohio, Twelfth month 26th, 1861.

*Range of Sound*—Herschel gives three hundred and forty-five miles as the greatest known distance to which sound has been carried in the air. This was when the awful explosion of a volcano at St. Vincent's was heard at Demerara. The cannonading of the battle of Jena was just heard in the open fields near Dresden, a distance of ninety-two miles, and in the casemates of the fortress it was very distinct. The bombardment of Antwerp is said to have been heard in the mine of Saxony, three hundred and seventy miles distant.

Selected.

## THE OLD HOUSE FAR AWAY.

The wild birds warble, the silvery rills  
Sing cheerily round the spot,  
And the peaceful shade of the purple hills  
Falls dim on my mother's cot;  
Its windows are small, and its thatch is low,  
And its ancient walls are gray;  
O, see it! I love it! where'er I go—  
That old house far away!

The little clock ticks on the parlour wall,  
Recording the passing hours;  
And the pet geranium grows rank and tall,  
With its brilliant scarlet flowers;  
And the old straw chair, so cosy and low,  
Where mother sat knitting all day;  
O, see it! I love it! where'er I go—  
That old house far away!

Dear mother! how plainly I see her now  
Reclining in that old chair,  
With the sunset resting upon her brow,  
That was once so smooth and fair;  
With her crimped border white as snow,  
And her once dark hair now gray,  
O! my heart is with her where'er I go—  
In that old house far away!

Not all the treasure the world affords,  
The riches of land and sea,  
Not all the wealth of earth's proud lords,  
Can blot from my memory  
The roof that sheltered each dear, dear head,  
And the humble floor of clay,  
Where the feet I loved were wont to tread,  
In the old house far away! *Dublin Jour.*

For "The Friend."

## Terrible Adventure on a Volcano.

[The following account given by Carl Steinman, who visited Mount Hecla, in Iceland, just before its terrible eruption in 1845, shows the foolhardiness with which men of science will sometimes rush into danger, and jeopard their lives for no good. It is also a fearful instance of marvellous preservation.]

Having secured a guide, I set out at an early hour, on the morning following my arrival in Salsun, (at the foot of the extinct volcano,) praying for fair weather and a safe return.

The scenery, even from the first, was so different from any I had ever seen outside of Iceland, as to be worthy of a better description than I am able to give. Suffice it to say that, as you push on, ascending summit after summit on your way to the great and awful centre of all, you find the danger, dreariness, and desolation increase to the most terrible sublimity, till at last, when you do finally stand on the highest point in this unliving world of chaos, you instinctively pray, with an icy shudder shivering through your miserable frame, to be restored to the life you seem to have left forever behind you.

O how shall I attempt to convey to any mind the awful scene of desolation that surrounded me, when at last I stood more than four thousand feet above the level of the sea, on the highest peak of barren Hecla! Six mortal hours—three on horseback, and three on foot—had I been clambering upwards from the world below; and now among the very clouds that rolled and swept round me, I stood in a world of lava mountains, ice, and snow—the lava black as midnight, the snow of blinding whiteness—and not in all that region a tree, a bush, a shrub, a blade, or even a solitary living thing, excepting myself and guide. Far as the eye could reach, when the moving clouds permitted me to see, was a succession of black, rugged hills, snow-crowned peaks, glistening glaciers, and ice-bound streams, into whose inanimate solitude no human foot had ever penetrated—a world without plant or life—the very desolation of desolation—filled with yawning chasms, dreadful abysses,

and midnight caves, which have never echoed any sound but the thunders of heaven, and the groanings and convulsions of earth. So wild and terrible was the scene, that I felt a strange thrill rush through my shivering frame, and quiver about my dizzy brain, and I shouted, to break the stillness of death, and heard my voice come disjunctly back in a hundred echoes, till it seemed to be lost in the bowels of the unproductive earth.

Wrapping one of the blankets about me, to protect me from the freezing cold, and cautiously using my pointed stick to try every foot of ground before me, I now began to move about, over blocks and heaps, and hills of lava, and across narrow chasms, and pitfalls, and patches of snow and ice, my faithful guide keeping near, and often warning me to be careful of my steps. In this manner I at length ascended a ridge of considerable elevation, stumbling my way to the top, and now and then displacing fragments of lava, that rolled crashing down behind me. As yet I had seen no signs of the mouth of the crater, which eighty years before had vomited forth its terrific and desolating streams of melted black sand: but on reaching the summit of this ridge, I looked down into a sort of basin, open at the lower side, and having some three or four deep seams or chasms in its centre, into which the melting snow and ice on its sides were running in small streams. A peculiar and not very agreeable odour came up with a thin smoky vapour, and I fancied I could hear a distant sound, something between a gurgle and a rumble.

"I suppose this is the original crater," I said, turning to the guide.

The fellow was as pale as death, and every feature expressed surprise allied to fear.

"What is the matter?" I quickly demanded, "have you never seen this spot before?"

"I have seen this place before, master," he replied, "but never anything like this. When I was here last, there was no hollow here, but only a level plain of snow and ice."

"Indeed!" exclaimed I, feeling strangely interested; "what, then, do you infer? that there is about to be a fresh eruption!"

"I fear so, master: what else can have caused this change? You see there is heat below, which has melted the thick glacier, and only a few streaks of ice now remain upon parts of the sides, while the centre is gone."

"And the ground here has a slight feeling of warmth, too!" I rejoined, as I bent down and laid my hand upon it.

"Let us leave, master!" returned the fellow hurriedly, looking around with an expression of alarm. "I do not like to remain here; we may be destroyed at any moment. Let us hasten down, and report what we have seen."

"Nay," said I, feeling strangely interested and fascinated by the perilous novelty, "I do not think there is any immediate danger, for the snow and ice, it is plain to be seen, have melted slowly, and before I go away, never to return, I should like to venture into this basin, and look down into one of those chasms."

"O no, master!" replied the guide, with nervous anxiety; "do not do it! it might cost you your life!"

"At least I will risk it, if you will agree to wait for me," said I, fully determined on the venture, even though I were to go without his consent.

"I will wait," he answered, "but remember, master, you go down against my advice."

The crater, or hollow was about fifty feet in depth, with gently sloping sides—and using my pointed stick with the greatest care, I forthwith began the descent, often stopping to try the ten-

per of the lava with my hand, and finding it gradually grow warm as I proceeded, though not sufficiently so to excite any alarm. In a short time I reached the bottom, and stood on the verge of one of the seams or chasms, which opened far, far down into the heart of the mountain. It was about four feet in width, zig-zag in shape, and emitted strongly the peculiar odour before mentioned. A small trickling stream from a melting layer of ice above, was running into it; but I could only see that it was lost in the deep darkness below, from which came up a kind of hissing, boiling, surging sound, with something like a rumbling shock at intervals, and gentle puffs of heated air.

The place, the scene, and withal the sense of danger connected with it, held me there with a sort of magnetic fascination, and I soon found myself strongly tempted to make a fatal plunge into the awful abyss. Knowing by experience that reason is not always able to govern and control the actions in such cases, I forced myself back a few feet, but still remained near the opening, deaf to the entreaties of my frightened guide, who now began to implore me to return before it should be too late. As the dreaded volcano had not been in action for more than thirty years before his birth, I believed that he could know no more of the danger than myself, and, therefore, preferred to act from the dictates of my own feelings, rather than his fears; and as I was to pay him well for his services, felt but little disposed to be hurried from a place which had cost me so much time, money, and trouble to visit.

Giving no heed, therefore, to his earnest solicitations, I now resolved to sound, if possible, the depth of the chasm before me, and then proceed to inspect the others; and for this purpose I pried off from a larger one a small block of lava, and advancing to the very edge of the chasm, dropped it down, and listened to the hollow reverberations, as it went bounding from side to side, long after it was lost to the eye. The depth was so immense that I heard it for more than a minute, and then the sound ceased rather to die out from distance, than to cease because the block had reached its destination. It was an awful depth, and fearfully impressed me with the terrible; and as I drew back with a shudder, a gust of hot sulphurous air rushed and roared upward, followed by a steam like vapour, and a heavy, hollow sound, as if a cannon had been discharged far down in the bowels of the earth.

This new manifestation of the powers of nature fairly startled me into a desire for flight, and I had already turned for the purpose, when suddenly there came a sort of rumbling crash, and the ground, shaking, heaving, and rolling under me, began to crumble off into the dread abyss. I was thrown down, and, on my hands and knees, praying for mercy, was scrambling over it and upward, to save myself from a most horrible fate, when two blocks, rolling together, caught my feet and legs between them, and without actually crushing, held them as if in a vice. Then came another crash and crumble; the lava slid away from behind me, and I was left upon the very verge of the awful gulf, now widened to some fifteen or twenty feet, down into which I looked with horror-strained eyes, only to see darkness and death below, and breathe the almost suffocating vapours that rushed up from that seemingly bottomless pit.

O the horrors of that awful realization! what pen or tongue can portray them? There, a helpless but conscious prisoner, suspended over the mouth of a black and heated abyss, to be hurled downward by the next great throes of trembling nature.

"Help! help! help! for the love of God, help!" I screamed, in the very agony of a wild despair.

I looked up and around to catch a glimpse of my guide; but he was gone, and I had nothing to rely on but the mercy of heaven! and I prayed as I never prayed before, for a forgiveness of my sins, that they might not follow me to judgment. It might be a second, it might be a minute, it might be an hour, that I should have thus to undergo a living death, but be the time long or short, I felt there was no escape from a doom that even now makes me grow pale and shudder when I think of it. Above me was a clear blue sky—beneath me a black and horrible abyss—around me sickening vapours, that made my brain grow dizzy. Rumbling and hissing sounds warned me that another convulsion might occur at any moment, and another would be the last of me. Home and friends I should never see again, and my tomb would be the volcanic Hecla! I strove with the madness of desperation to disengage my imprisoned limbs, but I might as well have attempted to move a mountain. There I was fixed and fastened for the terrible death I was awaiting.

Suddenly I heard a shout; and looking around, I beheld, with feelings that I cannot describe, my faithful guide, basting down the rugged sides of the crater to my relief. He had fled in terror at the first alarming demonstration, but had nobly returned to save me, if possible, by risking his life for mine. May God reward him as he deserves!

"I warned you, master," he said, as he came up panting, his eyes half starting from his head, and his whole countenance expressing commingled terror and pity.

"You did! you did!" cried I, "but O forgive and save me!"

"You are already forgiven, master; and I will save you if I can—save you, or perish with you."

Instantly he set to work, with his iron-pointed stick, to break the lava around my limbs, but scarcely had made any progress when again the earth trembled, and the blocks parted, one of them rolling down into the yawning chasm with a dull, hollow sound. I sprang forward—I seized a handle of the guide—we both struggled hard, and the next moment we had both fallen, locked in each other's arms, upon the solid earth above. I was free, but still upon the verge of the pit, and any moment we might both be hurled to destruction.

"Quick, master!" cried the guide; "up! up! and run for your life!"

I staggered to my feet with a wild cry of hope and fear, and half supported by my faithful companion, hurried up the sloping sides of the crater. As we reached the ridge above, the ground shook with a heavy explosion; and looking back, I beheld, with horror, a dark smoking pit, where we had so lately stood.

And then, without waiting to see more, I turned and fled over the rough ground as fast as my buried limbs would let me. We reached our horses in safety, and hurrying down the mountain, gave the alarm to the villagers, who joined us in our flight across the country, till a safe distance was gained.

Here I bade adieu to my faithful guide, rewarding him as a man grateful for the preservation of his life might be supposed to do.

A few days later, when the long extinct Hecla was again convulsing the island, and sending forth its mighty tongues of fire and streams of melted lava, I was far away from the sublime and awful scene, thinking God I was alive to tell the story of my wonderful escape from a burning tomb.

God had raised see his children humble for sin, than proud of grace.

*The Plainness and Simplicity which the Gospel enjoins, with the Example of Christ Jesus, and of holy Men in all Ages.*—We tenderly exhort all seriously to consider the plainness and simplicity which the gospel enjoins, and to manifest an adherence to this testimony, in their speech, apparel, furniture, business, salutations and conversation; into which our forefathers were led by the Spirit of Christ, and in conformity with whose precepts and example, they patiently suffered long imprisonments, and great persecutions; being convinced that it was their duty thus to bear a testimony against the vain, corrupt spirit of the world. 1746.

The Spirit of Truth, which led our ancestors to lay aside everything unbecoming the followers of Christ, still leads in the same path, all who submit to its guidance; we, therefore, earnestly entreat all Friends to watch over themselves in this respect. The example of our blessed Saviour, his immediate followers, and of virtuous and holy men in all ages, ought to make a due impression on every considerate mind; and especially on such as have had the advantage of a guarded education.—*Philadelphia Discipline.*

*Moscow a Fire Doomed City.*—Of all cities of the modern epoch, and perhaps of ancient times Moscow has suffered the most fearfully from fires. In 1536, it was nearly consumed, and two thousand persons perished. But this calamity was trifling to the dismal catastrophe of 1571, when beleaguered by the Tartars. They fired the suburbs, and a furious wind carried the flames into the heart of the capital, which the inhabitants could not quit except to die by the sword. A Dutch merchant, who was present at the scene, and whose account is preserved in the Harleian MSS, speaks of the event as like a storm of fire, owing not only to the wind, but to the streets being paved with great fir trees set close together, oily and resinous, while the houses were of the same material. Thousands of the country people had taken refuge in the city from the public enemy. The poor creatures ran into the market-place, and were "all roasted there, in such sort that the tallest man seemed but a child, so much had the fire contracted their limbs—a thing more hideous and frightful than any can imagine. "The persons," he adds, "that were burnt in this fire were above two hundred thousand—an exaggeration, doubtless, but an indication of a horrible incident.

A still more stupendous conflagration was the burning of Moscow in 1812, owing to its increased extent. If attended with fewer horrors, they were sufficiently rife, for all who could not fly—the sick, infirm, and wounded—inevitably perished. Upon the approach of the French invaders, and the loss of the great battle of Borodino, it was determined to abandon the old capital of the czars; and on Sunday, Sept. 15th, its three hundred thousand inhabitants were suddenly aroused from a sense of security by a preceptory order to quit their houses, while the Russian army of defence fled through the midst of them in full retreat. On the morrow, the officers of the government and the police withdrew; the prisons were thrown open; and none were left but the incapable, and those who remained to execute the secret orders of the authorities. Toward evening the advanced guard of the enemy arrived, and before midnight Napoleon was in the Kremlin. The city, with its churches and palaces of semi-Asiatic architecture, rising above an immense mass of private dwellings, must have presented a strange, solemn, and awful spectacle to the new conquerors. Not a Moscowite was to be seen; not a chimney smoked; not a sound was heard. An unclouded moon illuminated those de-

serted streets, vacant hotels, and empty palaces. "How doth the city sit solitary that was full of people."

Scarcely were the French established in their new quarters, when smoke and flames were observed issuing from houses closely shut up in different districts. By Tuesday evening, the 15th, the fires had assumed a menacing aspect, distracting by their number the efforts made to quench them, while a high wind rapidly connected them with each other, and wrapped Moscow in a vast sheet of flame. Midnight was rendered as bright as day, for at that hour, at the distance of nearly a league, Dumas could read the despatches forwarded to him by the light of the burning metropolises. Thirty thousand houses, seven thousand principal edifices, and fourteen thousand inferior structures, were reduced to ashes. The private loss is supposed to have exceeded thirty millions sterling. "Palaces and temples," writes Karamsin, the Russian historian, "monuments of art and miracles of luxury; the remaining of past ages, and those which had been the creation of yesterday; the tombs of ancestors and the nursery-craddles of the present generation, were indiscriminately destroyed." Napoleon shuddered at the sight as ominous of a series of disasters, and was compelled to decamp precipitately. Much mystery has been affected with reference to this transaction. But there can be little doubt that, as it was intended to dislodge the French, it was the work of Rostopshchin, the governor, carefully prepared for, with the full consent of the cabinet of St. Petersburg. He was observed to bring along with him, on joining the army, a number of fire-engines. On being asked why he had brought such things, he replied that he had "good reasons for doing so. Nevertheless," he added, "as regards myself, I have only brought the horse I ride and the clothes I wear."

"By their own hands their much-loved homes were fired."

By their own hands their thousand fates expired; fierce burn the flames, that waft to yonder skies The incense of the patriot sacrifice. The wide bazaar, within whose stately walls, A kingdom's ransom filled the golden halls, Rich as the fabled Phoenix's funeral bed; In one full blaze of perfumed flame has fled; Tower kindles tower, and fires on fires arise; To aid the dreadful death the tempest flies, Speeds with the swiftness of the mountain storm, To where the Kremlin rears his iron form; With wreathed flames his regal towers are crowned; While hollow whirlwinds dance and moan around.

It is a curious fact that, the year after the fire, seedling aspen plants sprang up everywhere among the ruins of the city. That tree is very abundant in Russia, particularly in the woods around Moscow. The seeds had been wafted by the winds; and if the inhabitants had not returned to the site it would speedily have become one immense forest.—*Leisure Hour.*

*Consistency in Small Things.*—Custom can never alter the immutable nature of right; fashion can never justify any practice which is improper in itself; and to dress indecently is as great an offence against purity and modesty, when it is the fashion, as when it is obsolete. There should be a line of demarcation somewhere. In the article of dress and appearance, christian mothers should make a stand. They should not be so unreasonable as to expect that a young girl will of herself have courage to oppose the united temptations of fashion without, and the secret prevalence of corruption within; and—*Alas! should be called in where admonition fails.*—*Harvard More.*

**Paris Zoned with Flowers.**—A curious project has just been submitted to the municipality of Paris. The plan is to gird Paris with a zone of flowers. The gentleman who proposes this plan of a "Jardin de Ceinture" is said to be a celebrated botanist and agriculturist. He proposes to the State to transform the fortifications and the earthworks facing the city, both of which are now so much unproductive waste ground, into a great *potager d'acclimation*, or nursery for exotics of every possible kind, whether from hot or cold countries, according to the aspect of the ditch, wall, and earthworks. The administrators of this garden, which he guarantees to form with a given capital for a commencement of operations, would pay to the State a certain rent per hectare; undertake to cultivate no species of parasitical fruit or flower that would be injurious to the wall or difficult to remove in case an enemy was expected; to sell at a low market price the produce of the fortifications; and, in the space of two years and a half, to clear all the expenses that the society may incur in carrying out the project. Nothing can be more brilliant than the results which are promised.

**The True Adorning, not in Dress.**—I warn and exhort all Friends to return to that which first convinced you; to that keep close, in that abide, that therein ye may know, as at the first, not only a bridle to the tongue, but a curb to the roving mind, a restraint to the wandering desire. For assuredly, Friends, if Truth be kept to, none will need to learn of the world what to wear, what to put on, or how to shape and fashion their garments. But Truth will teach all how best to answer the end of clothing, both for useful service and modest decency. And the cross of Christ will be a yoke to the unruly will, and a restraint upon the wanton mind; and will crucify that nature that delights in finery and bravery of apparel, in which the true adorning doth not stand, but which true adorning stands in the hidden man of the heart, in that which is not corruptible, even a meek and quiet spirit.—*Job Scott.*

**The Foot of a Horse.**—The human hand has often been taken to illustrate Divine wisdom—and very well. But have you ever examined your horse's hoof?—It is hardly less curious in its way. Its parts are somewhat complicated, yet their design is simple and obvious. The hoof is not, as it appears to the careless eye, a mere lump of insensible bone fastened to the leg by a joint. It is made up of a series of thin layers, or leaves, of horn, about five hundred in number, nicely fitted to each other, and forming a lining to the foot itself. Then there are as many more layers, belonging to what is called the "coffin bone," and fitted into this. These are elastic. Take a quire of paper and insert the leaves one by one into those of another quire, and you will get some idea of the arrangement of the several layers. Now the weight of the horse rests on as many elastic springs as there are layers in his four feet—about 4000; and all this is contrived not only for the easy conveyance of the horse's own body, but for whatever burdens may be laid on him.—*Stock Journal.*

**Learning at the Feet of Jesus.**—Lilias Skeke had been held in very unusual estimation among the worthiest, as well as the highest in profession, of the citizens of Aberdeen. She, however, found the peace of her enlightened and enlarged mind, to consist in joining the Society of Friends; by this act, more completely taking up the cross to self, than she had hitherto seen the need of, especially

with regard to its more refined appearances and workings. Thus, she was reduced to sit down as at the feet of Jesus, and learn of him in all things, who is "meek and lowly in heart;" herein "proving what is acceptable unto the Lord," through a deep searching of soul, and a continued subjection of her own spirit to his.—*From a memorial of Lilias Skeke. 1678.*

A Professor of the Berlin University has been making curious researches respecting the population of the globe. The following is the result:—Population of Europe, 372,000,000; of Asia, 720,000,000; of America, 200,000,000; of Africa, 89,000,000; of Australia, 2,000,000. Total population of the globe, 1,283,000,000.

There is in truth scarcely a more efficacious means of honouring the Deity, than by observing a constant christian manner of conducting our intercourse with men.—*Jonathan Dymond.*

## THE FRIEND.

FIRST MONTH 11, 1862.

Our present issue contains the Memorial presented to Lords Palmerston and Russell, by the Meeting for Sufferings in London, urging a pacific solution of the difficulty arising from the seizure of the emissaries of the "Southern Confederacy" on board the British mail Packet "Trent." We are rejoiced that a voice has been thus raised on behalf of equity and peace, and the blinding excitement of wounded national pride and the unchristian clamor for war and revenge. It is deplorable to witness the exhibit made by the English newspapers of a cherished hostility to the government and people of the United States, and the avidity with which they seize upon whatever can serve as a pretext, for embroiling the two countries in deadly strife; under the hope of opening the way to the coveted cotton of the South, and securing the permanent weakening of this vast republic. But we know there are thousands of christian men and women there, who harbour no such degrading feelings, and we think there is reason to believe, that a large part of the people are at heart opposed to giving aid and support to slavery in this country, and would protest against their government adopting such an unjust and inconsistent policy. But be that as it may, it becomes every Friend carefully to guard against imbibing the feelings of distrust and animosity towards that nation, which are, we fear, so generally awakened in the minds of our fellow countrymen in the free States, and to do what we can, consistently, to counteract the sorrowful effects they must sooner or later produce, if they are permitted to rankle in the bosom and stimulate to a course of speech or action consonant with the law of retaliation, which the world still persists in affixing to the code of christianity.

The present generation in this country has never before had the evils of war brought so closely home to them, and the nearer it is seen, and the more immediately it is felt, the more stuporous are the feelings, the more complicated the miseries found to be inseparable from it. It seems almost incredible that within one year, such a flood of wickedness, such a scene of rapine and murder could have spread over so large a portion of our late prosperous and happy country. We need seek no stronger proof than is now daily forced upon our attention, that under whatever circumstances it may arise, war always has its origin from the

source of evil, and cannot be carried on without, not merely inflicting death and physical suffering, but corrupting and debasing more or less the great body of those actively engaged in its prosecution, while the community at large, is injured to feelings of vindictiveness and eager longing for the destruction or suffering of their fellow beings.

How dreadful to the truly christian beholder are the enormous military forces now prepared on both sides, to carry out, by the largest amount of bloodshed which each can perpetrate, the arbitrament of questions, which, at last, when the carnage is stayed, must be settled by negotiation and the forms of civil government. Six hundred thousand men arrayed against each other, training to acquire the art of using their murderous enginery with the most fatal effect upon their fellow countrymen, but whom they have recently learned to consider as their enemies. Families torn asunder by the violence of party feeling, and brother meeting brother on the battle field and sometimes staining their hands with each other's blood. Neighbours and friends rushing into deadly strife, and seeking by every means in their power to reduce each other's families to penury and want; vice and immorality holding carnival within the camp, while pestilence fills the hospitals, and consigns thousands to untimely graves. And all this in our enlightened country, in the latter half of the nineteenth century, and among a people who have long made a high profession of the christian religion; of being the disciples of Him who said he came to save men's lives, who commanded his followers not only that they should do no evil, but that they should *not resist evil*: that they should love their very enemies, do good to those who hated them, and pray for those who despitefully used them and persecuted them; and who enforced this ever-peaceful, non-resistant doctrine, by permitting himself,—the Son of the Most High,—to be betrayed into the hands of sinful men, restraining the ardor of his loving disciples, who were ready to smite with the sword in what they thought so good a cause, saying, my kingdom is not of this world, also would my servants fight. It is into this heavenly kingdom that all must labour and pray to enter, if they would become loyal subjects of the Prince of Peace, the redeemed and sanctified companions of the Lamb slain from the foundation of the world. This kingdom is to be set up in the heart, and nothing can hurt or destroy within its holy limits; its banner is undefiled love, and its weapons are always spiritual, and rendered mighty through the power of love undefeigned.

While the nations of the earth are subject to the spirit that rules in the hearts of the children of disobedience, wars and fightings will spring out of the evil passions which actuate the unregenerate man, and they who take the sword will continue to perish by the sword; but the great aim of christianity and the noble cause in which every true christian is to be enlisted, is to win over the human family from the dominion of this murderous spirit, and draw them into the kingdom of Christ, where all is harmony and peace. We cannot be engaged in this blessed work while indulging in hatred or revenge, and wherever any give countenance or aid to support or promote the spirit that delights in or wages war, they so far oppose the extension of the reign of the Messiah, and put off the full consummation of that glorious day when nations shall not learn war any more and the kingdoms of this world shall become the kingdoms of our Lord and of his Christ. We are bound to submit to the powers that be, and to render a cheerful obedience to every ordinance of the government under which we live, where it does not contravene our duty to God.

where and how he lies the two are in opposition, if we are truly his servants, we can no more rail or resent than we can fight, but must patiently suffer, and joyfully take the spoiling of our goods, or imprisonment, rather than betray the high and holy cause which we have espoused, and violate the express commands of the Captain of our soul's salvation.

Every Friend must deeply feel the deplorable condition into which he sees our beloved country plunged by the base passions of wicked men; and while he cannot but acknowledge that the awful scourge of civil war is a just judgment of the Almighty for our individual and national sins, his prayer must be that evil may be restrained, the inhabitants learn righteousness from the punishment they are suffering, and the cause of justice and truth triumph in the end. But he cannot consistently participate in the spirit from which the war originated and is carried on, nor voluntarily and knowingly contribute to its prosecution. His profession calls him to stand aloof from the deadly strife and combats by which men of the world seek to establish, or pull down authority and rule; and if he is alive to the responsibilities resting upon him, he will feel the call with peculiar force, to seek to be effectually ended with that spirit "which delights to do no evil, nor to revenge any wrong, but delights to endure all things in hope to enjoy its own in the end." His hope is to outlive all wrath and contention, and to weary out all exaltation and cruelty, whatever is of a nature contrary to itself. "As its crown is meekness, its life is everlasting love unfeigned, it takes its kingdom with enmity, and not with contention, and keeps it by lowliness of mind."

#### SUMMARY OF EVENTS.

**UNITED STATES.—Congress.**—This body has not been much in session of late, and many of the members have been absent. The most serious business devolving upon Congress, is the supply of the means to support the enormous expenditure, on account of the army and navy. The subject is under the charge of the Committee on Ways and Means. It is proposed that they will recommend a free use of the taxing power, including heavy excise duties on many articles, in addition to a further issue of treasury notes as a circulating medium.

**The Rebel Commissioners,** whose capture gave so much offence to England, were conveyed in a small steamer by a government agent, from Fort Warren to Provincetown, N. B., and there placed on board the British gun-boat *Rinaldo* to be conveyed to London.

The *Halifax Express* of Twelfth month 13th says, that J. C. Breckenridge arrived in that place about a week before, and that he had been sent to the steamer *Canada* for England. Breckenridge and Hunter, of Virginia, have, it is believed, been appointed by the rebel government ministers to France and Great Britain.

**Progress of Hostilities.**—The lapse of a week has apparently made but little change in the aspect of affairs. Ways and Means, in Mississippi, that has been transported. At Cairo, preparations are being forward for a movement down the Mississippi, with a powerful fleet of strongly built gun-boats. The rebels were understood to be much alarmed, and had made great efforts to place a river flotilla of gun-boats, and also placed sub-marine batteries between Columbus, Ky., and Memphis, Tenn. The Federal forces hold Ship Island near the mouth of the Mississippi, and have recently taken possession of Biloxi, about ninety miles from New Orleans. A part of General Sherman's forces at Port Royal have been landed on the North Edisto, and seized the railroad station, No. 4, on the Charleston and Savannah railroad, twenty-three miles south of Charleston. A large rebel force was stationed between Savannah and Charleston for the defence of those cities.

**Credible Reports.**—The commanding officer to the Port Royal district, has informed Jeff. Davis that he is confident in his ability to prevent the U. S. troops from advancing on Charleston and Savannah. He is understood to have about 20,000 men in his command. A late arrival from Port Royal states that the negroes were busily engaged in securing the cotton in the vicinity; about \$2,000,000 worth had already been collected and delivered to the U. S. agent. Several occa-

sional fires had broken out at Charleston, but they were extinguished before much property was destroyed.

**The Exports and Imports.**—The exports from New York during the year 1861, amounted to \$137,963,268; in 1860, to \$103,200,367, and in 1859, to \$68,303,794. The imports of the past year have amounted to \$125,900,000. This is the first year in which the exports have exceeded the imports, and this notwithstanding very little cotton has been shipped. The cause of the increase of exports is found in the short harvests abroad and the surplus of breadstuffs in the United States.

**The Commerce of New York.**—The whole number of arrivals at this port, during the year 1861, which is 671 vessels more than in the previous year. Three thousand and ninety-two of these were American, 1449 British, and nearly all the balance were from other European ports. The number of passengers landed from foreign ports, was 89,750, and from California, 9117. **Deaths at Sea.**—The whole number of lives lost last year by casualties on board of American vessels, is returned at 968; but as all have probably not been reported, the total doubtless exceeds 1000.

**Failures of the Year.**—According to a statement prepared by the Commercial and Financial Directory, 5935 failures occurred in the Northern States during the past year, with an aggregate indebtedness of \$178,682,170. A large portion of these failures has resulted from the heavy indebtedness of the Southern States, most of which are still unpaid, as last year, and from the debt of Southern debtors to the principal Northern cities, estimated as follows—New York, about \$159,000,000; Philadelphia, \$24,000,000; Baltimore, \$19,000,000; Boston, \$1,600,000—total, \$210,000,000. The total liabilities of citizens of the seceded States to those of the United States, are estimated at nearly \$200,000,000.

**Philadelphia.**—Mortality last week, 285. The total number of deaths in this city during 1861, was 14,240, of which number 3738 were infants under one year of age. The deaths from consumption of the lungs numbered 1805. The amount of rain last year, according to the record of the United States Signal Office, was 40.97 inches, which is about two inches above the average for the last twenty-four years. The mean temperature of the year was 54.7 degrees, which is one degree and a half higher than the average of the preceding thirty-five years.

**Virginia.**—The exports of merchandise during the past year, amounted to \$8,706,298, and of gold, to \$36,105,639—total, \$44,813,937, which is about one million more than in 1860. The arrivals of vessels from Atlantic and foreign ports, was nearly the same as in 1860.

**Utah.**—Measures are about being taken in this territory to draft and adopt a State Constitution. Congress will be memorialized for the admission of Utah into the Union, during the present session.

**New York.**—Mortality last week, 322. Specie in the banks, on the 4th instant, \$23,993,878. Gold, 24 3/4 per cent. premium; foreign exchange, 1.14 a 1.15. The money market comparatively easy. The demand for gold and foreign exchange proceeds from the agents of foreign capital, who are anxious to return it to Europe.

**Southern News.**—Leesburg, Va., has been strongly fortified by the rebels. A disastrous fire has occurred at Richmond, by which the theatre and many other buildings were destroyed. A fire at Nashville, Tenn., on the 23d ult., destroyed a great quantity of supplies for the army. The U. S. fleet near New Orleans have captured several rebel steamers. The premium for gold in New Orleans has advanced to 35 per cent. The inhabitants are being taken in a state of great perplexity and alarm. Fighting between Fort Pickens and the batteries near Pensacola has been renewed, with some injury on either side. At Norfolk and Richmond, salt commands such high prices as to be beyond the reach of the middle and lower classes of the people. The rebel Congress having passed an act authorizing the seizure of salt in the hands of speculators, the parties holding it mostly disposed of their stocks to private purchasers before they were visited by the government agents. This scarcity is felt all over the seceded States. The rebel army is stated by a late Richmond paper to be in a state of great disorganization, and is encamped, and the men are spending their time in gambling. The editor urges the government to do something to remedy the evil, as in the present condition of the army, enlistments cannot go on. Many men were offering large sums for substitutes.—In one instance \$1500 had been offered.

**British Troops for Canada.**—As the navigation of the St. Lawrence is closed, and the transport of troops, inland from Halifax to Canada in midwinter, is difficult and expensive, the U. S. government has given permission to pass the British troops through Maine into Canada.

**Cotton in the West.**—An agent appointed by the Illinois Central Railroad Company to investigate the fitness of the State for the growth of cotton, reports, after extensive travel and careful investigation, that there are in Illinois from eight to ten millions of acres of land, which are well adapted to its culture, and that might be profitably employed for that purpose.

**Panama Cotton.**—A quantity of cotton has been shipped from Panama for the growth of cotton, reports, after extensive travel and careful investigation, that there are in Illinois from eight to ten millions of acres of land, which are well adapted to its culture, and that might be profitably employed for that purpose.

**Foreign Intelligence.**—Intelligence has been received of the capture of Vera Cruz, by the Spaniards. The Mexican troops retired without offering any resistance.

**India.**—At the latest dates, cholera was making great ravages in India, the natives being the principal sufferers. At Kandahar, eight thousand people died in eighteen days.

**Dates to Twelfth month 22d.** There was no abatement in the warlike preparations.

The Adriatic, with nearly 1400 troops of the Grenadier Guards, and the Parma, with about 1000 of the Scott's Fusilier Guards, left Southampton, on the 20th, for North America.

The *U. S. Sloop* Cleopatra will leave Liverpool on the 21st, for Queenstown, there to embark over 500 men of the Seventeenth regiment. The *Magdalena* will embark about 1000 men, at Southampton, on the 21st.

The mail steamers of the Peninsula and Oriental Company, which are to be sent to America, are all made capable of resisting printers, in case of war.

The gun-boats in the second class reserve at Portsmouth have been ordered to fit out immediately.

The Observer (ministerial organ) says that England wishes for peace, but that she will gain by a war, as it will enable her to recruit her American frontiers, open the ports of the South, and give a lesson to the United States.

The death of Prince Albert has caused a most profound sensation in England. There is great sympathy for the Queen, who bore the bereavement with fortitude. It is highly probable that she will be appointed the Prince of Wales as Regent, and retire to private life.

The London Critic says, "We have reason to believe that, up to the time of his death, the Prince Consort raised his voice energetically against the haste with which the Government were proceeding to arm the States—an event which he denounced as subversive of her interests, dangerous to the real sources of her power, and certain to be advantageous only to the despotic powers of Europe."

The Liverpool markets for cotton and breadstuffs were without material change. The bullion in the Bank of England continued increasing. Consols, 90 1/2.

The French government has addressed a circular to the European Powers, declaring that the arrest of Mason and Sidell was contrary to the principles which are regarded as essential to the security of nations. The circular is in substance, that the French government had deemed it necessary to submit its opinion to the Cabinet at Washington, in order to determine if it make concessions which the French government considered indispensable."

**Stocks.**—The Liverpool cotton market buoyant, with an advance of 3d. 1d. New Orleans fair; 12d.; Uplands, 12d. Stock in port, 558,000 bales, including 216,000 of American. The English papers were discussing the Trent affair in a more hopeful aspect, and express the belief that the demands of England will be complied with by the U. S. government, and war is thus averted.

#### RECEIPTS.

Received from Jesse Cope, Pa., \$2, vol. 26; from Sarah Ann Cope, \$2, vol. 30; from Barton Dean, O., \$1, to 27, vol. 26, and for Amelia Garretson, Va., vols. 33 and 34; from Elisha Hollingsworth, O., \$2, vol. 36, in full.

**DEATHS.**—On the 20th of Fifth month, 1861, at Westfield, N. H., Sarah A. Lawrence, daughter of Joshua B. and Maria Pusey, in the twenty-fourth year of her age.

On the 31st of Seventh month, 1861, near Moorestown, SARAH D., wife of Isaac Leeds, aged forty-four years; a beloved member of Chester Monthly Meeting, N. Jersey.

# THE FRIEND.

PHILADELPHIA.

Postage to any part of Pennsylvania, for three months, if paid in advance, three and a-quarter cents; to any part of the United States, for three months, if paid in advance, six and a-half cents.

*An Epistle in True Love, containing a Farewell Exhortation to Friends' Families.*

(Concluded from page 146.)

And for the encouragement of the Lord's people in this practice, in the power and wisdom of God, I see clearly, and am constrained to leave it behind me, and the Lord requires a godly care in families to be observed amongst his people; and I have seen it to be the only expedient for a right reformation, and regulation in the churches; for let me tell the backslider, with the covetous earthly minded, and those who are lovers of pleasure more than God, it is high time for them to repent, and do their first works, taking blame to themselves for their unfaithfulness, and the evil example they have been unto their families; either in trampling upon the testimonies of our faithful suffering elders, by paying of tythe connivingly or willingly; or any other evil that the testimony of truth is against; and for the future, redeem the time, by doubling their diligence, lest they should have cause to repent when it is too late, and then horror will be their portion in a dying hour.

And this farther I have to leave to the unfaithful, for the clearing of my conscience in the sight of God; that if his love will not prevail, neither immediately, nor instrumentally, the Lord will be clear when he judgeth, as he was in the destruction of the old world, together with the cities of Sodom and Gomorrah; it having been the way of the Lord, to let those who are afar off hear what he hath done, in order that they may be warned, that hearing and fearing, they may be saved whilst mercy is offered.

And that this may be the choice of all, is the sincere desire of one, who is made willing to spend and be spent for the peace and prosperity of the church; and that all, who profess to be members thereof, may be so taught of the Lord, that they may come to be established in righteousness; and, by holding out to the end, may receive an immortal crown of glory, which will never fade away.

Oh! children of believing parents, in whom is innocence, and upon whom the spots of this world have not yet prevailed: my love in Christ is great to you; believing assuredly, that the call of the Lord is unto you, that you may be of his heritage and sanctuary, in order to place his name in the midst of you: for you hath he chosen, above all the families of the earth, to show forth his praise,

and declare his wonderful works to the children of men: therefore my desire is, that none may frustrate the Lord in his gracious intention; but that his glorious work may be carried on, both in particular, and in the general, to his praise and the churches comfort. That it may be so, I desire you to take the following exhortation.

First, As you grow up to years of understanding, so as to know good from evil, be sure you choose the good, and refuse the evil: and if at any time you should transgress your parents, masters or mistresses' commands, be sure you cover it not with a quibble, or a lie; for although you ought not by any means to disobey your parents, yet if any, for want of due care, at any time, should; it may be the fault committed may be no great sin in the sight of God; but if covered with a willful lie, a grievous sin is committed, for which you must know sorrow, if favour with God you come to witness.

Therefore, dear hearts, fear God in doing and speaking truth in all things; for if once way is given to lying, and an habit of it got into, such lose the favour of God, and forfeit their credit with men.

The next evil I have to warn the youth of is, to beware of an high proud mind, from whence desires after the glory of this world do proceed, which bring in a train of unnecessary cares and troubles; so that it may easily be seen, the proud man and woman never want misery, because they seldom have a settled quiet content; and the chief reason is, they go far from God, the alone author of true content: for, as saith the scripture, "the Lord beareth the proud afar off;" and that man or woman, who grows big with conceit of themselves, can scarcely satisfy their eyes with seeing, nor their appetites with craving. Hence it follows, What shall I eat? what shall I drink? wherewithal shall I deck and adorn myself? Nay, saith the incessant seeker after the fashions of this world, Which is the newest fashion, cut or dress? All this is but vanity and vexation of spirit. I take these to be like those the prophet spoke of, when he speaks complaining of Israel, saying, "Israel is an empty vine; he bringeth forth fruit unto himself." Oh! you children of believers! that you may not be of this number, neither seek to come up in imitation of those who follow the foolish fashions of this world, lest you grieve God and your parents, whose love and zeal for the Truth cannot admit of any such sinful liberty: therefore I beseech you, let your conversation be without coveting those things; and do not seek to prove the patience of your tender parents, by your murmuring and reasoning, by bringing examples on this wise, such Friends' children have their clothes made after this fashion or the other; urging your parents by your reasoning, for that which hath no reason in it, to wit, *pride*, giving them no rest until you have obtained your ends. Oh! let such fear in time, for such things border near upon willful disobedience; and it is to be feared, the next step those take, will be into the wide world of wickedness. Therefore I entreat young people, who have been guilty of the above-mentioned evils, be hum-

bled before the Lord, strip yourselves of all your vain attire; repent that ever you gave way to the reins of your vain minds, to be drawn out after the glory of this world.

There is also another dangerous snare, which the enemy seeks to catch young people in, that is, the fellowship and friendship of those, who do not profess with us; by which some of our youth, in giving way to frequent walking and conversation with them, have been captivated into unequal marriages.

Now dear Friends, be warned, take the apostle's advice, be not unequally yoked, a believer with an unbeliever. 2 Cor. vi. 14. Such doings, though they may be sweet in the taste, yet we have seen it bitter in the going down, viz.: That those who for want of watchfulness, have been prevailed upon to an unequal yoking, afterwards coming to a sight of their youthful folly, and having children, how bitter hath it been to such parents, when they could not have them brought up in that faith where they believe salvation is most surely to be obtained: the strife that hath thereupon followed, hath many times caused great distraction between husband and wife, betwixt whom nothing should be but love.

And that all young people may be preserved, out of this and all other evils, shun bad company as infectious both to soul and body, and let your spare hours be spent in religious company, or retirement, reading or meditating on heavenly subjects; of which you are blessed with variety. So shall you come up in favour with God, and all of righteous people, which that you may, is the sincere desire of my soul.

And now a few words to those young men and women, who like brave, noble Joseph, from your childhood have feared God, and obeyed your parents, resisting temptations, both inwardly and outwardly: to you is God's love large; upon your heads is the blessing of Joseph. Oh! you blossoming boughs, whose ripe fruits will be holiness unto the Lord; you who have been afflicted to see your brethren and sisters miss their way in the aforementioned evils, praying for their return; and when any of them do return, meet them with joy. It is you whose branches shall spread over the wall of all opposition, and, in the power of the Lord, shall be enabled to tread upon scorpions, and overcome evil spirits; for the Lord is calling to the sons and daughters of Zion, to arise and work; yea, thresh the world of wickedness, and he will make their horns iron, and their hoofs as brass; they will go forth in his name, as silver trumpets to the nations, which yet lie in idolatrous darkness; and their wisdom shall confound the wisdom of the carnally wise men of this world, and bring to nought the understanding of the prudent; for it is the Lord's will, the earth should be filled with his living knowledge: Therefore you faithful sons and daughters, keep in humility, out of all self-conceit, and the Lord will be with you, as he was with your faithful Elders; and you shall be a royal diadem in the hand of our God; to whose powerful protection I leave you, sincerely supplicating the Lord, that the prodigal may be brought home, and the faithful may be preserved to the

end of time, that in the end we may all rest in those glorious mansions, where the wicked cannot trouble; but our weary souls shall be at rest, praising the Lord God and the Lamb, world without end. Amen.

So, in an earnest of this future bliss, I rest at this time, in my small measure, your faithful friend and well-wishing sister,

ELIZABETH JACOB.

Worcester, the 5th of the 9th month, 1712.

### Education.

Selected.

The first thing to be considered with respect to education, is the object of it. This appears to me to have been generally misunderstood. Education, in its largest sense, is a thing of great scope and extent. It includes the whole process by which a human being is formed to be what he is, in habits, principles, and cultivation of every kind. But of this, a very small part is in the power even of the parent himself; a smaller still can be directed by purchased tuition of any kind. You engage for your child masters and tutors at large salaries; and you do well, for they are competent to instruct him; they will give him the means, at least, of acquiring science and accomplishments; but in the business of education, properly so called, they can do little for you. Do you ask then what will educate your son? Your example will educate him, your conversation with your friends, the business he sees you transact, the likings and dislikings you express; these will educate him; the society you live in will educate him, your domestics will educate him; above all, your rank and situation in life, your house, your table, your pleasure-grounds, your hounds, and your stables will educate him. It is not in your power to withdraw him from the continual influence of these things, except you were to withdraw yourself from them also. You speak of beginning the education of your son. The moment he was able to form an idea, his education was already begun; the education of circumstances—insensible education—which, like insensible perspiration, is of more constant and powerful effect, and of infinitely more consequence to the habit than that which is more direct and apparent. This education goes on at every instant of time; it goes on like time; you can neither stop it, nor change its course. What these have a tendency to make your child that he will be. Maxims and documents are good precisely till they are tried, and no longer; they will teach him to talk, and nothing more. The circumstances in which your son is placed will be even more prevalent than your example, and you have no right to expect him to become what you yourself are but by the same means. You, that have toiled during youth, to set your son upon higher ground, and to enable him to begin where you left off, do not expect that you will be what you were—diligent, modest, active, simple in his tastes, fertile in resources. You put him under quite a different master. Poverty educated you; wealth will educate him. You cannot suppose the result will be the same. You must not even expect that he will be what you now are; for, though relaxed perhaps from the severity of your frugal habits, you still derive advantage from having formed them; and in your heart, you like plain dinners, and early hours, and old friends, whenever your fortune will permit you to enjoy them. But it will not be so with your son; his tastes will be formed by your present situation, and in no degree by your former one. But I take great care, you will say, to counteract these tendencies, and to bring him up in hardy and simple manners; I know their value, and am resolved

that he shall acquire no other. Yes, you make him hardy; that is to say, you take a country-house in a good air, and make him run well clothed and carefully attended, for, it may be, an hour in a clear, frosty winter's day upon your gravelled terrace; or perhaps you take the puy, shivering infant from his warm bed, and dip him in an icy-cold bath, and you think you have done great matters. And so you have, you have done all you can. But you were suffered to run abroad half the day on a bleak heath in weather fit and unfit, wading barefoot through dirty ponds, sometimes losing your way bentaged, scrambling over hedges, climbing trees, in perils every hour both of life and limb. Your life was of very little consequence to any one; even your parents, enumbered with a numerous family, had little time to indulge the softnesses of affection, or the solicitude of anxiety, and to every one else it was of no consequence at all. It is not possible for you, it would not even be right for you in your present situation to pay no more attention to your child than was paid to you. In these mimic experiments of education, there is always something which distinguishes them from reality; some weak part left unfortified, for the arrows of misfortune to find their way into.

You are sensible of the advantages of simplicity of diet, and you make a point of restricting that of your child to the plainest food, for you are resolved that he shall not be nice. But this plain food is of the choicest quality, prepared by your own cook; his fruit is ripened from your walls; his cloth, his glasses, all the accompaniments of the table, are such as are only met with in families of opulence; the very servants who attend him, are neat, well-dressed, and have a certain air of fashion. You may call this simplicity; but I say he will be nice—for it is a kind of simplicity which only wealth can attain to, and which will subject him to be disgusted at all common tables. Besides, he will from time to time partake of those delicacies which your table abounds with; you yourself will give him of them occasionally; you would be unkind if you did not; your servants, if good-natured, will do the same. Do you think you can keep the full stream of luxury running by his lips, and he not taste of it? Vain imagination!

It would not be understood to inveigh against wealth, or against the enjoyments of it; they are real enjoyments, and allied to many elegancies in manners and in taste; I only wish to prevent unprofitable pains and inconsistent expectations.

You are sensible of the benefit of early rising; and you may, if you please, make it a point that your daughter shall retire with her governess, and your son with his tutor, at the hour when you are preparing to see company. But their sleep, in the first place, will not be so sweet and undisturbed amidst the rattle of carriages, and the glare of tapers glancing through the rooms, as that of the village child in his quiet cottage, protected by silence and darkness; and moreover, you may depend upon it, that as the coercive power of education is laid aside, they will, in a few months, slide into the habitudes of the rest of the family, whose hours are determined by their company and situation in life. You have, however, done good, as far as it goes; it is something gained to deter perniciious habits, if we cannot prevent them.

There is nothing which has so little share in education as direct precept. To be convinced of this, we need only reflect that there is no one point we labour more to establish with children, than that of their speaking truth; and there is not any in which we succeed worse. And why? Because children readily see we have an interest in it. Their speaking truth is used by us as an engine of

government. "Tell me, my dear child, when you have broken anything, and I will not be angry with you." "Thank you for nothing," says the child; "if I prevent you from finding it out, I am sure you will not be angry," and nine times out of ten he can prevent it. He knows that, in the common intercourses of life, you tell a thousand falsehoods. But these are necessary lies on important occasions.

Your child is the best judge how much occasion he has to tell a lie; he may have as great occasion for it, as you have to conceal a bad piece of news from a sick friend, or to hide your vexation from an unwelcome visitor. That authority which extends its claims over every action, and even every thought, which insists upon an answer to every interrogation, however indiscreet or oppressive to the feelings, will in young or old produce falsehood; or, if in some few instances the deeply imbibed fear of future and unknown punishment should restrain from direct falsehood, it will produce a habit of dissimulation, which is still worse. The child, the slave, or the subject, who, on proper occasions, may not say, "I do not choose to tell," will certainly, by the circumstances in which you place him, be driven to have recourse to deceit, even should he not be countenanced by your example.

I do not mean to assert that sentiments inculcated in education have no influence; they have much, though not the most; but it is the sentiments we let drop occasionally, the conversation they overhear when playing unnoticed in a corner of the room, which has an effect upon children; and not what is addressed directly to them in the tone of exhortation. If you would know precisely the effect these set discourses have upon your child, be pleased to reflect upon that which a discourse from the pulpit, which you have reason to think merely professional, has upon you. Children have almost an intuitive discernment between the maxims you bring forward for their use, and those by which you direct your own conduct. Be as cunning as you will, they are always more cunning than you. Every child knows whom his father and mother love and see with pleasure, and whom they dislike; for whom they think themselves obliged to set out their best plate and china; whom they think it an honour to visit, and upon whom they confer honour by admitting them to their company. "Respect nothing so much as virtue," says Eugene to his son; "virtue and talents are the only grounds of distinction." The child presently has occasion to inquire why his father pulls off his hat to some people and not to others; he is told that outward respect must be proportioned to different stations in life. This is a little difficult of comprehension; however, by dint of explanation, he gets over it tolerably well. But he sees his father's house in the bustle and hurry of preparation; common business laid aside, every body in movement, an unusual anxiety to please and to shine. Nobody is at leisure to receive his caresses, or attend to his questions; his lessons are interrupted; his hours deranged. At length a guest arrives; it is my Lord —, whom he has heard you speak of twenty times as one of the most worthless characters upon earth. Your child, Eugene, has received a lesson of education. Resume, if you will, your systems of morality on the morrow; you will in vain attempt to eradicate it. "You expect company, mamma; must I be dressed to-day?" "No, it is only good, Mrs. Such a one." Your child has received a lesson of education, one which he well understands, and will long remember. You have sent your child to a public school; but to secure his morals against the vice which you too

justly apprehend abounds there, you have given him a private tutor, a man of strict morals and religion. He may help him to prepare his tasks; but do you imagine it will be in his power to form his mind? His school-fellows, the allowance you give him, the manners of the age, and of the place, will do that; and not the lectures he is obliged to hear. If these are different from what you yourself experienced, you must not be surprised to see him gradually recede from the principles, civil and religious, which you hold, and break off from your connections, and adopt manners different from your own. This is remarkably exemplified amongst those of the dissenters, who have risen to wealth and consequence. I believe it would be difficult to find an instance of families, who, for three generations, have kept their carriage and continued dissenters

(To be continued.)

For "The Friend."

#### A Word to Zion.

The Lord's hand is not shortened that he cannot save, neither is his ear grown heavy that he cannot hear, but his power is the same that it ever has been, and his mercy also is as great towards his humble dependent children and servants, as in any day or age of the world. Why then should any of the tribulated ones say, or why should Zion say, "The Lord hath forsaken me, my God hath forgotten me." His all-penetrating eye sees the condition of the workmanship of his holy hand at one view, and He can at his pleasure speak the all-effective word, however storm-beaten our poor barks may be, "Peace, be still." How instructive is the circumstance recorded in Holy Writ, when there arose a great tempest on the sea, inasmuch that the ship was covered with the waves, and Christ was asleep; and his disciples came to him, and awoke him, saying, "Master, earnest thou not that we perish?" Ah yes! the mental language of many a poor storm-beaten disciple of the present day, in the great tempest which has for some time been beating upon the vessel, is, Lord, save us, we perish. It may be that the confidence of these is at times so much shaken, that they merit the pathetic rebuke, "Why are ye fearful, O ye of little faith?" but let them remember that though their Lord and Master may linger, as if He were asleep in the hinder part of the ship, as if unmindful of their perilous condition, yet in his glorified estate, he sleepeth not by day nor slumbereth by night, and he will in his own time, say to the contending elements, "Peace, be still."

Let all Zion's children take a little comfort in believing that they are always under the immediate notice of their Lord and Master, who is touched with a feeling of their infirmities, who was tempted in all points as we are, yet without sin, that he might be a faithful high Priest, in bringing many sons unto glory. As we are individually striving to be kept humble, watchful, and faithful to his light and grace in our hearts, whatever overturnings may be permitted to come upon us, we shall be favoured with a safe abiding place, where no evil can befall us, nor plague come nigh our dwellings. Our confidence being in Him, who is both wonderful in counsel, and excellent in working to bring about his own divine purposes, we shall not be over-much troubled, either at the shattered and peeled condition of Church or State; even though the great Ruler of Heaven and earth may speak terrible things in righteousness, because of the sins and transgressions of the people; but our great aim and labour will be, to be living protests against all evil; "The sons of God without rebuke, in the midst of a crooked and perverse nation."

For this my spirit travails, that Zion's children

on every part of the Lord's footstool, might come to witness more thoroughly the resurrection power of the Lord Jesus Christ, which alone can raise them into newness of life, that in this day of great trial and tearing down, of war and bloodshed, and the increase of sin and wickedness attendant thereon, a band of living witnesses may still be preserved, "The sons of God without rebuke, in the midst of a crooked and perverse nation;" such as are settled and grounded in the living eternal Truth, as held and maintained by our worthy fathers. Then should we be as lights in the world, and others seeing our good works, our self-denying life and conversation, would glorify our heavenly Father in the day of visitation.

There is an imperious necessity for these to keep their ranks in righteousness, both on account of their own preservation and safety, the prosperity of the church, and the advancement of the kingdom of our dear Redeemer; not giving heed to the reasonings of those who are unwilling to submit to the cross of Christ, endeavouring to invalidate the doctrines and testimonies of the gospel, which have ever been duty to every faithful Friend, and which it is our duty to uphold in their primitive purity. These principles and practices have long stood the test of investigation, and they must, in the ordering of divine Providence, finally prevail; as the benign influence of the gospel of Christ comes to be witnessed, more and more, throughout the nations of the earth. We may almost conclude at times, that the efforts made by some, to depreciate and get rid of our distinguishing testimonies are so great, that, in a short time, there will be in many places, but little left but the name of Friends; but let the true mourners in Zion take comfort in believing, that our holy Head, who gathered us to be a people, and laid upon us the obligation to bear these testimonies before the world, showing thereby the efficacy of pure religion upon our hearts, has been in an eminent manner round about his faithful servants, blessed the provision of Zion, and satisfied her poor with bread; and He will continue to keep all those, who in honesty and godly sincerity, walk by the same rule and mind the same thing.

The truly devoted children of Zion, have, amidst all their trials and discouragements, much to stimulate them to stand with their loins girded and their lights burning; for there is a goodly number without our pale, whose souls are seeking the living substance; having wearied themselves seeking for it in the way of lifeless performances, and who have their attention more turned within, where alone the treasure is to be found. Were we thus preserved, practically protesting against all that is wrong, showing in life and conversation that we are the self-denying followers of a crucified and risen Lord, a powerful invitation, in our example, would be held forth, "Look upon Zion the city of our solemnities, thine eyes shall see Jerusalem a quiet habitation, a tabernacle that shall not be taken down; not one of the stakes thereof shall ever be removed, neither shall any of the cords thereof be broken, but there the glorious Lord will be unto us as a place of broad rivers and streams, wherein shall go no galley with oars, neither shall gallant ship pass thereby. For the Lord is our judge, the Lord is our lawgiver, the Lord is our King, he will save us." Thus we would be in our measure fulfilling the divine will, in gathering others to Christ, according to his declaration, "other sheep have I, which are not of this fold, them also I must bring, that there may be one fold and one Shepherd." May all the faithful testimony bearers be afresh animated to observe the Scripture exhortation, "Walk about Zion and go round about her;

tell the towers thereof. Mark ye well her bulwarks, consider her palaces, that ye may tell it to the generation following; For this God is our God for ever and ever; he will be our guide even unto death." J. E.

Barnesville, Ohio, First mo., 1862.

For "The Friend."

#### The Alpaca in Australia.

The use of Alpaca wool in European manufactures, is of quite recent date. A quantity was imported into Liverpool about the year 1831, which found no purchaser till it attracted the notice of Titus Salt, a poor but ingenious spinner. He took some home for trial, and being satisfied with the result, purchased the lot and worked it up into a new fabric, which was much liked by the trade. The demand produced a supply; a trade in Alpaca wool grew up, and Titus Salt became one of the richest manufacturers in England. In 1834 the import into Liverpool was 5700 pounds, and it now reaches nearly to three million pounds. The Peruvian Government, jealous of so wealth-producing an animal being possessed by other countries, in 1848 issued a decree prohibiting their exportation, and imposing a penalty of forfeiture of the flock and of ten years' labour in chains in the Chincha islands, on the owner and driver of any flock of these animals found within a certain distance of the coast. After overcoming innumerable difficulties, and encountering great hardships during a period of nearly seven years, Charles Ledger succeeded in the Eleventh month, 1858, in landing at Sydney 276 Llamas and Alpacas, out of nearly 1500 he had at various times taken into his flock. It is impossible too highly to estimate the importance of this to the future of Australia. All, or nearly all the introduced animals have flourished there. In 1788 Australia had no sheep, and but one bull, three cows, one horse, three mares and three colts. In 1859 New South Wales alone had upwards of 200,000 horses—of two million of cattle, and seven and a half million sheep, while the wool imported into England from all the Australian colonies in 1860, amounted to nearly sixty million pounds. The owner of the Alpacas introduced in 1858, thinks that in 50 years the Alpaca flock of Australia will reach five and a half million animals, which at a low average of seven pounds, will yield nearly forty million pounds of Alpaca wool, worth at 2s. per lb., about four million pounds sterling. The number of animals at last accounts was 358, and the lambing time was close at hand, after which the shearing, the second in the colony, was to take place, and was anticipated to be encouraging in the highest degree. The animals possess fleeces such as Peru has never seen, and the fat obtained from each animal exceeds any ever seen in South America, showing in the most convincing manner, both the perfect acclimatisation of the Alpaca in South America and the complete success of the cross breeding which has been conducted.

The Chinese have from time immemorial practised the boring of artesian wells, and according to missionaries, there are several of them in the province of Ou-Tong-Kiao of the depth of 1093 yards. Some of these wells, however, instead of water, give inflammable gas.

It is a sign of sincerity when a man's profession is joined with meekness, and he dares not boast of himself, or censure others; when the glory of God is preferred above all. Such a man is not a hypocrite.

For "The Friend."

## BIOGRAPHICAL SKETCHES

OF Ministers and Elders and other concerned members of the Yearly Meeting of Philadelphia.

## JOHN SMITH.

John Smith was born in or near Burlington, New Jersey, about the year 1722. He was a religious character from his youth up, and was brought into services in the church in early life. He was long an elder, and was very useful in that station. He was married to Hannah Lloyd, in \_\_\_\_\_, to whose memory, when she died, he gave forth a loving testimony. They resided for some time in Philadelphia; but before his death, he returned to Burlington. His friends of that last Monthly Meeting gave forth the following brief testimony to his memory:

"He was, when in health, a diligent attender of our meetings both for worship and discipline, careful in keeping to the hour appointed to meet, and weightily attended to the importance of the services. He was long a useful member of our meetings for business, and an elder who ruled well among us, being favoured with a sound judgment, and eminent abilities as a man, with a meek and quiet spirit as a christian. His endeavours to promote good order and peace in religious society, and in neighbourhoods, we believe, were attended with happy consequences. Our esteem for him is not easily measured by words, but we give this short testimony in love to his memory, desiring it may be attended with improvement to us who survive. He died of a lingering disorder, but was preserved in resignation of spirit. Not long before his conclusion, perceiving it approach, he said, with a seeming satisfaction, "I believe I am going now! The Divine mercy is great!"

His death took place, Third mo. 20th, 1771, he being in the forty-ninth year of his age.

## JOHN THOMAS.

John Thomas was born in the year 1716, in Chester county, Pennsylvania. Under the restraining care of his religious parents, and through submission to the enlightening, directing influences of the Holy Spirit, he was led in early life into a godly self-denying life. As he grew in years, he witnessed the necessary baptisms, qualifying him for usefulness in the church, and after a time it pleased the Lord Jesus to confer upon him a gift of gospel ministry. He was not large in expression; but being faithful, his labours were seasonable and serviceable. In the year 1766, he removed to York county, and settled there, by which he became a member of Warrington Monthly Meeting. His time of residence there was short, yet his ministry sweetened by gospel love, and enforced by his exemplary conduct, was very acceptable, yea, comforting and instructive to Friends.

The illness which released him after a long period of suffering from the probations of time, was a pulmonary one. At its commencement, to some of his intimate friends he spoke of the great poverty of spirit, which was his portion. Under this feeling of spiritual weakness, he was engaged earnestly to seek for patience to bear the proving dispensation allotted him. As he abode uncomplainingly in this condition of sorrow and leanness, the Lord, the alone Comforter of his depending children, saw meet to change the dispensation, and to grant him light, liberty, and peace. A while before his close, in a religious opportunity with some Friends in his chamber, he was greatly favoured with the overshadowing sense of the Lord's merciful regard. In this state he was drawn forth to speak of the tender dealings and sustaining grace of the Lord

manifested to him, from his childhood to that very hour. He earnestly exhorted those present to the faithful occupancy of the various gifts committed to them, especially such as were called to the ministry. He said he had loved the Lord from his youth; that he had been concerned to be faithful in the exercise of the small gift committed to him, and he now experienced comfort from this faithfulness, feeling the sensible enjoyments of the Master's loving presence. This enabled him to bear with patience his sufferings of body, feeling the assurance of immortal rest. He said that, in the beginning of his illness, his great poverty of spirit, made him ready to conclude that the Lord had forsaken him, but that now God had answered him to the joy of his heart, and caused him to magnify his goodness. He could now see the wisdom of that proving dispensation, which tended to wear him more thoroughly from all temporal enjoyments, and to animate to look for his joys and consolation above. He exhorted all to humility, telling them the time was drawing near wherein his body must go down into the grave,—a place where there was no exaltation. He added, "I have this testimony to bear for the Lord, that as I have been engaged to love him, and walk humbly before him, seeking to him for strength, with no dependence upon my own wisdom, I have found him to strengthen me; and now in this pinching time, he is near me, to comfort me with the joys of his presence." Although he was so weak in body as to be scarcely able to speak so as to be distinctly heard, yet he was strong and lively in the inner man, and in great sweetness of spirit, he departed this life, Fifth mo. 9th, 1771.

## MARY SIMCOCK.

Mary Wall, a daughter of that worthy minister of the gospel of Christ, Nicholas Wall, and Jane his wife, was born in Middletown, Bucks county, in the year 1686 or 1687. Her parents, soon after her birth, removed into the limits of Philadelphia Meeting, and there she was brought up. Being tenderly visited in early life by the Spirit of the Lord Jesus, and giving up thereto, the pious precepts and example of her parents were blessed to her, and she was enabled to manifest by conduct and conversation that her soul was enamoured with the beauty of holiness, and the blessed consistency of the Truth. Early in the year 1706, when about nineteen years of age, she was married to John Simcock, the son of that eminent minister of that name, who resided near Chester. The newly married couple resided near Abington for many years, where Mary received a gift in the ministry which she exercised to the comfort of Friends. After passing many years of usefulness in that neighbourhood, both in the church and in the world, they, about the year 1740, removed to Kingwood, New Jersey.

Her husband, after her death, gave forth this brief memorial concerning her. "She was a daughter of Nicholas and Jane Wall, of the Northern Liberties of the city of Philadelphia, honest Friends, to whom she was obedient in her youth. As she grew in years, she was concerned to be a sensible witness of the operation of Truth in her own heart, and keeping carefully under this concern, she was many times sweetly comforted in spirit, which favour she prized above the enjoyment of any earthly treasure. She was likewise engaged in concern for the good of her fellow-creatures, and after some reasonings in her own mind, she gave up to declare in a public manner what the Lord had done for her soul. After which she frequently appeared in public, while she was of ability to attend meetings. Her testimony was well received, and when her natural strength

and faculties were much impaired, it was evident she still retained that good part, which had been her early choice. Several Friends of Kingwood Meeting coming to visit us a few months before her departure, after a time of silent waiting she appeared both in testimony and supplication, in a solid, sensible manner, which plainly demonstrated that the Lord still favoured her with his living presence, giving ability to her, who had no strength of her own. She was a loving, faithful wife, an exemplary mother, and a true helpmate, in things pertaining to our everlasting well-being, patient affliction of body and mind, and departed quietly without any apparent illness, the 19th of the Fifth month, 1771, in the eighty-fifth year of her age; a minister upwards of fifty years."

The Monthly Meeting at Kingwood, expressing unity with her husband's testimony, say that her ministry, although not large in word, "was edifying to those whose hearts were prepared of the Lord." "Though, through age and infirmity of body, she was incapable of attending meetings, for some years before she died, yet as she retained her love to Truth and Friends to the last, we doubt not she has made a happy change, and is now enjoying the reward of the righteous in the mansions of everlasting rest."

*Female Employment.*—About six years ago, —Ricardo, M.P., the then chairman of the Electric and International Telegraph Company, heard of a young girl, the daughter of one of the railway station-masters, who had for three years carried on, day by day, the whole of the electric telegraph business for her father, and that, too, with great intelligence and correctness. The idea of training and employing women as clerks for the Telegraph Company then suggested itself; it was proposed to the committee, and the proposition was warmly seconded by General Wylde, who has proved a most untrusting friend to the cause. Opposition was at first shown; but the experiment was permitted to proceed, and —Craig, the present intelligent patron, was appointed to instruct, in her own room, eight pupils on two instruments. With what tact, perseverance, and success — Craig and her pupils worked, may be gathered from the fact that at Founder's Court alone upwards of ninety young women are now in active employment, the whole of the actual working of the instruments having fallen into their hands. The committee are now perfectly satisfied that the girls are not only more teachable, more attentive, and quicker-eyed than the men clerks formerly employed, but have also pronounced them to be more trustworthy, more easily managed, and, we may add, satisfied with lower wages.

The result of the experiment has been so satisfactory, that about thirty more women are now employed at the branch offices, namely, eight at Charing Cross, two at Fleet Street, two at Knightsbridge, etc.; and doubtless they will soon fill posts in all the branch offices of England.

The instrumental clerks earn from eight to eighteen shillings per week, and the superintending clerks from twenty to thirty shillings. Now, if we place one pound per week against *nothing*, those wages are good. Six weeks is considered the average time for learning the fluctuations of the needle, after which period payment for service commences, nor is any fee required for instructions. If at the end of two months the pupil cannot conquer the movement of the hands, she is dismissed as incompetent to master the art. The young girls now working at Lothbury are chiefly the daughters of small tradesmen; but several are the children of Government clerks—Somerset House or Treasury

men—three or four are the daughters of Clergymen.

Other companies, the Magnetic, and the London District Telegraph companies (the offices of which are in Threadneedle Street), are following the steps of the International, and have already engaged a number of hands, who are now being instructed; but the honour and the credit of the movement is due to the Electric and International Company. The success which has followed this practical and liberal attempt to afford employment for women, may induce others who have it in their power, materially to assist this praiseworthy object.

The employment of women as clerks in telegraph offices being an accomplished fact, there seems no just cause why they should not become clerks elsewhere. As, in too many instances, we take offence at names rather than things, should ladies have a distaste for the appellation of clerks, let those thus officiating be called assistants, if they like that term better. In positions where intelligence is wanted rather than strength, numberless avenues might be opened up, so that women could again become workers as they once were, before the absurd and pernicious ideas about "gentility" took possession of their minds, to the exclusion of common sense. In the progress of civilization, every day opens up new departments of employment for educated men, and the world of labour is surely wide enough to admit women likewise to some of these occupations.—*Leisure Hour.*

For "The Friend."

The Baptism of Water and that of the Spirit Discussed.

Although the following poetical correspondence has already appeared in "The Friend," in one of the early volumes, yet it is not doubted that it would be interesting to many of its present readers, especially of the younger class—if admitted again to its columns. It is stated in elucidation of the matter, that the parties are said to have felt a mutual attachment to each other, and that the only obstacle to a union was a conscientious objection, on each side, on account of religious sentiments. One of the parties was a clergyman of the church of England, and the other was a member of our Society, well known afterwards, not only among her fellow members, but in the literary circles of the day, as Mary Knowles. D.

CLERGYMAN.

Hark! how the sacred thunder roars the skies!  
"Repeat and be baptised," Christ's herald cries!  
"Repeat and be baptised," consenting Heaven replies.  
And can *Lavinia* unaffected bear  
This awful message echoing in her ear?  
Will my *Lavinia* unaffected prove  
Rebel to God, and faithless to her love?  
Say, shall a parent's absolute command  
The mighty voice of God himself withstand?  
Shall heavenly calls to earthly ties give place,  
And filial fondness frustrate christian grace?  
Shall human wit Omnipotence engage,  
Shall *Isabella* enslave with *John*'s wage?  
Must each *opiate* waive his claim to merit,  
That *Fox* may shine first martyr of the spirit?  
Must common sense be banished from the soul,  
Ere gospel salva can make the sinner whole?  
Must each adept in Calvary's great school  
Be lost in meekness but to fret a fool?  
Must *Paul* at *Corinth* be a babbling fool,  
And *Peter* when a *Baptist* be a Jew?  
Must *Philip*'s process be superfluous thought,  
Because he washed the cunuch he had brought?  
Must fabled rites be metaphorical away,  
And no central house be central disobei?  
Such juggling arts may change each part of speech,  
Make water spirit, and baptise, to teach;  
But if such jargon *Jesus* represents,  
The light, indeed, is only lent to saints,  
Then in the letter, double dark we find;  
And *Christ* in figure only saved mankind.

THE ANSWER.

Hark! how the sacred thunder roars the skies,  
"Repeat and be baptised," Christ's herald cries!  
"Repeat and be baptised," consenting Heaven replies.  
The christian's herald roars the solemn sound;  
And deeply humbled throats the sacred ground;  
Owne the injunction's undisputed claim,  
Its awful import and its glorious aim!  
But here a difference mutual zeal inspires,  
You plead for outward, we for inward rites.  
We think the gospel's hallowed page excites  
Superior efforts, nor one type requires;  
Since no lavation can effectual prove,  
The innate stain of nature to remove.  
No mole of words can heavenly grace impart,  
No plea for outward, we for inward rites.  
Hence we, as vain and useless, disallow  
The faithless *arely*, and unbinding *roar*,  
As empty shadows, which men may observe,  
Yet from the substance in their conduct swerve;  
While superstition rites their limas divide,  
They cease to follow their internal guide;  
Enslaved by *canons*, and the various rules  
Of *councils*, *synods*, *colleges* and *schools*,  
This night mankind, (for priests an ample field),  
To circumcision's ancient custom yield;  
And truly or like and worthy its sound feet,  
These holy fathers kneel to wash our feet,  
"Tis thus that holiness to form gives place,  
And solemn triflings "frustrate christian grace."  
In Jordan's pool well pleased the Almighty saw,  
His Son beloved submitting to the law,  
But his apostles through the waters sent,  
With a baptising power beyond the element,  
This power does all true ministry attend;  
'Twas promised, and will never have an end;  
This mighty power his herald did proclaim,  
"He shall baptize you with an holy flame,"  
Yet water was in use an ancient rite,  
Of old the common way to proselyte;  
But no dependence placed thereon you'll see,  
And *Paul* and *Peter* in this point agree.  
The real christians with illumined thought,  
View truth unblashed as a sunnier taught,  
Nor water as a means of observance revered,  
Since their immortal antitype appeared,  
*Fox* preached this doctrine to a seeking age,  
It shines in *Barclay*'s unretired page,  
Simple their schemes, no mean self-love they knew,  
And truly or like and worthy its sound view;  
With hearts devoted, gospel truths displayed,  
And scorned to make divinity a trade;  
No juggling arts e'er used, no low disguise  
O'er obvious texts, and sense to tyrannise,  
Discerning truth by its own native light,  
And by its guidance practiced what was right,  
This state attained, external rites no more  
Demand observance as in days of yore—  
'Tis grace alone, we by experience find,  
Imparts instruction to the attentive mind;  
Convicts of error, and restrains from sin;  
For what these are, we manifest within,  
Each wayward passion by its aid subdued,  
The soul's enthroned in active rectitude;  
Cleansed of its stains, and sprinkled from above,  
With pure descendings of atoning love,  
A baptism this, essence you will find,  
Or, "Christ in figure only saves mankind."  
'Tis this alone my suppliant spirit craves,  
Since but one *Lord*, one *Faith*, one *Baptism* saves.

*Value of Hay, as Compared with other Milk-Producing Substances.*—Several French and German chemists estimate the relative value of several kinds of food for milk cows, according to the following table:—That 100 pounds of good hay are worth 200 pounds of potatoes; 460 pounds of beet-root with the leaves; 350 pounds of Siberian cabbage; 250 pounds of beet-root without the leaves; 250 pounds of carrots; 50 pounds of clover, Spanish trefoil, or vetches; 50 pounds of oil-cake, or colza; 250 pounds of pea-straw and vetches; 300 pounds of barley or oat-straw; 400 pounds of rye or wheat-straw; 25 pounds of peas, beans, or vetchseed; 50 pounds of oats; and 500 pounds of green trefoil, Spanish trefoil, or vetches.

*Some Unexpected House Plants.*—I do not mean that stand of green and flourishing geraniums and roses, which has just been stationed in your south window, the pet of your anxious thoughts, which you hope to be able to keep through the winter, though, if you do, it will be the first time. I ask you to look at some humble, unnoticed plants, which are found in and about every house, the world over. Do you know that plants grow and spread by thousands, all over the sides of your house and stone steps, and from garret to cellar, continually multiply, and die out again. Well, there is a very insinuating family, that goes creeping in all by-places, and lives where you never dreamed flowers would live. One of these plants is found in old worn garrets, and dark, damp closets and corners. It takes root in old books and papers, and in clothes that have been long laid away. Here it spreads in green, brown, and dirty patches, which your mother calls *mildew*. And that is the right name, though I doubt if she told you it was a blossoming vegetable, as truly as your hyacinths. Another of this family, so wide-spread, is always at home in the pantries and buttery, is in the cellar, or even in your desk at school. Instead of growing in the ground as a plant should, it takes root in bread and cake—is particularly fond of cheese. In a single night, the thousand little plants will grow, and spread like a soft blue cloud throughout a loaf, and in the morning the cook declares the "bread's mouldy." The little plant is mould. But how did it get into my desk, and grow upon that piece of apple? The air is full of its invisible seeds, floating everywhere; but they will come into life, and decay in a few minutes. Yet that tiny mould is a vegetable, with roots, stem, and blossom. On the south side of the street, in the city, on the north side of every building, bricks and stones turn green. Most likely, you thought it was *only turning green*, and never asked the reason. The microscope shows it to be a minute plant, whose name is lichen, and it has a near relative in the woods, growing upon the old bark, on stones and fence rails. This last is larger, and prettier to the naked eye. In the field, these small vegetables are the dread of farmers. For if it is wet, rot, mildew, smut, rust, and blight, all species of fungus, (that is the family name,) run riot over the fields, planting themselves upon the grain, destroying its life. Have you never picked an ear of corn that was all swollen, and spotted blue and black. That was blight. Farmers call it a disease, but it is a vegetable. It is certain, however, if the sun shines, and the grain is strong and healthy, that these plants will not grow upon it. One name is given to all these—the *Fungus*. Some of them grow in ink, in milk, and vinegar, and, more curious still, some on living animals. In Italy, the silk worm is destroyed by thousands, by a fungus growing all over its body. Every child has picked off the window in some old, decay garret, flies that lay dead, glued to the glass, and covered with a thin blue film. The fly became sick in the confined air, and then the seeds of the fungus sprouted upon it, and killed it. Even men are sometimes attacked by these plants. I grant you this is not a very pleasant family, creeping into life in the damp and dark, fixing on the sickly or decaying substance, and mantling it with death, and often flourishing in poisoned soil. Nor do I expect you will give a place to mildew among your plants in the window, but let us allow them a right in the great vegetable kingdom, and acknowledge their kindred to our roses.—*Arthur's Home Monthly.*

Good men have the fewest fears. He has but one who fears to do wrong. He has a thousand who have overcome that one.

\* Matt. xii. 14. † Matt. xii. 2.

‡ Cor. i. 17. § 1 Pet. iii. 21.

For "The Friend."

## The Rule of the Church.

The great Agent by which the soul is to experience the washing of regeneration, and be renewed into the divine image which was lost by transgression, is the grace of God which has appeared unto all men, teaching us that denying ungodliness and worldly lusts, we should live soberly, righteously and godly in this present world, looking for that blessed hope and the glorious appearing of the great God, and our Saviour Jesus Christ. None can look with faith and comfort for this blessed hope and appearance, unless they are in measure restored to the divine image, and made members of his living church, which is built upon Christ the foundation, against which the gates of hell cannot prevail. As it is only by this grace that we can be delivered from all evil, and be grafted into Christ, we must abide under his government and refining power, to be qualified to take part in the duties of his church, and to act as judges in its decisions. The natural understanding and will of man, with all his literary knowledge even of the doctrines of Truth, or any party combination whatever, cannot constitute him a living member of the body of Christ, and consequently cannot make him a judge and counsellor in it. He only who gives gifts unto men, can appoint for the work and service which he assigns to each member, and give ability to occupy the gift for his honour, the true welfare of the church, and the growth of the member who is called and anointed for the work of the Lord. All decisions affecting our testimonies, which have not the divine authority of the adorable Head, will avail nothing for the welfare of the body, but must tend to scatter and alienate from Him. Had our religious Society kept under the guidance of the Holy Spirit, our doctrines and testimonies would not have been departed from, and changes made to the discipline as has been done in some places. What desolation and distress have followed! Many have thrown off all appearance and the language of Friends, and the faithful standard-bearers are mourning over the desolations which the wisdom of the world, and the unsanctified will of man have introduced among us.

We have the following conversation, which took place between John Gratton and his fellow-prisoners, on the rule which governs the church of Christ, and has been owned from the rise of our Society, by the spiritual, faithful members to this day.

"While I remained in prison, I had some discourse with the papists who were in prison with me about several things. The first time the popish priest began with me thus; the jailer being ill, I went down to see him, and when the priest heard I was with the jailer, he came also with about eight debtors, who were civil men, being well brought up, and they came to see the jailer; and being pretty cheerful with the old man, the popish priest broke out and said, 'Well may I be cheerful, who suffer for the Truth, when I see how cheerfully some men suffer for error.'

"There were none but he and another papist, and I, who suffered for our profession of religion, so that I saw he struck at me, and told him there were none at that time who suffered for their religion, but him and another of his own mind and me, therefore said I, it must needs be me thou meanest, that suffers for error; either prove thy charge or own thy fault, for I am not willing to sit down with it; telling him, that if he could make it appear that I suffered for an error, I would take him for my friend, for I was not willing either to live or die in error, if I knew it.

"Then he would have heard no more of it, but I was not willing to pass it by and let him go so;

for the charge was great. Prove it, said I, or confess thy error.

"So he asked what we must be tried by; it was answered, By the rule of the church. He acquiesced with that, and so did I. Then I asked him what that rule was; but he seemed to evade, and would not answer; but one that sat by said it was the Scriptures. He said, no; then I asked him again, what he said the rule was; to which he made no answer. Is it the pope? said I; 'No,' said he. Is it the church? said I; he answered, no; and so did I too; for the church was to be ruled by the rule, therefore could not be the rule. But said I, What dost thou say is the true church's rule? But he seemed loth to answer; but being urged, he said tradition was the rule. 'Tradition,' said I, but what was the rule before there was tradition? for there must needs be the elders, before there was the tradition of the elders. And said I, the rule is a firm, stable, standing rule, from the beginning of the world to the end, that alters not or changes, which cannot be added to, nor taken from. All this he seemed to have but little or nothing to say against.

"The company desired me to tell them what I believed this rule was. And in answer to their request, I told them; It was the Holy Ghost, the Spirit of Truth, which was in the beginning, and was God, and is God, and changes not; and since our Lord Jesus Christ suffered death for us, and rose again, this Spirit is poured forth upon all flesh; see Acts 2. This is that which guided Enoch, so that he obtained testimony that he pleased God. This hath been the guide, rule and leader of all the patriarchs, prophets, and holy men of God, who spoke as they were moved by the Holy Ghost, or Spirit of Truth, which leads and guides the true church into all truth, and all true worship is in it. And as many as are led and guided by the Spirit of God, they are the sons and daughters of God. This was and is the true church's rule; and if any man have not the Spirit of Christ, he is none of his; so this that is the guide of the church, must be the rule; he that works by a rule is guided by it and ruled by it. This is that which baptized men into the church or body of Christ; of which the children of God are born, and are nourished by, so that it gives them life, and inspires them, and gives them understanding, manifesting to every man that which is for his profit and welfare, and is freely given. The apostles were ministers or servants of it; this brings men into the adoption, and enables them to call God Father, and to say truly, that Jesus is the Lord. It directs men to obey, and enables them to do the will of God; this is grace and a free gift to all, and if they will, they may come and drink abundantly of it, for it is a fountain of living water. Since men have turned from it, and run after blind guides, they have lost it and another, and are confounded. Having lost the rule, the true guide, they cry, Lo! here, and lo! there, and are out of love and charity one with another, and one is for one head and ruler, and another for another head; so every head would rule, and there being many heads and horns, even to admiration, they are pushing at one another, and in Babylon is found all the blood of the saints and martyrs of Jesus; but the true church is full of love and good will to all mankind; with much more to that purpose. Upon this discourse the company believed that the Spirit of Truth was the rule and guide; whereupon the popish priest desired that he and I might be at peace, and would have no more discourse."

Is not our religious Society becoming divided under different heads which are at enmity, and are pushing at one another to promote their own will

and way, which is not the Divine will, instead of cherishing the love of God in their own hearts and seeking the salvation of all men. A great change has been made within a few years. We did not think fifty years ago of calling in question the christian faith of the Society as laid down by Fox, Barclay and Penn, but since different attempts have been made to modify it, unsettlement has spread therefrom, which has broken up the love and harmony that bound us together and made us one people; and to restore which, is out of the power of man by any contrivance of his own. The Spirit and power of Christ, which gathered us from the lo! here and lo! there, only is able to bring us together again; and this must be yielded to in denying self, taking up the cross and following Him in humility, so as to be made new creatures and prepared to receive the inscription of "Holiness unto the Lord," as sanctified vessels fit for the Master's use. This is an individual work. Let every one look to his own standing, that he may be favoured to see his condition, as he values the peace of the Church and his own peace and acceptance in the day of account.

From the Leisure Hour.

## Jelly.

Many of us can perhaps remember the time when extreme notions prevailed relative to the life-supporting power of jelly. No sooner was an invalid discharged from the doctor's hands, than the nurse began to ply the patient with her jellies. Calves' feet had a sort of historical reputation as being the stock jelly-maker. Next in esteem came isinglass, perhaps, in one of its many varieties. Hartshorn shavings, were used upon certain occasions, under the false impression that jelly from this source was endowed with special properties. In the history of medical delusions, the doctrine of signatures, as it is called, holds a conspicuous place. A tenet of this doctrine was, that articles of medicine presented an external aspect, or character, of their medicinal virtues. Inasmuch as hartshorn shavings yielded, on distillation, the volatile fluid even now popularly termed hartshorn, but chemically ammonia, therefore it was imagined that the jelly from hartshorn shavings would be stronger and more restorative than other jelly.

All true jelly has for its foundation the chemical principal of gelatine; and the doctrine of signatures notwithstanding, it little matters from what source the gelatine is obtained. The modern confectioner obtains jelly from a great variety of sources; all innocent enough, though some of them would, if known or remembered, do a little violence to one's prejudices. Parchment shavings, boiled down, make very excellent jelly; but a person eating such would do well to forget the origin and manufacture of parchment. White kid glove leather can be transmuted into jelly; and I am told that jelly is actually obtained by London confectioners from this source. Well, kid-skin is not repulsive to think about; but one may as well forget that many of the smaller sized ladies' kid gloves (so called) are manufactured from rat-skins! Ivory turnings and ivory dust are a source of jelly, both convenient and delicate, notwithstanding a certain violence done to one's sentiments on learning that a delicate jelly, trembling under the spoon, was made from the dust and cuttings of a small tooth-comb! A very large proportion of all bones is gelatine. It is hardened in bone by mixture with a white powder, technically called "bone earth," the latter being a mixture chemically speaking, of carbonate and phosphate of lime. If a bone be soaked for a considerable time in ordinary vinegar, or still better, in weak spirit of

all, the bone earth is dissolved, and all the gelatine remains behind, ready to be transformed into jelly by solution in water. Much of the gelatine sold as a substitute for isinglass is actually obtained in this way, though, in some respects, it is inferior to gelatine otherwise obtained; the fact being, that long contact with acids is injurious to it. In many kitchens a peculiar sort of boiler, termed a digester, may be found. It is a vessel firmly closed, and which remains firmly closed until the steam, generated by boiling, acquires sufficient force to press up a valve. Water boils in an open vessel at 212° of Fahrenheit's thermometer; but, if the steam be restrained by pressure, the boiling point of water is elevated, and also its solvent power. For this reason a bone placed in a digester with water, and the water sufficiently heated, the gelatine of the bone dissolves out. Prolonged boiling, however, damages the quality of gelatine—indeed alters its chemical composition to some extent; whereas it happens that jelly thus extracted by the aid of a digester, is none of the best.

I have adverted to the medical superstition of *signatures*, as an explanation of the partiality once shown for jelly of hartshorn shavings. There are other superstitions relative to gelatine, the origin of which is less manifest. Almost from time immemorial there has been a notion afloat, that some particular virtue resides in the jelly of snails. Frequently, even at the present time, in remote country places, the gelatinous matter of snails is prepared in various fashions, as a supposed restorative; but, up to the end of the last century at least, snail jelly was accepted as a regular article of medical dietetics. In most old cookery books, directions are given for making snail food; and wonderful examples are cited of the benefits derived from it. The curious thing is that, setting out with a belief in some particular efficacy in the gelatine, or flesh, in a manner to speak of snails, vague notions of their essential spirit crept in; and imaginary essences of snails were prepared by distillation. I say "imaginary," because every modern chemist is aware that a liquid scarcely differing from water results when a watery solution of gelatine is distilled, whether that gelatine be from snails or other sources.

Jelly, though still prized as a valuable article of food, has had to abate many pretensions since Majendie proved that dogs could not live on gelatine alone. There was a time when nurses and even doctors, thought that jelly alone was the most strengthening of foods. Other opinions prevail now. Indeed, Liebig has advanced the opinion that gelatine is endowed with no nutritive properties whatever, and that unlike sugar and starch, it cannot even minister to the development of animal heat. In advancing this opinion, it may be that Liebig has gone to an unsafe extreme; at the same time there can be no doubt that gelatine is not the generous life-supporter it was once imagined.

Writing of starch, I am here led to notice that it sometimes usurps the place of gelatine, being used for the preparation of jelly-like forms of food, to look at, but differing from true jellies, nevertheless. If starch in any of its varieties be boiled for a time in water, a viscid tremulous mass results, very nearly allied to true jelly in appearance, and often substituted for it. Every housewife knows that two varieties of lichen, sold respectively under the names of Iceland moss, and Carrageen or Irish moss, are frequently used as substitutes for gelatine—isinglass, for example. Not to be called over the coals by some too critical chemist, I beg to express myself perfectly aware of the

fact, that a minute difference of composition is attempted to be drawn by some, between isinglass and gelatine. Whether that question be founded on fact is even doubtful; at any rate, if not the same, they are so closely similar that I may well be pardoned for treating of them as identical. Well, returning to Iceland moss and Irish moss, though used as substitutes for gelatine, as starting points for the preparation of jelly-like articles of food, they contain not a particle of gelatine. They are both rich in holding certain varieties of starch; hence their securing power of gelatinization.

What now, about the so-called jelly of fruits—currant jelly, for example? Is there any gelatine there? By no means. Gelatine is exclusively found in the animal kingdom. The soft, tremulous, jelly-like mass obtained from fruits which also can be obtained from many vegetables—carrots and parsnips, for example—results from the half solution of organic principles known as pectine and pectic acid. The close resemblance borne by them to gelatine is expressed by their name; pectis being the Greek word for jelly.

Perhaps the most confirmed jelly-eaters of present times are the Chinese. Most persons have heard of, or read about the celebrated bird's-nest soup. The latter is merely a flavoured solution of gelatine; and, according to the experience of those who have tasted it, is none the better for its curious origin: isinglass, or any other form of gelatine would have answered just as well. Nor are the Chinese content with the outlandish source of gelatine provided by bird's-nests; hundreds of junks traverse the Indian Ocean for the purpose of collecting disgusting marine creatures, known as the "sea slug," sometimes also called the *leche de mer*, and the sea-cucumber. Their epicurian tastes also prompt them at great cost to obtain deer's tendons, all the way from Central Tartary. Tendons are little else than pure gelatine; but gelatine might be obtained by our almost-eyed brethren from many more accessible sources.

On the whole, it may be said of gelatine that it has lost much of its ancient repute. It cannot support life, or even satisfy the cravings of hunger, when eaten alone for periods together. To gorge a hungry person recovering from serious illness with jellies, is a mistake. Flesh formers are what his hungry stomach craves for; but gelatine cannot produce flesh. Nevertheless, without gelatine, few, if any, sorts of animal food would be tolerable. To make good soup without gelatine is in a manner impossible. The almost universal distribution of gelatine throughout the animal kingdom shows that, however, incompetent to support life alone, the Creator must have invested it with important uses. Not less agreeable to the taste than important to the stomach is a well made jelly; and if the partaker of it can overcome his prejudices little will it matter whether the jelly be got from isinglass, calves feet, or rat-skin kid gloves.

## THE FRIEND.

FIRST MONTH 18, 1862.

In our last number we referred to the sad spectacle of angry and hostile feeling towards this country indulged in by a large part of the British people, as depicted by the newspapers published there; but later advices indicate an under current, which is beginning to manifest itself in opposition to the warlike and menacing tone and measures, urged upon the government by those who appear mainly desirous to secure the acknow-

ledgment of the "Southern Confederacy," and the cotton it can supply. Many remonstrances are said to have been sent in, some from towns, and others from various religious denominations, urging the ministry to pause before plunging the country into war, and pleading for the observance of the duty obligatory on christians, to abstain from violence and do all in their power to promote peace. At a meeting recently held in "Surrey Chapel," London, the well-known Newman Hall addressed an audience of nearly three thousand working men, and we take from the published report of his discourse, the following extracts expressive of sound sense, and inculcating the right kind of feeling.

"Some people seem to imagine that Britannia has a right to rule the waves—that the ocean is her freehold—that she may do what she pleases there—and that other nations must not be allowed to act in a manner which is quite justifiable in ourselves. Need I say that such a sentiment is most unjust and monstrous. (Hear.) If this were carried out we should always be at war with every commercial nation of the world. No, there are certainly laws and customs to regulate affairs on the sea. By these we must abide as much as others; and therefore the first thing to be done is to discover what is the law—whether it has been broken, and what can be done to secure its observance in future. Let us then regard this question as one needing calmness of judgment, not violence and passion. Let the case be deliberately argued. If America meant not defiance, but law, let us first ascertain what the law is—not demanding our interpretation as the true one, not admitting theirs, but referring the dispute to an impartial referee. (Cheers, and a voice—"That's good.") But it may be urged in apology for violent measures—"Must we not at once vindicate the honour of our flag." What! is our flag of so recent invention, with so poor a history, enriched with so few memories of glory, that it will be dishonoured by a short and dignified delay? Dishonoured by not at once fluttering defiance against the freemen of the north; but would it not be more dishonoured by floating side by side with the flag of slave traders—(repeated cheers)—slave breeders, slave traders? If there must be one or other dishonour, oh spare us this latter! Never, never let the meteor flag of England be hoisted on the side of tyranny and oppression. (Great cheering.) But, supposing arbitration fails, and we cannot agree on this question, must we then fight?"

"I have been astounded at the opinion widely circulated, that we must have either redress or retaliation. Is there not a third alternative—forgiveness? (Hear, hear.) If for the future the law can be made plain, and obedience to it secured, may we not pass over the affront to ourselves? Is every dispute between nations if not amicably arranged, to lead to war? Is nothing to be overlooked? What is the law of Christ? 'Forbearing one another, and forgiving one another, if any man have a quarrel against any, even as God forgave you, so also do ye.' We feel our duty to act on this law in our individual capacity; is it less our duty as citizens, and as nations? Alas, Christian nations seem to think that they may do a communities what would be wicked as individuals. (Hear, hear.) But there are not two rules of conduct. If I am to forbear and forgive as regards you, my family must do so towards your family, my town towards your town, my nation towards your nation. What has our religion done for us as a country, if we are to appeal as hastily and as angrily to the sword to settle a quarrel as if we never heard a Sabbath bell, and never had seen a bible, and never listened to the gospel

of peace? (Cheers.) Oh, that God, in whose hand are the hearts of all, would dispose the people and the rulers of both countries to peaceable counsels. (Cheers.)

"I beseech you, make earnest prayer to Him. I observe with pleasure that a great meeting is convened in Exeter Hall for prayer next Tuesday, the day before our government dispatch will reach Washington. Let us pray that it may be received in a conciliatory spirit. But not only so. Let us pray that we may be conciliatory, that we may be patient, and forbearing, and gentle, even if their reply be otherwise, remembering the command, forbearing one another, and forgiving one another, if any man have a quarrel against any. I fear I have detained you too long, but the importance of the subject, I trust, will be a sufficient apology. (Cheers, and 'go on.')

Once more, workmen, I beseech you to do what you can to allay the unreasonable, unchristian war spirit that now prevails. I consider in this case that war would be most wicked. I am not one of those who advocate peace at any price, but I do earnestly plead for peace now, and I ask you all to help. Let each do what he can to roll back the tide of angry passion. Oh, by all the untold horrors of angry war—by the tenfold terribleness of a war between brothers—by the sufferings of a negro race, who look on with alarm lest you should join their oppressors to rivet their chains—by the aspirations of the long down trodden people of Hungary and Italy, whose enemies will exult if the great champions of freedom contended with each other instead of making common cause against tyranny—by the interests of the world, which will look on aghast to see its civilizers and evangelists engaged in mortal combat instead of prosecuting, in holy rivalry, enterprises of benevolence—by the principles of Christianity—by the example of Jesus—by the law of God—I beseech you cast in your influence on the side of peace, and loudly exclaim, "we will have no war with America." (Loud and repeated applause.)"

We trust that these views will, excepting that of not advocating "peace at any price," more generally prevail, and the peaceful relations between the two countries not be permanently disturbed.

#### POTATO ROT.

We have had left with us a card, stating that H. WHITALL, No. 241 N. Fourth street, Philadelphia, is prepared to in-trust farmers how to grow good crops of potatoes, and to remove the cause of blight or rot, on condition that he shall receive half the increase over the ordinary yield: no increase no pay. As many of our subscribers are farmers, who would be glad to have their potato crops as remunerative as formerly, we give them this information, though we know nothing of the character and value of the alleged discovery. Letters addressed to him enclosing a three cent stamp, will be answered.

#### SUMMARY OF EVENTS.

UNITED STATES.—Congress.—The Senate, by a unanimous vote, has expelled Senators Polk and Johnson, of Missouri, who have identified themselves with the cause of the rebels. Senator Sumner, of Mass., delivered an eloquent speech on the Trent affair, defending the policy of the administration. The rebellion and the war for its suppression is, of course, the most prominent subject before both Houses. Mr. Sumner's speech will be dissatisfied with the comparative inaction of the army, and urge a more vigorous prosecution of hostilities, with an advance upon the entire line of operations.

The Army.—The Sanitary Commission has made its report after visiting every camp, from St. Louis to the Potomac. According to this report, about two-thirds of the volunteers were native Americans. Of the camps inspected, one half were in good order and well con-

ducted, twenty-six per cent. negligent and slovenly, and twenty-four per cent. in a positively dangerous state. The food is reported to be of good quality and in abundance. The chief complaint is the want of fresh vegetables. In twenty-three regiments, the men did not often or readily get intoxicating drink, while in one hundred and seventy-seven it appeared that the soldiers were supplied with liquor to a greater or less extent by the sutlers. Heretofore, intoxicating drink was found to be common in only six regiments. The average constant number of sick per one thousand men is sixty-three in the army of the Potomac, one hundred and sixty-two in the Western Virginia army, and in the valley of the Misssippi, one hundred and twenty-two. A recent message of Gov. Curtin, Pennsylvania has 93,577 soldiers in actual service, and 16,038 preparing to enter the field—a total of 109,615.

Hostilities.—A rebel camp, in Boone county, Missouri, was attacked and broken up on the 28th ult., by a detachment of Federal troops. The rebels lost about one hundred and fifty men; the Federal troops, nine killed, and thirty-four wounded. Another rebel camp, near Romney, Va., was dispersed by a detachment of Federal troops, who captured a number of prisoners and two pieces of artillery, with the wagons and mules attached. The rebel army, in Eastern Kentucky, under the command of General Marshall, being threatened by the near approach of a division of the Federal forces, disbanded and fled in all directions, after having hastily collected and burned their wagons, tents, camp equipment, &c. The Secretaries of the States, in which the Federal forces were the assailants, have recently occurred, including an attack upon a rebel fort in South Carolina, near Port Royal Ferry. The fortification was destroyed, and the rebels driven off.

The Blockade of the Potomac.—The rebel batteries along the river shores do not prevent the passage of vessels in many instances. On the 12th ult., the United States steamship Pensacola heavily laden with cannon and warlike munitions, passed down the river with entire safety. Twenty-two shots were fired at her, none which took effect.

The National Finances.—The Commissioners of the Banks of Boston, New York, and Philadelphia, in convention at Washington, for the purpose of aiding and advising the Treasury Department, have invited the Secretary of the Treasury, the Committee of Finance of the United States, and the Secretary of the Senate of the House of Representatives, to meet with them in consultation. At one of their meetings the Bank Commissioners submitted the following propositions: 1. That in lieu of the proposed issue of one hundred and fifty million of United States notes, and making them a legal tender, the government should issue fifty millions of United States convertible into seven per cent. stock, redeemable in ten years, and one hundred and fifty millions of small notes, bearing six per cent. interest, and payable in two years. 2. That the Sub-treasury law shall be repealed, and the banks shall be used as depositories of all the public moneys, except that received from customs. 3. That Congress shall pass a joint resolution, declaring that it will pass a revenue bill providing for the raising of one hundred and twenty-five millions per annum by taxation, &c., in addition to the receipts from customs. 4. That the Secretary of the Treasury should be authorized to negotiate further loans, without restriction as to the terms or rate of interest, and also to obtain temporary loans by hypothecating stock in anticipation of sales.

Cabinet Changes.—It was stated, and generally believed, in Washington, on the 13th inst., that Simon Cameron, Secretary of War, had resigned his seat in the Cabinet, and will go to Russia as minister, in Cassius M. Clay's place. It was further stated that Edward M. Stanton, of Pennsylvania, has been appointed Secretary of War. Stanton filed the post of Attorney-General, near the close of every camp, from St. Louis to the Potomac.

Philadelphia.—Mortality last week, 262.

Brooklyn.—The number of deaths in Brooklyn, during last year, was 5933, viz: 2129 adults and 3813 children.

New York.—Mortality last week, 370. The export of specie for the week amounted to \$1,935,078, during the same time the banks increased their specie about one and a half millions. Exchange on London, 112½, Gold, 23 a 23 premium.

The Southern Indians.—The Cherokees and other half civilized tribes residing in the Indian Territory, are divided into two parties, one of which adheres to the Union, and the other takes sides with the rebels. It is stated that two battles have recently taken place between the loyal and rebel Indians, in both of which the latter

were victorious. 20 pieces of army and navy cloth, at \$10 a \$12.50 per yard; 20 barrels of sulphuric acid at \$1.00 per pound; 1000 lbs of copper at similar high rates.

The Charleston (S. C.) Courier makes light of the obstruction to the channel, caused by the sunken stone fleet. It says that on the occurrence of the first heavy north-east storm, the force of the wind, the heaving of the sea, and the action of the current, had the effect of jamming from previous experience, quickly break up and remove all the vessels.

The Richmond papers urge a more bold and vigorous policy in conducting the war; they seem to be as much annoyed by the inaction of the Southern army, as some of the Northern papers are annoyed by the inaction of the steamer Ella Warley recently succeeded in running into Charleston harbor, notwithstanding the blockade and the sunken vessels. She had on board an old and experienced pilot, who was familiar with every creek, inlet and sound on the coast. Her cargo consisted of rifled cannon, gunpowder, drugs and other articles such as were greatly needed.

The Grain Markets.—The following were the quotations on the 13th inst. New York—Red Western wheat, \$1.41 a \$1.43; white Michigan, \$1.43 a \$1.47; oats, 36 cts. a 37 cts. No. 1 yellow, 65 cts. a 67 cts. Philadelphia—Red wheat, \$1.36 a \$1.37; white, \$1.44 a \$1.50; oats, 38 cts. a 39 cts.; yellow corn, 58½ cts.; clover seed, \$4.25.

American Locomotives.—The London Engineer says that while wages and iron are much higher in America than in England, the cost of the machinery is much less. The dimensions in the United States, range at from 20 to 25 per cent. lower prices.

FOREIGN.—European dates to Twelfth mo. 29th. Engagements from several religious denominations in Philadelphia have interviews with Earl Russell on the subject of Northern aid to the United States. The British Board of Trade returns show a decline in the exports for the previous eleven months, of about 7½ per cent. The falling off is almost entirely in cotton goods. The Liverpool market for breadstuffs dull, at a small decline in prices.

#### RECEIPTS.

Received from Asa Ray, O., \$2, vol. 34; from Abraham Cowgill, agt., 10, \$1, 27, vol. 35, and for Nathan Satterthwaite, \$5, 10, 27, vol. 34, for Jos. Hall, \$2, vol. 35.

#### FRIENDS' ASYLUM.

Committee on Admissions.—Samuel Bettle, Jr., No. 149 N. Tenth street; Charles Ellis, No. 724 Market street; William B. Smith, No. 618 Sixth street; and No. 268 S. Third street; John C. Allen, No. 335 S. Fifth street, and No. 321 N. Front street; Horatio C. Wood, No. 612 Race street, and No. 117 Chestnut street; John M. Whitall, No. 1317 Filbert street; and No. 410 Race street; Wm. Morris, No. 269 S. Third street; Nathan Hills, Frankford; Elliston P. Morris, Germantown, and No. 805 Market street.

Visiting Managers for the month.—Benjamin J. Crew, James Thorp, and Elliston P. Morris.

Physician and Superintendent.—Joshua H. Worthington, M. D.

DIED, Tenth month 11th, 1861, MARY ANN CADARBY, daughter of Joel and Caroline W. Cadbury; a member of the Northern District Monthly Meeting. This dear young Friend was peculiarly led in her mission of kindness to visit the sick and solitary, brightening many lonely hearts by her cheerful spirit and thoughtful attentions. During the last few months of her life, she was denied the privilege of much social intercourse with her friends; a harassing cough and increasing debility making rest and quiet essential to her comfort; but throughout this interval of retirement, there was a fervent exercise maintained by her, and she prepared to meet that attack, which she felt was approaching. It was instructive to witness the patience and resignation with which she accepted the privations of sickness and the serenity with which she awaited the gradations of her disease, expressing a desire to be permitted to find assistance with her Saviour, who, she could feelingly acknowledge, "was very merciful." Most touching was it to receive her little messengers of affection, and kind farewells to her friends, while the peacefulness of her spirit seemed an evidence that the strength she so earnestly sought was mercifully granted her. May we not humbly trust that, through an unmerited mercy, she has entered one of those mansions which our holy Redeemer declared he went before to prepare for his disciples.

At the residence of his son, Henry Lawrence, in Millville, Pa. on the 18th inst. died, at the age of 180 years, HENRY L. LARSEN, in the seventy-first year of his age.

# THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XXXV.

SEVENTH-DAY, FIRST MONTH 25, 1862.

NO. 21.

PUBLISHED WEEKLY.

Price Two Dollars per annum, payable in advance.

Subscriptions and Payments received by

JOHN RICHARDSON,

AT NO. 116 NORTH FOURTH STREET, UP STAIRS,

PHILADELPHIA.

Postage to any part of Pennsylvania, for three months, if paid in advance, three and a-quarter cents; to any part of the United States, for three months, if paid in advance, six and a-half cents.

For "The Friend."

The Agriculture of France.

The following notes are compiled from an article in the last Edinburgh Review on "the Rural Economy of France since 1789," by Leonce de Lavergne.

*Progress of France since 1815.*—Since 1815, the foreign trade of France has quintupled; her manufactures have quadrupled; her agriculture has doubled its produce, under the influence of those three great principles of peace, justice and freedom, which are the eternal counterpoise to the hateful effects of war, violence and despotism. Eighty thousand miles of roads have been opened in the country; ten thousand miles of railway have been completed, or are now in progress; canals have been made; rivers rendered navigable; ports and docks constructed. The progress of rural economy, especially from 1815 to 1847, kept pace with this great movement, and has not scissibly been thrown back by the unfavourable and extraordinary courses of the last few years, in spite of bad seasons, the potato disease, the vine disease, the mortality of the silk worm, and the disturbed state of the political world. The tenure of land has of course been modified to a considerable extent, by the laws of succession established in France; but this change is less rapid and complete than is commonly imagined in England. Taking the area of France at 45,000,000 hectares (a hectare is about two and a half acres,) M. de Lavergne computes that one-third of the soil is still held by 50,000 large proprietors, possessing an average of 750 acres; another third by 500,000 middling proprietors, possessing an average of 75 acres, and the last third by 3,000,000 small proprietors, possessing an average of about 7 acres. This is but an approximation; but it is certain that there are in France 16,000 land owners paying £40 a year and upwards on land tax to the State, and about 37,000 land owners paying from £20 to £40. In the allotment of the soil, it seems that since 1789 about 5,000,000 acres have been added to the productive area of the country; vineyards and orchards and meadows have considerably increased; woods have diminished. In tillage cultivation, the fallows have decreased one half; the growth of wheat, barley and oats has increased one-third; that of rye and the inferior kinds of grain has diminished. Water meadows have tripled

in extent, and the cultivation of roots, which was hardly known in 1789, now covers 5,000,000 acres. But the quality of the crops has risen even more than their extent. The quantity of wheat actually grown has nearly doubled; live stock has also doubled in number and value; the silk crop and the rape oil crop have quintupled. The production of home grown sugar has come into existence, and the growth of wine has also doubled. From these facts, M. de Lavergne concludes that the total value of the agricultural produce of the empire must now exceed £200,000,000 sterling, or at the rate of £6 per head of the population. He also infers that rents have risen since 1789, in the proportion of 12 to 30; farmers' profit in the proportion of 5 to 10; outlay in that of 1 to 5; taxes on land and dues have diminished in the proportion of 7 to 5, and labourers' wages have doubled.

*Beet Root Sugar.*—In the first class of these productions must be ranked one created in the present century, and which takes rank as the finest agricultural conquest of our age—beet root sugar. The invention was made in Prussia, and in 1799, a chemist at Berlin had produced some native grown loaves of sugar. In 1809, during the war, it was introduced into France; the peace of 1815, by re-opening the colonial trade, gave it a check, but it has ever since gone on to increase. Of 350 manufactories of home grown sugar in France, 150 are in the department of the north. It might be apprehended at first that the production of beet root sugar would be injurious to the production of meat and corn, by employing and exhausting the best lands. It is now demonstrated that the manufacture of sugar not only creates a new source of profit, but also augments the other products of the soil. The extraction of saccharine matter from the root, only takes away a portion of its substance; the pulp and the leaves are excellent fodder for cattle, and the profits of the sugar houses cover the expense of abundant artificial manures. In 1833, the city of Valenciennes, which is the chief seat of this trade, inscribed on a triumphal arch these words:—

Growth of corn in the district before the introduction of sugar warts, 353,000 hectolitres, (a hectolitre is about 2½ bushels;) head of cattle, 700. Since the introduction of sugar warts, corn, 421,000 hectolitres; cattle, 11,500 head.\*

The best test of the success of the cultivation and manufacture of beet root sugar in France, is the contest which the home grown root has carried on against the cane grown sugar of the French colonies. In 1830, the whole production of the beet root sugar was 10,000,000 kilogrammes; in 1840,

\* A friend of the writer who has lately visited a large beet root sugar farm, in the north of France, states that the manufacturers no longer fear competition. The marc, or beet root cake, is subjected to so great a force in expressing the juice, that it comes almost perfectly dry from the press, and will keep for years without spoiling, and is stored in under-ground vaults for future sale, when not wanted for immediate use. It is in great request for the feeding of cattle, horses, &c., and brings so high a price, that the manufacturer is content if the sugar will pay the cost of making, with the profits derived from the sale of the beet root cake.

it had risen to 40 million, (770,000 cwt. c.) but during this period, colonial sugar was heavily taxed, and home grown sugar free of duty. The colonies loudly demanded equal freedom or equal protection. A progressive duty was put on beet root sugar, and in 1847, the two sugars were equally taxed. The revolution of 1848 was followed by the abolition of slavery in the French sugar colonies, and the farmers of Flanders derived no small advantage from the check thus given to their competitors; for the equality of the tax operated unjustly upon the unequal conditions of the rivals. By the law of 1860, the duty on colonial sugar was fixed for some years, somewhat below the rate of duty on home grown sugar, but the beet root sugar grown holds his ground; and there is reason to believe he will continue to prosper, even though the French colonies are fast recovering more than their former productive power, and the French market must be opened ere long like our own to the sugar of the world. In spite of the inferiority of the climate and raw material, the ferocity of the climate and the science of France produced sugar on terms more advantageous to the consumer, than the West India planter with his rude agriculture and scanty means.

*The Valley of the Loire.*—This valley is one of the finest parts of Europe. From Orleans to the sea for a distance of about 100 leagues, a long plain of alluvial soil extends, conquered from the stream by the hand of man, and not infrequently invaded by the stream from which it was conquered. These lands of exuberant fertility have been seized upon, as is always the case in similar instances by the small proprietors; more and more subdivided into narrow allotments, they fetch as much as £160, (500 dollars,) per acre, and present a complete spectacle of garden cultivation. The whole people of small farmers, who dispose of their produce in the towns adjacent to the river, inhabit a string of villages and cottages on the slopes of the valley, and even on the banks of the stream, protected by dams which are as old as Charlemagne. In ordinary times, the Loire drags its idle waters along its sands, or at least, when swollen by rains, respects the dykes which enclose it. Occasionally, however, the river bursts or surmounts the artificial barriers, sweeping away harvests and habitations; but the soil is so productive, and the climate so mild, the small farmers are so persevering, and the markets so good, that no sooner have they retired than the luckless victims set to work again, and the damage is soon effaced. If the plain of the Loire offers this fine range of cultivation, her chalky cliffs are not less covered with vines. The vineyards of the Loire cover an extent of 250,000 acres, nearly equally divided between the two banks. The annual product amounts to 2,000,000 hectolitres, (44 million gallons,) chiefly drunk in the country, though some of it makes excellent vinegar for exportation. Vineyards, as well as plains are infinitely subdivided. The vine dressers hollow out their dwellings and their cellars in the soft chalky rock which grows their vines, and when the year is favourable, and the liquor good, they live happily in these humble earths. A very small

plot of ground, planted with vines, supplies occupation and competency to a whole family.

The old provinces of Maine and Anjou, which may be said to belong to the region of the Loire, though not immediately contiguous to the river, are now superior to Touraine in point of farming, and rank among the most improving departments of France—especially that of La Sarthe, renowned alike for its hemp and its poultry. But the agricultural progress of this district is closely connected with its political history. It borders on the Beauce, and it was the scene of the Vendean wars. In no part of France before the revolution of 1789, were the relations of the nobles and peasantry so friendly. In no part of France, was the revolution so ill received. At the first levy of the conscription, the people rose, together with their lords, in defence of the throne and the altar, and it was only by a war of extermination that their resistance was overcome. Indeed, their spirit remained unbroken by the military triumphs of the empire, and in 1815, the Vendean country gentleman had little change to complain of beyond the sufferings and losses inflicted on himself, and on his dependants by that terrific contest. The weapons which have really changed La Vendée, are not those of war but of peace. During the reign of Louis Philippe, roads were cut through inaccessible districts; the market was opened; agricultural produce has risen incalculably in price; the application of lime dressing to the soil, has enabled the farmer to grow wheat instead of rye; four-course husbandry has made its appearance; water meadows have been introduced with the greatest success in that moist and mild climate, and the Durham breed of cattle has effectually become established in the country. The proprietors of the soil of Maine and Anjou are principally small resident country gentlemen, farming their own land, in conjunction with the peasantry; and M. de Lavergne assured us that if such a thing as a true French country gentleman can be said to exist, it is here we must look for him.

(To be concluded.)

#### Dymond on War.

[The following extracts from Jonathan Dymond's "Inquiry into the Accordancy of War with the Principles of Christianity," have been made in the belief that their insertion in "The Friend" might be seasonable at this time of commotion, when so many seem in danger of swerving from a faithful support of our testimony to the peaceful kingdom of the Messiah.]

When I endeavour to divest myself of the influence of habit, and to contemplate a battle with those emotions which it would excite in the mind of a being who had never before heard of human slaughter, I find that I am impressed only with horror and astonishment; and perhaps of the two emotions astonishment is the greater.

That several thousand persons should meet together, and then deliberately begin to kill one another, appears to the understanding a proceeding so preposterous, so monstrous, that I think a being such as I have supposed, would inevitably conclude that they were mad. Nor, if it were attempted to explain to him some motives to such conduct, do I believe that he would be able to comprehend how any possible circumstances could make it reasonable. The ferocity and prodigious folly of the act would out-balance the weight of every conceivable motive, and he would turn, unsatisfied, away,

There is an advantage in making suppositions such as these; because when the mind has been familiarized to a practice, however monstrous or inhuman, it loses some of its sagacity of moral perception—prodigality becomes honour, and inhumanity becomes spirit. But if the subject is by some circumstance presented to the mind unconnected with any of its previous associations, we see it with a new judgment and new feelings; and wonder, perhaps, that we have not felt so or thought so before. And such occasions it is the part of a wise man to seek! since if they never happen to us, it will often be difficult for us accurately to estimate the qualities of human actions, or to determine whether we approve them from a decision of our judgment, or whether we yield to them only the acquiescence of habit.

It is worthy at least of notice and remembrance, that the only being in the creation of Providence which engages in the wholesale destruction of his own species, is man? that being who alone possesses reason to direct his conduct, who alone is required to love his fellows, and who alone hopes in futurity for repose and peace. All this seems wonderful, and may reasonably humiliate us. The powers which elevate us above the rest of the creation, we have employed in attaining to pre-eminence of outrage and malignity.

It may properly be a subject of wonder, that the arguments which are brought to justify a custom such as war receive so little investigation. It must be a studious ingenuity of mischief, which could devise a practice more calamitous or horrible! and yet it is a practice of which it rarely occurs to us to inquire into the necessity, or to ask whether it cannot be or ought not to be avoided. In one truth, however, all will acquiesce,—that the arguments in favour of such a practice should be unanswerably strong.

Let it not be said that the experience and the practice of other ages have superseded the necessity of inquiry in our own; that there can be no reason to question the lawfulness of that which has been sanctioned by forty centuries; or that he who presumes to question it is amusing himself with schemes of visionary philanthropy. "There is not, it may be," says Lord Clarendon, "a greater obstruction to the investigation of truth, or the improvement of knowledge, than the too frequent appeal, and the too supine resignation of our understanding to antiquity." Whosoever proposes an alteration of existing institutions will meet, from some men, with a sort of instinctive opposition, which appears to be influenced by a process of reasoning, by no considerations of propriety or principles of rectitude, which defends the existing system because it exists, and which would have equally defended its opposite if that had been the oldest. "Nor is it out of modesty that we have this resignation, or that we do, in truth, think those who have gone before us to be wiser than ourselves; we are as proud and as peevish as any of our progenitors; but it is out of laziness; we will rather take their words than take the pains to examine the reason they governed themselves by." To those who urge objections from the authority of ages, it is, indeed, a sufficient answer to say that they apply to every long continued custom. Slave-dealers urged them against the friends of the abolition; Papists urged them against Wickliffe and Luther; and the Athenians probably thought it a good objection to an apostle, that "he seemed to be a setter forth of strange gods."

It is agreed by all sober moralists, that the foundation of our duty is the will of God, and that his will is to be ascertained by the Revelation

which he has made. To Christianity, therefore, we refer in determination of this great question; we admit no other test of truth: and with him who thinks that the decisions of christianity may be superseded by other considerations, we have no concern; we address not our argument to him, but leave him to find some other and better standard, by which to adjust his principles and regulate his conduct. These observations apply to those objectors who loosely say that "wars are necessary;" for supposing the christian religion to prohibit war, it is preposterous, and irreverent also, to justify ourselves in supporting it, because "it is necessary." To talk of a divine law which *must be disobeyed*, implies, indeed, such a confusion of moral principles as well as laxity of them, that neither the philosopher nor the christian are required to notice it. But, perhaps, some of those who say that wars are necessary, do not very accurately inquire what they mean. There are two sorts of necessity—moral and physical; and these, it is probable, some men are accustomed to confound. That there is any physical necessity for war—that people cannot, if they choose, refuse to engage in it, no one will maintain. And a moral necessity to perform an action, consists only in the prospect of a certain degree of evil by refraining from it. If, then, those who say that "wars are necessary" mean that they are physically necessary, we deny it. If they mean that wars avert greater evils than they occasion, we ask for proof. Proof has never yet been given: and even if we thought that we possessed such proof, we should still be referred to the primary question—"What is the will of God?"

It is some satisfaction to be able to give, on a question of this nature, the testimony of some great minds against the lawfulness of war, opposed to those testimonies are to the general prejudice and the general practice of the world. It has been observed by Beccaria, that "it is the fate of great truths, to glow only like a flash of lightning amidst the dark clouds in which error has enveloped the universe; and if our testimonies are few or transient, it matters not, so that their light be the light of truth." There are, indeed, many, who in describing the horrible particulars of a siege or a battle, indulge in some declamations on the horrors of war, such as has been often repeated and often applauded, and as often forgotten. But such declamations are of little value and of little effect: he who reads the next paragraph finds, probably, that he is invited to follow the path to glory and to victory—to share the hero's danger and partake the hero's praise; and he soon discovers that the moralizing parts of his author are the impulse of feelings rather than of principles, and thinks that though it may be very well to write, yet it is better to forget them.

There are, however, testimonies delivered in the calm of reflection, by acute and enlightened men which may reasonably be allowed at least so much weight as to free the present inquiry from the charge of being wild or visionary. Christianity indeed needs no such auxiliaries; but if they induce an examination of her duties, a wise man will not wish them to be disregarded.

"They who defend war," says Erasmus, "must defend the dispositions which lead to war; and these dispositions are absolutely forbidden by the gospel."—Since the time that Jesus Christ said, *put up thy sword into its scabbard, christians ought not to go to war*.—Christ suffered Peter to fall into an error in this matter, on purpose that, when he had put up Peter's sword, it might remain no longer a doubt that war was prohibited, which before that order, had been considered as allowable.—"I am persuaded," says the Bishop of Llandaff, "that

"Astonished at the madness of mankind,"

when the spirit of christianity shall exert its proper influence over the minds of individuals, and especially over the minds of public men in their public capacities, over the minds of men constituting the councils of princes, from whence are the issues of peace and war—when this happy period shall arrive, war will cease throughout the whole Christian world." "War," says the same acute prolate, "has practices and principles peculiar to itself, which but ill quadrate with the rule of moral rectitude, and are quite abhorrent from the benignity of Christianity." The emphatical declaration which I have already quoted for another purpose, is yet more distinct. "The prohibition of war by our Divine Master is plain, literal and undeniable. Dr. Vicesimus Knox speaks in language equally specific:—"Morality and religion forbid war in its motives, conduct and consequences."

(To be continued.)

**Pepper-Growing on the Island of Penang.**—The pepper-vine is cultivated or propagated from slips or cuttings, which are planted with uniform precision in long rows, six or eight feet intervening between each plant. At the same period of these being set, supporters are planted, which are usually cuttings from several species of trees, common alike to the Straits and to India. The Monocoon, which is a hardy plant, is reared from seed. When the pepper-plant is first set, it has to be covered over with the broad leaves of a tree called the Peah, to protect the young plant from too much exposure to the sun, before it has properly taken root. When about four months old, the leaders are cut off, leaving only three or four shoots, which are trained perpendicularly by being first attached by twine to small stakes driven into the earth close by them, and then gently coaxed on to the proper supporters, to which they speedily attach themselves.

So rapid is the growth of this remarkably pungent plant, whose leaves resemble much in size and color the Convolvulus Major, that in the course of twelve months the vines have attained a height of twelve feet, and are covered with blossoms. This is now the proper time for removing the stakes entirely, and for turning the growth of the vines in a downward direction; all the leaves are stripped off the stems, with the exception of a small tuft just at the very top. A pit, twenty inches in diameter, and about the same depth, is then dug close to the roots of the vine, and the stem is then coiled horizontally into this pit, leaving the tuft of leaves to be attached to fresh stakes planted for the purpose. The pit is then filled up, and the plant in that position is left to thrive. All these are requisite precautions, which give ample occupation to many score of hands, which might otherwise, at the season when the pepper-vines require most attention, be forced to remain in compulsory idleness.

Soon after the process above stated, the vines begin to increase in size, owing to the number of roots shooting from the recently interred stem, and it is at this period of the vine's growth that all the pepper-planter's skill and energy is required in training the vine so as to prevent it ascending too rapidly. For this purpose, the top of the vine and some feet below are detached from the supporter, and not permitted to adhere to it, and being dependent to the ground, the plant throws out side-shoots, which it crease in bulk proportionately to the height of the mother stem. Though the blossoms now come to maturity even when the plant has attained its third year, the produce is very insignificant; it afterwards, however, rapidly increases, and a vine is considered to have arrived at maturity when it yields two and a half cetties of pepper. The plants

are said to continue in full vigor for fifteen years, after which period they begin to decline; though, if properly attended to, they have been known to yield up to the thirtieth year.

The quality of the pepper depends much upon the care bestowed in gathering, and also during the drying process. If plucked before fully ripe, it loses in size and weight; and if, on the other hand, permitted to remain until the deep greenish hue of the fruit assures the planter that the proper period for plucking is at hand, then our Chinese informant tells us that a peul of pepper, properly dried on mats, will yield thirty-six cetties. But there are many little *contretemps* which render pepper-planting by no means a speculation void of risk and loss, the fruit being subject to blight, even after being well set, should the season prove unusually hot or dry. On such occasions, nearly one half the produce of a plantation has been known to drop off and be entirely lost, and it is then that the planter may be seen running up to the little hillock in the centre of his plantation, and gazing out anxiously towards the horizon, hoping to espy some cloud not bigger than his hand, which may indicate sooner in the hour of need; for a few hours of sharp rain, indicated by the rising clouds, will remedy the evil.

—English Work.

For "The Friend."

TO THE EDITOR.

**Esteemed Friend,**—Having lately met with the subjoined extract in a religious periodical, headed "The Cultivation of Personal Religion," it appeared to me so applicable to the most of christian professors in this day, not excepting the different sects, who claim the appellation of *Friends*, that I felt there might be a service in transcribing it for your useful journal, if considered suitable. It will be observed at a glance, that the title and some of the phraseology are not in accordance with our general practice, and the terms which are used, in reference to "the first day of the week," and the "Scriptures of Truth," as well as recommending *set times* for prayer, are inconsistent with our views of gospel truths, as well as unscriptural; nevertheless the necessity of what we are wont to term "individual faithfulness," is so clearly held up to view, and the possibility of our being actively engaged in public, religious services (so called), while the vineyards of our own hearts lie barren and uncultivated, the "daily sacrifice" neglected, and the fire on the altar of our hearts suffered to expire, while the "sparks of our own kindling," combined with the prevalence of worldly cares, "are choking the word of life," and rendering it unfruitful, that I thought its insertion might be productive of good.

A. B.

Canada West, First mo. 4th, 1862.

"The Cultivation of Personal Religion."

"This is a subject of vital importance to every person professing to be a follower of the Redeemer. We deem it essential to the very existence of piety in the human heart, that its professor should strive, mightily every day for the mastery over each, mightily every day for the maintenance of a life of besetting sin, and for the maintenance of a life of godliness. No real personal religion can be maintained without this daily struggle. We have been led to pen a few remarks on this subject, from the fear that some who profess and call themselves christians, and who are members of churches, have lost sight of this truth. They seem to think that religion consists only in outward observances, instead of the cultivation of that inner life, which is the motive power of all true action. Personal religion does not consist simply in zeal, knowledge, or an attendance on all the public means of grace.

We can imagine that all these may exist while the inner life is languishing, or indeed there is an entire absence of genuine piety. The apostle Paul, in a few comprehensive words, describes personal religion, thus: "I am crucified with Christ; nevertheless I live; yet not I, but Christ who liveth in me, and the life which I now live in the flesh, I live by the faith of the Son of God, who loved me, and gave himself for me." Again he says, "I follow after, if that I may apprehend that for which also I am apprehended of Christ Jesus." Personal religion is the great mystery of godliness; the life of God in the soul; which life is sustained and carried on by communion with God, and while God is the source of this life, yet it is obvious that it must be guarded, and defended continually against all the assaults and interruptions incident to the present state of being. The failure of all who turn aside from vital godliness, is traced to the non-cultivation of personal religion. It should not be forgotten that christians are in an enemy's country—in a world of dangers, and that they are environed with foes, who have to be manfully resisted, and in the strength of God, overcome. The common business of every day life is a hindrance to the life of God in the soul. The appetites and propensities of corrupt nature are hindrances; and Satan, the grand adversary, stands perpetually in the way. How, then, is it possible to maintain this life without an agonizing struggle? How can the delicate plant of grace flourish without perpetual culture? How can spiritual strength be renewed, but by partaking daily of that meat which the world knoweth not of? We fear some christians are too much engaged in public and active duties, to carry on private and personal ones. For instance some, in addition to the absorbing secular duties of the six days, are engaged the entire sabbath in public exercises with a single hour for reading God's Word, and reflection on their own spiritual state. They live too fast; their whole religious life is one of dissipation. They are engaged in keeping the vineyards of others, but their own they keep not. Far be it from us to discourage the activity of any christian; but we think it possible to be so absorbed in the outer life as to neglect the inner.

"To speak physically—if a man is much engaged in arduous and active bodily labour, he must have stated periods for food, he must take time for repose, and the recruiting of exhausted nature, or disease and death will inevitably follow. So intellectually; if the mind is continually giving out, without having its periods for taking in fresh supplies of knowledge, it will soon become like an exhausted mine. It will contain no more precious metal.

"Pre-eminently it is the case with regard to the soul, and the deep things of God. That christian can only become strong, and permanently continue in well doing, who has his 'parentheses for prayer,' his set time for devotion, his secret hours for meditation, and severe self-examination. If he neglects these, he will do it at the expense of spiritual health.

"In other words, if he omit the cultivation of personal religion, his burning zeal, his words of faith, and labours of love, and all his active duties will prove of little avail, nor can we expect their continuance will be of very protracted duration."

**A Horse Sixty-nine Years Old.**—*Wilkes' Spirit of the Times* gives an account of a small black Galloway, eleven hands high, which attained to the greatest age of any horse of which we have any record. He was a resident of a small village near Haddington, in Scotland. He was foaled in 1720, and at the time of his death he was sixty-nine years

old. A few weeks before his death, he trotted for several hours at the rate of seven or eight miles an hour, and fell well on his oats and hay to the last. This is more than four times the average age of horses, throwing out of the account all that die by accident, or from very hard usage. A horse properly kept and cared for, will last twenty years very frequently, but as they are generally kept, but few ever reach that age.

*The Shoemaker in Spain.*—A minister of the Gospel, who resided for a time at Gibraltar, made several excursions into the Spanish territory for the purpose of distributing a few Bibles and Testaments in that unhappy country, where the power of the apostate Church of Rome is so great, that the poor priest-ridden people dare not read the Bible. At one time he visited the house of a shoemaker, with whom he held very pleasing conversation. He found this poor man of an inquiring mind, greatly dissatisfied with the existing state of things, and yet unable to see any door of hope, or any prospect of remedy for the wrongs and woes of his country. He stated that he and a number of his friends, were in the habit of meeting together every week, and discussing public affairs, when politics were talked over; but they generally left off as they began such discussions seldom proving very profitable.

"Why do you not get the Bible and read that?" said the minister.

"Ah?" replied the shoemaker, "I wish I could get it; but the priests take care we poor Spaniards shall not have the Bible."

"Well now," said the minister, "I know the risk I am running, and that if the priests learn that I am here distributing copies of the Bible, I shall be stilted before I get back to Gibraltar; but I think I can trust you. Would you really like a Bible to read?"

"There is nothing I should like so much," was the reply.

A copy was then given to him, which he received with evident delight, and with many expressions of gratitude. On being asked if his friends who met with him during the week would also like copies, he declared that they would be highly prized and diligently read, and he received several more books for their use. The minister gave him a few parting words of exhortation, told him where he might be found, and after distributing the remainder of his little volumes, reached Gibraltar in safety.

Some weeks after this, the minister sat alone in his room, having told the servant that no one was to be admitted to see him, as he was engaged in study. During the day, however, a Spanish peasant, dressed in his gay holiday attire called at the house and asked to see the minister. He was told that he could not be seen, as he had given orders that he was not to be disturbed.

"Oh, but," said the Spaniard, "I think if you tell him that a man to whom he gave a Bible has come a long distance to see him, he will not deny me."

Struck with the earnestness of the man the servant at length consented to go with a message to his master, and said that a person was at the door who would not be denied. The peasant was therefore shown up into the minister's room.

"Don't you remember me, sir?" was the exclamation of the Spaniard, on perceiving he was not recognized; "don't you remember, sir, calling at the house of a shoemaker a few weeks ago, and leaving him some Bibles?"

"Yes," replied the minister; "but I really did not recognize you again in your smart holiday dress."

The man then began to tell what joy the Bibles

had caused to himself and his friends, and that now, instead of meeting to talk politics, they met to read the Scriptures together, and in that volume of truth they saw the true remedy for the ills that afflicted their country. After the heartfelt expression of many thanks, the shoemaker concluded by saying, "As a mark of my gratitude for your coming at the risk of your own life, to bring me the precious Bible, I have brought you, sir, a pair of shoes, which I hope you will accept."

"Well," said the good minister, "it is very kind of you, but I fear your good intentions may not be of much service, for the shoes will probably not fit me."

"Oh, yes, sir, I think they will, if you will try them."

The trial was made, and the shoes were found an excellent fit; and on the man's being asked how he had guessed the size so accurately, he replied, "I knew, sir, after you left my house you had to pass over some soft clay, so I followed you, and from your footprints I took the size of your foot, which enabled me to make you the shoes, which I hope you will wear as a mark of my gratitude for the Book you gave me."

Surely there is hope for poor Spain, when it is thus that her sons appreciate the Bible, though for centuries deprived of its light and truth.—*From "The Book and its Mission."*

*Australian Statistics.*—The *Melbourne Herald* publishes a comprehensive analysis of the statistics of Victoria. In less than a quarter of a century the population has risen from 170 to 530,000, of whom 335,000 are males, and 195,000 females. The government has sold 3,000,000 acres of land, at an average price of £2, 10s. per acre, and has realized by that sale between £7,000,000 and £8,000,000 sterling, the whole of which large sum has been laid out in endeavours to improve the colony. On the 200,000 acres of town and suburban land, we have fixed property to the value of between £60,000,000 and £70,000,000 sterling, and of the 2,500,000 acres of country lands we have about 1,500,000 acres enclosed, and 300,000 acres under tillage. Our yield of grain last year was in round numbers 4,000,000 bushels, which at 5s. per bushel, would be equal to £1,000,000 sterling, and our other agricultural and horticultural produce would raise up to that £2,500,000 sterling. Over our unsold lands roam 6,000,000 sheep, 700,000 head of horned cattle, 70,000 horses, and sundry other stock, from which the pastoral tenants of the crown, besides enriching themselves, furnish us with exportable and consumable produce—with wool, tallow, hides and skin, for export, and with sheep, cattle and pigs, for slaughter—to the value of between £3,500,000 and £4,000,000 sterling.

These are facts patent to all, and not to be controverted or gainsaid by any. They look like fiction, we must confess, but they are nevertheless truth, and truth unadorned. We leave the foregoing, then, to speak for itself, and proceed to another series of facts, deducible from the same official source. In less than ten years, with a *bona fide* gold mining population never exceeding 60,000 to 80,000 souls, and now believed to be much less, owing to the withdrawal of the people to other pursuits, without a corresponding increase by immigration—we have raised between 22,000,000 and 23,000,000 ounces of gold, valued at between £90,000,000 and £95,000,000 sterling, which has stimulated every branch of trade and industry in the colony, and otherwise tended to enrich it. We began with a gold export of less than £600,000 in 1851, and raised it to more than £10,000,000 in 1852. We dropped it to between £9,000,000 and £10,000,

000 in 1854, and raised it to £11,000,000 and upwards in 1855, and continued at that rate until 1858. We then came down to £9,000,000, or thereabouts, in 1859, and this year it will in all probability not be much less.

Selected.

#### I KNOW NOT WHEN.

I know not when; but this I know,  
That it will surely come to me—  
The day which comes to all below;  
Which every child of earth must see;  
For 'er his spirit none hath power  
To keep it, in that last dread hour.

I know that I shall watch the sun,  
As I have watched him many a day,  
In gold behind the hills go down,  
Gilding with splendor all the way;  
I shall not see him set again—  
Yet this I shall not know 'e'en then.

Some night, I know, the shades will gather,  
The dusky shadows deeper grow,  
The silent stars come out together,  
The last that I shall see below;  
No voice from out that distant sky  
Will warn me that my end is nigh.

Some spring-time I shall mark the trees  
Grow daily greener 'er my head,  
And in the autumn I shall feel  
The dead leaves rustle 'neath my tread,  
Nor know next autumn's winds shall come  
To strew the dry leaves on my tomb.

And there will be a darkened room,  
And they will catch my faintest breath,  
And silence and a gathering gloom  
Will fall from off the wings of Death;  
I shall not hear the muffled tone,  
The silent whisper, "He is gone."

But when this last great change shall come,  
If I bidden not us—and 'tis best;  
If I be ready for my home,  
It matters not how soon I rest;  
Death will be but the end of sorrow—  
Dawn of an endless, heavenly morn.

#### THE SPARK.

As when, amidst the embers cold,  
Some little spark is seen,  
Which, slowly fading, serves to show  
Where light and heat have been;

When all but hopeless seemed the task  
To raise the sinking frame,  
Some gentle breath has stirred the spark,  
And fanned it into flame;

So, when within the human heart  
The spark of sacred fire,  
With lustre dimmed, though ling'ring yet,  
Seems ready to expire;

When Hope is fled, when quenched by Sin,  
No more does warmth enfold  
The heart, where dusky-winged Despair  
Broods o'er the ashes cold.

God in his loving mercy sheds  
His Spirit's quick'ning breath,  
And upward spring the seeds of flame—  
Life reigns where once was death.

Chambers's Jour.

*The Knowledge which is Life Eternal.*—A little of the knowledge of the mystery of the hidden life and power, is of more value, and would do the souls of men more good, than heaps of literal knowledge wherewith the world is so filled. The knowledge of God and Christ in the mystery is no less than life eternal, in them and to them, who are taught in the new covenant, or ministration of the power of the endless life, so to know them.—*Isaac Pennington.*

There may be pride in rags, in a solemn look and lowly carriage.

## Education.

(Continued from page 155.)

Education it is often observed, is an expensive thing. It is so: but the paying for lessons is the smallest part of the cost. If you would go to the price of having your son a worthy man, you must be so yourself: your friends, your servants, your company, must be all of that stamp. Suppose this to be the case, much is done: but there will remain circumstances which perhaps you cannot alter, that will still have their effect.

Do you wish him to love simplicity? Would you be content to lay down your coach, to drop your title? Where is the parent who would do this to educate his son? You carry him to the workshops of artisans, and show him different machines and fabrics to awaken his ingenuity. The necessity of getting his bread would awaken it much more effectually. The single circumstance of having a fortune to get, or a fortune to spend, will operate more strongly upon his mind, not only than your precepts, but even than your example.

You wish your child to be modest and unassuming: you are so, perhaps, yourself—and you pay liberally a preceptor for giving him lessons of humility. You do not perceive, that the very circumstance of having a man of letters and accomplishments retained about his person, for his sole advantage, tends more forcibly to inspire him with an idea of self-consequence, than all the lessons he can give him to repress it. "Why do you not look sad, you rascal!" says the undertaker to his man in the play of "The Funerals." "I give you I know not how much money for looking sad, and the more I give you, the gladder I think you are." So will it be with the wealthy heir. The lectures that are given him on condensation and affability, only prove to him upon how much higher ground he stands than does his attendant; and the very pains that are taken with his moral character will make him proud, by showing him how much he is the object of attention. You cannot help these things.

Your servants, out of respect to you, will bear with his petulance; your company, out of respect to you will forbear to check his impatience. And you yourself, if he is clever, will repeat his observations.

In the exploded doctrine of sympathies, you are directed, if you have cut your finger, to let that alone, and put your plaster upon the knife. This is very bad doctrine, I must confess, in philosophy; but is bad even in morals. Is a man luxurious, self-indulgent? do you not apply your *physic of the soul* to him, but cure his fortune. Is he haughty? cure his rank, his title. Is he vulgar? cure his company. Is he diffident or mean-spirited? cure his poverty, give him consequence—but these prescriptions go far beyond the family recipes of education.

What then is the result? In the first place, that we should contract our ideas of education, and expect no more from it than it is able to perform. It can give instruction. There will always be an essential difference between a human being cultivated and uncultivated. Education can afford proper instructors in the various arts and sciences, and portion out to the best advantage those precious hours of youth which will never return. It can likewise give, in a great degree, personal habits; and even if these should afterward give way under the influence of contrary circumstances, your child will feel the good effects of them, for the latter and the loss will he go into what is wrong.

Let us also be assured that the business of education, properly so called, is not transferable. You may engage masters to instruct your child in this or the other accomplishment, but you must edu-

cate him yourself. You not only ought to do it, but you must do it, whether you intend it or not. As education is a thing necessary for all; for the poor and for the rich, for the illiterate as well as for the learned, Providence has not made it dependent upon systems uncertain, open, and difficult of investigation.

It is not necessary, with Rousseau or Madame Genlis, to devote to the education of one child the talents and the time of a number of grown up men; to surround him with an artificial world; and to counteract by means of the natural tendencies of the situation what is placed in his society. Every one has time to educate his child; the poor man educates him while working in his cottage—the man of business, while employed in his counting-house.

Do we see a father who is diligent in his profession, domestic in his habits, whose house is the resort of well-informed, intelligent people—a mother whose time is usefully filled, whose attention to her duties secures esteem, and whose amiable manners attract affection? Do not be solicitous respectable couple, about the moral education of your offspring, do not be uneasy because you cannot surround them with the apparatus of books and systems; or fancy that you must retire from the world to devote yourself to their improvement. In their world they are brought up much better than they could be under any plan of fictitious education which you could provide for them; they will imbibe affection from your caresses; taste from your conversation; urbanity from the commerce of your society; and mutual love from your example. Do not regret that you are not rich enough to provide tutors and governors to watch his steps with sedulous and scrupulous anxiety, and furnish him with maxims it is morally impossible he should act upon while grown up.

Do not see how seldom this over-culture produces its effects, and how many shining and excellent characters start up every day from the bosom of obscurity with scarcely any care at all!

Are children then to be neglected? surely not; but having given them the instruction and accomplishments which their situation in life requires, let us reject superfluous solicitude, and trust that their characters will form themselves from the spontaneous influence of good examples, and circumstances which impel them to useful action.

But the education of your house, important as it is, is only a part of a more comprehensive system. Providence takes your child where you leave him. Providence continues his education upon a larger scale, and by a process which includes means far more efficacious. Has your son entered the world at eighteen, opinionated, haughty, rash, inclined to dissipate? Do not despair, he may yet be cured of these faults, if it please Heaven. There are remedies which you could not persuade yourself to use, if they were in your power, and which are specific in cases of this kind. How often do we see the presumptuous, giddy youth changed into the wise counsellor, the considerate, steady friend; how often the thoughtless, gay girl into the sober wife, the affectionate mother! Faded beauty, humbled self-consequence, disappointed ambition, loss of fortune—this is the rough physic provided by Providence to meliorate the temper, to correct the offensive petulances of youth, and bring out all the energies of the finished character. Afflictions soften the proud; difficulties push forward the ingenious, successful industry gives consequence and credit, and develops a thousand latent good qualities.

There is no malady of the mind so inveterate, which this education of events is not calculated to cure if life were long enough.

States are educated as individuals—by circum-

stances: the prophet may cry aloud, and spare not; the philosopher may descend on morals; eloquence may exhaust itself in invective against the vices of the age; these voices will certainly follow certain states of poverty or riches, ignorance or high cultivation.

But what these gentle alternatives fail of doing may be accomplished by war, a loss of trade, or any of those great calamities by which it pleases Providence to speak to a nation in such language as *will* be heard. If, as a nation we could be cured of pride, it must be by mortification; if of luxury, by a national bankruptcy, perhaps; if of injustice, or the spirit of domination, by a loss of national consequence.

In comparison of these strong remedies, a fast, or a sermon, are prescriptions of very little efficacy.

ANNA LETITIA BARBAULD.

Selected.

Daniel Wheeler.

When our dear deceased Friend, Daniel Wheeler, was about leaving the harbour of "the Mother Bank," England, upon his perilous voyage to the islands of the Southern Ocean, he addressed a farewell letter to the Meeting for Sufferings in London, from which the following is extracted:—

"And now, whilst my heart is bearing towards the isles afar off, the same constraining love which wrought the willingness to leave all for my gracious Lord's sake and his gospel, extends its binding influence to all my dear brethren and sisters, of every age and of every class, wherever situated, and however circumstanced; desiring in tender and affectionate solicitude, that they may be found steadfastly following the footsteps of those honourable and worthy predecessors in the same religious profession with ourselves, who have long since rested from their labours, and whose memorial is on high; who bore the burden and heat of a day of deep suffering, in the faithful discharge of their duty, for the support of those principles in their original purity and brightness, which have been transmitted to us. If any should feel sensible of having fallen short in this important work, let me in tenderest love encourage such to be willing to humble themselves under the mighty hand of God, even to the state of little children; and to turn inward to the pure, unflattering witness, which cannot deceive nor be deceived; to be willing to enter into a diligent and heartfelt search, and patiently and impartially examine how far those indispensable conditions are submitted to on their part, without which none can be followers of the meek and lowly Jesus. Where is that self-denial and the daily cross He first enjoined? Are we denying ourselves those gratifications of time and sense, which cherish and keep alive in us the evil propensities of fallen nature, that separate man from his Maker, and like the little foxes which spoil the tender vines, designed in richest mercy to bud, blossom, and bring forth fruit, lastingly to remain to the praise and glory of the great Husbandman? Without faithfulness there will be no fruitfulness. It is not giving up or forsaking this or that little thing, to part with which is little or no sacrifice or privation, that will suffice; a full surrender of the whole will in all things, must be made to Him, whose sovereign right it is to rule and reign in our hearts. Let none plead for disobedience in these little things, on the ground of their being such; for if such they really are, they are the more easily dispensed with, and not worth retaining; and a tenacity in wishing to preserve them, assuredly indicates, that they have more place in our affections than perhaps we are aware of: 'tho' that loveth father or mother more than

me, is not worthy of me; and he that loveth son or daughter more than me, is not worthy of me; and he that taketh not his cross, and followeth after me, is not worthy of me."

**Workshops on the Farm.**—Much as has been written on this subject, there is room for more. Indeed, it seems that much more will have to be written before farmers will appreciate this important appendage to the farm. A shop fitted up, ten by twelve, (larger would be better,) well lighted, and containing a bench furnished with a vice together with a collection of carpenter's tools' some such as follows—five augers, four chisels, three saws, three planes, a square, tri-square, hammers, drawing-knife, block, and bits, a scratch-wire, file, mallet, compass, &c., with places for every thing, is about the kind of shop and tools for the farm. A shop of the above description, where the farmer and his sons can spend their rainy days, is almost indispensable on every well regulated farm. There are rainy days enough every year for the farmer to keep his premises in good repair without employing a carpenter, except for the large and important jobs, provided he has a shop with proper and sufficient tools, by applying them at the right time. It is too often the case that the carpenter's tools are by far too scarce on the farm; a hammer, an auger or two, and a saw, constituting all the carpenter's tools on the farm. And it is nearly always the case that the general appearance about the house and barn indicate this, as, for example, gates of their hinges, or broken down, boards off the barn or fences, and a general slooped appearance all over the farm. There is another fact concerning farmers of this class, and that is that the number and kind of farming implements generally correspond with their carpenter's tools; consequently, they are generally classed among these called poor farmers. On the other hand, a farmer who has his sons growing up about him, if he has a shop he need never be at a loss to find employment for them on rainy days. A hundred little jobs are constantly waiting to be done, and besides furnishing employment, (which is a great deal,) and giving the place a neat and tidy aspect by keeping things in repair, his sons are receiving invaluable lessons, which will be of lasting importance to them. A boy brought up to use the bench and tools becomes, at the age of sixteen, not a carpenter, or at least has acquired sufficient skill to perform all the rough carpenter's work on a farm. This has been a branch of rural economy much neglected by our farmers; but I am glad to see that farmers are taking a new interest in this important feature of the farm, and the heathenish practice of converting the kitchen into a workshop is now nearly abolished.—*Country Gentleman.*

**The Conduct of the first Followers of our blessed Lord.**—If they did not run away from suffering, much less did they oppose it, and make tumults and parties to defend themselves; no, they were led as lambs to the slaughter, and as sheep before the shearers are dumb, so opened not their mouths, but committed their cause to Him who judges righteously, and said, vengeance is mine, and I will repay it.—*Cave's Primitive Christianity.*

**What "Rip-Raps" Means.**—Many persons have, since the war begun, made inquiry as to the origin of the term "Rip-Raps." For the benefit of the uninitiated, we give the following information. In engineering, a "Rip-Rap" is a foundation obtained by throwing stones together in a heap, without order, in deep water, or on soft bot-

tom. The battery on the channel between Fortress Monroe and Sewell's Point is constructed on such artificial foundation, and therefore styled the "Rip-Raps." The fortification was begun about twenty years ago. Loose blocks of granite were piled up to a height of twenty or thirty feet, and permitted to remain for years, for the purpose of settling the foundation. The blocks were taken down to the water line a year ago, and nothing more has been done to the fortification since.

**Beware of the Knowledge that Puffeth up.**—What shall I then say to you, who are lovers of learning and admirers of knowledge? Was not I also a lover and admirer of it, who also sought after it according to my age and capacity? But it pleased God in his unutterable love, early to withstand my vain endeavors, while I was yet but eighteen years of age; and made me seriously to consider, (which I wish also may befall others,) that without holiness no man can see God, and that the fear of the Lord is the beginning of wisdom, and to depart from iniquity a good understanding; and how much knowledge puffeth up, and leadeth away from that inward quietness, stillness, and humility of mind, where the Lord appears and his heavenly wisdom is revealed. If ye consider these things, then will ye say with me, that all this learning, wisdom and knowledge, gathered in this fallen nature, is but as dross and dung in comparison of the cross of Christ; especially being destitute of that power, life, and virtue, which I perceived these excellent (though despised, because illiterate) witnesses of God to be filled with. And therefore, seeing that in and among them I, with many others, have found the heavenly food, that gives contentment, let my soul seek after this learning, and wait for it forever.—*Robert Barclay.*

**The Horse's Petition.**—In the days of John, King of Atri, in an ancient city of Abruzzo, there was a bell put up, which any one that had received any injury went and rang, and the king assembled the wise men chosen for the purpose, that justice might be done. It happened that after the bell had been up a long time, the rope was worn out, and a piece of wild vine was made use of to lengthen it. A knight of Atri had a noble charger which was become unserviceable through age, so that to avoid the expense of feeding him, he turned him loose upon the common: The horse, driven by hunger, raised his mouth to the vine to munch it, by which the bell was sounded. The judges assembled to consider the petition of the horse, which appeared to demand justice. They declared that *the knight whom he had served in his youth should feed him in his old age*—a sentence which the knight was obliged to faithfully perform.

If, in our day, all the supernumerary animals, coupled by some such means, make known the ill-treatment of their masters, there would be no end to the "horse-trials" held.

**Let the Ancient Staudard should be Lowered.**—It is well there are a few left, who are jealous lest the ancient staudard should be lowered by unskillful meddlers in things too high for them. Oh! how tried my poor mind is, under a sense of a want amongst us of true discernment; and even in my very secluded allotment here, I think my inward eyes see a covering in our society that is prohibited in the truth; a mixture as surely disapproved in the sight of the Great Head of the Church, as ever the forbidden lincey-woolsey garment was of old; and which must one day be taken off, for the all-scrutinizing eye will not wink therat.—*Sarah [Lynnes] Grubb.*

**Lucifer Matches.**—The manufacture of these trifling articles is now carried on in England to an enormous extent. At one large saw-mill in London may frequently be seen six or eight piles of yellow pine, each as large as a six-roomed house, and all intended to be cut into lucifer splints. The deals are cut by circular saws, revolving with great velocity, into pieces three or four inches long; and these pieces, or blocks, are cut into lucifer splints by a machine in which there are about fifty sharp knives or cutters, fixed in a row. Five blocks are cut at once; and the action is so inconceivably rapid, that there are one hundred and twenty movements of the cutter in a minute, and two hundred and fifty splints severed and shaped at each cut, so that there are 30,000 cut in a minute, or 1,800,000 in an hour. Three of these machines, working ten hours a day each, would therefore produce 54,000,000 per day. The lucifers cut and shaped weekly at this one establishment, if placed end to end, would reach from England to Australia.

**A Good Confession.**—I, too, have known what the enjoyments and advantages of this life are, and what the more refined pleasures which learning and intellectual power can bestow, and, with all the experience which more than threescore years can give, I now, on the eve of my departure, declare to you (and earnestly pray that you may hereafter live and act on the conviction), that health is a great blessing—a competence obtained by honorable industry, a great blessing—and a great blessing it is to have kind, faithful, and loving friends and relatives; but that the greatest of all blessings, as it is the most ennobling of all privileges, is to be indeed a christian.—*S. T. Coleridge, to his God-child.*

**Substitute for Leather.**—The London Advertiser says:—"Not the least remarkable feature of the present day is the almost universal application of a new discovery, intended, perhaps, to supply a want in one particular branch of industry. We are not, therefore, surprised to learn that—Szerelemay has adapted his process of indurating stone to other substances, and as an instance of this in the Houses of Parliament alone, where its first trial took place, it is used also to prevent rust. Wood, too, is subject to the "Zopissa" process, and last year it was found to act wonderfully on calico, cloth, molaskin, &c., rendering them water-proof, and capable of being worked up into most wonderful imitations of the varieties of dressed leather. This last application has recently been patented, and a company is now being formed for the manufacture of boots and shoes, of which the upper leather is to be made of this new material. A great reduction in the price of boots and shoes may be expected."

**The way Apostasy creeps in.**—The great apostasy came not upon the Christian world all at once, but by several degrees, one thing making way for another; until that thick and gross veil came to be overspread, wherewith the nations were so blindly covered from the 7th or 8th until the 16th century. Even as the darkness of the night comes not upon the outward creation all at once, but by degrees, according as the sun declines in each horizon.—*Robert Barclay.*

Man's carnal heart would rather pluck up the ancient laud-marks of God's truth than not make the way of faith and obedience broader. Let us be careful to take just ways to compass just things, that they may last in their benefits to us.

## The Eruption of Vesuvius.

The Naples correspondent of the London Times describes a visit he paid to Torre del Greco on the 12th. "The place has," he says, "become what Pompeii was after the earthquake; two and twenty thousand persons had been driven from their dwellings in a night, while all the signs of recent life and of hurried escape met me at every glance.

"The train stopped on the Naples side of the city," for," said the inspector, "there are several clefts in the road, and the vibration of the carriages might bring down more houses. So, dismounting, we walked along the rail, through the Strada Marina, every house in which had fissures from top to bottom, and, before ascending, went down to the sea, which, at a few feet from the beach, was boiling furiously. Fortunately, I was accompanied by the rector of the city, who pointed out in detail what was most remarkable. The sea has retired," he said, "full 20 palms, and we consider this as a bad symptom, and an indication of yet greater disasters. These huge rocks were covered on Sunday last, and now they are exposed, and are cleft to the bottom, as if by some mighty mechanical power." They are all composed of hard flint-like lava, which flowed down in 1794, overwhelming the father of the present city.

"Through the subterranean openings which had been made by the earthquake the water from the mountain was pouring into the sea, and though the temperature was not much increased, it had an acid flavour. Close by, we went into a ruined house, to examine a well which had been cleft by the earthquake, and through which the springs were pouring down with much violence, as the ear, not the eye, told us. Torre del Greco is terraced on the incline of the mountain, and you enter one parallel street from another by a series of steps. Other streets run at right angles to these, and lead from the sea up to the higher parts of Vesuvius. Let us ascend the Strada Ripa, which had a large fissure throughout, and turning off to the left pass down the Strada Fontana. It is so called from the fountain which is there, and which has now risen several feet; at one extremity of it the water was in a state of boiling agitation, not I think, from the effect of heat so much as from the springs which had opened beneath. I tasted this water, which was perfectly flavourless, like boiled water; but there was nothing more decided in its character. Every house in this street was in a ruined state; workmen were knocking holes in the facades at the top of some of them, in which to place the ends of poles that were to be their props; others had fallen in a mass of debris, and several were cut down so finely that sections of them remained, exhibiting the interior. Thus I saw, tottering on the extremity, a bed, neatly folded down, and which had evidently not been slept in; the chairs were ranged round the side of the room that had been saved, and a grilliron, tomatoes, kitchen utensils of all kinds, hung against the walls of this section of the second floor of the ruined building. What an escape for the inhabitants! I retraced my steps, and entered another terrace, called the Strada Santo Croce. All the houses here presented a similar appearance. We walked in the middle of the street, for they could tell but that one of the cripples might fall upon us. Right and left were cross streets in the same condition, and in them several houses had fallen a mass of rubbish. I stopped before one large house in particular, the shell of which was remaining intact, while the interior had fallen in, and the same mason work projected through the open door. Just outside, the street had been thrown up by the volcanic action, and a crater was formed ten palms in diameter. I stood on the

edge and looked down, and saw the geological formation was all of lava, the old lava, of 1794, split asunder by a mysterious and irresistible power, and the actual city was built on the city of the dead. Nine times has Torre del Greco been destroyed, and yet, with a persistence which appears like folly, the inhabitants have returned, and rebuilt, and have been swallowed up."

The Official Journal of Naples publishes the latest report of M. Palmieri, director of the observatory of that city, containing an account of the decline of the present eruption up to the 17th. He states that, although Mount Vesuvius has nearly subsided into its usual quiet state, yet a quantity of carbonic acid is still evolved from the soil of Terra del Greco, leading to the belief that all the crannies opened there communicate with a vast subterranean receptacle of that gas, extending far under the sea, where numerous bubbles are seen to rise, and the death of a large number of fish has been marked in consequence. This time the eruption had not been announced by the disappearance of water from the wells, but, on the contrary, by the opening new springs strongly acidulated with carbonic acid, which has also tainted the water of several wells, which, at the same time has risen to a higher level in them. But the most singular phenomenon mentioned by M. Palmieri is, that the soil has risen nine-nights of a metre above the level of the sea, and since this rising has taken place above the old lava of 1794, the latter has been broken and cracked in various directions, which has caused the fall of many edifices built upon it. The true cause of the reelevation of the sea, so often mentioned by authors, and not credited, as no cause could be assigned for it, is now fully explained; it is not the sea that recedes, but the soil that rises. "It now remains to be seen," says M. Palmieri, "whether this rising will go down again; and I would, therefore, recommend the land owners of Torre del Greco not to set about rebuilding their houses just yet." The craters continue to emit sulphurous hydrochloric acid, and also a certain quantity of sulphuretted hydrogen. Among the sublimations may be mentioned a large amount of sulphur, the usual chlorides of iron and a little specular iron ore.

The Times' correspondent, writing from Naples on the 21st, says:—"The mountain has been in a state of greater or less agitation all the week; but on Tuesday we had another eruption, equal in magnificence to any I have yet witnessed. It was beginning when I departed for it increased in power, and the same wonderful and beautiful effects which I have already described, were again observable. At every shot that was fired by the mountain there rose a cloud of ashes in the form of a pine tree, which fled off to the south as another shot was fired, and another cloud arose. As the heavy-laden clouds escaped beyond the power which had expelled them, and I could see at intervals showers, nay, storms, of ashes falling like avalanches on land and sea, and still the black, gorgeous masses rolled on towards Capri, obscuring the coast which lies opposite to Naples. Thunder and lightning, or the roaring of Vesuvius, and electric lights, were frequent incidents in this awful scene; the latter, shot up from the mouth of the crater to the summit of the dark cone, played about its evolutions, and revolved, as it were, in the license of freedom—the daylight could not obscure its brilliancy. Towards sunset we marked that effect of colour which is only to be seen in southern latitudes, for then the mass of dark cloud which hung over Vesuvius, and the entire bay was lit up with the most delicate roseate tints. Then came on gray eve and darker

night, rendered still more so by the electric flashes which continued to dance about Vesuvius. On the next morning I went down to Torre again. Alas! it is a city on crutches; many cripples have fallen, and many are falling; Professor Palmieri, the great Vesuvian authority, confirms the report of the elevation of the soil, and hopes that the proprietors will not rebuild until the depression, which may be expected, has taken place."

Yet with a fatuity which appears like madness, the people are with difficulty held back from returning to their perilous dwellings. It is the fact that Gen. Della Marmora has been compelled to station soldiers there to prevent such folly. From all I can gather, the mountain was split from top to bottom, the fissure reaching far into the sea. In a few words, I will show this. There are eleven craters above Torre del Greco, all emitting sulphurous vapours, and the largest is from 70 to 80 feet deep and 100 feet wide. From this point on the 8th inst., after heavy rumblings, and heaving of the surface, the ground was split open, and a fiery fissure was made allude to the outskirts of the city, through which the same unseem power passed, opening the streets, and laying bare some parts of the former buried town, and then running into the sea. All this is evident to the eye. You see the fissures in all directions, and walk daintily at times lest you fall in, or lest some rickety building may come down.

Yesterday the Exmouth, which went out to try its Armstrong's, returned by Torre del Greco, and made the fire of a whirlpool, now formed, which must be about 300 feet in diameter. It was boiling violently, and emitted a strong sulphurous odor. A boat, 30 feet in length, was let down and sent into the centre of the whirlpool, when it was turned rapidly round by the volcanic force beneath. The sounding gave 23 fathoms of water, and the plummet brought up sand and sulphur. From a part of the circumference a tail, so to call it, about 60 feet in width, runs away in the direction of Sorrente, and is of a beautiful light-green colour. All the water here was tepid, had a strong sulphurous smell, and many fish have been destroyed. The precise elevation of the well on which Torre stands is 1-1/2 metre, and I may observe that the gases which are emitted on land are stronger than those at sea, so much so that a man was killed on Wednesday, and several of my friends nearly fainted from pausing near them. It is unnecessary to say that the principal element developed is carbonic acid gas."

*Our Christian Pedigree.*—There is a pedigree, namely, the Christian, which is noble indeed, and is worthy of our most diligent search and earnest inquiry. To be the children of God, and co-heirs with Christ, to have our robes washed in the blood of the Lamb, and to be made kings and priests unto God; and to know this ourselves, by the testimony of the Holy Spirit in our hearts, whereby we can cry, Abba, Father; this, this is far above all in this sublimary world! O let us in the piece of divine and spiritual heraldry be our main care and concern; omitting no opportunity, under those blessed means that are so plentifully afforded us of making our calling and election sure.—R. Claridge.

*Peeling Potatoes.*—The most farinaeous part of the potatoe is found immediately under the skin, so that in preparing potatoes for the table, it is necessary to be careful to cut off as thin a peel as possible.

It has been computed that the whole number of copies of the Scriptures in existence in the world before the present century, did not exceed four

millions. There is one society, the British and Foreign Bible Society, of which the annual issue for 1831, was 470,929 Bibles and Testaments, and in the year 1861, 1,917,997 copies, or an increase of 307 per cent. The aggregate issue of Bibles from Great Britain every year is now 4,000,000, or as many as existed in the world before the present century.

## THE FRIEND.

FIRST MONTH 25, 1862.

The selection from A. L. Barbauld on Education, which is concluded in this number, forcibly urges the power of example and the necessary effect of association with both persons and things. The true character of education, as embracing every thing which draws out and moulds the disposition and moral tone, as well as the intellectual faculties of the child, is properly insisted on; but there is no allusion to the restraining and transforming power of Divine Grace in the heart, and the duty incumbent on parents to train their offspring in the habit of feeling for this, and striving to know their will and propensities to be brought under its effectual working, so that whatever the circumstances in which they may be placed, they may resort to it as a counsellor and guide, and as administering ability to them to walk in the safe path of self-denial. This combined with the others, is the only true mode of rightly educating children, and where parents, by their own lives and conduct, show forth its excellency, their tender charge are much less likely to stray from the way in which they should go, than where their education is almost altogether conducted by others, however, adapted such may be to impart literary or scientific knowledge.

### SUMMARY OF EVENTS.

**UNITED STATES.—Congress.**—The House of Representatives has passed a bill abolishing absolutely the franking privilege hitherto exercised by members of Congress. The bill passed by a vote of 107 to 42. The House has also passed a bill for the suppression of the abominable traffic in coolies. The resolution, as passed by the house, appropriates nearly six millions of dollars for the construction and repair of forts, at various places on the sea coast and the line of the Northern lakes. Both houses have passed a resolution by nearly unanimous votes, declaring the purpose of Congress to raise at least \$25,000,000 by taxation, in a large issue of the revenue from duties on imports. The nomination of Edward M. Stanton, as Secretary of War, was confirmed by the Senate, with a vote approaching unanimity. That of Simon Cameron, as Minister to Russia, met with more opposition, but was confirmed by a vote of 24 to 12. The Secretary has also been confirmed. A bill, introduced last week, enacts that all property belonging to those who shall be found in arms against the United States, shall be forfeited, and that every insurgent shall forfeit all claims to the labour of persons held to service, and such persons shall be at once declared free. Any one claiming to be entitled to such service, must not only establish his title, but also that he has been loyal during the existing rebellion. The bill provides that the President shall make provision for the transportation of the freed slaves to some tropical country, and the settlement of such as may be willing to emigrate.

**The National Finances.**—It is stated as the result of the various conferences held in Washington by the Secretary of the Treasury, with the representatives of the great moneyed interests from the Northern cities, that the Secretary has abandoned the idea of a large issue of demand notes to be circulated as currency, and will, in lieu thereof, ask Congress to authorize the issue of \$250,000,000 in treasury notes, bearing 3.65 per cent. interest, payable one year after date, in denominations of five dollars and upwards, for the term of three years, and which are again convertible into a six per cent. stock, payable in twenty years. The banks agree to receive and pay out the United States notes, and to sustain, in all proper ways, their credit.

**The War.**—The amount of the government contracts

for small arms, to be delivered six months hence, reaches thirty-seven millions of dollars, and the aggregate of the army bill about to be reported to the house is five hundred millions of dollars. A large portion of the small arms is being imported from Europe. A formidable expedition has just sailed from the Chesapeake, under the command of Gen. Burdette. Its destination was not known with certainty, though various circumstances indicate the coast of North Carolina and the towns on Pamlico and Albemarle Sounds as the points of attack.

Accounts from Norfolk state that much alarm prevailed in that city from the fact that an attack upon it could be made by the Federal forces at Fortress Mounroe. No material change has taken place for a long time in the positions of the two great hostile armies near Washington. The rebels are understood to have no fewer than twenty-six well constructed forts in defence of the city, and the "Manassas Junction." The movement of the great Western expedition progresses slowly southward. Several additional columns of Northern troops have entered Kentucky, and at the latest dates Gen. Buell's advance was but a few miles from Bowling Green. The dispersion of Humphrey Marshall's force in Eastern Kentucky, was not effected without some bloodshed, about one hundred men being killed and wounded on both sides; the rebels were the principal sufferers. On the 19th inst., a sanguinary engagement took place at Somerset, Pulaski county, Ky. The rebels were defeated by Gen. Zollicoffer, and the Federal forces of Gen. Schoepf and Gen. Thomas. The despatches state that the rebels suffered a decisive defeat. Gen. Zollicoffer was killed, and their army routed with the loss of its cannon and supplies. A large number were killed and wounded on both sides. In Missouri, a detachment of Federal troops made a descent upon Lexington, and captured a large amount of rebel supplies. About sixty rebel soldiers were taken prisoners. A rebel force of 900 men at Silver Creek, Howard county, was attacked and routed by the Federal troops, and 100 men killed, 200 wounded, and 28 prisoners; that of the Federal troops, 6 killed and 19 wounded. The rebels lost 160 horses, their wagons, tents, ammunition, &c. Gen. Price's army at Springfield is estimated at 12,000 men.

**Southern Items.**—So far about 15,000 southern prisoners on the Federal side have been exchanged. The system of exchanges commenced by the government, is fully reciprocated by the rebel authorities. The British steamer *Rinaldo* having on board Mason and Slidell, arrived at Bermuda on the 9th, and sailed for St. Thomas on the 10th. It is reported that the British Commissioners would take passage for England.

The Santa Fe mail of Twelfth month 20th states that 2000 Texans were moving up the Rio Grande, for the purpose of attacking Fort Craig, and the same number landed at Fort Union. The latter fort was well prepared to receive an attack, but it was supposed Fort Craig would be taken by the rebels. The Legislature of Virginia (at Richmond) has adopted a resolution appropriating so much of the public debt of the State and other securities held by the resident citizens of the United States as may be necessary to indemnify the citizens of Virginia, who are loyal to the State for losses sustained by them in consequence of any confiscation act of Congress, or any other act growing out of the war. It is stated that John C. Breckenridge was recently at the residence of Gen. Grant, and that he had sailed from Halifax next day, having been in error. A considerable quantity of cotton and sugar have recently been sent in wagons through Kentucky to the Ohio river, for the north.

**Washington.**—Small-pox prevails in this city to an extent which is alarming. The army has not yet suffered much from the disease.

**New York.**—Mortality last week, 413. The New York Times presents the following summary of the foreign commerce of New York for the year ending Twelfth mo. 1861:

1861—Foreign specie at New York	\$37,068,000	Less re-exported	4,326,000
Excess of specie imported	32,742,000	Foreign goods imported	1,852,000
Foreign goods imported	\$125,688,000	Foreign re-exported	22,407,000
Foreign re-exported	7,309,000	For this market	\$118,379,000
Domestic produce exported	131,256,000	Domestic produce imported	95,548,000
Gold from California	21,515,000	Gold from California	35,495,000
Philadelphia.—Mortality last week, 274.			

**The Slave Trade.**—The barque *Lyra*, of New York, with 825 slaves on board, has been captured off the coast of Africa by a British cruiser.

**The Pirate Sumter** was at Cadix, Spain, at the latest advices having taken and burnt three vessels on her voyage across the Atlantic. She spoke several other U. S. vessels, without attempting to molest them. The New York Commercial states on the authority of a private source, that the pirate Sumter has been sunk by a U. S. gun-boat near Cadiz.

**The Domestic Slave Trade.**—The Louisville Democrat says that the tendency of negroes, southward from Missouri and Virginia, was never as rapid as now, and that they involuntarily emigrated from the States of Missouri, Arkansas, and their right into the free States, will soon relieve the State of the greater portion of them. The slave markets in Virginia are largely supplied; the sale of negroes, usual at the close of the year, have, it is stated, been nearly twice as large as in preceding years. **Illinois.**—At the last meeting of the Illinois Agricultural Society at Springfield, J. H. Smith, of Quincy, exhibited a ton of sugar made by himself, from sorghum cane, at an estimated cost of five cents per pound.

**The Flood in California.**—The late disastrous flood in this State was attended with great loss of life in some places. Nearly one thousand Chinamen were washed off from Long Bar and vicinity on the Yula, and drowned. They had remained in their cabins until escape was impossible.

**Spain.**—The *Yera Cruz* dates to the 1st inst. The Spanish army were in undisputed possession of the city and neighbouring country, and the people appeared to be satisfied with the rule of the Spaniards.

**Great Britain.**—Liverpool dates to the 5th inst. The steamers John Bell, the Hope and Sarah Stone, were all loading cotton at Liverpool, for the New York market at the time the war feeling was noticeably attended with a rise in the public funds. Consols showed great buoyancy, and had advanced about a half per cent. The London Herald says, "It behoves both England and France to consider with care, as they have not arrived for several years, the Vienna Conference."

The Liverpool cotton market was active at advanced rates. Sales of the preceding four days, 80,000 bales, including 10,000 for re-shipment to the United States. Breadstuffs dull and lower. Flour, 29s. a 35s.; red wheat, 11s. 6d. a 12s. 6d.; white, 13s. a 15s. 6d. per 100 lbs.

**France.**—The Emperor, on New Year's day, made an address to the diplomatic corps, and received as usual the various state bodies. In response to an address from the Senate, he said he considered the Senate to be a permanent part of the Constitution. To the clergy he was assured that they might count on his protection and lively sympathy, telling them that they knew how to render to Cesar the things which are Cesar's, and to God the things that are God's.

**Russia.**—An imperial decree has been issued in consequence of the recent disturbances, sanctioning the closing of the University at St. Petersburg, and ordering the dismissal of the professors and students.

**Sweden.**—It is said that the King of Sweden is about to present a project of electoral reform to the National Diet at its next session. The King is known to favour a liberal extension of the franchise, but a stubborn resistance on the part of the nobility and higher clergy is expected.

### RECEIPTS.

Received from Henry Knowles, agt., N. Y., for Isaac Peckham, \$5, to 27, 31, and for David Peckham, \$2, vol. 25; from John E. Sheppard, N. J., \$2, vol. 34; from Edward Y. Cope, Pa., \$2, vol. 35, and from Nathan S. Yarnall, Pa., \$1, to 27, vol. 35.

DIED, at his father's residence in Belmont Co., Ohio, on the 19th of Twelfth month, 1861, after a few days illness, Samuel Lewis, son of G. A. and Lucretia Lewis, the eighteenth year of his age; and on the 22d of the same month, his mother, LUCRETIA LEWIS, in the fifty-fourth year of her age; both esteemed members of Plainfield Monthly and Parularic Meeting.

Printed and Published by John G. Yarnall, N. Yarnall, Middlebury, Delaware Co., Pa., on the 30th of Twelfth month, 1861, JAMES YARNALL, in the seventy-third year of his age.

PUBLISHED BY  
WILEY & M'ELROY, PRINTERS,  
Lodge street, opposite the Pennsylvania Bank.

# THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XXXV.

SEVENTH-DAY, SECOND MONTH 1, 1862.

NO. 22.

PUBLISHED WEEKLY.

Price Two Dollars per annum, payable in advance.

Subscriptions and Payments received by

JOHN RICHARDSON,

AT NO. 116 NORTH FOURTH STREET, UP STAIRS,

PHILADELPHIA.

Postage to any part of Pennsylvania, for three months, if paid in advance, three and a-quarter cents; to any part of the United States, for three months, if paid in advance, six and a-half cents.

For "The Friend."

The Agriculture of France.

(Continued from page 162.)

**Southern France.**—We have been in French Flanders the combination of the careful tillage of the low countries; on the eastern frontier, the Vosges, the Jura and the Alps remind us of the magnificent pastures of Switzerland, and the industrious daisemen of the black forest; to the north in Normandy, we find a reflexion of the southern and midland counties of England, large dairy farms, a fine breed of horses, and a peasantry still retaining the shrewdness and strength of the northern descent; further to the west, the Celtic population of Brittany, inhabiting a granite-bound coast, which owes whatever fertility it possesses to the mild breezes of the ocean, rears immense herds of cattle, compensating in some degree for the imperfect tillage of the soil. But when we reach the south-western and south-eastern regions in a warmer latitude, the value and variety of the products of the soil become far greater.

Saintonge and Angoumois have been for centuries the seat of the great brandy distilleries, which, in spite of imitations, give Cognac a monopoly in the world. In good years the brandies produced from these districts, are worth three millions sterling, and the greater part of them are exported. In these climates every kind of vegetation contributes in different ways to the agricultural wealth of the country—the chestnut produces an abundant esculent crop—the walnut tree is so valuable that one-third of the oil made in France, is prepared from it, and rivals the produce of the olive groves, whose gray foliage fringes the bare and burning rocks of Provence. In the valley of the Garonne, the plum-trees alone produce a crop of prodigious amount, known all over the world, as the French plums or prunes of our desserts; and indeed, throughout the south of France, and even in the mountains of Auvergne, the preparation of dried fruits is an important branch of culture and of trade. The mulberry tree and the vine cover the plains of Languedoc, and as we approach the ancient seats of Roman power at Arles, and of papal dominion at Avignon, the agriculture, as well as the majestic ruins of those ages, remind us that we are on the confines of Italy. Everything here becomes Italian: the climate, the crops, the associations of the past, the manners of the people, and almost their language. Near us is Nismis, that

Rome of the Gauls, whose monuments are better preserved than those of Rome herself. Before us is Arles inhabited by Constantine, and once destined, it is said to become the capital of his empire. An immense arena, ancient theatres, magnificent aqueducts, attest on every side the power of Rome. If, from antiquity we pass to the middle ages, we encounter at Avignon, the greatest institution of Italy and the world, the papacy; and in earlier times still, that court of Provence which was the harbinger of Italian taste and the home of troubadours who preceded Dante and Petrarch.

The greater part of the department of Vaucluse was papal, down to the revolution. Its agricultural prosperity, which is second to scarcely any part of France, is due to one word—irrigation. The crops of Lombardy are justly lauded; the county of Avignon is not less prolific and for the same reason. The pontifical government early introduced the Italian method of distributing water. One of the streams which serve to fertilize the plain in its myriad channels, is the Sorgia, springing from the fountain of Vaucluse, not more celebrated in poetry than for the abundance and utility of its inexhaustible waters. The olive tree begins to appear at Montelimar, and increases as we proceed towards the south. But the mulberry becomes more rare. Indeed, although many attempts have been made to cultivate the mulberry for the silk worm in many parts of Southern France, the production is not entirely successful, except in the Cevennes, more especially in the districts of Alais and Uzès in the department of the Gard, and of Argenteire and Privas in Ardèche. The mulberry tree, to produce an abundance of nutritive leaves at the proper season, requires a cool soil under a brilliant sky; the silk worm requires throughout the months of May and June warmth and pure air. Both the tree and the caterpillar require an infinite amount of delicate precautions, which are only to be obtained from a population long trained to this peculiar operation. But the value of the produce, and the value of the land combining these conditions, is enormous. Plantations of mulberry trees have been sold for £600, (3000 dollars), an acre, and the silk crop of France, down to 1859, had reached the value of four millions sterling. In 1854, one of those mysterious diseases which attack the very sources of production, began to affect the silk worm. The loss has been at least three quarters of the crop in France, and as yet no effectual discovery has been made of the cause or the remedy of the evil. The whole territory of France does not exhibit in an equal degree those signs of agricultural improvement, and the high table lands or mountain ranges of the central departments frequently crossed by travelers on their road to Switzerland and Italy, afford the least favourable aspect of what may, in more favoured regions, be called "la belle France." Yet even here something has been done to reclaim the desolate heaths, and to convert the sandy tracts into roads. Fifty years ago people used to say that the land in la Salogne was worth three lives an acre, if there was a hare upon it. Now the large estates of that district are under cultivation.

The Emperor himself has built a sort of farm-chateau, where he goes to watch the progress of the works he has ordered, and possibly the interest he takes in the country, may have been heightened by the fact, that it was the original residence of the Bauhauis family. There is too a picturesque charm in those rural districts which modern improvement has not squared and levelled and embellished. Rural life, as it existed half a century back, was a true picture of the oldest existing state of manners, and the most primitive state of civilization. Bri is the heart of France. It was there that in the English wars, the expiring nationality of France took refuge. Charles VII. was at one time only King of Bruges, and to this day no province retains so much the stamp of ancient France. The manners, the dialect, the accent of the people are those of the seventeenth century. Except on the line of the principal roads, the towns retain the calm and monotonous air of the old *bourgeoisie*; the rural districts still resemble the imperishable picture drawn by La Fontaine of rural France in his day. The shepherd still leads his flock; the house-wife still plies her distaff; the woodman brings back his fagot; the horse and the ox are in the same meadow; nature in all her wildness still skirts the cultivated lands; the hare and the frogs, the rabbit and the weasel are all there, with the fox robbing the poultry yard, and the wolf robbing the fold. This region half a desert and half cultivated, which lives and speaks by the imagination of the fabulist, has lost nothing of its old aspect. At the corner of a field and a common, one might still fancy that ancient colloquy of the wolf and the dog; and the breeze which sweeps over the mire, still repeats the dialogue of the oak and the bulrush.

*The Progress of a Worldly Spirit in the Heart.*

—Though the change from day to night, is by a motion so gradual as scarcely to be perceived, yet when night is come we behold it very different from the day; and thus as people become wise in their own eyes, and prudent in their own sight, customs arise up from the spirit of this world, and spread by little and little, till a departure from the simplicity that there is in Christ becomes distinguished as light from darkness, to such as are crucified to the world.—John Woolman.

*Plants in Bed-Rooms.*—It should be known

to all persons, that to have plants in a close bed-room at night, is a practice detrimental to health. Even plants not in flower, and without smell, injure the air during the night, and in the absence of the sun, by impregnating it with nitrogen and carbonic acid gas. A melancholy proof of this is recorded as having occurred in Bedfordshire, England. — Sherbrook having frequently had his pinery robbed, the gardener determined to sit up and watch. He accordingly posted himself, with a loaded fowling piece, in the green-house, where it is supposed he fell asleep, and in the morning was found dead upon the ground, with all the appearance of suffocation, evidently occasioned by the discharge of mephitic gas from the plants during the night.

## Dymond on War.

For "The Friend."

(Continued from page 164.)

In an inquiry into the decisions of christianity upon the question of war, we have to refer—to the general tendency of the revelation; to the individual declarations of Jesus Christ; to his practice; to the sentiments and practices of his commissioned followers; to the opinions respecting its lawfulness which were held by their immediate converts; and to some other species of christian evidence.

It is perhaps, the capital error of those who have attempted to instruct others in the duties of morality, that they have not been willing to enforce the rules of the christian scriptures in their full extent. Almost every moralist pauses somewhere short of the point which they prescribe; and this pause is made at a greater or less distance from the christian standard, in proportion to the admission, in a greater or less degree of principles which they have superadded to the principles of the gospel. Few, however, supersede the laws of christianity, without proposing some principle of "expediency," some doctrine of "natural law," some theory of "intrinsic decency and turpitude," which they lay down as the true standard of moral judgment.—They who reject truth are not likely to escape error. Having mingled with christianity principles which it never taught, we are not likely to be consistent with truth, or with ourselves; and accordingly, he who seeks for direction from the professed teachers of morality finds his mind bewildered in conflicting theories, and his judgment embarrassed by contradictory instructions. But "wisdom is justified of her children;" and she is justified, perhaps, by nothing more evidently than by the laws which she has imposed; for *all* who have proposed any standard of rectitude, other than that which christianity has laid down, or who have admitted any foreign principles with the principles which she teaches, have hitherto proved that they have only been "sporting themselves with their own deceivings."

It is a remarkable fact that the laws of the Mosaic dispensation, which confessedly was an imperfect system, are laid down clearly and specifically in the form of an express code, whilst those of that purer religion which Jesus Christ introduced into the world, are only to be found, casually and incidentally scattered, as it were, through a volume—intermixed with other subjects—elicited by unconnected events—delivered at distant periods, and for distant purposes, in narratives, in discourses, in conversations, in letters. Into the final purpose of such an ordination (for an ordination it must be supposed to be), it is not our present business to inquire. One important truth, however, results from the fact as it exists:—that those who would form a general estimate of the moral obligations of christianity, must derive it, not from *codes*, but from *principles*; not from a multiplicity of directions in what manner we are to act, but from instructions respecting the motives and dispositions by which all actions are to be regulated.

It appears, therefore, to follow, that in the inquiry whether war is sanctioned by christianity, a specific declaration of its decision is not likely to be found. If, then, we be asked for a prohibition of war by Jesus Christ, in the express terms of a command, in the manner in which *Thou shalt not kill* is directed to murder, we willingly answer that no such prohibition exists!—and it is not necessary to the argument. Even those who would require such a prohibition are themselves satisfied respecting the obligation of many negative duties, on which there has been no specific decision in the New Tes-

tament. They believe that suicide is not lawful. Yet christianity never forbade it. It can be shown, indeed, by implication and inference, that suicide could not have been allowed, and with this they are satisfied. Yet there is, probably, in the christian Scriptures not a twentieth part of as much indirect evidence against the lawfulness of suicide, as there is against the lawfulness of war. To those who require such a command as *Thou shalt not engage in war*, it is therefore, sufficient to reply, that they require that which, upon this and upon many other subjects, christianity has not chosen to give.

We refer then, first to the general nature of christianity, because we think that, if there were no other evidence against the lawfulness of war, we should possess, in that general nature, sufficient proof that it is virtually forbidden.

That the whole character and spirit of our religion are eminently and peculiarly peaceful, and that it is opposed, in all its principles, to carnage and devastation, cannot be disputed.

Have peace one with another. By this shall all men know that ye are my disciples, if ye have love one to another.

Walk with all lowliness and meekness, with long-suffering, forbearing one another in love.

Be ye all of one mind, having compassion one of another; love as brethren, be pitiful, be courteous, not rendering evil for evil, or railing for railing.

Be at peace among yourselves. See that none render evil for evil to any man.—God hath called us to peace.

Follow after love, patience, meekness.—Be gentle, showing all meekness unto all men.—Live in peace.

Lay aside all malice.—Put off anger, wrath, malice.—Let all bitterness, and wrath, and anger, and clamour, and evil speaking be put away from you, with all malice.

Avenge not yourselves.—If thine enemy hunger, feed him; if he thirst, give him drink.—Revenge to no man evil for evil.—Overcome evil with good.

Now we ask of any man who looks over these passages, what evidence do they convey respecting the lawfulness of war? Could any approval or allowance of it have been subjected to these instructions, without obvious and most gross inconsistency? But if war is obviously and most grossly inconsistent with the general character of christianity—if war could not have been permitted by its teachers, without an egregious violation of their own precepts, we think that the evidence of its unlawfulness, arising from *this general character alone*, is as clear, as absolute, and as exclusive as could have been contained in any form of prohibition whatever.

To those solemn, discriminative, and public declarations of Jesus Christ, which are contained in the "sermon on the mount," a reference will necessarily be made upon this great question; and, perhaps, more is to be learnt from these declarations, of the moral duties of his religion, than from any other part of his communications to the world. It should be remarked, in relation to the injunctions which follow, that he repeatedly refers to that less pure and less peaceable system of morality which the law of Moses had inculcated, and contradistinguishes it from his own.

"Ye have heard that it *hath* been said, An eye for an eye, and a tooth for a tooth, but I say unto you that ye resist not evil; but whosoever shall smite thee on thy right cheek, turn to him the other also."—"Ye have heard that it *hath* been said, Thou shalt love thy neighbour, and hate thine enemy; but I say unto you, Love your enemies;

do good to them that hate you; and pray for them which despitefully use you and persecute you; for if ye love them only which love you, what reward have ye?"

There is an extraordinary emphasis in the form of these prohibitions and injunctions. They are not given in an insulated manner. They inculcate the obligations of christianity as *peculiar* to itself. The previous system of retaliation is introduced for the purpose of prohibiting it, and of distinguishing more clearly and forcibly the pacific nature of the new dispensation.

Of the precepts from the mount the most obvious characteristic is greater moral excellence and superior purity. They are directed, not so immediately to the external regulation of the conduct, as to the restraint and purification of the affections. In another precept it is not enough that an unlawful passion be just so far restrained as to produce no open immorality—the passion itself is forbidden. The tendency of the discourse is to attach guilt, not to action only, but also to *thought*. "It has been said, Thou shalt not kill, and whosoever shall kill, shall be in danger of the judgment; but I say, that whosoever is *angry* with his brother without a cause, shall be in danger of the judgment." Our lawgiver attaches guilt to some of the violent feelings, such as resentment, hatred, revenge; and by doing this, we contend that he attaches guilt to war. War cannot be carried on without these passions which he prohibits. Our argument, therefore, is syllogistical. War cannot be allowed, if that which is necessary to war is prohibited.

It is, however, objected that the prohibitions, "Resist not evil" &c., are figurative; and that they do not mean that no injury is to be punished, and no outrage to be repelled. It has been asked, with complacent exultation, what would these advocates of peace say to him who struck them on the right cheek? Would they turn to him the other? What would these patient moralists say to him who robbed them of a coat? Would they give him a cloak also? What would these philanthropists say to him who asked them to lend a hundred pounds? Would they not turn away? This is *argumentum ad hominem*; one example amongst the many, of that lowest and most dishonest of all modes of intellectual warfare, which consists in exciting the feelings instead of convincing the understanding. It is, however, some satisfaction, that the motive to the adoption of this mode of warfare is itself an evidence of a bad cause, for what honest reasoner would produce only a laugh, if he were able to produce conviction? But I must ask, in my turn, what do these objectors say to the meaning of the precepts? What is the meaning of "resist not evil?" Does it mean to allow bombardment, devastation, murder? If it does not mean to allow all this, it does not mean to allow war. What again do the objectors say is the meaning of "love your enemies," or of "do good to them that hate you?" Does it mean "ruin their commerce"—"sink their fleets"—"plunder their cities"—"shoot through their hearts?" If the precept does not mean all this, it does not mean war. We are, then, not required to define what exceptions christianity may admit to the application of some of the precepts from the mount; since, whatever exceptions she may allow, it is manifest what she does *not* allow; for if we give to our objectors whatever licence of interpretation they may desire, they cannot, either by honesty or dishonesty, so interpret the precepts as to make them allow *war*. I would, however, be far from insinuating that we are left without any means of determining the degree and kind of resistance, which, in some cases, is lawful;

although I believe no specification of it can be previously laid down; for if the precepts of christianity had been multiplied a thousand-fold, there would still have arisen many causes of daily occurrence, to which none of them would precisely have applied. Our business, then, so far as written rules are concerned, is in all cases to which these rules do not apply, to regulate our conduct by those general principles and dispositions which our religion enjoins. I say, so far as written rules are concerned; for "if any man lack wisdom," and these rules do not impart it, "let him ask of God."

(To be continued.)

#### Condensing Gases.

The severe frost which lately set in, with every prospect of a recurrence from time to time, naturally directs the attention of scientific thinkers to the effects producible by intense artificial cold upon different substances. The most obvious action of cold is to condense gases and vapours to the liquid state, and to cause bodies in the latter condition to assume the solid form, and it has always been a matter of interest with chemists to ascertain which substances which were ordinarily known as gases at the atmospheric temperature, would, under the influence of extreme cold, obey the same laws as steam, and become converted into either liquids or solids. On this subject some remarkable results have recently been obtained. The first who thoroughly investigated the subject of the liquefaction of gases was Faraday. Between the years 1823 and 1844, this philosopher succeeded in condensing, by the united action of extreme cold and great pressure, most of the known gases into liquids, leaving, in fact, only six, namely, — oxygen, hydrogen, nitrogen, carbonic oxide, nitric oxide, and coal gas, which resisted the very powerful means which he employed to effect the desired result. The purified gases were first pumped into strong glass tubes, until in some cases a pressure of fifty atmospheres was obtained, the gas being compressed by mechanical means alone into 1.50th of its original bulk. Simultaneously with the action of the force-pump, the tubes containing the highly condensed gases were plunged into powerful freezing mixtures, formed of a mixture of solid carbonic acid and ether, in some instances placed in a vacuum under an air-pump, by which means temperatures were obtained as low as —106 deg. Fahrenheit in the air, and —166 deg. or —170 deg. under the exhausted receiver.

These pressures and temperatures were found simply sufficient to condense all gases with the exception of those above named. Chlorine yielded very easily, becoming reduced to a liquid fluid of a clear yellow colour; sulphurous acid, and likewise cyanogen, ammonia, arsenuretted hydrogen, hydriodic acid, hydrobromic acid, euclorine and carbonic acid, were also condensed to the liquid state, by means of the reduction of temperature alone, without any artificial increase in pressure. When pressure was added to extreme cold, further results were obtained. Several other gases, such as fluoride of silicon, phosphuretted hydrogen, fluoride of boron, and nitrous oxide, were obtained liquid, and many of them frozen to solids. By employing a mixture of solid protoxide of nitrogen with bisulphide of carbon, and placing the bath under an exhausted receiver, M. Natterer succeeded in obtaining a temperature as low as —220 deg., but even then was unsuccessful in condensing oxygen, hydrogen, or nitrogen. These three bodies have since been subjected to every imaginable device whereby it was likely that their condensation could be effected, for

not only was this desirable on purely scientific grounds, but their physical appearance in the liquid or solid form would be certain to throw considerable light upon their true positions in the scale of elementary bodies; there being good reason to suppose that hydrogen, and perhaps nitrogen, would prove to be metallic bodies; this could only be definitely ascertained by ocular observation. Some of the most recent results in this direction have just been obtained by Dr. Andrews, whose researches on ozone are well known to men of science.

This chemist is engaged at the present time in investigating the changes of physical state which occur when the non-condensable gases are exposed to the combined action of low temperatures and far greater pressures than they have ever before been submitted to. The compressed gases are always obtained in the capillary end of thick glass tubes, so that any change they might undergo could be observed. By making use of the elastic force of the gases evolved in the electrolysis of water as the compressing agent, the author actually succeeded in reducing oxygen gas to 1.300th of its volume at the ordinary pressure of the atmosphere. Dr. Andrews has since constructed an apparatus capable of effecting the compression by mechanical means, and obtains pressures which are only limited by the capability of the capillary glass tubes to resist them. The gases are furthermore exposed in their highly compressed state to a freezing-bath, capable of reducing their temperature to —106 deg. F. By this means atmospheric air was compressed to 1.370th of its original volume, and by the united action of pressure and intense cold it was reduced to 1.675th, in which state its density was almost as great as that of water. Oxygen gas was reduced by pressure alone to 1.324th of its volume, and by the joint action of pressure and cold to 1.554th; hydrogen, by the united action of pressure and cold to 1.500th; and nitric oxide by pressure to 1.310th, and by pressure and cold to 1.680th. Notwithstanding these enormous pressures, none of the gases gave any signs of liquefaction, even at the greatest condensation. The amount of contraction was nearly proportional to the force employed, till the gases were reduced to from about 1.300th to 1.350th of their volume; but beyond that point they underwent little further diminution of volume from increase of pressure.

The reader will be reminded by these experiments of the efforts of Mr. Perkins to effect similar results; by exposing atmospheric air to the pressure of upwards of 1100 atmospheres he succeeded in compressing it to such a degree that a small portion of fluid appeared at the end of the compressed column. This fluid, however, did not wholly recover its gaseous state when the pressure was removed, and was therefore most likely water. It had no taste, and did not act upon the skin. Speaking of this experiment and its result, Prof. Faraday says that it resembled water, but that if upon repetition it be found to be the product of compressed common air, then its fixed nature shows it to be a result of a very different kind to the ordinary liquefactions by pressure, and necessarily attended by far more important consequences.

We shall await with interest the publication of Dr. Andrews' further researches in this direction.

*Our Christian Testimonies.*—Christians, who would strictly keep within the bounds prescribed by their religion, should imitate the ancient Romans, who carefully watched that their god Terminus, who defined their limits, should never recede; the first step of his retreat, they said, would be the destruction of their security.

#### Musings and Memories.

For "The Friend."

#### NO ONE WITHOUT INFERENCE.

We all exert an influence for good or ill on those around us, and it behoves us to see that such as we have, is exercised for the benefit, not injury of others. Some do not, apparently, understand that their conduct and conversation have any effect on others, and do not perceive the responsibility that attaches to them for the example they set. I remember to have read of an incident which occurred a few years since in England, illustrating the influence exerted by mere children. At a temperance meeting a lecturer, in speaking of the influence which might be exerted against intemperance by individual faithfulness, said, "Every one has influence; even that child in her father's arms has influence." As he said this, he pointed to where a man stood with his child. "That is true!" said the father, with fervent emphasis. When the meeting was over, the man came to the lecturer, and apologized for his unreasonable speaking, which was occasioned by a sudden outburst of feeling, overpowering his sense of the proprieties of time and place. He then said, "I was a drunkard; but as I did not like to go to a public house alone, I used to carry this child. As I approached the public house one night, hearing a great noise inside, she said, 'Don't go, father! Hold your tongue, child!' 'Please, father, don't go!' 'Hold your tongue, I say!' Presently, I felt a big tear fall on my cheek. I could not go a step further. I turned round and went home, and have never been at a public house since, thank God for it. I am now a happy man, and this little girl has done it all; and when you said that even she had influence, I could not help saying, 'That's true!'"

Eternity can alone disclose the influence we have exerted on earth. Without doubt every one who has mingled in society, has at times through heedlessness or inconsiderate and improper actions evilly affected others. Who of us but can, in looking back over our own lives, remember cases in which we feel convinced such must have been the effect of things said or done by ourselves. In some of these we may perhaps have the consoling reflection, that Divine grace has preserved those most liable to be made as affected thereby from permanent injury; but in others, having lost sight of the parties, we cannot tell what their conduct since has been. Well do I remember at least one case, in which a decidedly evil influence was exerted by me, but how permanent its effects may have been, I cannot find, as all trace of the injured one has been lost for more than forty years. Often, during that period, has conscience knocked at the door of memory, with this matter in hand, and has awakened sorrowful emotions.

Sometimes in after life, we have very afflictive evidence given us of sad consequences which have resulted from the actions of our unregenerate days, and sometimes from the mis-steps we have made even after a spiritual awakening, and when we were in the main desirous of doing the will of our heavenly Father. A case of the former kind comes to mind. An individual who, in the days of his youth, had lived according to the leadings of the prince of the air, the spirit which rules in the children of disobedience, who had been a frequenter of theatres, and had given free course to his unregenerate nature, having, through the quickening, heart-changing visitations of Divine grace, witnessed the work of regeneration cleansing his heart, believed himself called to be a minister of the gospel of life and purity. On a certain occasion, long after this, he was at the bedside of a dying in-

penitent sinner, one who had been an acquaintance of his in the days of his wicked career, who, at that awful moment, when he was about closing his earthly existence, told the terror-struck preacher that his soul was forever lost, but that it was his evil example which had led him to destruction. It was, if my memory serves me, principally in his going to the theatre, that his example had encouraged this person, then a youth, in breaking through the hedge of christian restraint which had before kept him from that place. The attendance there led almost unavoidably to base companionship; his course of degradation was rapid, and he now felt heaven was lost to him forever. Despair was his portion, even on this side of the grave, and as he passed through the valley and shadow of death, he could feel no hope; he could see no light. By him, the Lamb of God was felt as a righteous Judge, whose only salutation would be, "Depart, ye wicked, into everlasting fire prepared for the devil and his angels."

Such was the death-bed of this poor misled man, who, in the midst of remorse, knew not even to taste the sweet sorrow of repentance. The agony was not alone on his part. Bitter were the feelings of the man whose example had given him an impetus down the pathway of ruin. He clung to his bedside; he agonized with him; he agonized for his poor, lost soul; and when death closed up the last avenue of hope, his anguish was of a character to be mitigated only by a fresh feeling of that boundless love, which, in Christ Jesus, can save the lost, can change the leopard's spots, yea, can make the very unclean white as snow.

Samuel Pothergill, looking over the crimes of his youth, the injuries his evil course of conduct had produced to others, declared that for this, it seemed the sword would not pass from his house forever. He had enough to do with his first repentance and faith in the Lord Jesus, a fresh pardon for all his sins, yet the anguish at times came upon him, when he thought of those whom his example may have contributed to centre where the worm dieth not and the fire is not quenched.

No true christian, however deep the anguish of soul he has already experienced, for the evil he has committed, however well assured he has been that, in the unutterable love of God through Christ Jesus, all has been forgiven, could look upon one, who, through the influence of his example, has been led into, and continues in sin, without experiencing renewed sorrow of soul. Some influence for evil is often exerted by us, even after the main bent of our minds is towards holiness, and when the earnest desire of our hearts is the promotion of purity, and the increase of the Redeemer's kingdom. How sorrowful would be the feeling, if upon looking on a poor brother or sister, evidently widely straying from the paths of Truth, we should feel a conviction that they had been walking feebly and falteringly, yet with honest intent, when we, by harsh rebukes, sarcastic reflections or the manifestation of uncalled-for prejudices, turned them aside, and through the awakening in them of resentful feelings, have been one cause of their sorrowful wanderings, and increasing departure from true peace.

It may startle Englishmen, but I most positively and confidently say that England cannot match Upper Austria, I will not say that two hundred miles, but even for twenty. England, doubtless, has the first agriculture in the world; no other land grows as much produce comparatively with the powers of its soil; her battle of every kind are absolutely unrivalled; and she has parks and country-houses which I in vain looked for here. But Upper Austria exhibits what England does not—

a care of cultivation, an excellence of condition in farm-houses, farm-yards, and cottages—a uniformity which, as far as I am aware, has no rival. The whole region looks as if it were a model farm, and the houses and buildings seem as if they were just fresh out of the carpenter's and painter's hands. I looked very keenly on both sides of the way, and I could not discover a single thatch which required repair, or a single piece of wood which required repainting, or a single head of land not carefully tilled to its extreme margin, or a single farm-house that was not in perfect order. That is a sight which Upper Austria may safely challenge England to display. We know very well that it is impossible to go about England without seeing farms in decay, cottages crying out for repairs, farm-yards overflowing with slovenliness, fields presenting a disagreeable contrast to the skill and intelligence which its neighbours prove the country to possess. This is the remarkable point. Taken as a whole, English agriculture stands on a much higher level than the Austrian; but, also taken as a whole, Upper Austria shows a universal and uniform care and excellence, on its own basis, which England may envy, but does not imitate.—*Correspondent of the Press, Vienna.*

For "The Friend."

*Considerations suggested by the present Position of Philadelphia Yearly Meeting and the Society of Friends at large.*

It has often appeared that a brief review of the principal internal troubles which have afflicted our religious Society during the last thirty-five years with some remarks thereon, would be of service—not only for the information of the younger portion of its members, who may feel an interest in its concerns, and be gradually preparing to take the places of the elders, but that it may also have a tendency to bring about a resolute, to keep the minds of Friends generally to what should be a leading object, viz. the upholding, in the meekness of wisdom, and in all their fullness and simplicity, the doctrine and testimonial of Truth; believing as we do, that the great Head of the church committed them in a very remarkable manner to this people, about two centuries ago, for the promotion of His own blessed cause in the earth.

From the service of Truth must be excluded all personal and selfish motives and lower springs of action, which would mar and destroy the work of the Lord; in producing strife and contention in the latter, in place of that which can alone qualify us to promote His cause; for "except the Lord build the house, they labour in vain that build it; except the Lord keep the city, the watchman waketh but in vain."

It was in getting from this foundation and dependent state, so necessary for the true labourers to stand in, that the minds of many were led into darkness and confusion, and the way paved for the introduction and spread of that unsoundness in christian principle, known as Hicksism, in the further development of which, it is to be feared, many were led into a state bordering upon infidelity. These exercising the perverted reasoning powers upon various parts of Holy Scripture, and perhaps calling the results openings of Truth, were finally brought through the subtlety of the enemy of all good into a denial of "the Lord that bought them."

This was introduced into the society a most lamentable state of things—strife, confusion and division. And notwithstanding the concern and labours of faithful Friends to counteract it, and the efforts used to clear the society from the imputations of holding such sentiments, and their evident

disagreement with our christian principles, the effects have been indeed sorrowful, not only within our own borders, but also in lessening the confidence of other religious professors in the soundness of our doctrines. Thus the way has been much closed for the spreading of those vital principles of the Christian religion, as they have been always held by sound Friends.

While at first but few comparatively were the open advocates of these poisonous sentiments, the superficial state as to religion of too many at the period, presented a condition of mind but little prepared to withstand their influence; and hence many were carried away with the current from various causes—some innocently through a want of that perception which a deeper religious experience would have given them, others through personal and social considerations. And thus has been entailed an evil, the extent of which it would be impossible to estimate in its past, present, and future consequences to all who may be involved in it.

May it please our heavenly Father, in the riches of His grace, to open the hearts of all, especially the innocent and sincere among that people, and draw them by the powerful influence of His Holy Spirit into that state of mind, in which they, with all of us, may be led to see the only ground of hope that we really have for the salvation of our souls, even the forgiveness of God through Jesus Christ our Lord and Redeemer—through whom alone we have access to God; and that they may see how it is, that "every man that hath heard and learned of the Father, cometh unto Christ." These are great and solemn mysteries, yet unspeakably precious truths to those, who have really witnessed that new birth, without which we "cannot see the kingdom of God," or know it established in our hearts—that heavenly divine kingdom that cometh "not with observation," but is within. This is life eternal, to know thee the only true God and Jesus Christ, whom thou hast sent; who also gave himself as that one offering, whereby are perfected forever them that are sanctified."

Unless a diligent watch is maintained, one departure is liable to beget another, and hence there was soon an appearance of danger from the opposite quarter. A class of Friends not discerning the true ground of the Hicksite errors, and whence they had their root, in their own wisdom, it is to be feared, went about to guard the society against a supposed tendency to lapse in that way; at the same time endeavouring to conciliate other professors, by setting forth more prominently the soundness of our faith as to what has been called the "outward part of christianity." Many took part in this effort, and there has been a leaven at work, almost ever since the out-going of Elias Hicks, which in its fuller development now seeks to change the original ground of the society—inasmuch that with its views thus modified, little would remain to distinguish it from other protestant professing churches, unless it be our testimonies against war, oaths and a man-made and paid ministry. And with reference to the latter—if an inclination for the work, a supposed qualification to expound Scripture, and a desire to be useful, are the chief incentives for engaging in it, it might not be long before the other arrangement, (which on some accounts may be preferable,) would also be introduced, as it affords the opportunity for selection, and pay issues regularly. Indeed, it is in this way easy to explain how the various systems of ministry now in use have gradually come to be so established. Inasmuch as these the starting point has been, in departure from the life and power of Truth, a virtual denial of the headship of Christ in His church; a holding the form of christianity

as a profession, while denying, or not waiting to feel its living influence to quicken and make alive.

With regard to many of the evil consequences growing out of the course of Elias Hicks and his followers, the society has been comparatively clear or many years, but the difficulties now upon us appear to arise, as has been remarked, from an attempt to substitute what has been termed "Modern Quakerism," for the ancient faith and practices of Friends.

We have thus seen how from evil seed sown in ground too well prepared for its reception, sprang Hicksism on the one hand, and a tendency toward Episcopalian views on the other—the one leading to rank infidelity, the other to substitute a sentimental, theoretical faith for one remarkable for its simplicity and practical nature. The growth of the latter defection has been gradual, but widespread. For years past there have been circulated throughout the society publications whose tendencies are in that direction, which have been eagerly aid held of by a large number prepared to receive their views as an advance upon primitive Quakerism, and better adapted to the spirit of a more enlightened age. In this way, it is feared, a class of superficial religionists has been begotten, with a real outstripping their religious experience, and views which, if carried to their legitimate result, must lead the society back again—if not to the "weak and beggarly elements," at least to a dependence upon the letter, and on the will and wisdom of men.

Under a concern for the preservation of Friends every where in the faith and practices of their forefathers, Philadelphia from time to time was constrained to point out to other Yearly Meetings the ground of its anxiety. But instead of producing the desired results, these labours of love met with but little response in an official way, although there was reason to believe the minds of many exercised members in various parts, were relieved and strengthened by the concern thus manifested.

In 1845, the organization of the Society in New England was broken, as a result consequent upon the action of that Yearly Meeting in the case of John Wilbur. This Friend had long been deeply concerned in witnessing the spread of those superficial views we have already noted, and after vainly endeavouring to arouse his fellow-members in New England to a sense of their danger, he was formally disowned. A comparatively small number who sympathized in his concern, now withdrew from the body at large, and thus was effected a separation in New England Yearly Meeting.

While Philadelphia Yearly Meeting did not see its way to continue its epistolary correspondence with the "larger body" in New England, so called, it was not prepared to open a communication with the Meeting organized by John Wilbur and his friends, although strongly sympathizing with them in their trials. On the contrary, all other Yearly Meetings, with one exception, continued their correspondence with the body by whom J. W. had been disowned; thereby increasing the feeling of estrangement toward Philadelphia, which had already appeared in consequence of the stand it had taken.

In 1849, the Meeting for Sufferings of Philadelphia felt it to be its duty, to examine into the causes of difficulty in New England, with a view to bring about if possible, between the two bodies now claiming to be New England Yearly Meeting, a re-union upon the right ground. In the course of their investigation they became convinced that, "although the manner in which this separation was effected, was not such, as we think, affords a precedent safe to be followed in the organization

of a Yearly Meeting," yet that the doctrinal views held by J. W. and his friends were sound and orthodox, and that they had been improperly denied the rights of membership in the Society.

The course pursued by London Yearly Meeting leading to a belief that it was strongly in the interest of new views on doctrine and discipline, tended to encourage their growth in this country, and probably to bring about a serious division in Ohio Yearly Meeting in 1855. The new body then organized, was recognized by all the Yearly Meetings except Philadelphia, which still endeavoured to maintain a consistent and steady course in opposition to the dividing spirit which was abroad, and fully recognizing the body of which Benj. Hoyle was Clerk, as the ancient and legitimate Yearly Meeting, could not approve of the new organization, and issued an Epistle to the body from which it had seceded. For although there are doubtless many estimable Friends who united with the separatists at that time, yet as a body claiming to be the Yearly Meeting of Ohio, they could have no just title; being, to use the language of a prominent disciplinarian of London Yearly Meeting, "a disorderly organization."

Separation having been resorted to as a means of settlement in the existing difficulties, the tendency to a similar course was now manifested in Philadelphia itself, where it has been urged by Friends taking opposite ground, as the only effectual method of clearing the Society of its various maladies. Thus many who were well concerned, not abiding in the patience nor waiting for the wisdom and power of Truth to instruct and lead them, have been more or less influenced by a dividing spirit, thereby sadly complicating the difficulties, and weakening their own hands for labouring harmoniously with their brethren for the preservation of the Church.

Philadelphia Yearly Meeting now felt the importance of increased watchfulness and care, in order to feel after the mind of Truth with regard to its future movements as a body, with desires to remove as much as might be, from its own deliberations, whatever tended to draw its attention to mere outside issues, not essential to the great question in hand. To avoid entanglements, and fearing lest under the existing unsettlement, the epistolary correspondence so long continued with other Yearly Meetings, was degenerating into a merely formal intercourse, Philadelphia believed it right in 1857 to suspend it for the present, without exception, thereby rendering its position singularly isolated.

Having been more prominently engaged than most others in efforts to protect its own members, as well as the Society at large, from dangers which it believed impending, it is not strange that Philadelphia Yearly Meeting did not see its way to adopt the same course that had been taken by other co-ordinate bodies of Friends. In its action with reference to the division in New England, it was actuated by a desire to do what appeared impartial and right, and instead of hastily admitting the claim of either "body" to be considered the true Yearly Meeting, it recommended, after careful and weighty deliberation, that both should endeavour to get into such a disposition as would enable them to be rightly re-united and the harmony restored.

Nothing that has since transpired has shaken our confidence in the wisdom of this advice, and it would have been indeed a blessing had it been acted upon by all parties. Philadelphia Yearly Meeting could consistently have taken no other course, and it was done under a sense of the guidance, as it is believed, of the great Head of the

Church, and ought not to have produced uneasiness, or led to estrangement in feeling on the part of its sister Yearly Meetings.

The later separation in Ohio being so clearly against established principles of church government and regularity of proceeding, the course taken with reference to it by most of the Yearly Meetings, can scarcely be accounted for on other ground than that the want of sufficient examination into the merits of the case, thereby leading into hasty decision.

Since the lamentable separation just referred to, there have been set up several new organizations, each of which claim to be a genuine Yearly Meeting of Friends. These have had their origin with such as sympathized with the "smaller body" in New England, yet who thought the burden under which they laboured on account of the deficiencies so apparent in the Society had become too heavy for them; and believing that their own weight in their respective Meetings had been very much lessened, they sought relief in separating from their brethren. Most of the Friends who have seen fit to take this course, there is no reason to doubt, are sound in the faith of the Society, and honestly concerned for what they suppose may contribute to its preservation; but there has been too apparent a degree of restiveness under their burdens, which might have been checked by seeking after a greater depth in the life of Truth, and more willingness to bear in the meekness and gentleness of Christ, the trials which might be meted out to them for his "body's sake, which is the Church." Had these kept their places among the brethren, steadily labouring for the faithful support of the doctrines and testimonies of Truth, the harmony of the body might have been still preserved, and those serious complications avoided, which have followed the divisions and sub-divisions resorted to as a summary means of relief from the singular trials of our day.

These brief allusions have thus been made to well-known transactions, simply for the purpose of presenting a view of the trying circumstances under which Philadelphia Yearly Meeting has felt itself led into the course adopted by it, and to enable Friends every where to appreciate correctly the position it occupies.

When we consider the peculiar circumstances in which it is placed; the momentous interests involved, or underlying the difficulties in the Society, together with the various degrees of growth in religious experience among its own members, and the diversities of disposition and mental capacity, it is scarcely strange that some under the influence of an undue and intemperate zeal on the one hand, have run beyond the requirements of Truth, and so added to the afflictions of the Church—while some carried away by the force of the current on the other side, and not judging as to the source of it or its tendency, have increased the burden.

Yet notwithstanding these difficulties on either hand, the main question in all its importance remains the same—the preservation of our Society upon its true and original foundation. Hence, how critical has our situation become, and how important that we should get into and be kept under that living concern with which Truth itself invests the mind; avoiding any disposition on the one hand that would carry us beyond the true medium, or on the other beguile into a course, whereby the position of this Yearly Meeting might be compromised, and the right ground it may have held be in anywise abandoned. It may be in the ordering of best Wisdom that it should stand perfectly still, until brought into a situation to move with safety under the openings and leadings of Christ the Good

Shepherd. Herein love will not be wanting in us toward the whole family, however outwardly separated—and our own spirits being in full subjection, "Wisdom will be justified of all her children." We should also see in this condition, whether we are free from all prejudice or resentment, and know an entire willingness that the word of the Lord alone may have "free course and be glorified." One of our chief concerns would then be, to know how far each of us ought to go, and for what end, and when we ought to stop or stand still, lest haply we should be fighting our own battles and not the Lord's. A due regard also for each other's judgment as well as feelings, would be apparent on all sides, and having tenderly, in the fear of the Lord, expressed our own views as to matters that may be in hand, we should be more willing to submit than contend. In this spirit, they who are rightly exercised that the Truth only may prevail amongst us, would find their judgments carry more weight with those who differed from them, than if even the right thing were urged in a harsh and censorious spirit.

Thus the Truth would be maintained in the meekness and wisdom of the Lamb—not to gratify self under a guise, or to save our own reputations for wisdom as men, or to advance ourselves into positions of influence in the visible Church. The weight and power of Truth would then be the authority of our Meetings—not the mere prevalence of strong opinions; and as a disposition thus to lay down our own wills prevailed generally amongst us, the Lord would undertake His own cause, and once more "bless His people with peace."

If our Religious Society was raised up to bear before the world a consistent testimony to the spirituality of the Gospel Dispensation, and a more practical acknowledgment of the Headship of Christ in his church, how fearfully important was the trust committed to our forefathers in the Truth; and if they were called to revive primitive christianity in the simplicity of its faith and practice, can we in contemplating the condition of the professing church, or that of the world at large in our day, believe that this mission is accomplished? There is abundant evidence in the history of our early Friends, that they were chosen instruments in the Lord's hand for exalting His name in the earth, and that the work prospered through them. Let us see to it, that we are not seeking to build upon this goodly foundation a superstructure in which man's wisdom is too apparent, and of materials which the Lord will not own.

Our lot has fallen upon a day when the hand of Him who ruleth in the Kingdoms of men, is evidently stretched over them, frustrating the wisdom of the wise, and bringing to nothing the understanding of the prudent. His judgments are indeed in the earth, visiting national sins with His divine retributions; and it is through these, that the "inhabitants of the world will learn righteousness." With our finite comprehensions, we can scarcely realize the fearful importance of the times in which we live, and the important consequences involved in the turnings and overturnings, which are taking place around and among us. It has often been through such wide-spread calamities which follow such occasions, that the church has been quickened or awakened to new advances toward that purity in which it is designed she should shine forth. Well, therefore, will it be for us as a people, that we be found occupying that high position, which we have been called on to fill, even as a beacon or a way-mark, whereto may be drawn all who are seeking after those more spiritual views of the early church, which have been so much overlooked by the great mass of professing christians,

but which, as we believe, were revived in their fullness and simplicity by our worthy predecessors.

Instead then of seeking in our own creaturely wisdom and activity to promote what we may think the interests of the blessed cause, let us remember that the Lord's spiritual house can be built only of living stones of His own preparing; and that when in our zeal we lose sight of the great Master-builder, his work is marred in our hands, and that glorious day retarded, when "righteousness shall cover the earth, as the waters cover the sea."

May we, dear Friends, of every age and condition, turn inward to that Light which first led us as a people, for a qualification rightly to labour in our several allotments, neither shrinking from service, nor pressing forward beyond those limits which the Truth would set for each one of us. Under this exertion we should be individually led to inquire what part we may have had, through unweariedness or unfaithfulness, in bringing upon the Church those afflictions which now oppress her; and in that ability which God giveth, seek first to rebuild against our own dwellings the breaches in the walls of Zion.

The day calls loudly for a deepening in the root of religion, in order that nothing be done through strife or vain-glory, or under those impulses which may be mistaken, by the inexperienced in spiritual things, for divine requireing. And as we indubitably grow in that life which is "hid with Christ in God," the church in its official acts will manifest that it seeks nothing but the honour of its Holy Head; while these will bear evidence that like his people of old, we move only when he moves, and stand still when the cloud is upon the tabernacle. If therefore the present be a day when the call is "to thy tents, oh Israel!" let us obey—remembering the injunction to that chosen people formerly—"in returning and rest shall ye be saved, in quietness and in confidence shall be your strength."

*Educated Feet.*—Who can tell to what uses the feet and toes could be put, if a necessity arose for a full development of their powers? There is a way of educating the feet, as well as the hand or the eye; and it is astonishing what an educated foot can be made to do. We know that in the time of Alexander, the Indians were taught to draw their bows with their feet, as well as with their hands, and J. E. Tennent tells us that this is done up to the present time by the Rock Veddas, of Ceylon. And nearly all savage tribes can turn their toes not only to good, but bad account; like the aborigines of Australia, who, while they are cunningly diverting your attention with their hands, are busily engaged in committing robberies with their toes, with which they pick up articles as an elephant would with his trunk. So also the Hindoo makes his toes work at the loom, and weaves with them with almost as much dexterity as with his fingers. The Chinese carpenter will hold the bit of wood he is planing by his foot, like a parrot, and will work a grindstone with his feet. The Barber and tribbe, who are the most famous canoe-men on the West African coast, will impel their light canoes (weighing only from eight to ten pounds,) with great velocity over the waves, and, at the same time, will use the foot to bail out water; and when they would rest their arms, one leg is thrown out on either side of the canoe, and it is propelled with the feet almost as fast as with a paddle. There was also Monsieur Ducrest, who died only four years ago, who, although he was born without hands, was brought up an artist, and who annually exhibited at the Louvre pictures painted by his feet. Then there was Thomas Roberts, the armless huntsman to George Barlow, whose feet were made to perform the duties of his hands. And there was

William Kingstone, who with his toes wrote out his accounts, shaved and dressed himself, saddled and bridled his horse, threw sledge hammers, and fought a stout battle, in which he came off victorious.—*Cuthbert Bude's Glencreggan.*

*Unhallowed efforts to spread the Knowledge of the Gospel with the anticipation of a day of calamity, which, if permitted, will try the foundation of all.*—As to the increased efforts to spread the knowledge of the Gospel, but little fruit can be expected, so long as they continue to be so blended with the inventions and contrivances of man. I verily believe this is one great means of preventing the people from coming to a knowledge of the true gospel, which remains to be "the power of God unto salvation." If the minds of the people were turned to an inward and vital knowledge of this work, there would be some hope; provided the teachers themselves were really called to and qualified for the work; and not, as is to be feared too many of them are, strangers to the inward work themselves.

In my apprehension, nothing short of a day of calamity will bring the people to their senses, and reduce them to a state of simplicity and humility; which in the end would prove an unspeakable blessing, if happily it were the means of turning their attention to the true Teacher in their own hearts, who giveth life to those that hear and obey him, and would cause them to cease from man whose breath is in his nostrils, "by whom they have been so long kept in darkness." That so those abominations which are set up and standing in the place of the true Christian religion, and which make the earth so destitute of the presence of the Lord, may forever be swept away from its surface.

Should such a day be permitted, it will certainly try the members of our highly professing Society, and show who are of the foundation that standeth sure; these will be preserved as in the hollow of the Lord's hand, from "the blast of the terrible ones," but the chaff,—such as have nothing but an empty profession to stand upon, will assuredly be scattered before the storm.—*Daniel Wheeler.*

*Statistics of French Poultry.*—The whole country rears 30,960,000 hens, yielding 3,715,200,000 eggs, of the value of 115,608,000 francs (\$29,721,600). When to this we add the value of fowls as food, the number of cocks, pullets, and capons, we find that the entire produce of poultry in France may be valued at 182,880,000 francs (\$36,576,000). But while this may be regarded as the actual produce of France at the present time, as an immense increase may be calculated upon. By an improved system of feeding, and by increasing the amount of laying eggs by means of artificial heat, the grand total is enlarged from the amount just named to 835,640,000 francs (\$167,128,000). Eggs are consumed in Paris to the amount of 3,784,243 pounds weight annually; and in many parts of the country they constitute, along with bacon, the principle food of the inhabitants. France, as already mentioned, exports to England, in eggs and poultry, to the value of 6,000,600 francs annually (\$1,200,000), and also largely to Russia, Spain and Switzerland.

It is the broken, contrite spirit that the Lord regards; it is the heart that wears the costly robe of sweet humility, in which the lowly Jesus makes His blessed abode.

They who are the least in their own opinion, walking in humility, in circumspection and godly fear, are the greatest.

**Adulteration in Silk Fabrics.**—What is Jute? a question often asked by the general reader. His article, well known to those engaged in the East India trade, played an important part in the recent great fire of London. It has been demonstrated that it is a rather unsafe article to stow away, on account of its ignition, and tendency to spontaneous combustion. It is also unsafe in another particular, for it is the great adulteration of silk. Jute is the fibre of a species of hemp, (botanically speaking, the *corchorus capsularis*), which is grown in the East Indies, chiefly in Bengal. The same class of men who put shoddy into cloth, logwood to a villainous compound, and then call it port wine, adulterate silk with Jute. It has a lustrous, gaily appearance, and the fraud is not easily detected. A recent English writer in the *Technologist* says that, thanks to jute, there is scarcely a piece of sound genuine silk woven in the country, and the consequence is, that the so-called silk fabrics, instead of lasting from generation to generation—

They did in the times of our grandmothers and great-grandmothers—barely last the brief period of the latest new fashion. The reason of this is identical—in preparing the fibre for the market, it is necessary to cause it to almost rot, in order to develop the fine silky character so much valued for the jute intended for export. In India, the cloth made from the fibre is much stronger and more durable, because they do not take such care in steeping it for home consumption. In Ure's "Philosophy of Manufacture," (newest edition,) a writer says of Jute, "that it is mixed with the cotton wares of cheap broadcloths, and also with silk, and from its stre, can scarcely be detected." Why cannot it be turned to more honourable purposes than adulteration? Dr. Forbes Watson says that its production admits of unlimited extension, and who doubts but the great paper-rag and cotton question may be somewhat solved by jute?—*N. Y. Journal of Commerce.*

**Gifts in the Church to be used in the Power of a Resurrection of the life of Jesus.**—Dear friends, be patient in the exercise of your gifts and services, and take no offence at any time, because what seems to be clear to you is not presently received by others; but at all things in the church be propounded with a awful reverence of Him that is the head and life of us; who said, "Where two or three are gathered together in my name, there am I in the midst of them." Therefore let all beware of their own spirits, and keep in a gracious temper, that so they may be fitted for the service of the house of God, whose house we are, if we keep upon the foundation that God hath laid; and such he will build up, and teach how to build up one another in him. And every member must feel life in himself, and all on one Head, this life will not hurt itself in any way, but be tender of itself in all; for by this one life of the Word, we were begotten, and by it ye are purified and made to grow into your several services in the church of God. It is no man's learning nor artificial acquirements; it is no man's riches, or greatness in this world; it is no man's eloquence or natural wisdom, that makes him fit for government in the church of Christ: it is all endowments must be seasoned with the heavenly salt, his spirit be subjected, and his gifts pass through the fire of God's altar, a sacrifice to his praise and honour, and so self being baptised into death, the gifts may be used in the power of the resurrection of the life of Jesus in him.—*Philadelphia Discipline.*

It is beneath the dignity and nobility of a christian mind to be much employed about, and pleased with, the covering of the body.

**Invention of the Saw.**—This useful tool was invented by Daedalus, according to Pliny; but Apollodorus says the inventor was Telus. It is stated that the latter, having found the jaw-bone of a snake, employed it to cut through a piece of wood, and then formed an instrument of iron like it. Reecher says the saw-mills were invented in the seventeenth century; but this is not so, it appears, for they were erected in Madeira in 1420, and at Breslau in 1427. Norway had the first saw-mill in 1530. The Bishop of Ely, ambassador from Mary of England to the Court of Rome, describes a saw-mill there in 1555. In England, saw-mills had, at first, the same fate with printing in Turkey, the crane in Strasburg, &c., the attempts to introduce them were violently opposed; and one erected by a Dutchman, in 1663, was forced to be abandoned.

**Justification and Sanctification, with the Universal Privilege of the Lord's People.**—Do we deny Jesus Christ and justification through his righteousness, because we make the sufficiency thereof of a more universal extent than ye? or because we love *whole Christ* so much, and his seamless garment, that we will not have him divided? Nay, we dare not divide justification and sanctification, neither confound them: we have felt the blood and the spirit distinct, yet inseparable. Neither canst thou think we make void the Scriptures, because we honour the Spirit, which was before the Scriptures were written, and bear testimony against all who deny the Spirit's immediate teachings to be the universal privilege of the Lord's people.—*Lilian Skeen.*

**Height of Lakes.**—It is very remarkable that many of the larger lakes are situated high above the sea. The great lake of Titicaca, between Bolivia and Peru, South America, and which is 12,500 feet, or nearly 2½ miles above the level of the sea, is 170 miles in its greatest length, and 70 miles in its greatest breadth. Soundings of 120 fathoms have been taken near the shore, and the depth farther out is believed to be greater. The great North American lakes are from 230 feet to 310 feet only above the sea level. The lake Luzerne, the highest water navigated by steamers in Europe, is 1466 feet above the sea; Chautauque lake, in the state of New York, and which is the highest lake yet navigated by steam in America, is 1306 feet above the level of the sea. The lake Titicaca would, if the vessels could be got there, float all the navies of the world.

## THE FRIEND.

SECOND MONTH 1, 1862.

In the columns of this number of our Journal, will be found a communication entitled "Considerations suggested by the present Position of Philadelphia Yearly Meeting and the Society of Friends at large."

It has been prepared by a Friend or Friends, who, we believe, have taken little or no active part in the proceedings of Philadelphia Yearly Meeting alluded to in it, and is the result of religious concern for the best interests of the Society at large, uninfluenced by party feeling. Commending it to the careful perusal of our readers, we leave it to speak for itself.

The accumulating evidence forced upon the notice of all who are not determined not to see, of great departures, in many parts of the Society, from its original principles and testimonies, and from its long observed principles of church government, render the concern and labour of Philadelphia and Ohio Yearly Meetings to maintain those

principles and testimonies inviolate, and to guard their members from the inroads of the novel views afloat, increasingly important. Both these meetings have had, and, in all probability, must continue to have, severe trials to bear, but these should not be permitted to abate their holy zeal for the support of the good cause, nor yet to prevent their members from cherishing and manifesting sincere religious interest in their brethren of other meetings, who are bound to the same law and to the same testimony.

Friends of Ohio Yearly Meeting have long had much to suffer from the unkind and unbrotherly course of other Yearly Meetings towards them; but we trust that many among them have learned to endure hardness as good soldiers of Jesus Christ, and both seek for and experience that support and consolation in their large share of affliction for the body's sake, which is far better than any mere external recognition of church fellowship, however desirable that may be. They have the heart-felt sympathy of many within the limits of those meetings which have recognized those who separated from them, who earnestly desire their encouragement, and patient continuance in well-doing, that they may inherit the blessing of divine preservation.

Information received from numerous reliable sources in Great Britain, leaves no doubt that very many Friends, there continue greatly dissatisfied with the acknowledgment of the separatists from Ohio Yearly Meeting, by London Yearly Meeting; being convinced that thereby it sadly lapsed from the ground it had previously occupied, and disregarded the rules and precedents in such cases that had heretofore been binding in the Society of Friends. But the measure was carried out by the party, which before, and more alarmingly since then, has been so assiduous in modifying the principles and practices of that meeting, in the expectation that it would thereby secure an organization in Ohio which would more fully sympathize with it.

Further effects of so many Yearly Meetings sanctioning the disorganization of the Society, by acknowledging those who separated, as a co-ordinate body with themselves, must continue to develop as time passes away. As that act shut out all the members of the legitimate Yearly Meeting, who maintained their allegiance to it, from the possibility of being attached by certificate to the meetings subordinate to those Yearly Meetings, within the limits of which they might move to reside, it necessarily compelled Ohio Yearly Meeting to extend its jurisdiction beyond the limits it has heretofore occupied, and to take care that where its members settled in sufficient numbers, they should have the benefits of regularly constituted meetings for Divine worship and for discipline; so that they shall be kept under the care of the body, marriages be properly accomplished, and the wholesome discipline of the Society duly administered. How many such meetings have been organized we do not know. This may, in the progress of time, effect important and unlooked for changes.

We should rejoice at any and every indication on the part of other Yearly Meetings to recognize the right of Philadelphia and Ohio Yearly Meetings to exercise, under what they believe to be Divine guidance, the same independent judgment as themselves; and to accord to them, in the stand they have felt called on to make, a sincere desire to maintain what has appeared to be the cause of Truth; and it would give us great joy could we see the way open for a harmonious reunion on the ancient immovable foundation of Quakerism. But the Society has not yet passed through the ordeal of the attempted modification of its faith and prac-

ties. Until that is accomplished more fully, and those members or meetings which are dissatisfied with its doctrines and testimonies, have generally withdrawn or been deprived of their influence, they will continue to obstruct a change for the better.

In the mean time it behooves all who really desire the welfare of the Society, whether they be in Philadelphia and Ohio Yearly Meetings or elsewhere, by close watchfulness over their own spirits, and a humble walk in the path of self-denial, to seek to be clothed upon with meekness and wisdom from above, that so they may hasten the coming of such a blessed re-union; and while standing faithfully at the posts assigned them, by their christian love and charity, effectually extend the invitation to all around them, come and "have fellowship with us; and truly our fellowship is with the Father and with his Son, Jesus Christ." Individual faithfulness is the only means for restoration of the body to soundness and unity. As that more generally prevails, the members walking by the same rule and minding the same thing, will all speak the same language and have the same object in view, and the churches dwelling in the fear of the Lord and the comfort of the Holy Ghost will be multiplied.

#### SUMMARY OF EVENTS.

**UNITED STATES.—Congress.**—The recent proceedings have not been of much importance. A resolution to expel Senator Bright, of Indiana, for alleged treason, in sympathy with the rebels, has occasioned a long and earnest debate in the Senate. A bill has passed both houses, authorizing the appointment of two additional Assistant Secretaries of War. In the House of Representatives, Thaddeus Stevens, in a speech, in reference to the war, declared his belief that the North cannot conquer the South so long as the war is waged on present principles. He contended that the slaves who are now aiding the rebellion, must be made the allies of the North, and that to effect this, they must be set free, and arms placed in their hands. The Committee of Ways and Means have reported a bill to authorize another issue of treasury notes. It proposes to legalize as lawful tender in all money transactions of the country, United States notes of circulation, to the amount of \$200,000,000, and the notes of circulation, to the amount of \$200,000,000, to be issued in the month of July, 1862, to meet the seventh month list. The bill also authorizes the issue of \$500,000,000 of six per cent. bonds. This circulation and all other audited demands upon the treasury, are made convertible into public stocks bearing six per cent. interest, and having twenty years to run.

**U. S. Army.**—Sickness in the camp near Washington has increased rapidly of late, in consequence of the long continued wet and cloudy weather. It is said there is not much serious disease among the soldiers. The Secretary of War has ordered that two Commissioners be appointed to visit the camps, and to discover every case of sickness to the end of the United States may be held, and there take such measures as may be useful to provide for the wants, and contribute to the comfort of such prisoners at the expense of the United States, and to such extent as the rebel authorities may permit.

**Hostilities.**—The inhabitants of the counties of North Carolina bordering upon Albemarle and Pamlico Sounds, are represented to be greatly alarmed at the prospect of the Burnside expedition landing in that region. On the 27th ult., the first reliable information was received from the Burnside expedition, that they had left Hampton Roads on the 11th and 12th ult. It had encountered violent storms, which had greatly delayed the progress of the vessels, and caused the wreck of several. Among those lost were the steamers City of New York and Pocahontas, the gun-boat Zouave and some smaller vessels. Only thirteen lives had been lost. Much greater difficulty than was expected had been found in crossing the bar at Pamlico Sound. No vessels drawing over seven and a half feet, could enter, nor could any drawing over thirteen feet reach outside of the bar. The Burnside expedition, however, Gen. Burnside had succeeded in getting over the bar one half of his vessels, all the gun-boats and 7000 troops. When last heard from, the weather had become favourable, and it was believed the remainder of the vessels and troops would reach the destination, within a few further days. When the expedition left its Chesapeake, it consisted of 125 vessels of all classes, many of them being small transports.

A large rebel force, said to be 11,000 under General Jackson, had Carolina, in the late of Romney, Va., and other portions of the Baltimore and Ohio Railroad.

An expedition sent from Cape Girardeau, Mo., to Benton and Bloomfield, surprised a body of rebels, and took eighty prisoners, with a quantity of arms, horses, &c.

The engagement last week, near Staunton, Va., in which the rebels were defeated, appears to have been correctly reported. The rebels sustained a decisive defeat, losing several hundred men killed, wounded and prisoners, with 14 cannon, a thousand stand of arms, and 1200 horses and mules. The Federal troops had 53 men killed, and 47 wounded. A despatch from Knoxville says that the defeated army had rallied, and would make a stand at Monticello, Ky., near the Tennessee line.

The state of the roads, in the vicinity of the large armies, is such as to render military operations almost impossible.

**South.—Items.**—The Richmond (Va.) papers mention the death of ex-President Tyler at the age of 72 years. The Charlotte (N. C.) Democrat says, that the militia have been called out in thirty-three of the eastern counties of North Carolina, in order to resist the advance of the rebel army. One-third of all the men enrolled are required to muster immediately.

The Savannah Republican states that Cedar Keys, a group of small islands, close to the west coast of Florida, had been captured by the United States ships *Albatross* and *Albatross*. The capture of Cedar Keys, is said to have been effected on the 1st of the present month. At the latest dates, all was quiet in the vicinity of Port Royal, S. C. The steamer Atlantic had conveyed 1525 bales of cotton to New York. Over sixty vessels were at Port Royal.

The steamer *Carle*, of Charleston, ran the blockade, and arrived at New York, New Providence, on the 18th, with a cargo of cotton.

A large meeting of the French residents of New Orleans was held in that city on the 10th, to devise some means of leaving the city and the South. A committee was appointed to communicate with the United States, and to obtain the assistance of the U. S. government.

**New York.**—Mortality last week, 391. A very destructive fire occurred on the 24th, in Bridge street, and another, on the 25th, in Fulton street. A number of houses and churches were destroyed, and property destroyed. Total loss by the two fires estimated at \$500,000.

**Philadelphia.**—Mortality last week, 221. The appropriations, during 1861, for the use of the public schools of Philadelphia, amounted to \$629,233. The chief engineer of the fire department reported that the estimated loss by the two fires last week to be \$343,290. There are 190 fire companies with 27 steam engines, 46 hand engines, 116 hose carriages, and 78,100 feet of hose.

**The Delaware Lottery.**—A bill has been introduced into the Legislature, and has passed one branch of it, which repeals the inquiries lottery grant, and declares it privileges void.

**New Mexico.**—The latest advices state that Gov. Connelly had called on the entire militia of the territory to resist the invasion from Texas. That portion of the regular forces which threatened to Craig, had been attacked, and treated without mercy by the U. S. army.

**The Grain Markets.**—The following were the quotations on the 27th ult. *New York*—Chicago spring wheat, \$1.20; red winter Western, \$1.42; Amber Kentucky, \$1.45; mixed corn, 65 cts.; white Baltimore, 75 cts.; rye, 85 cts.; wheat, 42 cts. *St. Louis*—Chicago spring wheat, \$1.22; red winter Western, \$1.35; white, \$1.40; 1.50; rye, 72 cts.; 72 cts.; yellow corn, 57 cts.; white, 55 cts.; old yellow, 59 cts.; oats, 38 cts.; 39 cts.; Pennsylvania barley, 68 cts.; 75 cts.; clover seed, \$4.50; \$4.62; fax seed, \$2.10; Timothy, \$1.57.

The Fortification of Alexandria, and England to the 12th ult. Information had been received of the surrender of Mason and Sillidell. A Cabinet council which was summoned for the 14th, had been countermanded, Secretary Seward's despatch having been considered in a council held on the 9th. The London Times understands that an answer will be returned expressing gratification at the disavowal of Commander Wilke's act, and accepting the satisfaction rendered. As to the general discussion of the law of neutrals, the government will decline any answer until they have an opportunity of expressing their views to the British Ministers. The general expression of the press and of the people appeared to be that of great satisfaction with the course pursued by the U. S. government in surrendering the rebel Commissioners. The London Times has a strong editorial on the subject of Mason and Sillidell, on their recent arrival; says they are about the most worthless booty it would be possible to extract from the Americans, having been long known as blind and habitual haters and

perilers of England. The Times trusts that Englishmen will not give these fellows anything in the shape of an ovation. The civility due to a foe in distress is all that can be claimed. England has returned them good for evil, and even now, if they can, they will be only glad to entangle her in a war with the United States. England would have done just as much to rescue two negroes, let Mason and Sillidell, therefore, pass quietly on their way, and have their say with any body who may wish to listen to them. The other journals advise a similar course. The war excitement has occasioned England a needless expense in military preparations, and she has done well to have the war bills all in, it will be found to be double that sum.

The feeling in France is said to be that of great satisfaction at the pacific termination of the Trent affair.

The Journal of St. Petersburg publishes an article concerning the British practice of intercepting the intelligence of his policy, and demanding that the Trent incident may become the starting point of negotiations for the recognition by the Powers of common principles upon the question of the neutral flag. It also expects England to give the world some guarantee for the future, by some condition which would insure universal respect for the rights of neutral powers, would contribute to the maintenance of peace, and mark the progress of civilization.

The privateer *Nashville* remained at Southampton. The government had observed the strictest measures towards her, and nothing whatever had been permitted to be done to the vessel, but what was absolutely necessary to make her seaworthy. Neither powder, guns nor munitions of war had been put on board. The United States war steamer *Tuscarora* had arrived at Southampton, and was keeping a close watch upon the *Nashville*. The *Tuscarora* was anchored about a mile from the dock wharf, with her fires banked up, and ready to start at a moment's notice if the *Nashville* attempted to go to sea.

The pirate *Suzer* was reported to have left Cadix, for Southampton. It was said that Spain would prosecute her, and would not permit her to be sent to the United States.

The Paris *Moniteur* of the 11th says, a feeling of profound regret and indignation has been aroused in France, as well as Great Britain, by the vindictive attempt to destroy the port of Charleston, S. C., by sinking vessels laden with stone at its entrance. The *Moniteur* says, the strongest terms against such proceedings, and asserts that no belligerent has the right to resort to such a warfare.

The London money market was easy. The bank rate has been reduced to 2½ per cent. Money was plentiful. The Liverpool cotton market was easy, and advanced 1½ per cent. The Liverpool cotton market was quiet. Sales of the week, 168,000 hales. Fair Orleans, 14½; middling, 13½. Stock in port, 565,000 bales, including 248,000 American. The market for breadstuffs was dull, at a small decline.

Affairs in Russia continue to be very unsatisfactory. The peasantry, it is affirmed, are absolutely persuaded that the decree which comes into operation in 1863, secures them not only their liberty but their lands. They refuse, therefore, to enter into any engagements with the proprietors, and are determined to resist by force any demand for their lands. This is openly admitted in the St. Petersburg papers, and it seems more than possible, unless the peasantry can be disabused, the Emperor will have no course but to grant their expectations, thus ruining all landholders but those who hold unsettled land. The Emperor has issued a decree to explain to the malcontents the true state of affairs.

#### RECEIPTS.

Received from Benjamin Gilbert, Pa., \$2, vol. 35; from Anna Radcliff, Ill., \$2, to vol. 35; from Wilson Hall, O., per Isaac Hall, \$2, vol. 34.

DIED, on the 19th day of Twelfth month, 1861, near Camden, N. J., JOSEPH B. COOPER, in the sixty-eight year of his age; a member of Haddonfield Monthly Meeting of Friends.

On the 19th day of January, on the 19th of Twelfth month, 1861, in the twelfth year of her age, AIZIC, daughter of George M. and Alice Haverstick. During her short illness she gave evidence that her mind was stayed on Divine support, and has left the consoling best that has been gathered to the fold of rest and peace. As just before her departure, she remarked that she was growing cold, and said, "I am going; glory, glory."

PILE & MELROY, PRINTERS,  
Lodge street, opposite the Pennsylvania Bank.

# THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XXXV.

SEVENTH-DAY, SECOND MONTH 8, 1862.

NO. 23.

PUBLISHED WEEKLY.

Price Two Dollars per annum, payable in advance.

Subscriptions and Payments received by

JOHN RICHARDSON,

AT NO. 116 NORTH FOURTH STREET, UP STAIRS,

PHILADELPHIA.

Postage by any part of Pennsylvania, for three months, if paid in advance, three and a quarter cents; any part of the United States, for three months, if paid in advance, six and a-half cents.

For "The Friend."

The Origin of Infusoria.

It is a well known fact that animal and vegetable matters during their decay become infested with countless numbers of minute animalcules. A tile hay or a few leaves soaking three or four days in water, appears to produce millions of them. The name of Infusoria has been given to them, because they were discovered in vegetable infusions, and in such liquids, and indeed in all places where decomposition of organic matter is going on, they appear to exist with a few exceptions, over the whole earth. From this universal distribution, their infinite number, their constant association with decaying animal or vegetable matter, their power of withstanding the extremes of temperature—some species being able to endure the heat of boiling water, and some the cold of zero—we may reasonably infer that they perform an important part in the economy of nature, yet what that office has been involved, with the source from whence they are derived, in great obscurity. In endeavoring to account for the certainty with which these creatures under certain circumstances appear, some microscopists, unable to discover any germs from which they might have originated, have been disposed to consider them the result of spontaneous generation. A theory of spontaneous generation is, however, both unsatisfactory and unscientific, and although advocated by men of distinguished reputation and supported by apparently decisive experiment, it cannot, we may firmly believe, stand in opposition to the ordinary laws of nature, nor withstand the scrutiny of more careful investigation. Quite recently a great deal of light has been thrown by the researches of Pasteur, a distinguished French chemist, on the whole subject of their origin and growth, and the effects produced by them, and which have also revealed a great many interesting facts. It was during some experiments upon the nature of fermentation that Pasteur's attention was arrested by the repeated presence of animalcules in his liquids—finding that whenever a certain kind of fermentation was going on, then and there two or three kinds of microscopic animalcules with unvarying constancy, swarmed before him, accompanied frequently with minute fungi or mould plants. Being thus led to vary his experiments to determine the question whether these organisms were or were not essential to the

process, he succeeded in ascertaining that so long as neither animalcules nor fungi were present, fermentation did not take place, and on the other hand that when one or both of these were present, fermentation did take place—in other words that their presence and the process of fermentation were mutually dependent upon each other. Having established this point, he sought to determine how the occurrence of these bodies or at least their development in his fluids could be prevented, and he devised the following experiments, which, while they show conclusively that these organisms are to be attributed to the growth of germs, in his liquids, as of seeds in a proper soil, and that these germs are derived from the great reservoir of them, —the atmosphere,—confirm also the statement of the connection between them and fermentation. An easily decomposable fluid contained in a flask connected with a platinum tube, was made to boil for a few minutes, to destroy the vitality of any germs existing in it, and then allowed to cool. The flask was then refilled with air which had been exposed to a red heat, and hermetically sealed. Under these circumstances the flask remained for an indefinite time, even at a temperature of 80°—that most favourable for the development of such organisms, without undergoing any alteration. When however, after a lapse of four to six weeks, a small quantity of atmospheric dust—conveyed upon a little amianthus, an insoluble and incombustible substance—was allowed to fall into it at the end of six hours, the fluid exhibited organised products, among which were Bacteria, Vibriones, and Monads, the same Infusoria in fact, which were seen during the usual decomposition of the liquid under ordinary circumstances, and the same chemical compounds, peculiar to the liquid, were formed as when exposed to the open air. In order to show conclusively that these must be attributed to the introduced atmospheric dust, and not to any change which the oxygen of the air might have caused, a flask prepared as the one was opened and allowed to receive a little amianthus, which, unlike the former, had been previously exposed to a red heat, in order to destroy the vitality of any germs in it. The flask was then sealed up, and its contents were found to remain unchanged indefinitely in a temperature of 80°.

These experiments were conducted with rigorous accuracy in apparatus, simple and precise, and were repeated so frequently with the same results, that it seems impossible to object to the conclusion that there does exist in the atmosphere, unobserved as yet by the microscopist, innumerable particles of an organic nature, which may be regarded as the ova or germs of animalcules, or the spores of minute vegetable forms, the vitality of which can be destroyed by a high temperature. In confirmation of this view, may be cited the experiments of Schroeder and Dusch, who found, in 1854, that substances could be indefinitely preserved from fermentation and putrefaction, by placing them in vessels filled with air, which had been filtered through cotton. Flesh, soup, and all kinds of alimentary substances could thus be preserved in the precaution had been previously taken of boiling

them in water. And in explaining this experiment, Schroeder attributed its success to the removal of cryptogamic spores or the germs of Infusoria by the filtration through cotton.

Professor Van den Broek, of Utrecht, also states that wine, the white and yolk of eggs, blood, and beef, undergo no change at a temperature of 80° Fahr., if never brought into contact with the atmosphere, nor do they in air which has been filtered through cotton, and Henry Pemberton, of this city, after confirming the statements of Schroeder and Dusch, in relation to meat, found that sugar in a coarse powder also deprives air filtered through it of the power of producing fermentation in alewort. Another experiment, in confirmation of his conclusions, was devised by Pasteur. A number of similar flasks were partly filled with the same fermentable liquid; the necks of the flasks were then drawn out over a lamp, and bent into a variety of sinuous shapes, leaving however the opening about the twenty-fifth of an inch or more in diameter; the liquid in some of them was then boiled for a few minutes, and then all were set away in a place undisturbed by currents of air. After the lapse of twenty-four to forty-eight hours, the liquid of the flasks which had not been boiled, i. e. (in which the vitality of germs had not been destroyed), was slightly covered with mucor, while that in the other flasks which had been boiled, remained limpid not only for days, but for entire months. There can be but little doubt that the germs which had passed through the narrow opening, had been prevented by the curvatures of the neck from reaching the fermentable fluid. It is to be observed that when the contents of one of these last named flasks was exposed to the air by breaking off the neck, in the course of a day or two the liquid became mouldy, or filled with infusoria.

As previously stated, some of these minute organisms are able to withstand the temperature of boiling water. Such as these Pasteur found in sour milk. In order to destroy the vitality of these germs, it was necessary to expose the milk to a temperature of 240° to 244° Fahr.; under these circumstances it was found to remain neutral in the flask, and to preserve the properties of fresh milk, while on the other hand, if into the milk, thus retaining its original character, the atmospheric dusty particles were introduced, it changed and coagulated, and the microscope showed the existence in it of divers animal and vegetable productions.

Since it thus appears that if we are obliged to consider infusoria as essential to fermentation, there are different species found during this process in different liquids, the interesting question arises, whether these germs develop into different infusoria, according to the circumstances with which they are surrounded, or whether they retain and reproduce the distinct characteristics of their several species. In other words, whether the cause of the acetic, the vinous, the lactic, the butyric, or the viscid fermentation is due to the development of the same species under varying conditions, or to that of a particular species peculiar to one kind of fermentation alone. On this subject, Pasteur re-

marks, "I may assert that there are a great many distinct organised ferments, which excite chemical transformations, varying according to the nature and organization of the ferment. But in most cases the nutriment suitable to some, allows of the development of others of them, whence arises the most complicated and variable phenomena. If we could only isolate one of these ferments, in order to develop it by itself, the chemical changes corresponding to it would take place with remarkable precision and simplicity."

(To be concluded.)

### Dynast on War.

(Continued from page 171.)

Of the injunctions that are contrasted with "eye for eye, and tooth for tooth," the entire scope and purpose is the suppression of the violent passions, and the inculcation of forbearance, and forgiveness, and benevolence, and love. They forbid, not specifically the act, but the spirit of war; and this method of prohibition Christ ordinarily employed. He did not often condemn the individual doctrines or customs of the age, however false or however vicious; but he condemned the passions by which only vice could exist, and inculcated the truth which dismissed every error. And this method was undoubtedly wise. In the gradual alterations of human wickedness, many new species of profligacy might arise which the world had not yet practised. In the gradual vicissitudes of human error, many new fallacies might obtain which the world hath not yet held; and how were these errors and these crimes to be opposed, but by the inculcation of principles that were applicable to every crime and to every error!—principles which tell us not always what is wrong, but which tell us what always is right.

There are two modes of censure or condemnation; the one is to reprobate evil, and the other to enforce the opposite good; and both these modes were adopted by Christ in relation to war. He not only censured the passions that are necessary to war, but inculcated the affections which are most opposed to them. The conduct and dispositions upon which he pronounced his solemn benediction, are exceedingly remarkable. They are these, and in this order: poverty of spirit—mourning—meekness—desire of righteousness—mercy—purity of heart—peace-making—suffrage of persecution. Now let the reader try whether he can propose eight other qualities, to be retained as the general habit of the mind, which shall be more incongruous with war.

Of these benedictions I think the most emphatical is that pronounced upon the *peace-makers*; "Blessed are the peace-makers, for they shall be called the children of God." Higher praise or a higher title, no man can receive. Now I do not say that these benedictions contain an absolute proof that Christ prohibited war, but I say they make it clear that he did not approve it. He selected a number of subjects for his solemn approbation; and not one of them possesses any congruity with war, and some of them cannot possibly exist in conjunction with it. Can any one believe that he who made this selection, and who distinguished the peace-makers with peculiar approbation, could have sanctioned his followers in murdering one another? Or does any one believe that those who were mourners, and meek, and merciful, and peace-making, could at the same time perpetrate such murder? If I be told that a temporary suspension of christian dispositions, although necessary to the prosecution of war, does not imply the extinction of christian principles, or that these dispositions may be the general habit of the mind, and

may both precede and follow the acts of war; I answer that this is to grant all that I require, since it grants that when we engage in war, we abandon christianity.

When the betrayers and murderers of Jesus Christ approached him, his followers asked, "Shall we smite with the sword?" And without waiting for an answer, one of them drew "his sword, and smote the servant of the high-priest, and cut off his right ear."—"Put up thy sword again into its place," said his Divine Master, "for all they that take the sword shall perish with the sword." There is the greater importance in the circumstances of this command, because it prohibited the destruction of human life in a cause in which there were the best of possible reasons for destroying it. The question, "shall we smite with the sword," obviously refers to the defence of the Redeemer from his assailants by force of arms. His followers were ready to fight for him; and if any reason for fighting could be a good one, they certainly had it. But if, in defence of himself from the hands of bloody ruffians, his religion did not allow the sword to be drawn, for what reason can it be lawful to draw it? The advocates of war are at least bound to show a better reason for destroying mankind, than is contained in this instance in which it was forbidden.

It will, perhaps, be said, that the reason why Christ did not suffer himself to be defended by arms was, that such a defence would have defeated the purpose for which he came into the world, namely, to offer up his life; and that he himself assigns this reason in the context. He does indeed assign it; but the primary reason, the immediate context, is—"for all they that take the sword shall perish with the sword." The reference to the destined sacrifice of his life is an after reference. This destined sacrifice might, perhaps, have formed a reason why his followers should not fight *then*, but the first, the principal reason which he assigned, was a reason why they should not fight *at all*. Nor is it necessary to define the precise import of the words "for all they that take the sword shall perish with the sword," since it is sufficient for us all, that they imply reprobation.

To the declaration which was made by Jesus Christ, in the conversation that took place between himself and Pilate, after he had been seized by the Jews, I would peculiarly invite the attention of the reader. The declaration refers specifically to an armed conflict, and to a conflict between numbers. In allusion to the capability of his followers to have defended his person, he says, "My kingdom is not of this world," if my kingdom were of this world, then would my servants fight; that I should not be delivered to the Jews; but now is my kingdom not from hence." He had before forbidden his "servants" to fight in his defence, and now, before Pilate, he assigns the reason for it: "my kingdom is not of this world." This is the very reason which we are urging against war. We say that it is incompatible with his kingdom—with the state which he came into the world to introduce. The incompatibility of war with christianity is yet more forcibly evinced by the contrast which Christ makes between his kingdom and others. It is the ordinary practice in the world for subjects to "fight," and his subjects would have fought if his kingdom had been of this world; but since it was not of this world,—since its nature was purer and its obligations more pacific,—therefore they might not fight.

His declaration referred, not to the act of a single individual who might draw his sword in individual passion, but to an armed engagement between hostile parties; to a conflict for an important object, which one party had previously resolved on attaining, and which the other were ready to have

prevented them from attaining, with the sword. It refers, therefore, strictly to a conflict between armed numbers; and to a conflict which, it should be remembered, was in a much better cause than any to which we can now pretend.

It is with the apostles as with Christ himself. The inessential object of their discourses and writings is the inculcation of peace, of mildness, of pliability. It might be supposed that they continually retained in prospect the reward which would attach to "peace-makers." We ask the advocate of war, whether he discovers in the writings of the apostles, or of the evangelists, any thing that indicates they approved of war. Do the tenor and spirit of their writings bear any congruity with it? Are not their spirit and tenor entirely discordant with it? We are entitled to renew the observation, that the pacific nature of the apostolic writings proves pre-emptively that the writers disallowed war. That could not be allowed by them, as sanctioned by christianity, which outraged all the principles which they inculcated.

"Whence came wars and fightings amongst you?" is the interrogation of one of the apostles, to some whom he was reproving for their unchristian conduct. And he answers himself by asking them "come they not here, even of your lusts that was in your members?" This accords precisely with the argument that we urge. Christ forbade the passions which lead to war; and now, when these passions had broken out into actual fighting, his apostle, in condemning war, refers it back to their passions. We have been saying that the *passions are condemned, and, therefore, war*; and now, again, the apostle James thinks, like his Master, that the most effectual way of eradicating war is to eradicate the passions which produce it.

In the following quotation we are told, not what the arms of the apostles were not, but what they were. "The weapons of our warfare are not carnal, but mighty, through God, to the pulling down of strongholds, and bringing into captivity every thought to the obedience of Christ." I quote this, not only because it assures us that the apostles had nothing to do with military weapons, but because it tells us the object of their warfare—the bringing every thought to the obedience of Christ—and this object I would beg the reader to notice because it accords with the object of Christ himself, in his precepts from the mount—the reduction of the thoughts to obedience. The apostle doubtless knew that, if he could effect this, there was little reason to fear that his converts would slaughter one another. He followed the example of his master. He attacked wickedness in its root; and inculcated those general principles of purity and forbearance which, in their prevalence, would abolish war, as they would abolish all other crimes. The teachers of christianity addressed themselves, not to communities, but men. They enforced the regulation of the passions and the rectification of the heart; and it was probably clear to the perceptions of apostles although it is not clear to some species of philosophy, that whatever duties were binding upon one man, were binding upon ten, upon a hundred, and upon the state.

War is not often directly noticed in the writing of the apostles. When it is noticed, it is condemned just in that way in which we should suppose any thing would be condemned, that was notoriously opposed to the whole system—just as murder is condemned at the present day. Who can find, in modern books, that murder is formally censured? We may find censures of its motives, of its circumstances, of its degrees of atrocity; but the act itself no one thinks of censuring, because every one knows that it is wicked. Setting statutes aside, I doubt

whether, if an Otaheitan should choose to argue that Christians allow murder because he cannot find it formally prohibited in their writings, we should not be at a loss to find direct evidence against him. And it arises, perhaps, from the same causes, that a formal prohibition of war is not to be found in the writings of the apostles. I do not believe they *imagined* that Christianity would ever be charged with allowing it. They write as if the idea of such a charge never occurred to them. They did, nevertheless, virtually forbid it; unless any one shall say that they disallowed the passions which occasion war, but did not disallow war itself; that Christianity prohibits the cause, but permits the effect; which is much the same as to say that a law which forbade the administering of arsenic, did not forbid poisoning.—And this sort of reasoning, trange and illogical as it is, we shall by and by find has been gravely adopted against us.

But although the general tenor of christianity, and many of its direct precepts, appear to me to condemn and disallow war, it is certain that different conclusions have been formed; and many, who are undoubtedly desirous of performing the duties of christianity, have failed to perceive that war is unlawful to them.

In examining the arguments by which war is defended, two important considerations should be borne in mind—first, that those who urge them, are not simply defending war, they are also defending *themselves*. If war be wrong, their conduct is wrong; and the desire of self justification prompts them to give importance to whatever arguments they can advance in its favour. Their decisions may therefore, with reason, be regarded as in some degree the decisions of a party in the cause. The other consideration is, that the defenders of war come to the discussion prepossessed in its favour. They are attached to it by their earliest habits. They do not examine the question as a philosopher would examine it, to whom the subject was new. Their opinions had been already formed. They are discussing a question which they had already determined, and every man, who is acquainted with the effects of evidence on the mind, knows that under these circumstances, a very slender argument in favour of the previous opinion possesses more influence than many great ones against it. Now all this cannot be predicated of the advocates of peace; they are opposing the influence of habit—they are contending against the general prejudice—they are, perhaps, dismissing their own previous opinions. And I would submit it to the candour of the reader, that these circumstances ought to attach in his mind, *suspicion* to the validity of the arguments against us.

The narrative of the centurion who came to Jesus at Capernaum, to solicit him to heal his servant, furnishes one of these arguments. It is said that Christ found no fault with the centurion's profession; that if he had disallowed the military character, he would have taken this opportunity of censuring it; and that, instead of such censure, he highly commended the officer, and said of him, "I have not found so great faith, no, not in Israel."

(To be continued.)

**Gold Beating.**—Of all metallic substances upon which man exercises his manufacturing ingenuity, there is probably none which admits of being wrought to so extraordinary a degree of fineness as gold. The process of beating gold is a very nice, as well as curious operation. One of the most important preliminary steps to this process, is to alloy the gold—for it is found that a minute per centage of silver and copper is necessary in order to impart to it a sufficient malleability. The

gold and its alloy are melted together, and are then moulded into ingots, which are flattened out by heavy rollers, into thin sheets, about four times as thick as ordinary printing paper. These thin sheets are then divided into pieces of about an inch square, and one hundred and fifty of these pieces are interleaved with as many vellum leaves, four inches square, and are then beaten with a heavy hammer until the gold has expanded to the size of the vellum. The pieces of gold are then quartered, and after being interleaved with six hundred pieces of gold-beater's skin, (which is a very tough membrane procured from the intestines of the ox,) are packed one upon each other, and are again subjected to a more careful beating, with a lighter hammer, until the gold has again expanded as far as its envelope will admit. This process of dividing and hammering is repeated several times, until finally a gold leaf is produced, which is about one eighteenth of a thousandth of an inch in thickness. Thus, for a few guineas, a large room might be carpeted with gold.

For "The Friend."

#### Remember Kindnesses.

Memory is a busy companion, always plying hither and thither for our entertainment; sometimes raising a window on some sweet out-look of the past, letting its glad sunlight stream in, or again thoughtlessly opening a door-way toward a stormy quarter of a stormy day, and almost before we know it, the chill damp wind has chased all the warmth around us away.

Yes, memory has great power, but it is not absolute; we may and we ought to keep it in check, banish it sometimes and recall it at others, train it to help us to be what we want to be, and to remind us of all things "lovely and of good report." Paul says, "think on these things." And thought sets on the mind something as a plane on wood, shaping it by repeated action, into those grooves and roundings which are cut in itself. He who thinks much on things "true," "honest," "just," "pure," "lovely," and "of good report," will assuredly in time bear the impress of his thoughts. So the more harshness and unloveliness we see, the more need have we to overlook them.

All people are not good, few people are all good, and while we ourselves are not, we have no room to be offended at the fact in others. If we were, we would have no disposition to be. But it is very rarely we have to search long to find good in any character, however it may be trusted over by manner or actual facts. And then there are two ways of looking at things;—both perhaps equally honest, but not equally lovely—the charitable and the censorious:—and when we have disciplined our own minds, and put down the independent, knowing, fault-finding readiness to take some objectionable view of any matter that comes before us, and have given the dominion to that loving, fair-spirited meekness which looks far more than it dislikes—we have done a little something toward sweetening the world.

Yes, remember kindnesses. They will be a charm hanging around the giver, that will be as an antidote to a great many things "we can't understand." Is "such-a-one" very free spoken, ready to pounce on any weakness that her sharp eyes have detected, and drag it out to the view of others? Shut down that memory, and call up that hour when the fever of trial ran high, and her hand raised to your lips the first cooling draught. Such a memory should shield her from judgment. Such a memory should shield her from judgment from a poor fellow mortal, and clothe her with sorrowing love. Has another acted very strangely, so much so that that you feel you could hardly give her

a cordial greeting? Oh, remember how, when your own hands were powerless, hers wrought for you, how she spent her strength unheeded, and how, for that devotedness, no blessing seemed then to your thought too great. Ah, think of her by this light, not by that. Did that strong man, in whose firm standing you had felt a secret joy, fall momentarily, before some unlooked-for blast? Did Memory take up this error and bury it from your sight. Tell her to remind you faithfully of your own mis-shaps, but suffer you to forget those of your friends. Thus she will be both wise and kind. It was a beautiful testimony to the truth of her profession that I lately heard borne by an elderly Christian—"I never forgot a kindness;" long before she had said, when some one alluded to an unkindness received, "I don't remember it: I never remember such things."

Remember kindnesses; and remember to show you remember them. A kindness appreciated is a kindness deserved, and, in part, returned. People seek to give pleasure in doing a kindness, and it is only fair to let them know if it is felt. A kind word will often give more pleasure than a great favor, and seems to carry no obligation with it. Then let it be given freely, and freely returned. We hear of warm-hearted people, and cold-hearted people; no doubt there is a great difference, but to my thinking there is often more in the expression than in the possession. Now and then we may meet with one who, we cannot help thinking, possesses more than is felt. But what a waste of warmth there is in this "cold world," by the untruthful repression of real feeling! Oh, if we would be better, and therefore happier, by remembering kindnesses of others, so also would we be, by remembering kindnesses to others; and well will it be if this kindness should rise up strong and stronger with us, and slay those feelings of pride and reserve which are founded mostly in "self," and which seldom forget "self."

Sincerity in all things! But sincerity being a good, leads upward, not downward—leads to cordiality, not to formality; to kindness, not to harshness. It teaches us to give to others without stint or measure, the good the heart prompts, not to rob them by keeping it back. It is a principle, reflecting not only the expression of feeling, but its origin and nature. It teaches not only truth to feeling, but truth to good. Sincerity and kindness are not foes, they are brethren of one spirit. Let us welcome them to our hearts and lives, let us turn out all their opposers to give them room; and day by day the way will grow plainer to the ready will, and as we look to Him, the great Source and Teacher of Kindness, we would learn of Him to "do good and lend, hoping for nothing again;" trusting His promise, "who reward shall be great, and ye shall be the children of the Highest, for He is kind to the unthankful and to the evil."

In sitting in meetings for discipleship, I look for as clear an evidence to speak, as in meetings for worship, therefore my words are few, but I hope they are in degree seasoned with salt—"let your speech be always with grace seasoned with salt," which is the life—in this path the wayfaring man cannot err, and peace is found in his dwelling; it is a means of keeping down those forward spirits which are ready to run when not sent, whose state is that of flatness and death instead of peace and consolation, and to whom the language applies, "Who hath required this at your hands?"—John Conran.

A man may be poor in purse, yet proud in spirit.

*Africans in America.*—On the American continent there are nearly fourteen million persons of African origin. A large portion is to be found within the equatorial regions. The entire African-American population of the Northern continent, numbering about four and a half millions, are located in the temperate zone, though the tropical tendency is every decade more clearly demonstrated. In the cotton or semi-tropical States the free white and the colored free and slave populations are nearly equal, the difference between them being less than half a million in favour of the whites. The necessities of the present struggle will decimate and decrease the whites very largely, and increase the colored. A large number of slaves from the border slave states are constantly being added, and the probabilities are that, within a comparatively short period, the balance of population in the Gulf states will be in favour of the African.

Putting, therefore, the African-American population at over thirteen millions, we have within the tropical belt a population of African descent numbering nine millions. They are to be found divided as follows:

Brazil	4,150,000
Cuba and Porto Rico	1,500,000
South and Central Amer. Republics	1,200,000
Hayti	1,800,000
Hayti, Eastern Division	120,000
British Colonies	800,000
French	250,000
Dutch	50,000
Danish	50,000
Mexico	80,000
Total	9,000,000

Nearly one half of these nine millions are mixed bloods—that is, of mingled African, Caucasian, or Indian descent. In Brazil, not more than one fourth of a population of eight millions are whites, and that is even a larger proportion than exists elsewhere in the inter-tropical regions. Of the four millions mixed bloods, at least two millions have more or less admixture of white blood, the rest being Indian and African. The fairest development, so far, of this mixed race is to be found in Brazil, where, recent travellers say, “no distinction of colour whatever exists,” its laws rendering “manumission easy, and once emancipated,” the negro finds every calling and office as fully open to him as to the whites. In the army or navy, in commerce, agriculture, or manufactures, in social or political position, colour is no barrier to the highest success. Persons of African descent are to be found in the Cabinet, and as general officers in the army, and in all civil positions. The races intermarry, and the parties to such marriages are received in society. In some of the Central American states black and coloured men are high in position. The chief justice of San Salvador is a black man, and most of the leading men of that state. Grenada, Guatemala, and Ecuador are mestizos, or persons of mixed Indian, African, and Spanish blood.

But our principal aim in this article is to show the position of this mixed race in the British West Indies. The total population of these islands will reach to 850,000, of whom not more than one eighth are whites. Of the remainder, 550,000 are pure blacks, 200,000 coloured, and the remainder aboriginal and coolies. Of the 200,000 persons of mixed descent, 75,000 reside in the island of Jamaica, as many more in the islands of Trinidad, Barbadoes, the Bahama group, and the large leeward islands. The other 50,000 are scattered over the smaller islands. They are engaged mostly in trade, mechanic arts, and agriculture, forming a considerable portion of the small proprietary interest.—*Pine and Palm.*

From “The British Friend.”

*To my Fellow Members of the Religious Society of Friends.*

*Dear Friends,*—The present critical condition of things amongst us, as a religious body, must, I think, be attracting the attention of all thoughtful minds. The tendency to the position we are now in has been in operation for many years, and we seem to have arrived at a point when it becomes the duty of all who believe in the truth and rectitude of the principles as first promulgated by our early Friends, to make a stand and endeavour to put a stop to the desire for innovation and change that many who are in membership seem desirous to bring about.

I believe that our Society was raised up at the first to bear testimony to many fundamental and important religious truths that had become, in the lapse of time, much obscured and lost sight of, but which the Almighty, in the plenitude of his wisdom, thought it right should be again pronounced. The originators of our Society did not go forth in the wisdom and strength of man, did not consult with flesh and blood, did not act on a principle of mere expediency, trimming here a little and softening down something there, to meet the customs and opinions then prevalent in the world, and with a view by such means to attract the world to them; but they boldly went to the root of the matter, and promulgated such religious views and truths as they believed were opened to them by the Spirit of Truth, and were in strict accordance with the doctrines of the New Testament.

The prerogative of the Almighty to rule by his Holy Spirit in the hearts of the children of men had been too much obscured and lost sight of, and secondary means were resorted to, such as the teaching of religion in the universities by the learning and skill of man; the bringing school or secular learning and man's wisdom to bear in the study of the Scriptures, to the exaltation of these sacred writings as the *alone* guide of man in his heavenward journey; thus drawing the seeking mind to secondary means for instruction in things that relate to the salvation of the soul, rather than at once going in an humble, reverential, teachable frame of mind to the footstool of the great Head of the church, casting aside all the wisdom and learning of man, with the petition, “O Lord, teach thou by thy Holy Spirit; show me thy Truth, and what is thy holy will and pleasure concerning me, and enable me wholly and unreservedly to conform to all thy requirements at my hands.” In such a disposition of mind the Scriptures would be read with profit, not critically studied in the wisdom of man, but with an inward breathing of the soul to the Source which they originated, that the true meaning of the several passages might be conveyed to the mind of the reader by that power which at the first gave them forth. The wisdom and the book-learning of man would be held in abeyance, and the Lord alone would be exalted as Head over his own church. Our first Friends saw that it was required of them to give greater prominence to the teaching of the Holy Spirit in the things that relate to man and his Creator; that man should ask counsel of Him, and walk in accordance therewith to His praise and glory in all things. Our first Friends saw that it was laid upon them to bear testimony against much that was then prevalent in the world, its vain customs and maxims, and ever varying form of fashion in attire and language. They adopted, not I think in man's wisdom, but in the wisdom from above, plainness and simplicity in their attire, language, and manner of living, and endeavoured to make their whole walk before men evidence that they were measurably

redeemed from the spirit of the world, and were seeking to be led and guided by the Spirit of Truth into all truth.

By the truth of the principles they held up, and their faithfulness in the maintenance of them, great numbers were attracted to the society, and its doctrines spread rapidly; but in the course of time lukewarmness and ease crept in, many of its testimonies became too irksome for many of its members to bear, a little more conformity to the world was desired, and as a consequence in ocasions the society has become dwarfish, and is much reduced in numbers, but entirely as I think for want of a faithful maintenance of our early principles by its present members. Instead of attracting the world to us by the faithful maintenance of first principles, a disposition is manifest amongst us to let many of them fall, by giving way a little here, softening and paring down a little there, to meet the spirit of the world, until I fear in the end, as this disposition is given way to, the whole substance may disappear, and our Society cease to be a distinct religious community.

The disuse of the plain language by members of our Society seems becoming very prevalent, and the attire that used to manifest the Friend to the world has of late become more and more discarded; and if these tendencies go on, by and by there will be nothing in the outward appearance and address to distinguish members of the society from the rest of the community. I am well aware that the language and attire of Friends do not confer godly-mindedness and holiness, but the language is scriptural and truthful, and the attire plain and neat, and of neither is there anything to be ashamed in; and I think they are of real use, inasmuch as they may in degree protect individuals from being solicited to join in things of a frivolous and hurtful tendency to a religious growth. It might almost be supposed that by discarding the outward appearance of a Friend, many among us, in their intercourse with the world, are almost ashamed to let it be known that they belong to the society, as if there was something reprehensible in such connection, and by thus ceasing to appear as Friends they lay themselves open to many of the hurtful allurements of the world that they might otherwise be exempt from; and it indicates a gradual assimilation to the world, rather than a being *redeemed therefrom*. Being members of the Society of Friends, why not appear manfully and openly as *Friends* to the world, for in the principles of Friends there is nothing to be ashamed of. In former times the truthful, consistent, godly walk of our early Friends attracted the world to them, and it might do so again. The strength and usefulness of our Society consist more, I think, in the upright walk of our members than in mere numbers.

The capability of delivering a fluent and eloquent discourse, attained by book-learning and the study of oratory, I hope, may never be thought a sufficient qualification for offerings in the line of the ministry in our religious meetings. The looking for something of this sort I would wish to warn the society against, as I fear something of the kind may be creeping in amongst us.

In thus writing I am aware I may lay myself open to much criticism, but this I am quite willing to bear, if by the foregoing remarks I may in any degree help to restore our Society to a more healthy condition.

Your friend,

JOSEPH BARROW.

Blackfield Terrace, Stanley Road,  
Kirkdale, near Liverpool,  
Eleventh mo. 18th, 1861.

## A True Hero.

The highest heroism is not seen on the battlefield, where men engage in mutual butchery to avenge wrongs, real or imaginary, but it is witnessed in the fearful casualties of life, where self-possession and steadfastness will save many from destruction; and in the trials of life, where a serene patience and resignation take the sting from the sharpest trials. Here is a beautiful illustration:

My young cousin Henry has been reading Abbott's History of Napoleon Bonaparte.

One evening as we sat together, he lay down his book, and, with glowing cheeks and sparkling eye, exclaimed:

"Wasn't he the most splendid man that ever lived? I'd give anything to be half as great?"

Abbott's portrait so carefully conceals the blemishes of his hero, and is set within a so dazzling a frame, that I could not wonder at a boy's enthusiasm in contemplating it. But I said: "Your chance of being half as great as Bonaparte is very good, I think. That is not always great which consists in brilliant achievements. The highest greatness is moral; and seeks the good of others, rather than its own glory. I could tell you of a more noble hero than Napoleon, who lived in his own time."

"I should like to hear of one," answered Harry, with an air that said he was not to be convinced. But still he loved a story; so I told him the following:—

Years ago, in the deep heart of a mountain in Belgium, a hundred men were working a coal mine.

Grim-visaged and dusky, moving about by the dull red light of their safety lamps, they might have been mistaken for the demons of the mountain, once supposed by the peasants to dwell in its caves. Their work was hard, and surrounded by dangers; but their wives and children were in the hamlet above, and long habit made them forget their perils. So they might be contented and even happy.

The creaking windlass raised and lowered a huge bucket through the deep and narrow shaft, from morning till night, carrying men and tools to and fro. This was their only doorway.

It was noonday, and the sun shone down one side of the shaft, and brought a glimmer of daylight to a part of the mine, when Hubert Giffin, the master miner, took his place in the great kibble, and was let down into the mine many feet below. When he reached the bottom, he commenced handing some tools and stores to Victor, a blind miner, who was waiting there. Victor had led a sick child in one of the cottages, and it was to inquire after him that he stood waiting at the bottom of the shaft.

The bucket was soon emptied, and Hubert was just stepping out, when hark! What sound was that which made his cheek pale? It was the rushing and trickling of water. The next moment he caught sight of a stream forcing itself through a fissure close to the shaft! Hubert's long experience instantly showed him their full danger. It was not a feeble, oozing stream, but a mighty pressure of water that had found its outlet here. They would be overwhelmed—lost.

One foot was yet in the bucket—a jerk at the rope would save him. But though death stared him in the face, he could not sacrifice others to save himself. Quickly jumping out, he seized blind Victor, and placed him in the bucket, saying quickly, as he jerked the rope:

"Tell them the water has burst in, and we are probably lost; but we will seek refuge at the farther end of the gallery. Say farewell to our poor friends." In a moment he was gone, and with

him Hubert's only certainty of escape from a terrible death.

The mine consisted of long, narrow passages, and on all sides deep caves from which the coal had been dug. The men were all at the farther end of the mine, hewing out the solid mountain, unconscious of danger. Hubert quickly made his way along the dark passage, followed by the swift-spreading water; and soon reached his fellow-workmen with the dreadful intelligence. It was a moment for panic, when each would have rushed to certain death in a vain effort to save himself. But looking firmly into their ghastly faces, the master spoke a few courageous sentences:

"Follow my words, lads, and be quick—our picks may save us!"

Then came a few steady, quick commands, to hollow a new chamber above the level the water would probably reach. The men obeyed in silence, though each knew not but that he might be digging his own grave. A hundred pair of hands soon finished the work, and into the cave a hundred men crowded to wait for death, or an almost impossible chance of relief. The water gradually filled all the old avenues and chambers, and then seemed stayed. Never was a situation more dreadful. Not more than a day's provision had been saved, and already two or three of their number had been killed by the falling rocks while hastily digging the new chamber. The long, dismal hours, with no change to mark them, brought the advance of almost certain death.

Courage, brave Hubert! God, who saw thy noble sacrifice, will help thee!

The terrified friends and workmen, on hearing Hubert's dreadful news, ran wildly about in hopeless panic. But soon guided by the message Hubert had sent, they commenced working a new shaft as near as possible to the spot where the hapless men might be. Five days and nights they toiled, digging deeper into the solid side of the mountain.

"It is a vain task," said the men. "But the women cried, 'Do not cease! God will help us!'"

At length, on the morning of the sixth day, the muffled sound of blows from within met the ears of the workmen in the shaft. A signal ran along the rope, and told the news to the waiting multitude above, who rent the air with joyful shouts. Soon a communication was made. They were saved—at least some were saved!

Who can imagine the feelings of the unfortunate men, buried for five days and nights without food, when first the day gleamed in upon them, revealing a human face!

Of the hundred who had been imprisoned, over seventy survived, and with them Hubert. Without him, indeed, probably no one would have been spared to tell the story.

This noble act, done in a place and at a moment when no praise of men could have been looked for, echoed throughout Europe, and obtained the praise and gratitude of the world. The thousand miners of Liege hailed their fellow labourer with delight and pride. Napoleon heard and admired in his palace in Paris, and sent a reward to the peasant nobleman. He sent him his cross of honour, the mark which all the high and great coveted, and, better still, offered him a pension which raised him above want for the rest of his life.

When God unfolds in heaven the secret charity of men, many such heroes shall stand revealed, whom the earth and the waves have covered, sending no testimony to the world. "Their Father who seeth in secret shall reward them openly."—*Late Paper.*

## Selected.

## A REFLECTION.

Growing older, growing older, growing older every day!  
For the lines are on my forehead, and my hair is streak'd  
with gray,  
And my strength is turned to weakness in the trembling,  
faltering limb,  
And my sight, once like the eagle's, now is weak and  
growing dim,  
And my cheeks are pale and sunken, and the pulses  
fainter play,  
And I know I'm growing older, growing older every day.

Yet the thought is not unwelcome, as I feel the solemn  
truth,  
That each day I'm moving farther from the flowery vales  
of youth,  
From bright days whose memories clust'ring I can never  
more forget—  
Mingled, too, with hours of sorrow whose swift flight  
leaves no regret,  
Dreams of pleasures past forever, that now light delu-  
sive age.  
Like some great illumination or a time worn, sombre  
page.

Friends were mine whose voices linger on the breezes of  
the past,  
Long ago they sank in slumber where we all shall sleep  
at last—  
But I often see their faces peering out amid the gloom,  
And their forms sometimes come near me resurrected  
from the tomb,  
O, 'tis not with sad regretting that the hours pass away,  
For ere long I shall be with them—growing older every  
day.

Life is but a toilsome journey, toilsome from its earliest  
morn,  
For the sunshine hath its shadows, and the rose its  
stinging thorn;  
And no day, however pleasant, but leads on the gloomy  
night,  
Peopled with its mournful spectres creeping thro' the  
misty light,  
Ghosts of precious joys departed; hours of gladness lost  
and gone,  
Like bright bubbles on the waters, drifting, drifting  
farther on.

Here are tears, and sighs of sorrow, borne on every pass-  
ing breath;  
Here the dearest ties are sundered by the ruthless hand  
of death,  
Here no pleasures can be lasting, and no joy but fades  
away,  
And no glorious dream of beauty but must vanish with  
the day;  
Here we are but lonely pilgrims, burdened down, but  
travelling on,  
To a blessed, blessed country where our dearest ones  
have gone.

Then, why should we note the shadows of these quickly  
passing years?  
Why look forward thro' the valley with such doubts,  
and pains and fears?  
Why start backward affrighted as we see the flowing  
tide?  
When we know our loved ones wait us, wait us on the  
other side—  
When we know we're drawing nearer as the moments  
glide away,  
As we feel we're growing older, growing older every  
day.

The Salem (Mass.) Register.

*Conformity to the World.*—She observed, that she had been visited long before her illness, and had found great uneasiness in wearing things that were gay, and also in speaking in the plural language to one person; and added, that she found it difficult to take up the cross, but when she did, her satisfaction was great. Oh! what I feel for those whose minds are involved in the world.—*From the Dying Sayings of Ann Crowley in her seventeenth year.*

To come but once into the world, and to trifle away our true enjoyment of it, and of ourselves in it, is lamentable indeed.

*Scene at a Slave-Mart.*—A friend of mine, in America, who was once a slave-holder, but under the ennobling influence of christianity had emancipated his slaves, told me that, on going once into a slave-mart, he saw among those to be sold a remarkably fine slave. When put up for sale, the auctioneer described him as a man of much physical power, and a skillful worker in iron. Such a man it was expected would bring a large price; and such was the case. There was a slave purchaser present, an itinerant trafficker in the bodies of men, who, as the bidding proceeded, kept ahead of the rest, which the poor slave observed. After a time the slave stepped off the block, and said to his bidder: "Well, master, I perceive that you intend to buy me. But, sir, if you buy me, you must buy my wife too: there she stands, crying yonder." "I don't know that I shall purchase you," said he: "get upon the block." The bidding went on, this person still keeping in advance. The slave again in great anxiety stepped off the block, and made a similar request, and met with a like repulse. In a short time after, this slave-dealer bought the slave, who then said, "Master, my wife and I are much attached to each other: she will be of little use to her master when I am gone; you may buy her cheap; do, master, buy my wife, and I will be a faithful slave to you. I am a skillful worker in iron, and will bring you good wages: do, master, buy my wife." "I came not," said he, "to buy your wife, but you." On this, the slave turned and embraced her tenderly, clasping her in his arms; when, as if a new thought had struck him, he came again to his master, and said, "You must buy my wife, and I will be to you a faithful slave." His master sternly refused his request. "Well," said he, "if you will not buy my wife, I will never be your slave; and immediately killed himself with a weapon which he drew from his pocket.—*Jno. Scoble.*

"No Cross no Crown," is a sure testimony, and will be answered in a future day; if we will not bear the cross, we cannot have the crown."

Then addressing her children present, said, "O my dear children, from my dying bed I beg of you, that it may be the constant breathing of your souls, to be redeemed from the perishing things of time, and that your affections may be fixed on eternity. What would it avail now, or at any other time, to have the world, or as much as might be equal to our extravagant desires, to possess? I would freely give it up for a happy possession in heaven.

"Oh, press after it; do not be satisfied in any thing that is sensual or carnal, but oh, that we may press after an inheritance in that which will endure forever!" Nearly her last expressions were, "Oh eternity!—Oh the length of eternity!—Oh that it may be impressed on every heart, the length of eternity! there is no end."—*From a Testimony concerning Mary Hagger.*

*Electricity in Cats.*—The extraordinary electrical character of the cat is well known. On a cold bright day, if a cat be stroked, the hairs of the fur bristle up, and electrical sparks issue therefrom, accompanied with a slight crackling. It appears, too, that the animal may be so charged with electricity, that it will give a severe shock to the holder. In order to obtain this result, the cat should be placed on the knees, and one hand applied to its breast, while the other is employed in stroking its fur. Crackling and sparkles soon make their appearance; and in a short time, if the party continues to stroke the animal, he will receive a sharp electrical shock that may be felt above the wrists. The cat seems to suffer as much as the experimenter, for on giving forth the shock, she springs to the

ground in terror, and seldom will permit a repetition of the same process.

For "The Friend."

On the occasion of some Friends calling to see Charles Marshall a little before his decease, he spoke to this effect: "I have loved the brotherhood; I have sought the unity and peace of the churches for these forty years, and to my great comfort I never did any thing tending to the breach thereof. I have two things that he upon me to Friends, which I desire may be communicated to them.

"The first is, 'That they gather down into the immortal Seed and Word of life in themselves, and be exercised in it before the Lord, and duly prize and set a value upon the many outward and inward mercies, and blessings, and heavenly visitations, that the Lord has eminently bestowed upon them, since the morning of the day of his blessed visitation; then shall they grow and be preserved in a living freshness to him: and the Lord will continue his mercies to them, and they shall not want his divine refreshing presence in their meetings together before him.'

"The second thing is, 'That those Friends to whom the Lord hath given great estates, ought to cast their bread upon the waters, and do good therewith in their lifetime; for those who are enjoyers of such things should see that they are good stewards thereof. Oh! the many poor families that such persons might be a help to! how easily might they, with a little, assist many a family to live in the world! and what a comfort would it be for such to see the fruits of their charity in their lifetime.'

To the Philadelphia Association of Friends for the Instruction of Poor Children.

The Managers report, that their Infant and Girls' schools on Winslow street for colored children have been in operation as usual during the past year, and have been visited by semi-monthly committees of the managers.

The Infant school has been full to its utmost capacity, so that recent applicants have had to be rejected. It is pleasant to witness the good order of the school, and the interest with which many of these little ones pursue their studies, making commendable progress therein. A recent visiting committee report that the children in the first class read quite well, and that some of them cypher in multiplication and division, and that of a class of ten children, who read pretty well in words of one and two syllables, all but two were ignorant of the alphabet when they entered the school.

The number of names now on the roll is 116, and the average attendance for the year has been 81 and a fraction. This school continues under the care of the same teachers as last year.

The Principal of the Girls' school having resigned her situation in the Ninth month, Elizabeth B. Kaighn has been appointed to succeed her; under whose care we believe the character of the school will be maintained, she being much interested in the scholars, and attentive to her duties; the girls, with very few exceptions, are obedient and attentive to their studies, making good progress therein.

The course of instruction in this school continues about as last reported; spelling, defining, reading, writing, arithmetic, geography, grammar, and history of the United States are taught; and a part of one day in the week is devoted to sewing, the garments made being generally distributed among the most destitute of the scholars in both rooms.

During last winter it became necessary to sup-

ply some of the children with shoes, in extreme cases, to enable them to attend the school; nine dollars and forty-five cents were thus expended.

The class list in this school numbers 49, and the average attendance for the year has been 39 and a fraction per cent.

The Library continues to be an object of interest to the Girls' school.—874 volumes have been loaned to the scholars during the past year, of which only one book has been lost. Some additional books of a useful and interesting character are desirable, and any contributions towards this object will be acceptable.

Owing to the dullness of the times, we have been obliged to reduce the rent of the premises, No. 16 North Front street, \$104 a year. There has also been a falling off in our annual subscriptions, owing to death and other causes; it will thus be observed that our income has been materially reduced, while the taxes on the property are increased, and the cost of conducting the schools is in no way diminished. To meet these deficiencies, it is therefore very desirable, that the annual subscriptions should be increased, and we would appeal to those who are blessed with an abundance, to contribute liberally, and enable this excellent charity to continue its work of educating the poor colored children.

Signed by direction and on behalf of the Board of Managers.

J. WISTAR EVANS, Clerk.

Philada., Twelfth mo. 26, 1861.

Officers.—William Smedley, Jr., Clerk; Jabez Jenkins, Treasurer.

Managers.—Israel H. Johnson, Richard Richardson, Mark Balderston, Benjamin H. Pitfield, Joseph S. Elkinton, Jabez Jenkins, Caleb Wood, J. Wistar Evans, Elihu Roberts, John M. Wetherill, Jno. E. Carter, Thos. Elkinton.

*Why do we Shake Hands?*—It is a very old-fashioned way of indicating friendship. Jehu said to Jehonadab, "is thine heart right as my heart is with thine heart? If it be, give me thine hand." It is not merely an old-fashioned custom; it is a strictly natural one, and, as usual in such cases, we may find a physiological reason, if we will only take the pains to search for it. The animals cultivate friendship by the sense of touch, as well as by the sense of smell, hearing, and sight; and for this purpose they employ the most sensitive parts of their bodies.—They rub their noses together, or they lick one another with their tongues. Now, the hand is a part of the human body in which the sense of touch is highly developed; and after the manner of the animals, we not only like to see and hear our friends, (we do not usually smell them—though Isaac, when his eyes were dim, resorted to this sense as a means of recognition,) we also touch them, and promote the kindly feelings by the contact and reciprocal pressure of the sensitive hands.

Observe, too, how this principle is illustrated by another of our modes of greeting. When we wish to determine whether a substance be perfectly smooth, and are not quite satisfied with the information conveyed by the fingers, we apply it to the lips, and rub it gently upon them. We do so, because we know by experience that the sense of touch is more actively developed in the lips than in the hands. Accordingly, when we wish to reciprocate the warmer feelings, we are not content with the contact of the hands, and we bring the lips into service. A shake of hands suffices for friendship, in undemonstrative England, at least; but a kiss is the token of a more tender affection.

By suffering we may avoid sinning; but by sinning we cannot avoid suffering.

*The Weather of 1861.*—The following, relating to the weather of 1861, was prepared by Dr. Conrad, from the record kept at the Pennsylvania Hospital:

MEAN TEMPERATURE OF EACH MONTH OF THE YEAR 1861.		
January, 30.5 degrees,	July, 75.6 degrees.	
February, 39.1 "	August, 73.9 "	
March, 42.2 "	September, 68.3 "	
April, 53. "	October, 60. "	
May, 59.5 "	November, 41.8 "	
June, 72.5 "	December, 37. "	

The mean temperature of this year is 54.7 degrees; which is one degree and a half higher than the average of the preceding 35 years.

AMOUNT OF RAIN FOR EACH MONTH OF 1861.		
January, 5.25 inches,	July, 2.56 inches.	
February, 2.06 "	August, 3.14 "	
March, 3.92 "	September, 4.40 "	
April, 3.70 "	October, 3.80 "	
May, 6.64 "	November, 4.87 "	
June, 3.88 "	December, 2.09 "	
Total,	46.44	

AMOUNT OF RAIN FOR EACH YEAR FROM 1838 TO 1861.		
1838, 45.29 inches,	1850, 51.54 inches.	
1839, 43.73 "	1851, 35.50 "	
1840, 47.40 "	1852, 45.74 "	
1841, 55.50 "	1853, 40.66 "	
1842, 48.53 "	1854, 40.18 "	
1843, 46.91 "	1855, 44.09 "	
1844, 40.17 "	1856, 33.92 "	
1845, 40.00 "	1857, 48.28 "	
1846, 44.38 "	1858, 40.45 "	
1847, 45.09 "	1859, 58.12 "	
1848, 35.00 "	1860, 44.00 "	
1849, 42.09 "	1861, 46.44 "	

The average amount of these 24 years is 44.37 inches. The greatest amount was in 1859, 58.12 inches. The smallest amount fell in 1825, 29 1/2 inches.

"But, alas! not many days had I been there, [Isaac Peenington's] ere we were almost overwhelmed with sorrow, for the unexpected loss of Edward Burrough, who was justly very dear to us all.

"This not only good, but great good man, by a long and close confinement in Newgate, through the cruel malice and malicious enmity of Richard Brown, was taken away by hasty death, to the unutterable grief of very many, and unspeakable loss of the Church of Christ in general.

"The particular obligation I had to him, as the immediate instrument of my conviction, and high affection for him resulting therefrom, did so deeply affect my mind, that it was some pretty time before my passion could prevail to express itself in words; so true I found that of the tragedian,

"Light griefs break forth, and easily get vent,  
Great ones are through amazement closely pent."

Thomas Ethelred.

*The Mighty Works of Creatively Activity.*—There is much to correct within our borders; yet, there is a great deal of "tin and rprobate silver" to be purged away, before we can "arise and shine" in the original lustre of this Society. I feel afraid lest "mighty works" should be pleaded, as spreading the knowledge of the Redeemer's kingdom, and lest creatively activity should assume the character of gospel labour. May the "watchers" be faithful to their trust. Oh! may many go deeper in their spirits to feel with the innocent life, which doth not strive, nor cry, nor lift up, nor cause the voice

to be heard in the street. Ah! the Great Head of the Church is requiring a humble, yet faithful acknowledgment of His interposition for His poor helpless servants.—*Sarah [Lynes] Grubb.*

*Memory of an Elephant.*—A female elephant belonging to a gentleman in Calcutta, who was ordered from the upper country to Chittagong, in the route thither broke loose from her keeper, and making her way to the woods, was lost. The keeper made every excuse to vindicate himself, which the master of the animal would not listen to, but branded the man with carelessness, or something worse; for it was supposed that he had sold the elephant. He was tried for it, and condemned to work on the roads for life, and his wife and children sold as slaves. About twelve years afterwards this man, who was well known to be acquainted with breaking elephants, was sent into the country with a party to assist in catching wild ones. They came upon a herd, and this man fancied he saw among a group his long lost elephant, for which he had been condemned. Having reached the animal, he spoke to her, when she immediately recognized his voice; she waved her trunk in the air, in token of salutation, and knelt down and allowed him to mount her neck. She afterwards assisted in taking other elephants, and decoyed three young ones, to which she had given birth in her absence. The keeper returned, and the singular circumstance attending the recovery being told, he regained his character; and as a recompense for his sufferings, had a pension settled on him for life. This elephant was afterwards in possession of Warren Hastings, then Governor-General of Hindostan.

Old Peter was a colored man, very poor in this world's goods, but "rich in faith." He lived in a miserable little hovel, but he was always cheerful, and said he was rich and happy as a king.

One day a boy who had been very kind to him, came to bid him farewell before leaving home for college. "Well," said Peter, as he was leaving, "I have but three words to say to you, and they are my Master's words, 'Watch and pray!'"

"Of course it will be of no use to watch without praying; and if you pray ever so much, and do not watch, the devil will have you, after all: but watch and pray, and then your heart will be guarded by a two edged sword, turning each way, and the devil cannot get in."

*Growth of Russia.*—Some one has supposed that the transference of the seat of the Russian empire from Moscow to the coast of the Baltic may some time prove to have been the most momentous event of modern history. By that act Russia turned her face westward; the youngest and proudest embodiment of the principles of oriental despotism, she thereby came into relation and inevitable collision with the freer tendencies of Europe; and, while every other European government has been obliged to concede something to the encroachments of democratic ideas, she alone has confronted them with an energetic, sagacious, and absolute autocracy. But her enterprise in the East is even more significant than in the West. Within the last three years she has gained possession of the vast region in north-western Asia, drained by the Amoor, a river of the first magnitude, larger than the Mississippi or the Nile. This territory, though little known, has been in dispute between the Muscovite and Celestial Empires ever since the seventeenth century. By a treaty concluded in 1855, China ceded all the district north of the Amoor; and by a second treaty concluded at Peking, November 14, 1860, Russia obtained all the territory south of the Amoor in-

cluded between the coast and the river Oussouri. She thus holds so much of the sea-coast as fronts duty is only about five hundred miles distant from Peking. The treaties also secure to her the free navigation of the Songari and Oussouri Rivers, the largest tributaries of the Amoor from the south, and thus all the products of warm Manchouria will find their main outlet through Russian commerce. The whole country is as yet undeveloped, but it abounds in mineral and agricultural resources, and is in process of rapid colonization. The island of Saghalien, off the mouth of the Amoor, has commodious harbors, and extensive coal fields. By availing herself of all the advantages that inhere in these acquisitions, Russia can hardly fail to achieve political and commercial supremacy in the farther East. Meantime she has pushed her conquests southward in Central Asia to Verenje and Kopal, which are only one third as far from the Indus as from the Volga, and her next stride may be across the Himalayas.

The magnitude of Russia is unprecedented in the history of nations. Her vast proportions can only be shown by a comparative statement. The total area of the United States, the North, the South, and the territories, is 2,936,166 square miles. The area of France (including Corsica and Savoy) is 207,933 square miles. The area of the British Isles is 120,850 square miles. Thus the territorial extent of the United States is twenty-four times greater than that of the British Isles, and fourteen times greater than that of France. Our whole area could be divided into about 100 states of the size of Massachusetts. It is moderate to say that the territory of our single country is much larger than that which constituted the Roman Empire when it was greatest. But Russia is between two and three times larger than the United States. Her square miles in Europe and Asia are 7,664,861. From the continuity of the empire, except Russian America, it may be regarded as one great whole. There is no more interesting problem than that of the destinies of the American Republic and the Russian Empire, which divide between them so much of the earth's surface and so many of the possibilities of the future, and which, while grounded upon opposite political ideas, rival each other in enterprise, vigor, and rapidity of development.—*New York Tribune.*

"A fondness for dress and music, were some of my greatest foibles; and I am bound in gratitude to acknowledge, that had it not been for parental care, advice, and prudent restraint, I might have gone great lengths in these gratifications. Then in the love of the gospel, I would most earnestly, and most affectionately recommend all religious parents, to be faithful in the discharge of their important duties, remembering they are delegated as caretakers over a very important trust: and happy will it be for those parents, who, in the day of righteous inquisition, may stand acquitted in the divine sight, having done all they could to preserve their offspring in true simplicity, and in the fear of the Lord."—*Ann Crowley.*

*How to Cut Glass with a Piece of Iron.*—Draw with a pencil, on paper, any pattern which you would have the glass conform to; place the pattern under the glass, holding both together in the left hand, (for the glass must not rest on any plain surface,) then take a common spike, or some similar piece of iron, heat the point of it to redness, and apply it to the edge of the glass; draw the iron slowly forward, and the edge of the glass will immediately crack; continue moving the iron slowly

over the glass, tracing the pattern, and the click in the glass will follow at the distance of about half an inch, in every direction, according to the motion of the iron. It may sometimes be found requisite, however, especially in forming corners, to apply a wet finger to the opposite side of the glass. Tumbler and other glasses may be cut or divided very fancifully, by similar means. The iron must be related as often as the erveio in the glass ceases to flow.—*Scientific American.*

**Hannah More's View of Ingratitude.**—At a dinner party at Bath, Jay, by whom the anecdote was communicated, was lamenting the ingratitude which Hannah More had recently met with from a person whom he had recommended to her beneficence; upon which he received a look from her which silenced him. After dinner, drawing him into a corner of the room, she said:—"You know we must never speak of such things as these before people, for they are always too backward to do good, and they are sure to swell on such facts to justify their illiberality." She finely added, "It is well for us sometimes to meet with such instances of ingratitude, to show us our motives; for if they had been right, we shall not repent what we have done, though we lament the depravity of a fellow creature. In these instances also, as in a glass, we may see little emblems of ourselves; for what, after all, is the ingratitude of any one towards us, compared to our ingratitude towards our Infinite Benefactor?"

**The Effect of Cold on Fattening Animals.**—Dr. Playfair, in the Journal of the Royal Agricultural Society, in speaking of the necessity of warmth to fatten an animal readily, says that to keep up the animal heat, the oxygen of the air unites with that portion of the blood which goes to form fat and tissues, and converts it into carbonic acid, water, and ammonia. Where all the vitality of the animal is used to manufacture heat, there is no power left to increase the fat. If we would fatten animals in winter, we must give them a summer temperature, by warming the shed and stables they occupy. The air that they breathe should be as pure as possible.

\* \* "Or shall we not reverently and rejoicingly behold in these morning pictures wrought without color, and kissed upon the windows by the cold lips of Winter, another instance of that Divine Beneficence of beauty which suffuses the heavens, clothe the earth, and royally decorates the months, and sends them forth through all hours, all seasons, all latitudes, to fill the earth with joy?"—*H. W. Beecher.*

**A Mother's Kiss.**—A day or two since, a ragged and dirty looking boy, fourteen years of age, pleaded guilty in the Superior Criminal Court to having fired a building. For two years past, since the death of his mother, he had wandered around the streets a vagrant, without a home or a human being to care for him, and he had become in every respect a "bad boy." A gentleman and a lady interested themselves in his behalf, and the latter took him one side to question him. She talked to him kindly, but without making the slightest impression upon his feelings, and to all she said he manifested the greatest indifference, until she asked him if he no one had ever kissed him. This simple inquiry proved too much for him, and, bursting into tears, he replied—"No one since my mother kissed me." That one thought of his poor dead mother, the only being, perhaps, who had ever spoken to him kindly before, touched him to his

heart, a hardened young criminal though he was. The little incident caused other tears to flow than his.

## THE FRIEND.

SECOND MONTH 8, 1862.

### SUMMARY OF EVENTS.

**FOREIGN.**—Liverpool dates to the 19th ult. Notwithstanding the satisfactory settlement of the Trent affair, there is still a disposition manifested by some journals in England to interfere in American affairs. New projects for movements favorable to the rebels are constantly being invented. Some civil at the tone of Seward's despatch; others bitterly condemn the action of our government in sinking a stone fleet in Charleston harbour; or clamor for the cessation of hostilities here, and the recognition of the Southern Confederacy, on the ground that the financial interests of Europe will suffer too much by the prolongation of the existing war for the suppression of the rebellion. The London Observer suggests that France and England should unite to re-establish peace in this country.

In regard to France, there is concurrent testimony from very high sources to warrant the statement that, though the Emperor's individual feelings are all with the North and the Union, yet the privations which the manufacturing class are suffering in consequence of the blockade, will render these feelings subordinate to the decision of the French legislative body, if in favour of uniting with England in such measures as will most probably lead to a termination of the war. Many continental journals express friendly feelings for our country, and jealousy of the British influences which sympathize so strongly with the South. *Le Rappel*, in a memorial addressed to the Liverpool Ship-owners' Association, relative to the stone blockade at Charleston, said that he had sent a despatch warning the American government against the ill feeling the proceeding would engender. After the design was carried out, he sent another despatch, expressing strong hopes that it would not be repeated elsewhere. It is rumored that the French and other governments were taking similar steps. The Commissioners of Customs have received orders to permit the exportation of all articles of war munitions against the United States, and the United States. The Independence Barge says that France will assume the initiative in a remonstrance against the blockade of the Southern ports, and that England will only afford France moral support. The Monitor says that the partisans in England for the recognition of the South increase, and no doubt there will be many advocates of this measure in Parliament.

The pirate Sumter, having been ordered by the Spanish government to leave Cadiz, has gone to Gibraltar. The Nashville remained at Southampton, closely watched by the U. S. steamer *Tuscarora*.

The Liverpool cotton market is dull, with a downward tendency. Breadstuffs firm, with a small advance. Consols, 93 a 93½.

**UNITED STATES.—The War.**—The Burnside expedition, at the date of the last intelligence, had possession of Pamlico Sound. The forces connected with the Port Royal expedition, have recently been engaged in devising measures to cut off the communication between Fort Pulaski and Savannah.

Bishop Ames and ex-Governor Fish, the commissioners appointed by the Secretary of War to visit and inspect the wants of the Federal garrisons by way of Fortress Monroe towards Richmond, to endeavor to fulfill the object of their appointment.

Secretary Stanton has ordered that no further contracts for or purchases of foreign military supplies of any kind be made if the articles can be made in this country. He has revoked all outstanding orders, agencies, &c., for such supplies from abroad. All outstanding contracts for arms or supplies must be presented at the War department within fifteen days, or be declared forfeited.

Accounts from Fort Pickens say that the rebels have withdrawn part of their forces from that vicinity to Mobile, which point they consider in danger. About 6000 men are opposite Pickens. Fugitive slaves constantly seek refuge at the fort.

In reply to a resolution of inquiry from the House of Representatives, the Paymaster General reports officially that the cost of music for the volunteers is five millions of dollars per annum, exclusive of clothing, subsistence

and transportation of the 17,500 men composing the bands, and the liability to pay each of them \$100 bounty at the close of their enlistment.

The position of the remaining forces in Virginia, Kentucky and Missouri, do not appear to have undergone any change.

The rebel forces which rallied at Monticello, Ky., withdrew on Gen. Thomas' approach, and continued the retreat into Tennessee. Reinforcements and supplies had been sent them from Knoxville.

It is stated that there are indications in Missouri of another attempt to drive the rebels out of the State. Gen. Price was still at Springfield, with 10,000 men.

**Southern Items.**—The Richmond Dispatch says: "Newbern, N. C., is in a ferment of excitement in the expectation of an attack in that quarter. The town is under martial law, and every preparation made for obtaining early intelligence of the enemy's movements, and for his repulse when he does come."

The Savannah papers state that a portion of the Federal fleet has departed from Fort Pulaski and the city, and were engaged in removing the obstructions, which had been placed in the channel.

The Memphis and Nashville papers manifest great apprehension lest the rebel forces should be compelled to evacuate Kentucky, as a consequence the Federal army should move southward.

The New Orleans Delta says, that a steamer ran the blockade from Charleston, S. C., on the 13th, with one thousand bales of cotton.

The Charleston Courier states, that the rebel steamer Calhoun, on her way from Havana, with a large and valuable cargo, had been chased by a U. S. cruiser, and abandoned and burned.

In several of the parishes about New Orleans, what were believed to be the germs of dangerous insurrections have been several times discovered within the past few months. In St. Mary's, thirteen slaves were shot at one time.

The price of sugar at New Orleans is 1½ to 2 cents a pound; mess pork, \$50 per barrel. Owing to the scarcity of meat, the planters are unable to supply their slaves with it to any considerable extent. Mules, wheat, &c., are sold at a high price instead of pork.

**Exchange of Prisoners.**—With a view of facilitating the exchange of prisoners, and obtaining the release of Federal soldiers, many of whom are suffering from their long confinement in Southern prisons, the President has concluded to place the captured rebel privateers, now in New York and Philadelphia, on the footing of prisoners of war, and has ordered their release from the prisons in which they are at present confined. About 4000 rebel prisoners, now at Fort Warren, have been ordered to Fortress Monroe for the purpose of exchange.

**Philadelphia.**—More than 275 dwellings. According to the report of the Building Inspectors, 1255 new dwellings were erected in this city, during the year 1861. The houses built in 1860, numbered 2867. The total number of dwellings in Philadelphia is about 92,000. Accurate enumerations show that the antebellum dwellings and stores on the lot of Eighth month last, numbered 2847, and on the first day of the present year, the number of such houses was 2360.

**The Grain Markets.**—The following were the quotations on the 3d inst. New York—Chicago spring wheat, \$1.50; \$1.34;—Corder Michigan, \$1.50; mixed, 65 cts.; oats, 42 cts. Philadelphia—Red wheat, \$1.30 a \$1.35; white, \$1.40 a \$1.50; corn, 55 cts. a 58 cts., 58 cts., 58 cts.

### RECEIPTS.

Received from W. B. Oliver, agt. Mass., for N. Breed, \$2, vol. 34, for V. Meader, \$2, vol. 35.

### WEST-TOWN BOARDING-SCHOOL.

**Visiting Committee.**—The Committee, upon appointment to visit the schools at West-Town, will meet there on Seventh-day, the 15th of the Second month, and proceed with the examinations on Second-day and Third-day following.

JOEL EVANS, Clerk.

Second mo. 5th, 1862.

### NOTICE.

The Annual Meeting of the Auxiliary Bible Association of Friends of Philadelphia Quarterly Meeting will be held at Arch street Meeting-house, Second mo. 10th, at eight, p. m.

T. E. BRADLEY, Secy.

Lodge street, opposite the Pennsylvania Bank.

# THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XXXV.

SEVENTH-DAY, SECOND MONTH 15, 1862.

NO. 24.

PUBLISHED WEEKLY.

Price Two Dollars per annum, payable in advance.

Subscriptions and Payments received by

JOHN RICHARDSON,

AT NO. 116 NORTH FOURTH STREET, UP STAIRS,  
PHILADELPHIA.

Postage to any part of Pennsylvania, for three months, if paid in advance, three and a-quarter cents; any part of the United States, for three months, if paid in advance, six and a-half cents.

Address to the Members of Philadelphia Yearly Meeting, 1862.

Dear Friends,—This meeting has been introduced into feelings of affectionate sympathy with friends, under the various temptations and difficulties which may assail them, in the present agitated condition of our beloved country; and a recent desire prevails that it may be our daily engagement to have our minds stayed upon the Lord, in humble, quiet trust; seeking strength and wisdom from Him, faithfully to uphold those precious testimonies that belong to the gospel of Christ, and which, as a people, we have been divinely called to show forth to the world.

Whatever peculiar circumstances attach to the war which is now waging in our land, we would commend Friends that the testimony of our religious society has ever been against all wars and fightings, without distinction, as being incompatible with the benign religion of our adorable Redeemer, which commands us not to resist evil, but to love and forgive our enemies; to do good to them that hate us, and to pray for them that despitefully use us, and evilly entreat us; and, under all circumstances, practically breathes the divine language: "Glory to God in the highest—on earth peace—good-will to men."

We have ever held that wars, of whatever nature, have a common origin, as described by the apostle James, viz: "From whence come wars and fightings among you? Come they not hence, even from your lusts that war in your members? Ye lust, and have not; ye kill, and desire to have, and cannot obtain; ye fight and war, yet ye have not." Our honourable elder, George Fox, when courted by flattery and offers of preferment, to induce him to engage in war, steadily refused to do so; and endured a long and cruel imprisonment among felons, in a noisome goal, for his faithful testimony against it; declaring to his persecutors "that he lived in the virtue of that life and power which took away the occasion of all wars."

This, dear Friends, is an experience we would tenderly and earnestly encourage all to press after, faithfully to live under the seasoning virtue of the Spirit and power of the meek and lowly Lamb of God, the Prince of Peace, who "came not to destroy men's lives, but to save them." Then shall we be preserved in a state of watchfulness unto prayer; and, our mental eye being illuminated by the light

of Christ, we shall see clearly the snares which beset us, however speciously disguised, and be kept from everything which would countenance or connive at war, either on the plea of patriotism, of benevolence, or other plausible pretext, or from any prospect of pecuniary gain.

We think it right, at the present time, to revive some of the ancient advices issued by the society in relation to this subject, and to commend them to the serious attention and careful observance of Friends; that by faithfully living up to our christian profession, the uprightness and consistency of our example may have a favourable influence upon others; and, should it please the Almighty to permit a time of greater suffering to come upon us, we may, through his favour, know our hands made strong, and our hearts prepared patiently to endure the day of trial. The advices are as follow, viz:

## ADVICES.

"Friends are exhorted faithfully to adhere to our ancient testimony against wars and fightings, and in no way to unite with any in warlike measures, either offensive or defensive, that by the inoffensiveness of our conduct we may convincingly demonstrate ourselves to be real subjects of the Messiah's peaceful reign, and be instrumental in the advancement thereof towards its designed completion; when, according to ancient prophecy, the earth shall be full of the knowledge of the Lord as the waters cover the sea, and its inhabitants learn war no more."

"Many are the ways by which the unwary and the covetous may be caught. But, brethren, look beyond the surface. Behold the depth of misery into which war plunges mankind. Then, putting your trust in Him who gives understanding to the simple, and provides for the sparrows, ye may avoid the pollution which is theirs who join hands with this desolating evil."—1795.

"Let all be careful not to seek or accept profit by any concern in preparations for war; for how reproachfully inconsistent would it be, to refuse an active compliance with warlike measures, and at the same time not hesitate to enrich ourselves by the commerce and other circumstances dependant on war."—1798.

"This meeting fervently recommends to the deep attention of all our members, that they be religiously guarded against approving or showing the least countenance at war, either by attending at or viewing military operations; or in anywise encouraging the unstable, deceitful spirit of party, by joining with political devices or associations, however speciously disguised under the ensnaring subtleties commonly attendant thereon; but that they sincerely labour to experience a settlement on the alone sure foundation of the pure, unchangeable Truth; whereby, through the prevalence of unfeigned christian love and good-will to men, we may convincingly demonstrate that the kingdom we seek is not of this world—a kingdom and government whose subjects are free indeed, redeemed from those captivating lusts from whence come wars and fightings.

"As we are called out of wars and fightings, so

let them be as seldom as possible the subjects of our conversation; but let a holy care rest upon us, to abide in that Power which gives dominion over the hopes and fears that arise from the concerns of an unstable world; which tend, as they are admitted into the mind, to lessen the trust in that Rock which is immovable."—1757.

"When goods have been distrained from any Friends, on account of their refusal to pay fines for non-performance of military services, and the officers, after deducting the fines and costs, propose to return the remainder, it is the sense of this meeting, that Friends should maintain their testimony by suffering, and not accept such surplus, unless the same or a part of it is returned without a change of the species."—1755.

"A living concern for the advancement of our testimony to the peaceable kingdom of Christ, continuing to spread in many minds, we fervently desire that the members of our religious Society may carefully avoid engaging in any trade or business promotive of war; sharing or partaking of the spoils of war by purchasing or selling prize goods; importing or shipping goods in armed vessels; paying taxes for the express purpose of war; grinding of grain, feeding of cattle, or selling their property for the use of the army; that, through a close attention to the monitions of Divine grace, and guarding against the suppression of it either in themselves or others, they may be preserved in a conduct consistent with our holy profession, and from wounding the minds, or increasing the sufferings of each other; not at all doubting, that He, to whom appertains the kingdom and the power, who is wonderful in working, will continue to carry on and perfect his blessed cause of peace in the earth.

"A solid attention to this concern is recommended to Quarterly, Monthly, and Preparative Meetings, and to our brethren in general; it being the judgment of this meeting, that if any of our members do either openly or by connivance, pay a fine, penalty or tax, in lieu of personal service for carrying on war; or allow their children, apprentices or servants to act therein; or are concerned in arming or equipping vessels with guns, or in dealing in public certificates, issued as a compensation for expenses incurred, or services performed, in war; that they be tenderly dealt with, and if they are not brought to an acknowledgment of their error, Monthly Meetings should proceed to testify against them."—1750, 1781.

"It is declared to be the sense of this meeting that furnishing wagons, or other means, for conveying military stores, is a military service; and that the care of felders, overseers, and all faithful Friends, should be extended in true love and christian tenderness, to such as deviate herein, in order to convince them of their error."—1755.

Also, "that a tax levied for the purchasing of drums, colours, or for other warlike use, cannot be paid, consistently with our christian testimony."—1776.

Also, "that it is inconsistent with our religious testimony and principle for any Friend to pay a fine or tax levied on him on account of his refusal to serve in the militia; although such fine or impo-

sition may be applied toward defraying the expenses of civil government. And where a deviation in this respect occurs, tender dealing and advice should be extended to the party, in order to his conviction and restoration, and if this proves ineffectual, the Monthly Meeting should proceed to testify against him."—1790.

When attempts were made to force the early believers into the Roman army, they meekly but firmly refused to comply, saying; "I am a Christian, and therefore cannot fight;" and several suffered martyrdom rather than take up arms.

Many of our predecessors bore cheerfully the spoiling of their goods, imprisonment, and the reproaches of the world, rather than violate their peaceable principles, and experienced the Divine Arm to be their stay and support.

May it be our concern, beloved friends, through the same blessed assistance, to endeavour faithfully to bear a clear and unfinishing testimony to the peaceable nature of the kingdom of our Lord and Saviour Jesus Christ; and, if military services or contributions are demanded of us, not seek to evade them by excuses, however plausible; but with innocent boldness avow our conscientious scruples as the sufficient ground for declining to comply; and, if suffering therefor should be our portion, let us strive to bear it in the gentle, non-resisting spirit of the gospel, which will preserve us from indulging any hard feeling toward those who may be the instruments of inflicting injuries upon us.

Our religious Society has always been favourable to good government, and steadily opposed to anarchy, and to every attempt to overthrow the civil power which Divine Providence has permitted to be set up over us; encouraging its members to live quiet and peaceable lives, and to obey all the laws which do not violate our well known religious principles. He is the best citizen and the truest patriot, whose life is regulated by the law of Christ, and conformed to his pure and holy example; and we never advance the real welfare of our country by disregarding these.

We feel that the present is a very serious and affecting crisis in public affairs, and that to stand forth before the people as the advocates of entire and invariable peace, involves a solemn responsibility. May we all, dear friends, suffer it to rest with weight on our minds, and incite us to watch unto prayer that everything which leads to contention and discord, may be eradicated from our hearts; and, through the aid of the Holy Spirit, we may cultivate, with diligence and patience, those heavenly dispositions which make for peace, both among ourselves, and toward all men; thus evincing to beholders that we are redeemed from the spirit of strife, and are really the lowly, self-denying followers of the merciful and compassionate Redeemer, whose religion is one of universal harmony and love.

With the salutation of love, we are your friends and brethren.

Signed on behalf and by direction of a Meeting for Sufferings, held in Philadelphia, the 17th of First month, 1862.

JOSEPH SNOWDON, Clerk.

*Flax Cotton.*—A Boston correspondent thus speaks of the recent invention for "flaxing out" King Cotton:

There are now in operation in this city experimental works for the manufacture of flax fibre into a material called fibrilla, or flax cotton. This can be produced in any quantity, at seven and eight cents per pound, and the cloth made from it is bet-

ter in every respect, and will take and preserve colours better than cloth made from cotton. The raw material, flax, wild or cultivated, can be produced, in Canada and all the Northern States, in vast quantities. Colonel Lander, in one of his recent reports, speaks of coming to plains covered with immense quantities of this plant growing wild.

Now, here is an article which even now can be had in quantities, so that its material can be produced at from two or three cents per pound less than cotton, and which is destined to supersede cotton. Slowly, but surely the parties owning the patents for the process for manufacturing this article are working it into the attention of our people.

For "The Friend."

#### The Origin of Infusoria.

(Continued from page 175.)

Another interesting question which Pasteur undertook to investigate, was the relative abundance of these germs in the atmosphere. In determining this point, a series of flasks were used, which were one-third filled with the same putrescible fluid. Their contents were boiled for two or three minutes, to kill any germs contained in them, and while still hot, their necks were drawn out to a fine point, and hermetically sealed. When these were taken to the desired locality, their points were broken off, and the air by its rapid ingress carried into the flasks its dusty particles and whatever else might be associated with it. The flasks were again quickly hermetically sealed, and placed away in a temperature of from 80° to 85°. The number of flasks in which animal or vegetable organisms were then developed, was he considered proportional to the abundance or scarcity of these germs in the atmosphere of that locality, at the time of its collection.

By comparing different samples of air obtained in this way, he arrived at several interesting conclusions. The atmosphere of the cellar of the Observatory at Paris was found to contain only one-twentieth as many germs as that from the court of the Institution. This difference was attributed to the comparative stillness of the cellar air, which permitted the gradual settling of its fine dust, leaving the upper portion comparatively free from it. This supposition was confirmed, by finding that the greater the precaution taken to prevent the disturbance of the atmosphere by the approach of the operator, the less indication there was of organisms, and Pasteur concluded that if it were possible to obtain a quantity of it without any agitation of the surrounding air, it would be found to be entirely destitute of ova and spores.

By this method also, there were obtained from the air of the open country a greater variety of infusorial forms than by the continuous exposure of a putrescible liquid to the air. This was accounted for by supposing that in the momentary rush of air into the flasks, a smaller number of germs were brought into contact with the fluid than in the other case; so that in each flask there was less opportunity for the monopolising of the nutriment by vigorous and rapid growers, to the exclusion of less numerous or more delicate species.

He also found that some samples of air yielded no organic growths at all. This was particularly the case in that collected at great elevations. On the Jura mountains, and near the Mer de Glace, the air was remarkably pure. In performing these experiments, a series of sixty-three flasks were prepared in an exactly similar manner. Twenty of these were taken to the level country, far from the habitation of man, at the foot of the Jura mountains, and there opened and closed. Six of these showed organic productions. Twenty others were

opened and closed on one of the mountains, (2789 feet above the sea,) of which five only were affected by the exposure. While of twenty others taken to Montauvert, and opened while a strong wind was blowing from the gorges of the glacier des Bois, (at an elevation of 6562 feet,) only two developed any animalcule or mould. In the performance of these experiments, great care was taken to avoid any error arising from dust carried on the person of the operator, or on the instruments, from other localities. The flask, while being broken, was held above the head with the end of the neck toward the wind; and a long iron forceps which had previously passed through a flame on the spot to destroy any germs adhering to it, was used to break off the point; an eolipile lamp fed with alcohol, was taken to close them hermetically with.

It appears therefore to be satisfactorily demonstrated, that the germs of Infusoria and the spores of cryptogamia, of extremely minute size, exist in the atmosphere, and that they are capable of beginning the process of fermentation in suitable liquids. That they are more numerous in the air of inhabited places, than in that of high elevations.

That ordinary air contains them in variable proportion according to the locality, and that they are not continuously distributed through it—there being places where none were found, adjoining places where they were found—but that in every locality where the experiment was tried, there were a sufficient number brought by the movements in the atmosphere into the liquids to indicate their existence—in the course of three or four days.

One more confirmation of the existence of these germs is desirable—that of seeing them develop into their appropriate forms under the microscope. Pasteur has already adopted an ingenious plan of collecting them from the atmosphere, by drawing a current of air for some time through gun cotton, and then dissolving it in ether. The insoluble residue containing the solid particles was then examined by the microscope. He says that there may always be found in atmospheric dust "a great number of organized corpuscles, which the experienced naturalist will distinguish as the germs of inferior organisms." But that these are the identical germs in question, does not appear to be so satisfactorily shown. In fact the existence of ova or spores in the atmosphere, large enough to be perceived by the microscope, has been denied by another distinguished Frenchman—Vouchet, who as an advocate for the theory of spontaneous generation, has diligently searched for these minute corpuscles. According to his statements, the atmospheric dust abounds in extremely small starch grains, which might readily be mistaken for the germs of the Infusoria or the spores of cryptogamia. He has examined the dust of many localities, and of many ages—among other samples, some collected in the recesses of ancient cathedrals—from the chambers of the pyramids—the ruins of Grecian temples—and even from the mummies of Egypt, in all of which these starch grains were found. But that there may be animated objects so small as to be invisible even to the most powerful microscope, we may readily imagine, since the most improved instruments cannot, it is calculated, define particles smaller than the 1-80,000th of an inch in diameter, and some infusoria are known to exist the 1-24,000th of an inch in dimensions. If then we estimate the size of their ova in the shrivelled state in which they would probably be when wafted abroad by the winds, at one-tenth of this magnitude, it is evident that they must be entirely beyond our range of vision with our present facilities.

## Dymond on War.

(Continued from page 179.)

An obvious weakness in this argument is this; that it is founded, not upon approval, but upon silence. Approbation is indeed expressed, but it is directed, not to his arms, but to his faith; and those who will read the narrative will find that no occasion was given for noticing his profession. He came to Christ, not as a military officer, but simply as a deserving man. A censure of his profession might, undoubtedly, have been pronounced, but it would have been a gratuitous censure, a censure that did not naturally arise out of the case. The objection is in its greatest weight presumptive only, for none can be supposed to countenance every thing that he does not condemn. To observe *silence* in such cases was, indeed, the ordinary practice of Christ. He very seldom interfered with the civil and political institutions of the world. In these institutions there was sufficient wickedness around him, but some of them, flagitious as they were, he never, on any occasion, even noticed. His mode of condemning and extirpating political vices was by the inculcation of general rules of purity, which, in their eventual and universal application, would reform them all.

But how happens it that Christ did not notice the centurion's religion? He surely was an idolater. And is there not as good reason for maintaining that Christ approved idolatry, because he did not condemn it, as that he approved war because he did not condemn it? Reasoning from analogy, we should conclude that idolatry was likely to have been noticed rather than war; and it is therefore peculiarly and singularly unfit to bring forward a silence respecting war as an evidence of its lawfulness.

A similar argument is advanced from the case of Cornelius, to whom Peter was sent from Joppa; of which it is said, that although the gospel was imparted to Cornelius by the especial direction of Heaven, yet we do not find that he therefore quitted his profession, or that it was considered inconsistent with his new character. The objection applies to this argument as to the last, that it is built upon silence, that it is simply negative. *We do not find* that he quitted the service:—I might answer, Neither do we find that he continued in it. We only know nothing of the matter: and the evidence is therefore so much less than proof, as silence is less than approbation. Yet, that the account is silent respecting any disapprobation of war, might have been a reasonable ground of argument under different circumstances. It might have been a reasonable ground of argument, if the primary object of christianity had been the reformation of political institutions, or, perhaps, even if her primary object had been the regulation of the external conduct; but her primary object was neither of these. She directed herself to the reformation of the heart, knowing that all other reformation would follow. She embraced indeed both morality and policy, and has reformed or will reform both—not so much immediately as consequently; not so much by filtering the current, as by purifying the spring. The silence of Peter, therefore, in the case of Cornelius, will serve the cause of war but little; that little is diminished when urged against the positive evidence of commands and prohibitions, and it is reduced to nothing, when it is opposed to the *universal tendency and object* of the revelation.

It has sometimes been urged that Christ paid taxes to the Roman government at a time when it was engaged in war, and when, therefore, the money that he paid would be employed in its prosecution. This we shall readily grant; but it appears to be forgotten by our opponents that, if this proves war

to be lawful, they are proving too much. These taxes were thrown into the exchequer of the state, and a part of the money was applied to purposes of a most iniquitous and shocking nature; sometimes probably to the gratification of the emperor's personal vices and to his gladiatorial exhibitions, &c., and certainly to the support of a miserable idolatry. It, therefore, the payment of taxes to such a government proves an approbation of war, it proves an approbation of many other enormities. Moreover, the argument goes too far in relation even to war; for it must necessarily make Christ approve of all the Roman war, without distinction of their justice or injustice—of the most ambitious, the most atrocious, and the most aggressive; and these even our objectors will not defend. The payment of tribute by our Lord was accordant with his usual system of avoiding to interfere in the civil or political institutions of the world.

"Let him that has no sword sell his garment, and buy one." This is another passage that is brought against us. "For what purpose," it is asked, "were they to buy swords, if swords might not be used?" I doubt whether with some of those who advanced this objection, it is not an objection of words rather than of opinion. I doubt whether they themselves think there is any weight in it. To those, however, who may be influenced by it, I would observe, that, as it appears to me, a sufficient answer to the objection may be found in the immediate context:—"Lord, behold here are two swords," said they; and he immediately answered, "It is enough." How could two be enough when eleven were to be supplied with them? That swords, in the sense and for the purpose of military weapons, were even intended in this passage, there appears much reason for doubting. This reason will be discovered by examining and connecting such expressions as these:—"The Son of man is not come to destroy men's lives, but to save them," said our Lord. Yet, on another occasion, he says, "I came not to send peace on earth, but a sword." How are we to explain the meaning of the latter declaration? Obviously by understanding "sword" to mean something far other than steel. For myself, I see little reason for supposing that physical weapons were intended in the instruction of Christ. I believe they were not intended, partly because no one can imagine his apostles were in the habit of using such arms, partly because they declared that the weapons of their warfare were *not* carnal, and partly because the word "*sword*" is often used to imply "dissension," or the religious warfare of the Christian. Such a use of language is found in the last quotation; and it is found also in such expressions as these: "*shield* of faith"—"*helmet* of salvation"—"*sword* of the Spirit"—"I have fought the good fight of faith."

But it will be said that the apostles did provide themselves with swords, for that on the same evening they asked, "shall we smite with the sword?" This is true, and I think it may probably be true also, that some of them provided themselves with swords in consequence of the injunction of their Master. But what then? The reader of the New Testament will find that hitherto the destined teachers of christianity were very imperfectly acquainted with the nature of their Master's religion—their conceptions of it were yet gross and Jewish. The very question that is brought against us, and the succeeding conduct of Peter, evince how little they knew that *His kingdom was not of this world, and that his servants might not fight*. Even after the resurrection, they seemed to be still expecting that his purpose was to establish a temporal government, by the inquiry—"Lord, wilt thou at this time restore again the kingdom unto Israel?" Why do

we avail ourselves of the conduct of the apostles, before they themselves knew the duties of christianity? Why, if this example of Peter be authority to us, do we not approve the *subsequent* example of this same apostle, in denying his Master?

Why, indeed, do we urge the conduct of Peter at all, when that conduct was immediately condemned by Christ? And, had it not been condemned, how happens it, that if he allowed his followers the use of arms, he healed the only wound which we find they ever inflicted with them?

It appears to me, that the apostles acted on this occasion upon the principles on which they had wished to act on another, when they asked, "Shall we command fire to come down from heaven to consume them?" And that their Master's principles of action were also the same in both—"Ye know not what manner of spirit ye are of: for the Son of man is not come to destroy men's lives, but to save them." This is the language of christianity; and I would seriously invite him who now justifies "destroying men's lives," to consider what manner of spirit he is of.

I think, then, that no argument arising from the instruction to buy swords can be maintained. This, at least, we know, that when the apostles were *completely* commissioned, they neither used nor possessed them. An extraordinary imagination he must have, who conceives of an apostle, preaching peace and reconciliation, crying "forgive injuries"—"love your enemies"—"render not evil for evil"; and at the conclusion of the discourse, if he chanced to meet with violence or insult, promptly drawing his sword, and maiming or murdering the offender. We insist upon this consideration. If swords were to be worn, swords were to be used; and there is no rational way in which they could have been used, but some such as that which we have been supposing. If, therefore, the words, "Let him that has no sword sell his garment, and buy one," do not mean to authorize such a use of the sword, they do not mean to authorize its use at all: And those who adduce the passage must allow its application in such a sense, or they must exclude it from any application to their purpose.

It has been said, again, that when soldiers came to John the Baptist to inquire of him what they should do, he did not direct them to leave the service, but to be content with their wages. This, also, is at best but a negative evidence. It does not prove that the military profession was wrong, and it certainly does not prove that it was right. But in truth, if it asserted the latter, christians have, as I conceive, nothing to do with it; for I think that we need not inquire what John allowed, or what he forbade. He, confessedly, belonged to that system which required "an eye for an eye, and a tooth for a tooth;" and the observations which we shall by-and-by make on the authority of the law of Moses, apply, therefore, to that of John the Baptist. Although it could be proved (which it cannot be) that he allowed wars, he acted not inconsistently with his own dispensation; and with that dispensation we have no business. Yet, if any one still insists upon the authority of John, I would refer him for an answer to Jesus Christ himself. What authority *He* attached to John on questions relating to his own dispensation may be learned from this—"The least in the kingdom of heaven is greater than he."

(To be continued.)

*Gigantic Bird's Nests.*—Gould describes the Wattleed Talegalla, or bush Turkey of Australia, as adopting a most extraordinary process of nidification. The birds collect together an immense heap of decaying vegetable matter, as a depository for the eggs, and trust to the heat engendered by

decomposition for the development of them. The heap employed for this purpose is collected by the birds during several weeks previous to the period of laying. It varies in size from two to four cart loads, and is of a perfectly pyramidal form. Several birds work at its construction, not by using their bills, but by grasping the materials in their feet and throwing them back to one common centre. In this heap the birds bury the eggs perfectly upright, with the large end upwards; they are covered up as they are laid, and allowed to remain until hatched, when the young birds are clothed with feathers, not with down as is usually the case. It is not unusual for the natives to obtain nearly a bushel of eggs at one time from a single heap. They are eagerly sought after, as well as the flesh. The birds are stupid, and easily fall victims to the sportsman, and will sit aloft and allow a succession of shots to be fired at them, until they are brought down.

For "The Friend."

#### The Migratory Grass-Hoppers or Locusts of North America.

Although the great migratory grass-hopper or locust of the Eastern continent is unknown in the United States, our country abounds with numerous species of grass-hoppers which occasionally appear in such multitudes as to be a real scourge to the district in which they prevail. The group which includes the true locusts, is distinguished from our ordinary grass-hopper among other characters by its power of flight, the latter being feeble of wing, and soon compelled to alight. The species which is the most destructive to vegetation, is the red-legged locust or grass-hopper, the *Acyrdium femur rubrum* of Dr. Harris. The body of the insect is about an inch long, and the wings, when expanded, measure 11 to 14 inches. It is characterized by the red colour of the hind legs. They frequent the salt marshes along the coast, and in certain seasons, after consuming the grass on these marshes, they make their way to the upland, destroying everything in their course. About the middle of the last century, they repeatedly swept over the New England colonies, occasioning so great an alarm among the people, that days of fasting and prayer were appointed on account of the threatened calamity. Every part of our continent, especially in the interior, is subject at times to the devastations of these insects. One of the best descriptions of their habits and ravages is contained in the report of the Canadian exploring expeditions of 1857 and 1858, by H. Y. Hind. The exploring party first met with the locusts on Garden Island, in the Lake of the Woods, about the middle of the Eighth month, 1857. "The shores were covered to the depth of two or three inches with countless millions of grass-hoppers, which had been washed there during the gale of the preceding night. The greater number of the grass-hoppers were alive, and as the rising sun warmed and invigorated them, they sprang with much regularity over the fields of Indian corn and the potato patches; their progress was like that of an invading army, eating and destroying every living green thing in their way. Before we left the island, they had advanced here and there some thirty or forty yards from the beach, in a well defined and undulating line, leaving behind them nothing but the bare and blackened stalks of the plants they had destroyed." The noise of their jaws in eating could be distinctly perceived, and the writer states, that in a calm day it could be heard with the greatest ease for a distance of several hundred yards. When the party arrived, in the Ninth month, at the White Horse Plain on the Assiniboine, the main tributary

of Red River, "the grass-hoppers appeared in countless millions just before my arrival; every bare patch of ground in the road was filled with their eggs, the living insects were leaping through the tall grass in infinite multitudes, yet notwithstanding failing to change the appearance of the country in the midst of so great a profusion of food. What the next year's brood may do remains to be seen, their progenitors had come in swarming clouds from the south side of the Assiniboine, but no one could tell of their origin, or of the devastations they must have created before they took their flight, and alighted on the White Horse Plain."

The exploring party continued its researches during the year 1858, and reached the Assiniboine at Lane's Post, in the middle of the Sixth month. "The first grass-hoppers were observed this year at Lane's Post; they were a brood from the eggs deposited by a swarm which alighted on the White Horse Plain, in September last."

"We reached the mouth of the Little Souris river, a branch of the Assiniboine, on the 24th of June. At the mouth of the Souris, the grass-hoppers were in countless numbers, and so voracious as to attack and destroy every article of clothing left for a few minutes on the grass. Saddles, girths, leather bags and clothing of every description, were devoured without distinction. Ten minutes sufficed them to destroy three pair of woollen trousers, which had been carelessly thrown on the grass. There were two distinct broods of grass-hoppers, one with wings not yet formed, which had been hatched on the spot, the other full grown invaders from the prairies, south of the Assiniboine. We here saw one of the vast flights of these insects, which were afterwards witnessed on a scale of alarming magnitude."

"On the 2d of July, we observed the grass-hoppers in full flight towards the north; the air, as far as the eye could penetrate, appeared to be filled with them. They commenced their flight about nine in the morning, and continued until half past three or four o'clock in the afternoon. About this time they settled around us in countless multitudes, and immediately clung to the leaves of grass, and rested after their journey. On subsequent days, when crossing the great prairie, from Red Deer's Head river to Fort Ellice, the hests of grass-hoppers were beyond all calculation; they appeared to be infinite in numbers. Early in the morning, they fed upon the prairie grass, being always found most numerous in low wet places where the grass was long. As soon as the sun had evaporated the dew, they took short flights, and as the hour of noon approached, cloud after cloud would rise from the prairie, and pursue their flight in the direction of the wind, which was generally S.S.W. The number in the air seemed to be greatest about noon, and at times they appeared in such infinite swarms as to lessen perceptibly the light of the sun. The whole horizon wore an unearthly ashen hue, from the light reflected from their transparent wings. The air was filled as with flakes of snow, and time after time, clouds of these insects forming a dense body, casting a glimmering silvery light, flew swiftly towards the N.N.E. at altitudes varying from 500 to 1000 feet and upwards."

"Some idea of the height of these insects may be gathered from the opportunity enjoyed by E. James who, when standing upon the summit of a peak of the Rocky mountains, 8500 feet above the level of the plains in Nebraska territory, (14,500 feet above the level of the sea,) saw them above his head, as far as their size would render them visible. "Lying on my back, and looking upwards as near to the sun as the light would admit, I saw the sky continually changing colour from blue to

silver-white, ash-gray and lead colours, according to the numbers in the passing clouds of insects. Opposite to the sun, the prevailing hue was a silvery-white, perceptibly flashing. On one occasion the whole heavens towards the south, east, and west, appeared to radiate a soft gray-tinted light with a quivering motion, and the day being calm the hum produced by the vibration of so many million wings, was quite indescribable, and more resembled the noise popularly termed a ringing in one's ears, than any other sound. The aspect of the heavens, during the greatest flight we observed was singularly striking. It produced a feeling of uneasiness, amazement and awe in our minds, as about some terrible unforeseen calamity were about to happen. It recalled more vividly than words could express the devastating ravages of the Egyptian scourges, as it seemed to bring us face to face with one of the most striking and wonderful exhibition of Almighty power in the creation and sustenance of this infinite army of insects. In the evening when the grass-hoppers were resting from their long journeys, or in the morning, when feeding on the grass leaves, they rose in clouds around us as we marched through the prairie; if a strong wind blew, they became very troublesome, flying with force against our faces, in the nostrils and eyes of the horses, and filling every crevice in the carts. But fortunately comparatively few flew on a windy day, otherwise it would have been almost impossible to make headway against such an infuriated host in rapid motion, before the wind, although composed individually of such insignificant members."

"The grass-hoppers were very numerous, and during four days filled the air like flakes of snow they rose simultaneously, when about to take their flight from areas of two to twenty acres in extent first perpendicularly to the height of twelve or fourteen feet, then in a slanting direction until they had attained an elevation of from two to three hundred feet, after which they pursued a horizontal course before the wind. In a light breeze the noise produced by their wings, was like a gentle wind stirring the leaves of a forest."

"On the 6th of July, we arrived at Pipestone Creek, and found the country swarming with a young brood of grass-hoppers, with wings about a quarter of an inch long, showing that their progenitors had arrived in the preceding autumn in time to deposit their eggs in the soil. Innumerable hosts of these insects passed overhead during the day, and on looking up through an excellent marine glass I could see them flying like seed at an immense height."

"At 4 P.M., on the 4th of July, we left Fort Ellice, and travelled due west through a pretty country, near the banks of the Qu'Appelle or Calling River. Here we observed during the morning the grass-hoppers descending from a great height perpendicularly like hail—a sign our half breed stated of approaching rain."

"The grass-hoppers were excellent prognosticators; a violent thunder storm in the afternoon commenced in the east, (all preceding storms had come from the west), and was accompanied by exceedingly heavy rain and a boisterous wind. The storm continued several hours. At 9 in the evening, the air was calm, and the heavens clear and bright; at ten, the storm returned from the west, and a more terrific and sublime exhibition of the elemental warfare none of us had ever before witnessed. Three times the lightning struck the earth so close to us there was no perceptible interval between the flash and the shock. It was distinctly heard to hiss through the air, and instead of penetrating the ground at once, seemed to leap from

bush to bush for a distance of sixty or seventy yards. It is remarkable that though the wind was blowing violently before and after the two flashes just described occurred, yet, between them, an interval of about three-quarters of a minute, there was a dead calm."

The last large flight seen by the party, was on the 26th of the Seventh month, when "vast clouds of grass-hoppers flying towards the east, passed high over our heads without intermission for nearly two hours."

It was ascertained that the mighty swarms of 1857, extended from the 94th to the 112th degree of longitude, and from lat. 41 to lat. 53—from the Mormon settlements in Utah to near the valley of the North Saskatchewan, and from the Lake of the Woods to the foot of the Rocky mountains, the perfect insect in 1857, or the young brood in 1858, having been observed nearly continuously over that wide extent of country.

"In the spring of 1858, the young brood was seen at Prairie Portage on the Assiniboine, hopping over the newly fallen snow at the latter end of April. It was thought by the settlers, that the cold weather which followed the warm days in the early part of the month when the eggs were hatched, would have destroyed the young brood; but it did not appear to have created any sensible diminution in their numbers.

"The extraordinary vitality of the eggs of insects is well known; but when we reflect that the eggs of the red-legged locust are exposed in Rupert's Land to a temperature lower than that at which mercury freezes, as well as to constant alternations from the freezing point to below zero, in the early spring months, their capacity to resist these influences cannot fail to be regarded as one of the most wonderful features in the life of this insect.

"Their power of sustaining long flights is also very remarkable. They generally rose from the prairie about nine in the morning, and alighted about four in the afternoon. During the intermediate hours, I do not recollect one instance in which they were observed to alight, except in anticipation of a thunder storm, when they would descend perpendicularly from a great altitude. Assuming their speed to have been twenty miles an hour, the distance they would fly in one day probably amounted to a hundred and twenty miles.

"Their principal food is the prairie grass and the leaves of shrubs, but they will attack any substance presented to them,—such as woolen garments and leather. The only article of clothing which did not suffer from their voracity, was the caoutchouc or gutta percha cloaks and coverings.

"The periodical visitations of these locusts have been enumerated among the objectionable features of parts of the Far West, and as some of the obstacles to the settlement of Nebraska. That they will also exercise an important influence upon the future of the southern part of Rupert's Land, there is but too great reason to fear; already they have twice destroyed the crops in different parts of the settlements; and in the State of Minnesota, in the region about Crow Wing, they rendered husbandry hopeless for two years, producing great distress in that newly settled country."

*The inward Principle we own.*—For being quickened by it in our inward man, we could easily discern the difference of things, and feel what was right and what was wrong, and what was fit and what not, both in reference to religion and civil concerns.—*William Penn.*

If we bide our talent in the earth, we shall lose our treasure in heaven.

## BIOGRAPHICAL SKETCHES

Of Ministers and Elders and other concerned members of the Yearly Meeting of Philadelphia.

## PETER HARVEY.

Peter Harvey was born in the Province of West Jersey, Tenth month 4th, 1721. His parents were members of the Society of Friends, religiously concerned to bring him up in the way of truth, and in the plainness and simplicity our holy profession calls for. Through the Lord's merciful visitations, he was brought into a living knowledge of, and a holy conformity to the principles of his education, manifesting great care and circumspection in his conduct and conversation. He was brought under concern for the good of others, and in various ways laboured to promote their earthly comforts and everlasting well being. He was appointed an Overseer and Elder in the church, and filled these stations reputably. He often advised Friends to keep cool in their minds, and to speak from a sense of Truth. He was of a meek and loving deportment, and was an example of brotherly condescension. As a husband he was loving and tender, as a master liberal and kind. By the blessing of Providence on his care and industry, he had accumulated some property, and was able to communicate of his fullness to others, which he did with cheerfulness. He was hospitable, gladly entertaining strangers; peace-loving, very earnest in settling difficulties and disputes among his neighbours.

During his last sickness, to a Friend who visited him in his sickness, he said, that in his youthful years his mind was much on improvement in outward business, and being successful therein, many spoke in praise of his conduct. In his prosperity he purchased sundry sorts of superfluities in workmanship, and did not see clearly what he was to do with them, but he did see, that at the time of going into these things, he had gone on in the dark, and that latterly, even in the time of his health, they had been a burden to his mind.

He appeared to be in a loving state of mind, saying that he had had a living sense of Divine Love, at different times in his sickness, and had been permitted to taste of that joy which is the everlasting portion of those who are sanctified, and the thought of death was not terrible to him. He had had during his confinement, a clearer sight of eternal happiness than he had thought attainable whilst in the body.

He deceased Tenth month 9th, 1771, very quietly, aged 50 years and five days, having been a member of Burlington Monthly Meeting.

## JOHN SYKES.

John Sykes was born in Derbyshire, Great Britain, Fifth month 8th, 1682, of honest Friends, who had been great sufferers because of their faithfulness in support of their Christian principles. They removed to America whilst their son John was an infant, reaching Burlington, Ninth month 1st, 1683.

Being favoured in early life with the visitations of Divine grace, and giving heed thereto, he was, even when quite young, solid and thoughtful.—Feeling the powerful overshadowing of his Heavenly Father's love, and continuing in humility and meekness, he manifested by his pure and circumspect walking and inoffensive life, that he was a sincere lover of the Truth, and a dedicated follower of our blessed Saviour.

In the year 1704, he was married to Joanna Murfin, a sober religious woman, with whom he lived in great harmony for nearly sixty-seven years. He was diligent in the attendance of religious meetings, and was faithfully engaged therein, in

labour to witness the arising of Life, and an ability to wait upon the Lord in spirit and in truth. After a time it pleased the Lord to confer upon him a gift in the ministry of the Gospel, which he exercised in great plainness, simplicity, and tenderness. He was frequently called into public service, and travelled through the Northern Provinces. His communications in the ministry were generally short, but were attended with life and power. They manifested that they sprang from the Divine Fountain of Good, and were to the comfort of the humble and contrite in spirit. He was earnest in exhortation, and with great fervency laboured in his Master's cause. He frequently pressed on his hearers the necessity of diligence in the attendance of meetings, and of a faithful engagement to labour in the inward work, that sanctification and holiness might be witnessed by them. In these respects he was a good example, which gave additional weight to his exhortations. He was careful in his family, circumspect in his dealings with all, and much esteemed by Friends, and beloved by his neighbours.

Having through a long course of labour in his great Master's vineyard, proved himself a workman who needed not to be ashamed, he, in a good age, was favoured to feel, and to express his great comfort and inward satisfaction, in the prospect of ending his day's work in peace. When the close came, he was blest with quiet resignation to the disposing will of his Heavenly Father. He departed this life Tenth month 26th, 1771, aged 89 years and about three months,—having been a minister nearly 50 years. His residence had long been Chesterfield, New Jersey.

## ABNER WOOLMAN.

Abner Woolman, son of Samuel and Elizabeth Woolman, was born in New Jersey, about the year 1724. He was educated by these faithful Friends as becometh the truth, and giving heed to the teachings of grace, became useful in the church. He was humble in his deportment, a lover of peace, and fond of quietness and retirement. Whilst striving to avoid a close intercourse with the world and its concerns, he was yet very useful in settling any difference which arose among his neighbours. He was a friend to all the afflicted,—and had a warm feeling of sympathy for the poor negroes, having a decided testimony against the custom whereby they were deprived of their natural rights.

He was much esteemed by his friends, and for several years filled the station of an Elder at Mausfield, part of Burlington Monthly Meeting. He frequently was engaged to labour in Meetings for business, and in private amongst his neighbours, to discourage much use of spirituous liquors themselves, and against furnishing much of it to their workmen, believing that a liberal distribution of them at harvest, was productive of evil. He deemed their use prompted to a light and noisy behaviour, unbecoming grateful receivers of the temporal favours bestowed on them, and at variance with that sobriety which is consistent with our Christian profession.

For some years before his close, through bodily weakness, he found it extremely difficult to attend religious meetings, yet he was very seldom absent. He departed this life Eleventh month 4th, 1771, aged about 47 years.

HUGH ELY, a valuable Elder of Buckingham, deceased during this year.

RICHARD GEORGE, an Elder of Haverford, deceased Eleventh month 25th, aged 72 years.

A humble spirit is a charitable and quiet spirit.

## FLEEING TO GOD.

Selected.

Under the shadow of Thy wing, my Father!

Thy life's calamities lie overpast.

In that sure refuge, let my spirit gather

Strength, to bear calmly on unto the last.

Be merciful to me—for thoughts that crush me,

Lie like an incubus upon my breast;

Only Thy voice, Omnipotent, can hush me

Into the quiet even, of seeming rest.

Oh! what a life but one long, long endurance,

Of this dull, heavy weight on heart and brain?

Speak to my spirit—speak the strong assurance,

That nothing Thou ordained is in vain.

Trembling amid the turmoil of existence,

Oh! let me grasp a more than mortal arm;

Father! my Father! be not at a distance

When earth's dark phantoms Thy weak child alarm.

Under Thy shadow fear cannot appall me,

If in the Rock of Ages surely hid

Under Thy shadow! harm cannot befall me,

If Thou, All wise, All merciful, forbid.

Nearer to Thee, my Saviour, my Redeemer!

In heaven, on earth, whom hith my soul but Thee?

Though for an instant, as some feverish dreamer

Grasps at the treasure which he seems to see

I, too, have dreamed, and waked to find illusion

Inscribed on all I sought to make my own,

And turning from my idols in confusion,

I dedicate my life to Thee alone.

Under the shadow of Thy wing abiding;

Close to my suffering Saviour's wounded side,

In the sure promise of His love confiding,

Why should I shrink, though earthly His betide.

Oh! if the heart grow strong through suffering only;

If but through trial it may reach its goal,

I will rejoice, although my way be lonely,

And all Thy waves and billows e'en me roll.

Salem (Mass.) Register.

**Rock Oil.**—There is nothing in the industrial world at the present time more remarkable than the production of petroleum. That great lakes of this valuable substance should have lain a few feet beneath the surface undiscovered for thousands of years, is one among innumerable proofs that the intelligence of civilization is required to enable man to bring to light and render available the natural resources of the planet which we inhabit. One very curious circumstance in the development of this industry was the tardiness of even our enterprising community to direct their attention to it after it was discovered. In 1826, an account of the Little Muskingum region, in Ohio, was published in Silliman's Journal, in which the statement was made that in boring for salt water, vast quantities of petroleum were obtained, which was beginning to be in demand for lamps in workshops and manufactories. The writer says:—"It affords a clear, brisk light when burnt in this way, and will be a valuable article for lighting the street lamps in the future cities of Ohio." Though this account was published in 1826, the discovery was made in 1819, and yet this mine of wealth was suffered to lie unappropriated in the heart of this country for thirty-five years. Attention was again called to it by the success of the coal oil manufacture, and in 1854, two gentlemen in New York, — Evleth and Bissel, secured the right to the upper spring on Oil Creek, in Pennsylvania, and organized a company to search for the oil. The operations were slow, and the first oil was struck at a depth of seventy-one feet, on the 26th of August, 1859. The drill suddenly dropped into a cavity, and oil rose within five inches of the surface. A pump being introduced, the company were soon in the receipt of one thousand gallons of oil per day.

This success created an intense excitement in the neighbourhood, and boring for oil became the great

business of the community. The petroleum was found not only along Oil Creek, but in numerous other localities, extending from Virginia to Canada West, and the supply has increased so rapidly as to bring the article down to a very low price, and to make it a great staple for domestic use and for export. The Erie railroad has a large number of cars devoted exclusively to its transportation, its pungent and peculiar odor rendering the cars thus employed unfit for other uses. At the depot of the company in Hoboken, thousands of barrels may be seen at any time to be seen on their way to this city, either for export or distribution. The peculiar power which the substance has of penetrating capillary tubes, covers the barrels with grease, and fills the wall with its odor.

Petroleum has just begun to play the great part which it is destined to fill in the industrial arts. It yields a good lubricating material, and produces the whitest, best and cheapest of all artificial lights. A great variety of hydrocarbons result from its distillation, and these, in combination with other compounds and elements, produce thousands of new substances for innumerable untold uses of the chemist and the artisan. We anticipate for petroleum a more rapid extension to a great variety of applications than marked even the introduction of India rubber.—*Scientific American.*

For "The Friend."

"When God and man stand opposite in view,  
Man's disappointment must of course ensue."

We may be convinced by what passes in our minds, if we will but closely and dispassionately examine our motives to action, that mankind, in a state of nature, are universally governed by self-will. The perversity of the will is indeed the primary cause of defection and degeneracy of all moral agents; it is the strong man armed that keeps the house; and, while he continues to possess it, all our endeavours after natural, and much more super-natural excellence, are too much perverted by passion and prejudice, ever to reach the object we aim at; for, whatever our rational discoveries of religious and moral truths may be, it is the will that determines us to action—the resignation of the will is, therefore, the first step in true devotion—hereby we escape the influence of the passions, commend ourselves to divine mercy, and are at peace; the presentations of good and evil are then distinguishable, and strength is received to reject the one, and cleave to the other." This we may observe in the case of Paul before and after his conversion; at the former period he was actuated by his own reason and will, and therefore failed of accomplishing the divine purpose, even while deeming himself the servant of God, doing his bidding and pleasure; and at the latter was influenced and governed by the manifest will of his divine Master, by whose power he was first humbled, and then so marvellously enlightened as to see clearly the way of self-denial, into which he was called, and afterwards engaged to walk, to the honour and praise of God, in the accomplishment of his holy will and purpose. It was then that he was made a humble and effectual instrument in the divine hand, of gathering souls unto Christ, through the influence and aid of the same divine power whereby his will had been subjected, and his eyes opened to behold the things which belonged to his peace.

To what other power or means, than the Spirit and grace of God, can we look for the recovery of our minds from their natural darkness and ignorance? and by what other was the notable Luther, after the exercise of his own wisdom and will in the pursuit of a course of violence, at length led to

see and to declare, that "bitterness is not expelled by bitterness," but that "sweetness expels bitterness;" and again, that "it is a deplorable righteousness that cannot bear with others because it finds them wicked, and which thinks of seeking the solitude of the desert, instead of doing them good by long-suffering, prayer, and example?" Again, said he, "Christ reigns [or dwelt] in the midst of his enemies. If he had desired to live only among the good, and to die for those only who loved him, for whom would he have died, an among whom would he have lived?" And still further respecting the limiting spirit of self-exaltation, whereby the church has been so often troubled and divided, he admonishes his co-labourers on this wise: "Although every thing is in a wretched state there, this is not sufficient reason for separating from it. On the contrary, the worse things are going on in it, the more we should cling to it; for it is not by separation that we shall make it better. We must not desert God on account of the devil; or abandon the children of God who are still in the Romish communion, because of the multitude of the ungodly. There is no sin, there is no evil that should destroy charity, for charity can do all things, and to unity nothing is difficult."

"But tis not easy with a mind like ours,  
To bid the pleadings of self-love be still,  
Resign our own, and seek our Maker's will."
